J. CARL JEWETT, **R. 5, Mason, Michigan**

"HEARTS OF THREE"

(*Continued from page* 11)

ered hand, stood a mummy whose lean brown face for all the world was the lean brown face of Alvarez Torres. Leoncia gasped, shrank back, and crossed herself at the sight.

Francis released her to Henry, advanced, and fingered the cheeks and lips and forehead of the thing, and laughted reassuringly:

"I only wish Alvarez Torres were as dead as this dead one is. I have not the slighest doubt, however, but what Torres descended from him—I mean before he came here to take up his final earthly residence as a member of the Maya Treasure Guard."

Leoncia passed the grim figure shudderingly. This time, the elbow passage was very dark, compelling Henry, who had changed into the lead, to light numerous matches.

"Hello," he said, as he paused at the end of a couple of hundred feet. "Gaze on that for workmanship! Look at the dressing of that stone!"

From beyond, gray light streamed into the passage, making matches unnecessary to see. Half into a niche was thrust a stone the size of the passage. It was apparent that it had been used to block the passage. The dressing was exquisite, the sides and edges of the block precisely aligned with the place in the wall into which it was made to dovetail.

"I'll wager here's where the old Maya's father died," Francis exclaimed. "He knew the secret of the balances and leverages that pivoted the stone, and it was only partly pivoted, as you'll observe——"

"Hell's bells!" Henry interrupted, pointing before him on the floor at a scattered skeleton. "It must be what's left of him. It's fairly recent, or he would have been mummified. Most likely he was the last visitor before us."

"The old priest said his father led men of the tierra caliente here," Leoncia reminded Henry.

"Also," Francis supplemented, "he said that none returned."

Henry, who had located the skull and picked it up, uttered another exclamation and lighted a match to show the others wht he had discovered. Not only was the skull dented with what must have been a blow from a sword or a machete, but a shattered hole in the back of the skull showed the unmistakable entrance of a bullet. Henry shook the skull, was rewarded by an interior rattling, shook again, and shook out a partly flattened bullet. Francis examined it.

"From a horse pistol," he concluded alound. "With weak or greatly deteriorated powder, because, in a place like this, it must have been fired pretty close to point blank range and yet failed to go all the way through. And it's an aboriginal skull all right."

A right angled turn completed the elbow and gave them access to a small but well-lighted rock chamber. From a window, high up and barred with vertical bars of stone a foot thick and half as wide, poured gray daylight. The floor of the place was littered with white-picked bones of men. An examination of the skulls showed them to be those of Europeans. Scattered among them were rifles, pistols, and knives, with, here and there, a machete.

"Thus far they won, across the very threshold to the treasure," Francis said, "and from the looks began to fight for its possession before they laid hands on it. Too bad the old man isn't here to see what happened to his father."

"Might there not have been survivors who managed to get away with the loot?" suggested Henry.

But at that moment casting his eyes from the bones to a survey of the chamber, Francis saw what made him say:

"Without doubt, no. See those gems in those eyes. Rubies, or I never saw a ruby!"

They followed his gaze to the stone statue of a squat and heavy female who stared at them red eyed and open mouthed. So large was the mouth that it made a caricature of the rest of the face. Beside it, carved similarly of stone, and on somewhat more heroic lines, was a more obscene and hideous male statue, with one ear of proportioned size and the other as grotesquely large as the female's mouth.

"The beauteous dame must be Chia all right," Henry grinned. "But who's her gentleman friend with the elephant ear and the green eyes?"

"Search me," Francis laughted. "But this I do know: those green eyes of the elephant-eared one are the largest emeralds I've ever see or dreamed of. Each of them is really too large to possess fair carat value. They should be crown jewels or nothing."

(*Continued next week*)

LEGHORN

HENS—S. C. White Leghorns. Ferris 284-egg strain. $4.00, $5.00 and $7.50 each. Hatching eggs $2.00 per 15 prepaid. A. Stegenga, Portland, Michigan.

S. C. BUFF LEGHORNS, BABY CHICKS, EGGS for hatching. Hens, Cockerels. Farm raised. Good laying strain.
J. W. WEBSTER, Bath, Mich.

GRABOWSKE'S S. C. WHITE LEGHORNS Stock and eggs for sale. Circular free.
LEO GRABOWSKE, Merrill, Mich., R 4

WYANDOTTE

Silver Laced Golden and White Wyandottes. Eggs from best quality, only $3 per 15, $5 per 30 by parcel post prepaid. Buy from old reliable, Clarence Browning, R2, Portland, Mich.

White Wyandottes, Dustin's Strain, culled by experts for utility, size and color. Eggs 15 for $2.00, 50 or more 10c each, by mail prepaid.
VANO FARM, Hartford, Mich.

LANGSHAN

BLACK LANGSHANS OF QUALITY
Bred for type and color since 1912. Started from pen headed by Black Bob. First prize cock at International show at Buffalo, Jan. 1912. Eggs $3.50 per setting of 15. Winter laying strain.
DR. CHAS. W. SIMPSON, Webberville, Mich.

BABY CHICKS

CHICKS—CHICKS
SHIPPED SAFELY EVERYWHERE BY MAIL
S. C. White Leghorns and S. C. Mottled Anconas; the great egg machines. Strong, sturdy chicks, guaranteed to satisfy. Order now for May and June delivery. Eleventh season. Catalog free.
HOLLAND HATCHERY, R7, Holland, Mich.

CHICKS AND EGGS Rose and Single Comb R. I. Reds, Barred Plymouth Rocks. Superior color. Prolific layers. Prepaid by parcel post and safe delivery guaranteed. Illustrated catalog free.
INTERLAKES FARM, Box 4, Lawrence, Mich.

Chicks, Leghorns, Minorcas, Spanish, Houdans, Campines, Reds, Rocks, Orpingtons, Brahmas, Wyandottes. Tyrone Poultry Farm, Fenton, Mich.

For Sale, Day Old Chicks, Single Comb White leghorn (Ferris strain) custom hatching. Williamston Poultry Farm, Williamston, Mich.

PUREBRED BABY CHICKS. HEAVY LAYING English White Leghorns. Anconas. Circulars free
IDEAL CHICK HATCHERY, Zeeland, Mich.

BABY CHICKS, PURE SCRANTON STRAIN Rhode Island Reds. $20 per 100. Order now.
H. VANDEPELS, Zeeland, Mich.

HATCHING EGGS

R. I. RED HATCHING EGGS, $9 PER 100. Special eggs from 300 egg hen, 75c each.
W. H. FROHM, R 2, Mt. Clemens, Mich.

ROSE COMB BROWN LEGHORN EGGS FOR sale. One fifty per fifteen eggs.
Flemish Giant rabbits that are giants. Quality guaranteed.
E. HIMEBAUGH, Coldwater, Mich.

EGGS FROM PURE BRED SILVER LACED Wyandottes, $1.75 for 15.
A. H. DURKEE, Pinconning, Mich.

FROM COOK'S BEST: S. C. BUFF, WHITE and black Orpington eggs, $4 per 15; $7 for 30
GRABOWSKE BROS., R 4, Merrill, Mich.

BARRED ROCKS State contest winning strain direct. Special pens only headed by pedigreed males. Purebred partridge rocks. Eggs $2.50 per 15, postpaid, $6 per 45.
N. AYERS & SON, Silverwood, Mich.

WHITE WYANDOTTES; EGGS FOR HATCHing from selected layers, $2 per 15, prepaid. Pens, $16 to $25.
FRANK DeLONG, R3, Three Rivers, Mich.

R. C. BR. Leghorn eggs, $1.50 per setting. Pekin duck, $1.50 for 8. Chinese goose 40c each.
MRS. CLAUDIA BETTS, Hillsdale, Mich.

BARRED ROCKS Eggs from vigorous early maturing stock from heavy laying strain. $2 per 15, $5 per 45 by prepaid parcel post. R. G. Kirby, R1, East Lansing, Mich.

EGGS FROM BIG BARRED ROCKS, BRED to lay. $1.50 setting.
MRS. THOS. FOSTER, Cassopolis, Mich., R1

HATCHING EGGS—PLYMOUTH ROCKS (ALL varieties) White Wyandotte, Ancona and Rouen Rucks. Catalog 2c.
SHERIDAN POULTRY YARDS, Sheridan, Mich.

S. C. AND R. C. BROWN LEGHORN EGGS for hatching winter layers, $1.00 for 13.
EVA TRYON, Jerome, Mich.

Barred Rock eggs for Hatching, 15 for $1.50. 30 eggs, $2.50, 100 eggs $8. P. P. prepaid.
MRS. GEO. WEAVER, Fife Lake, Mich.

FOR SALE HATCHING EGGS FROM A HEAVY LAYnig strain of S. C. R. I. Reds at $2.00 per setting of 15 eggs, $10.00 per 100.
Stock of excellent type and quality at all times.
Satisfaction guaranteed.
F. HEIMS & SON, Davison, Mich.

TOO LATE TO CLASSIFY

ENSIFODDER SUNFLOWER, THE KING OF ensilage plants, for yield and nutrition, greatest boon to farmers yet developed. Plant a field this season. Prove its sure crop, money saving features. 1 pound, $1.25; 5 pounds, 1 acre, $5. M. C. JACKSON, Seed Specialist, Ludington, Mich.

PUREBRED
Chester White Pigs from registered sow.
J. R. POINDEXTER, Breckenridge, Mich.

ENSIFODDER SUNFLOWER, THE KING OF wonderfully prolific. Best for garden, fortune for market growers. Seed 25c; plants 50c. M. C. JACKSON, Onion Specialist, Ludington, Mich.

A BREEDERS' SALE

at Howell, Mich., June 8, 1920

McPherson Farms Co. and Cluny Stock Farm

50 HEAD HIGH QUALITY A. R. O. HOLSTEINS 50

The animals offered are representative of our standard for type and production and are sound and healthy. Among the consignments are the following:

A cow with records at 4 1-2 years of milk 1 day, 100.8 lbs.; butter 7 days, 26.8 lbs.; 30 days, 106.9 pounds. A daughter of the above named cow with 365 day record at 3 1-2 yrs. of 20,241 lbs. milk and 735 lbs. butter.

Eight daughters of Maplecrest Application Pontiac No. 132652, who now has 16 tested daughters, 6 of which have records from 21 to 26 lbs. butter in 7 days—all under 3 years old.

A proven 30 lb. bull—a grandson of the great King Segis Pontiac—his dam being the great transmitting 30 lb. cow Princess of Oakdale—who heads a combination of 3 generations of 30 lb. cows—Also ten daughters of this bull will be sold.

A 29 lb. bull, whose sire's dam has produced over 100 lbs. milk in 1 day on official test.

Two daughters of a 33 lb. sire—5 granddaughters of the great Colantha Johanna Lad, who has 31 daughters that produced from 600 to 750 lbs. milk in 7 days.

One daughter of a 27 lb. Sr. 3 year old—1 daughter of a 26 lb. Sr. 3 year old.

Two daughters of a 25 lb. cow—1 daughter of a 24 lb. cow.

Cows will be bred to 30 lb. bulls of the choicest breeding.

All our herds are under Federal supervision—All animals over 6 months old will be tuberculin tested and sold on 60 day guarantee.

Sale will be held at Howell Sale Pavillion, commencing at 10:30 A. M.

Auctioneer—B. V. KELLEY, Syracuse, N. Y.

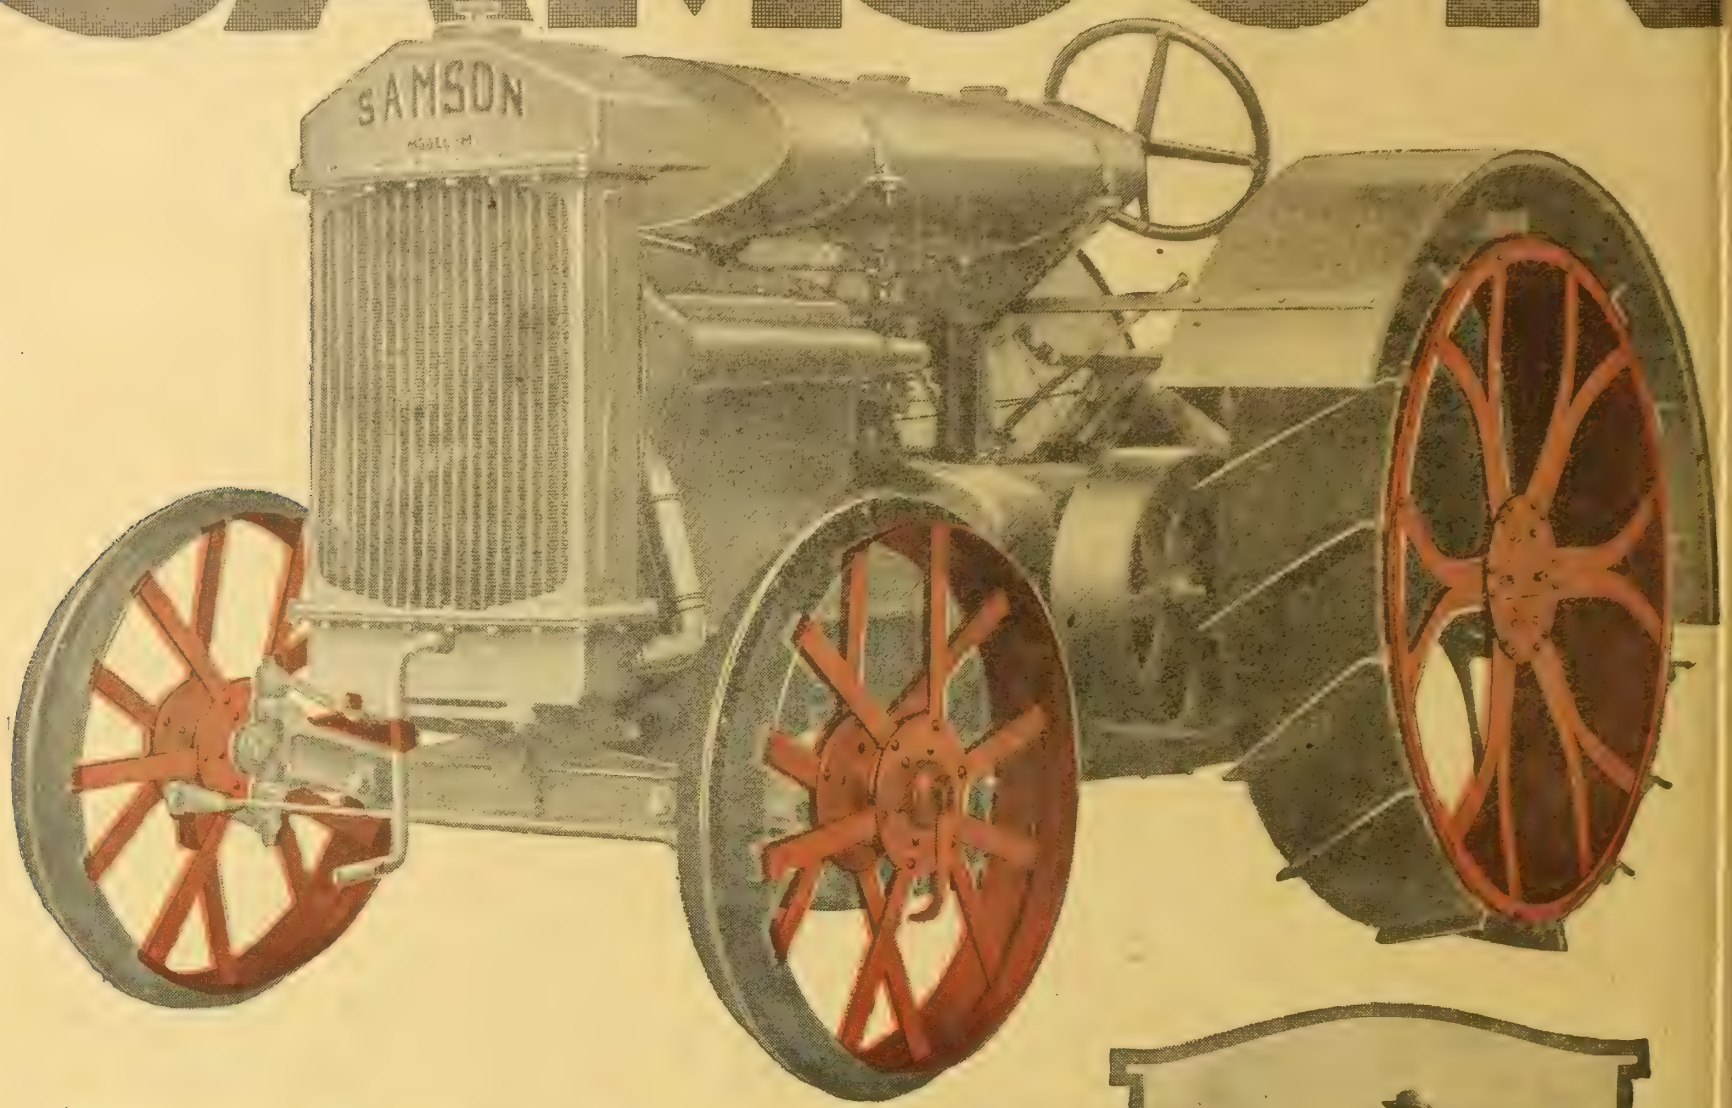
SAMSON



Heavy Draft Horsepower!

The Final Achievement In a Heavy-Duty Tractor at a Remarkable Price—$840

When the engineers and designers developed the SAMSON Model "M" Tractor, two things were uppermost in their minds: First, plenty of horse power at the draw bar for the lowest possible first cost and upkeep; second, an abundance of reliable, steady belt power that will do every heavy-duty belt power job on the farm or ranch.

They have accomplished both these things to perfection in the SAMSON Model "M." Here is a tractor that will take the place and perform the duty of a barn full of horses, without costing you a fortune or a big part of your crop to buy or maintain.

The even distribution of weight, compact unit design, and low center of gravity, give to the SAMSON great stability, making it hug the ground and preventing all danger of rearing up or tipping over.

The SAMSON Model "M" is the last word in modern, down-to-the-minute tractor construction. It is not like the average I-beam and channel steel frame tractor that weighs so much that it takes a large percentage of its own power for self-propulsion.

It is a close-coupled power unit all by itself, from radiator to rear wheels. Every part is enclosed and protected against dust, mud or rain.

For further details about the wonderful SAMSON Model "M," see your dealer or write us for FREE booklet which contains valuable and surprising information about maintenance cost of the SAMSON compared with horse upkeep.

A lot of things play havoc with a Cord tire: Sand blisters, tread separation, blowouts, heat. cold, poor traction, imperfect cord formation, too much or too little resiliency. Get rid of those evils—and you have a Cord Tire of real value. Exactly what we have accomplished in the manufacture of Gillette Cord Tires. The exclusive Gillette Chilled Rubber Process toughens rubber as iron is toughened when changed to steel. Makes sand blisters next to *impossible*. Tread, separation and blow-outs almost unknown. Reduces the destructive effects of heat and cold—scientific formation of both tread and body prevents uneven strain and uneven wear.

Second year sales of Gillette Tires were far greater than second year sales of any other tire ever produced. Put one Gillette or a full set on your car now. Write our general sales office, if there is no Gillette dealer in your town.

Model B

"All Our Locals are Voting to Stand Behind the Organization"—Mgr. Ackerman, May 13th

THE SUGAR manufacturers are making a last desperate effort to get their acreage without recognizing the collective rights of the farmers. Unless the farmers are on their guard every moment a great many of them are going to be deceived by the false and misleading propaganda of the factories.

Large advertisements signed by the sugar companies have appeared in many of the weekly papers of the sugar beet territory, urging the farmers to grow beets. Accompanying the advertisements is a letter supposedly written by a farmer stating why HE will grow beets. The letter sounds as if it was dictated by a manufacturer. No honest-to-God farmer who had any kind of a conception of right and justice or who had any respect for the standing of himself and family in his community could have written it,—without a price. Some men will sell their souls for a dollar. There might be a justifiable excuse for these "farmers" to grow beets, but there could be no excuse why they should publicly urge other farmers to forswear their vows and surrender unconditionally to the capitalists who own the sugar factories.

An advertisement signed by the Holland-St. Louis Sugar Co., paints in glowing language the wonderful opportunities that exist this year for the beet grower. Manager Hubbard says it is not unreasonable to predict FIFTEEN DOLLAR sugar beets this year. Two weeks previously Manager Wallace of the Michigan Sugar Co., predicted SIXTEEN DOLLAR beets. Neither of them know. They are guessing. They are guessing for a reason. And the tragic part of it all is that some of the farmers have swallowed the bait, and will grow beets under a contract that gives the manufacturer as much PROFIT per ton of beets as the farmer receives GROSS.

"You Are Partners in Our Business"

So says Manager Hubbard of the Holland-St. Louis Sugar Co. Ye Gods! What hypocrisy! What prostitution of the truth! What an insult to the intelligence of men! "Partners in the business." Mebbe so, mebbe so. A partnership in which the farmer does all the work, takes all the chances, pockets all the loss, and turns the profits that rightfully belong to him over to the boss manufacturer.

There is no partnership between the manufacturer and the grower. The manufacturer writes the contract without consulting the wishes of the grower, and in the majority of cases in the past the grower has humbly accepted the contract, not because he was sure he could make any money under it, but because he was willing to take a long chance. When he has asked to be consulted,—to be made a partner in the industry, if you please,—he has been spurned and insulted and made to feel that he is of no account.

Manufacturers Ready for a Killing

There is no longer any doubt but that the manufacturers are planning on a "killing" this year. If they pay the farmers $16 per ton for beets, nothing can prevent them from making the greatest profits in the history of the industry,—profits that will double and treble the value of sugar stock. Never was there such a golden opportunity before the manufacturers. And they will have their harvest, too,—if the government does not step in. Never was there such a golden opportunity before the farmers to get a fair share of these profits. They likewise can have their share if they only will.

Look to the Future

Another day is coming in the sugar industry. It will be a day of large production and low prices. The manufacturer is preparing this year against that day, and at the expense of the farmer. If the manufacturer will not recognize the farmer now when he needs the beets, how much less consideration will he give the farmer when the need for beets is not so great? The farmer will be the man who will suffer when low prices come, for he will have no reserve profits,—no sinking fund,—to fall back upon during the lean years. But not so with the manufacturers. Fortified with the reserve created during the year 1920—if the farmers lose their fight,—the manufacturers can suvive any number of lean years and be none the worse off. It is with this foresight that the manufacturers will, if they can, defeat you, my farmer friends, in your fight for recognition and a just price. And it ought to be with the same kind of foresight for the future of your business, that you should stand unswervingly by the position you have taken and show the manufacturers that you intend to be a partner in this industry.

To Members Farmers' Co-operative Union, Bay County

AT A JOINT meeting held at Monitor town hall on May 10th, the directors, officers and a large number of members voted unanimously that the Farmers' Co-Operative Union of Bay County is bitterly opposed to raising sugar beets under the contract and price the factories are offering. We have a few members who are going to raise scab beets. These members may be left to do their own threshing and other work that requires the help of neighbors. These members have received benefits through the Union by buying direct from the manufacturer and still they are not willing to stand by the principles of the Union.

The factories say they have enough contracted to run their factories another year, but at the same time these field agents are trying to get farmers to contract by offering them from $7 to $10 per acre as a bonus. This is a fact for they tried to get one of my neighbors to contract and offered him a bonus of $7 per acre. My advice to all good loyal farmers is to stand by our Union and not raise sugar beets at the present price and will come out on top in the long run. The laboring man is getting more for his labor. Why cannot the farmer? I say every member who has sowed sugar beets to drag them up, and stick to your union and be a man with men. (Signed) I. B. Davis, Secretary Farmers' Co-Operative Union of Bay County, Auburn, Mich.

Canadian Farmers Learn the Value of Loyalty

Great Strides Taken Politically and Economically Because Farmers Stick to Their Organizations

By H. D. RANNS

THE FARMERS as a force in Canadian politics have certainly arrived! The emergence of the farmers' party in the Dominion Parliament under the leadership of Hon. T. A. Crerar, formerly Minister of Agriculture in the Union government and the dramatic turn-over of power in Ontario, so that Premier Drury presides over the first provincial farmers' government in the Dominion—have drawn public attention to the fact that the farmer in Canada is in politics—very much in politics. The actual number of members elected to the federal house at the moment is not great—the new party numbers 13 just now—but their influence is out of all proportion to their numbers. That is because the men are generally recognized to be the vanguard of the host that will be elected at the next Dominion election, judging by all present indications. It is also because there is a freshness of utterance and largeness of vision about the farmer legislators already elected. The political calculations of the old time parties have been ruthlessly upset and the farmers are claiming that in their new movement not merely the farmers but the general public is speaking to the historic parties the words, "We are tired of you. It is time for a change."

Notwithstanding the dramatic nature of the events in Ontario, it is in the west that the political strength of the new movement is established. Mr. O. R. Gould, M. P., himself recently elected by a tremendous majority in the Assiniboia constituency in Saskatchewan is authority for the statement that there are now approximately 150,000 electors behind the candidates of the new National party (the favored designation of the new party) in the three prairie provinces. He estimates that there are 75,000 adherents of the new party in Saskatchewan, 40,000 in each of the provinces of Manitoba and Alberta and at that says nothing about British Columbia, whose newly established farmers' organization has a membership of 4,000 and is rapidly growing. It is evident that at the next general election in the Dominion a body of electors of that size in a thinly populated country like western Canada will mean a large accession to the ranks of farmer M. P.'s. The conservative estimate today is that the new National party will elect at least 30 members in the prairie provinces when the electors mark their ballots.

For a moment let us turn to consider the origin of the movement that has become within the last year or two so great a force in Dominion life and politics. It was in December, 1901 that a few leading farmers of the district met at Indian Head, Saskatchewan and decided to form an association for the protection of the interests of the farmer against the growing tendency of the big transportation and elevator concerns to fleece him. At that time the movement was a mere protest against economic injustice. (Those were the days of 80 and 40 cent wheat and there was some need to protest.) The first convention had present representatives from 38 local associations. Now there are 100,000 definite members of the associations in the three great prairie branches of the movement and, as Mr. Gould points out, a great outside public ready to support their policies. Such phenomenal growth is a tribute to the fact that the association has met a realized need.

Throughout the years the Grain Growers' associations, as they are known, though now only Saskatchewan retains that name, the others are known as United Farmers—have been busy gathering adherents, educating their constituencies and perfecting their organization. The associations have succeeded in teaching the farmer that he is more than a farmer—he is a citizen. They have helped to broaden the farmer's outlook and led him to cast his eyes and project his thoughts far beyond his own half section. The associations have also been powerful agents in the improvement of general living conditions on the prairies. The Grain Growers have always stood for an insistence on the fact that life is more than money and have advocated better roads, better homes, better schools, better churches—with marked effect. They have, in addition, done more than any other agency to break down that individualism and conservatism that seem natural to the prairie farmer and have made possible united and successful action for better social conditions on the prairie.

A programma such as this naturally appealed to other rural dwellers than the farmers themselves. Wisely enough, the associations did not limit their membership to farmers, but welcomed the support of all desirous of helping forward the things for which the movement stood. The result has been that the membership today includes many preachers and teachers in particular, who have done their best for the cause. In these latter days, when the National party is appealing for political support, the movement is meeting with its reward for the policy of the open door pursued through the years. It is significant that at the recent by-election Mr. O. R. Gould of Assiniboia was supported by an overwhelming number of the people of the small towns of the constituency, class lines being absolutely obliterated.

For many years these associations and their members had an indirect rather than a direct influence upon politics. It was known generally where they stood on different matters of public policy and both "historic parties" made bids for their support. In 1911 the farmers of the west almost to a man supported Sir Wilfrid Lourier in his reciprocity scheme, but in 1917 the mass of them supported the Union party out for the winning of the war. In provincial matters they have been divided on party lines, though there is a strong movement now for farmers' governments in the prairie provinces, especially in Alberta. In both provincial and Dominion governments prominent men have been elected to seats and in a number of cases to places in the cabinets. But they sat by virtue of the fact that they supported a Liberal or Conservative or Unionist government, not because of their position as Grain Growers. All the same the Grain Growers have been a tremendous influence in politics for a long time. At the recent Saskatchewan convention Hon. George Langley, himself an official of the Grain Growers, declared that the Grain Growers had got every important reform for which they had asked his government. More than once a resolution of one of the Grain Growers' conventions has been the means of initiating government action.

But it was not until November, 1916 that the farmers could even be said to have gone into politics. At that time the Canadian Council of Agriculture, the organization linking the different provincial branches, issued its first statement of a platform for Dominion affairs. That platform has been revised twice since that time, has been before the associations of the different provinces for adoption and has come to be the rallying point for the farmers and others who favor its adoption.

What sort of reforms are these farmers so anxious to have brought about? They have been widely accused by the members of the old line parties of "class politics," so an examination of their platform should be useful in the discovery of what grounds it affords for such an accusation. Let us run rapidly over the leading planks in the platform. First of all, there is the gradual reversion to a policy of free trade, including an immediate and substantial all-around reduction of the customs tariff, the present reduction of tariff on goods from Great Britain to one-half and gradual reduction to absolute free trade in five years, an endeavor to secure reciprocal trade in natural products with the United States, the placing of all foodstuffs on the free list, also of agricultural implements, that reductions made to other countries be also granted to Great Britain and that corporations engaged in the manufacture of protected goods be obliged to publish a statement of their profits. So you see they are drastic enough in their views on the tariff question but they claim, and, surely, rightly, that such tariff reductions would benefit, or the reverse, all other sections of the general public.

On other public questions, they have a platform which has been described by the press generally as the most statesmanlike platform before the Canadian public. Here are some points, tax on unimproved land values, graduated income tax, tax on the profits of corporations, no more natural resources be alienated from the Crown, the introduction of a land settlement scheme, public ownership of utilities in railway water and aerial, telephone, telegraph and express systems, no titles to be conferred on Canadians in the future, the senate to be reformed, abolition of the patronage system, removal of all press censorships, proportional representation, direct legislation, opening of seats to women on equal terms to men and the prohibition of the manufacture, importation and sale of liquor as a beverage. That is the gist of the platform and you must judge for yourself whether it is a class platform.

The Thing That Wins

IT MUST be clear to all farmers that if sufficient numbers of them take a position in defense of their just rights, they must win out. But farmers do not learn this except by bitter experience. For years the farmers of the west attempted half-heartedly to protect themselves from the avarice and dishonesty of the grain dealers. They did not succeed. Then they organized a Non-Partisan League and got what belonged to them. The Beet growers of Colorado and other western states have made repeated attempts to get a fair share of the profits of the industry, but it was not until this year when every last man determined to stand loyally by his association that anything was accomplished. The history of the Canadian farmers' economic and political struggles has been the same. Fifty per cent loyalty will not win. One hundred per cent will, every time.—Editor.

Big Dairy Farmers Favor Own Milk Distribution

Questionnaire Shows Strong Sentiment for Farmer-Owned Plant in City of Detroit

WE WERE hardly prepared for the unanimous vote which has been cast by members of the Michigan Milk Producers' Ass'n, in favor of a farmer-owned distributing plant in the city of Detroit. Although this questionnaire has been published in only one issue the response has been very gratifying, and without a single exception all believe that the milk producers should market their dairy products.

Below we reproduce a number of letters that have been received upon the subject. The questionnaire will be continued for some time to come and we trust every producer who markets his milk in the city of Detroit will let his position on this important matter be known. The coupon printed two weeks ago will be found on this page. Clip it and tell us what YOU think about this subject.

"We Are Ready" Says Robin Carr

"I have never started a letter with more enthusiasm for the subject than I am this one. And it's nothing new with me, thank goodness, this start towards a farmers' distributing plant. I've put it up to N. P. Hull, the Detroit News and other parties and interests with always the same reply—' I was 20 years ahead of the time.'

"I've also asked why with one dollar and one man invested and working for the distributor to 100 for the producer why did it take more to distribute than produce.

"And the one big thing I figure is to push the idea of just one distributor plant for Detroit and that the farmers'. We don't want to enter in competition, that would be just one more waste. We want to start something to cut out the present criminal waste of distributing milk. If every milk producer within one hundred miles of Detroit says we will sell milk to just one plant and that the farmers' what more is to be said.

"The elevators and mills have seen the steam roller coming and have been anxious to sell their property before their competitor sold out to the co-ops and who knows but if our noise is loud enough right from the start the Detroit milk distributors may want to dodge the roller.

"The farmer is just beginning to feel his power and say, isn't it fun? Think of it—the idea that in anything so direct as milk from farm to user that we have got to have somebody standing between holding no gun telling us we get so much and the user pays so much. I can't see myself 20 years ahead of the times in wanting to mind my own business. I'd sooner say I was 20 years under the sod if I didn't say it was the only solution and why not now.

"The dairy interests and policies of Michigan have been dictated and dominated by a few Holstein breeders who have done an unselfish good work, but their vision I would say has been too narrow and they are not big enough for the job longer. At our last local producers' meeting out of a big crowd I was the only one interested enough to ask Secretary Reed—'what about a plant?'—and he said 'Are we ready?' I'll agree THE MICHIGAN BUSINESS FARMER should operate a sub-soil plow and see if they couldn't uncover a multitude of our dear departed (mentally) who are still with us physically.

"I don't believe there could be a clearer case of the milk situation than mine has been in the past. I have an ideal stock farm, every foot productive, 160 acres, old home, bought for $13,000 at 5 per cent 8 years ago. Am 33 years old, always saving, high school and short M. A. C. coarse. My wife is a worker and we have hardly any other interest but milk from registered Holsteins and have never owned an automobile. Our fences should have been new 10 years ago, the buildings have not seen paint in ages, our roofs leak, etc. We have never paid a cent on the farm and owe $2,000. The only thing that keeps us going is the thought that we can cash in any time we want to leave our old home. What with the increase in price of land and and extra good herd of cattle we could clean up $15,000 to $20,000. But suppose tomorrow lightning hits our farm and burns up our cattle and barn and lowers the value of our farm, where are we? I don't call that farming. I have done things at a disadvantage my whole life for lack of funds. There is a ditch stringing quack grass through the middle of our best forty that should have been tiled 10 years ago. I don't believe there is better evidence of what dairying has not been than that. So I say go to it, you'll make a killing and I'm glad your hands are free to do it. Michigan has always needed just such an enterprise as yours. Thanks."—*Robin Carr, Livingston County.*

Believe Officers Capable of Taking Step

"My attitude on the present milk situation is this: In our Association we have a president and secretary, the latter with whom I am personally acquainted, and in all the other officers we have men who are able and competent to take care of this situation if the members will only back them up with their support financially as well as otherwise. The members of the Commission are also equally competent, and no fears need be had as to their judgment and handling of the affairs of the Association. If it lies within their power all will come out right in the end." —*A. R. Levy, Clinton County.*

(Note: Mr. Levy states in a coupon that he is satisfied with the commission plan, but favors the distribution of milk by farmer-owned enterprise.)

Systematized Milk Business

"Dear Editor—In your May 8th issue you want to know if we, the producers of milk are in favor of handling the selling of our milk in the city of Detroit.

"I lived in the city of Detroit nearly all of my life (29 years) and have seen a little of the distributing and handling of milk and the just verdict that I would give the present system is so rotten that it stinks. Capital was never invested in such a way that it should benefit humanity at large.

Three years ago May 11, 1920 I came on the farm. One thing I made up my mind to stick and I am still here and am going today. I was a greenhorn and the first time that I took hold of the plough handles it would have made anyone smile. Perseverance will work wonders. Farmers as a general rule are the hardest workers and the most persevering men and women and are the backbone of this or any other nation. Their remuneration in general is lower than that of the most illiterate laborer in town also the taking of their investment into consideration they make no interest or the little that is made generally come out of the fertility of the farm.

"The distributing of milk by the producers as I see it, should be undertaken at once. I spoke at our local producers' association May 1 on this very subject and from every side they expressed their opinion as the same and asked me if I had been associated with distributing of milk in the city. I was not directly but have been at times indirectly connected with it.

"We have twelve farmers that deliver their milk to the station for shipping to the city in our route, one of which hauls the milk as his turn comes. You ask anyone of them if he could afford to go every day instead of every twelfth day with his milk to the station and he would say: 'I would have to sell my cows as the expense is too great,' and some send nearly 40 gallons daily. That is equivalent to the same with distributing. You can plainly see the overlapping of routes and deliveries and the needless expense and overhead which must be met by such an impractical system that now exists.

"My solution that I offer is this: Take a survey of the city of Detroit and determine every station on the railroad and electric where milk comes to the city, proximity of the stations to the density of population and have them located at certain points along these lines near where a receiving plant with full equipment can receive and handle it in a systematic way without any duplication whatever and deliver it to the public. One such central plant and maybe twelve others distributed at best advantage as a survey would determine throughout the city. If you have ever seen a progressive track in an automobile factory you can understand my estimation of system.

"Elbert Hubbard said that he used to deliver milk when they used an angle iron to notify their patrons of the presence of the milk peddler in the neighborhood, and that he lost his job because he thought he could do his work faster by delivering it to the door instead of waiting for people to come out and get it themselves. This is the only evolution that the milk distribution has had since my boyhood days, except the pasteurizing, bottling, etc., demanded by the board of health.

A blind man can see the antiquity of the present lack of system.

"Manufacturers say that they cannot run their plants without modern systems employed. We the producers (manufacturers) if you please, of one of the most vital (bar none) essentials of the foods which is necessary to the welfare of the nation and has made us as a people what we are. I should say that we must distribute this milk ourselves and the kindred by-products of same irrespective of any compromise of middlemen so far as is possible. I am also voicing my milk producing neighbors idea at this same time. We the farmers should own, the country receiving stations, the determined by survey receiving stations in the city, trucks, wagons and all other machinery and equipment necessary to the bettering of the milk business throughout.

"Too many distributors have made fortunes at the expense of the producers. I am members of an association and milk is about the only product sold off my farm. The producers as a whole want to settle this question. I say now is the time. I have been fighting for two years. I demand on your behalf M. B. F., please help us win out. Your paper is the one every good farmer should have. Thanking you, I am.—*Henry S. Craft, Macomb County.*

Who Gets Your Milk Money?

City	Consumer paid cents per quart (N. S. figures for April	Producer received cents per quart	Distributor received cents per quart
Detroit	16	7.8	8.2
San Francisco	16	8.8	7.2
Denver	13	7.3	5.7
Washington	17.5	11.3	6.2
Augusta	20	10.0	10.0
Chicago	14	7.7	6.3
Des Moines	15	7.8	7.2
Kansas City, Kas.	15	7.5	7.5
New Orleans	19	11.3	7.7
Boston	17	10.1	6.9
St. Paul	13	8.2	4.8
St. Louis	15	8.8	6.2
Omaha	16.6	7.1	9.5
Lincoln	15	7.1	7.9
New York	15	8.0	7.0
Cleveland	15	8.7	6.3
Eugene, Ore.	15	8.0	7.0
Pittsburg	15	9.3	5.7
Philadelphia	14	9.7	4.3
Memphis	18	9.6	8.4
Salt Lake City	12.5	7.2	5.3
Spokane	15	7.9	7.1
Milwaukee	12	7.9	4.1

This table shows the proportion of the price of a quart of milk that goes to the farmer and the distributor. The milk prices are the latest reported to the United States Department of Agriculture. The proportionate division as between farmer and milk company is that which Professor J. H. Frandson of the University of Nebraska, found to obtain in 1918.—Detroit Times.

Shall the Milk Producers Market Their Own Product?

To the Reader:

Please use this coupon to express your views on the question, "Shall the Milk Producers market their own Product?" If you wish to write your views in greater detail, which we would prefer to have you do so, use a separate sheet of paper.

Question No. 1—Are you satisfied with the commission plan of fixing milk prices?.....(Please state opposition, if any.)

Question No. 2—Do you favor the Milk Producers' Ass'n distributing the milk of its members?.....

Question No. 3—Do you think the time is ripe for making plans toward this end?.....

Question No. 4—If you do not favor the actual distribution of milk by the producers, do you favor a central sales agency in Detroit where the milk may be received, weighed, tested and sold either to distributors or to the retail grocery trade?.....

Question No. 5—Are you a member of the Michigan Milk Producers' Ass'n?..... How many cows do you milk?.....

Do you consider you are making money at present prices?.....

(Please give such other information as will show clearly your attitude on the present milk situation.)

Cost of Operating Consolidated Schools

Considering Greater Advantages of New System Extra Cost is a Negligible Item

By WILFORD L. COFFEY
Assistant Superintendent of Public Instruction

A CONSOLIDATED school becomes the center for social life of the community. It is the logical place because of the interest that all have in the school. No religious dogmas enter to divide people in groups. This opportunity for people to meet and mingle with one another, to discuss problems that are pertinent to all, and to come to a better understanding of each other, is a large factor in making the country life a desirable life.

The consolidated school moreover makes it possible to have better trained and experienced teachers. Teachers prefer to work where there are other teachers and where they have fewer grades with more time for the instruction of each grade. The study made of Grosse Ile consolidated school, the six consolidated schools of Iron County organized under the township system, and the rural agricultural school at Otter Lake, Portage Township, Houghton County, indicated this to be true. In Grosse Ile eighty-five per cent of the teachers were normal school graduates, having had two years of training above the four years of high school. Seventy per cent of the teachers had had three years or more of experience.

In the Iron county consolidated schools, eighty seven per cent of the teachers employed were college or normal school graduates, having from two to four years of training above the four years of high school work. Sixty-four per cent of the teachers had had three years or more of experience.

In the rural agricultural school, a consolidated school at Otter Lake, all teachers employed were either college or state normal school graduates. Sixty-six per cent had three years or more of experience.

Compare these facts with the conditions in our one-room schools. In 1918, but forty-six per cent of these teachers had had one year or more of normal school training, and many of this number were not graduates from a four year high school. In 1915, and the conditions would be about the same now, but twenty-two per cent had had three years or more of experience. The experience of seventy-eight per cent of these teachers ranged from none to two years. This, put in other terms, means that the boys and girls of seventy-eight per cent of these schoolrooms are being taught by immature teachers with limited experience.

Is the consolidated school expensive? In answer to this question I submit the financial report of Mattawan school, a typical consolidated school with one hundred seventy-six pupils enrolled, and four busses employed to transport the children to school.

Sewing class of Iron River township school district

Receipts

Money on hand, July 8 1918, Gen. Fund	$ 303.36
Library	34.28
Received from Primary school Int. fund	1,323.09
Received from library fund	55.03
Received from tuition of non-resident pupils	239.85
Received from district taxes, for Gen. Fund	7,578.68
Received from loans	2,300.00
Received from other sources, miscellaneous	19.63
	$11,853.92

Expenditures

Paid men teachers	$ 1,000.00
Paid women teachers	3,690.00
Paid library books	76.00
Paid indebtedness	3,100.00
Paid for transportation of pupils	2,227.89
Paid for general purposes general fund	1,453.48
Amt. on hand, Gen. fund	293.24
Amt. on hand, library	13.31
	$11,853.92
Less amt. on hand	306.55
	$11,547.37
Less primary money received	1,323.09
	$10,224.28
Less indebtedness paid over and above loans	800.00
Cost to district	$ 9,424.28

Four busses at $2,227.89, making $556.87 average cost per bus.

This school is not organized under the Rural Agricultural law for consolidation. If it were it would receive each year $600.00 for maintenance and $200 for each vehicle used as the seven consolidated districts operating under this act are receiving. This would be an additional amount of $1,400 which would be subtracted, making the cost to the tax payers of Mattawan $8,024.28. This cost is more nearly proportionate than that which each primary district paid for its school, but it is not excessive when the advantages of the consolidated school are considered.

Below are the amounts that are being paid this year for transportation in several of the consolidated schools:

Buckley Consolidated School, Wexford County: Three busses—One at $4.00 per day; two at $2.00 per day.

Napoleon Consolidated School, Jackson County: Four busses—one at $9.00 per day; one at $8 per day; one at $6.50 per day; one at $5.80 per day.

Goodrich Consolidated School, Genesee County: Three busses at $85.00 per month each.

Grand Blanc Consolidated School, Genesee County: Five busses—Three at $60 per month; one at $50 per month; one at $120 per month.

Gaines Consolidated School, Genesee County: Four busses—One at $40 per month; one at $70 per month; one at $80 per month; one at $100 per month.

Is transportation practicable and feasible? Transportation is practicable. It has passed the experimental stage. It is being carried out in every part of Michigan under all kinds of climatic conditions. It has proved successful in the Dakotas and Minnesota where the winters are as severe as any place in Michigan. It has proved successful in states farther south where road conditions due to mud have to be overcome. The covered vehicles used in transportation are heated, or foot-warmers are provided, so that with sufficient robes the children arrive at school, after having ridden as far as eight miles, in a more comfortable condition than if they had been required to walk a mile or more through snow, slush or mud. The data following illustrate what is being done in transportion of school children in some of the country schools in Michigan. The distance given is the distance from the time the first child enters the vehicle until he reaches the schoolhouse.

Hoxeyville Consolidated School—Two busses travel eight miles; one seven miles one four and one-half miles.

Buckley Consolidated School—One bus travels six and one-half miles; one five miles; one two miles.

Napoleon Consolidated School—One bus travels nine miles; one eight and one-half miles; one eight miles; one six and one-half miles.

Otter Lake Consolidated School—One bus travels three miles; one four miles; one five miles.

Goodrich Consolidated School—One bus travels ten miles; one nine miles; one eight and one-half miles.

Gaines Consolidated School—One bus travels eight and one-fourth miles; one seven miles; one four and three-eighths miles; one three and one-fourth miles.

Auto busses are used to make the longer trips given above.

(The above is the third of a series of articles on the Consolidated School. The fourth and last will appear in an early issue. Readers are requested to write their opinions on this new school system.—Editor.

Fabric Law Means Higher Price to Farmer; Lower Price to Consumer

A TRUTH in Fabric Bill was introduced in the House of Representatives January 7, 1920, by Congressman Burton L. French, of Idaho. This bill is known in the House as H. R. 11641, and is now before the Interstate Commerce Committee of the House of Representatives. The Chairman of this committee is the Honorable John J. Esch, of Wisconsin.

This same Truth in Fabric Bill was introduced in the senate, January 8, 1920, by Senator Arthur Capper, of Kansas. This bill is known in the Senate as S. 3686, and is now before the Interstate Commerce Committee of the Senate. The Chairman of this Committee is Senator Albert B. Cummins, of Iowa.

This Truth in Fabric Bill, now before both branches of Congress, will, if enacted into law, immediately lower the prices of clothes.

The purpose of this Truth in Fabric Bill, as stated in the bill's introductory paragraph, is:

"To prevent deceit and profiteering that result from the unrevealed presence of substitutes for virgin wool in woolen fabrics purporting to contain wool, and in garments or articles of apparel made therefrom."

The provisions of the Truth in Fabric Bill make it compulsory to identify substitutes for virgin wool, namely, shoddy and cotton, and to give the people the knowledge of the presence of substitutes—the knowledge that is the people's only protection against those who would procure for the substitute the price of the genuine.

The Truth in Fabric Bill would lower the price of clothes because of the following reasons:

1. The bulk of the raw material now used in woolen apparel sold as all wool, is shoddy.

Under the Truth in Fabric Bill, shoddy can no longer be sold as virgin wool, and shoddy profiteering would consequently be stopped and the price of shoddy would inevitably be forced down.

Therefore, the price of all apparel containing shoddy would immediately be lowered, and this would include a very large part of all apparel.

2. The passage of the Truth in Fabric Bill would also immediately multiply the production of virgin wool fabrics for the following reason:

(a) The reason huge stocks of virgin wool are now lying in storehouses unmanufactured is because unidentified shoddy permits the manufacturer to make a greater profit with shoddy than he could make with virgin wool.

With the Truth in Fabric Bill enacted into law, the fabric manufacturer could no longer, as now, divert the people's demand for virgin wool to the rag and shoddy industries, and fabric manufacturers would consequently be forced to make up into fabrics the vast quantities of virgin wool now lying in the storehouses.

(b) It is estimated that, because of lack of ships to transport the wool from where it was produced to where it could be manufactured into cloth, there accumulated throughout the world during the war 1,265,000,000 pounds of virgin wool.

(c) Notwithstanding the fact that the world produces only one-third or less as much virgin wool as is needed in any one year, yet, on September 1, 1919, nearly ten months after the signing of the armistice, there was in the United States more than 700,000,000 pounds of virgin wool, an amount which exceeds by 100,000,000 pounds the United States annual consumption of virgin wool.

Furthermore, at the present time, nearly a year and a half after the signing of the armistice, it is estimated that there is more than one billion pounds of virgin wool in the world's store-houses, exclusive of the present year's clip 1920, which will be available in a few weeks.

A conservative estimate of the world's clip for 1920 is 2,500,000,000 pounds.

Therefore, there will be available within a very few weeks, more than 3,500,000,000 pounds of virgin wool.

(d) If the Truth in Fabric Bill is passed, all of this huge quantity of virgin wool would be immediately converted into cloth (instead of vast quantities of it being permitted to lie in storehouses, as has been done with great quantities of virgin wool since the signing of the armistice,) and the tremedously multiplied production of virgin wool cloth would effectively check and eliminate the rising price menace, and establish a sound economic price basis upon which business can proceed with safety and satisfaction.

By promptly passing the Truth in Fabric Bill, Congress will right the wrong aimed at by the over-all and old clothes clubs being formed throughout the country.

By passing the Truth in Fabric Bill, Congress will render the country a very great service by lowering the price of a necessity of life, and by establishing sound economic practices in connection with cloth clothes, which will tend mightily to stabilize the cost of living.

Farmer-Owned Enterprises

NO ONE HAS yet given a satisfactory reason why the sugar beet growers cannot own and operate sugar factories, or milk producers distributing plants. The answer eternally is, "It can't be done;" "it can't be done."

Why? Give us just one sound, sensible reason and we'll forever hold our peace. Until then we shall proclaim from the housetops that the farmers can and ought to do these things, and we shall stand ready to assist them in every way at our command.

Tell us, pray, what is required in the successful operation of a sugar factory or a milk distributing system? Both turn out an absolute essential. The market is established; the demand is assured. Only three essentials remain in the conduct of such enterprises. They are Raw Material, Capital, Good Management.

No matter by whom these enterprises are owned, the farmer furnishes the raw material. So check that off.

Capital for sugar factories and milk distribting enterprises is now furnished largely by men who have no interest in the enterprises except the dividends which they may earn on the stock. The individual stockholders of these concerns many of whom live in Detroit and New York City, haven't the slightest interest in what the farmer gets for his raw material or what the consumer pays for the finished product. Now what is the objection to letting the 12,000 sugar beet growers and the 12,000 members of the Michigan Milk Producers's Ass'n contribute their collective credit for the purchase of factories and plants and for the finishing and distributing of their products. Has not the farmers' money the same power to reproduce itself as the money of the professional capitalist? When you give us the answer, we'll check that off, too.

Now comes management.

"Granted," the skeptic will say, "that the farmers can furnish the raw material and the capital, but he cannot furnish the management." Well, who wants the farmers to leave their farms and become managers of sugar factories or milk plants? We don't. We'll concede that the best farmer on earth might be a flat failure at the head of such enterprises. But again, the farmer would merely be in the same position as are present stockholders of these concerns. What does Mr. John Dough of Wall Street, who has a substantial block of stock in a Michigan sugar factory, know about making sugar? Or what does the Detroit music manufacturer who draws down his thirty per cent dividends from the business of milk distributig know about the intricacies of the business. They don't know, that's the point, so they hire someone who does know. And the farmer, who in recent years has learned to trust those whom he puts in charge of his business affairs and to pay them what their services are worth, would expect to hire the best men obtainable for the job.

To put the question plainly and practically: "Is there anyone in Michigan who actually believes that farmer-owned sugar factories would fail if managed, for instance, by Mr. W. H. Wallace; or that a farmer-owned distributing enterprise would go on the rocks if managed, for instance, by Mr. W. J. Kennedy, of Towar's Wayne County Creamery?" Answer this question now, or forever hold your peace. Then we'll check this off, too, and remove the last argument that is keeping the farmer from sharing the profits that now go to Detroit and New York capitalists.

The Effect of Competition

THE COMPETITION of the Michigan State Farm Bureau in the wool-buying field has had a most significant effect upon the prices offered by the local buyers. It is a matter of fact that farmers living in the counties where the Farm Bureau is pooling wool are receiving from 7 to 15 cents per pound more than the farmers living in adjoining counties where the Farm Bureau is not active. For instance, the Farm Bureau is making advance payments to the farmers of Clinton county, on the basis of 80 cents per pound for the best grades of wool. In Gratiot county adjoining on the north the top price offered by local dealers is 60 cents for the best grades. Here is a difference of 20 cents per pound in two separate localities less than 50 miles apart. This is one of the greatest advantages of co-operation.

Farmers are too prone to look for the immediate and direct results of co-operative efforts and to overlook the accumulative and indirect benefits. For this reason many co-operative associations lose the support of their members and fail. Nevertheless, it stands to reason that never was a farmers' co-operative marketing association organized that did not exert some beneficial effect upon the prices for farm products.

It is not uncommon for members of co-operative associations to patronize their competitor when he over-bids or under-sells their own company. They do not seem to understand that the only reason the competitor offers more is because the presence of the co-operative association makes it necessary.

The greatest drawback to co-operative progress is the disloyalty of the very ones whom such co-operation will benefit the most. Every attempt to effect an organization for the good of the farmers has had its knockers. Always there were a few who would not join, and always there were a few who, after joining, became excellent crepe hangers and did their level best to destroy their organizations for the lack of which they would be getting today but a fraction of what they are receiving for their products.

The success of farmers' organization is measured wholly by the yardstick of loyalty. Loyalty will forgive mistakes and bad management. Loyalty will survive a period of loss. Loyalty will present an insurmountable obstacle to the enemies of organization. Loyalty will always win. Be loyal to your organization three hundred and sixty five days out of the year, and nothing can prevent you from attaining your goal.

Political Gas

A PROMINENT politician was once asked the secret of his success. "Promise everything," he replied, "but don't carry out your promises unless you have to."

There are quite a number of successful politicians who owe their position to a strict observance of this rule. Take Congressman Fordney, for instance. Last fall he faithfully promised the bean growers of Michigan that he would use all the influence at his command to secure special tariff legislation on beans. Knowing Mr. Fordney to be all but omnipotent in the lower house of Congress, the bean growers confidently awaited results. They were not forthcoming. The sugar beet controversy got warm; the manufacturers saw they would need some bean land for sugar beets; and Mr. Fordney mysteriously laid down on the job. His promise was just political gas, that's all.

Take Attorney General Palmer, as another instance. The Attorney General's Department made both written and verbal promises that it would investigate the sugar beet situation in Michigan. But that was before the primaries. The Attorney General, who is a candidate for President on the Democratic ticket, thought it would make the sugar beet growers feel good and possibly get him a few extra votes at the primary if he promised to help them. But Mr. Palmer made a terribly poor showing in the primary and he promptly lost interest in the sugar beet controversy. Telegrams dispatched to him since the primaries reminding him of his promise have gone unanswered. His promise was just political windjamming.

How long, how long, will the farmers be willing victims of the gas attacks of the politicians? How long will they sit like innocent children with their mouths open drinking in the words of wisdom and the fine promises of those whose only interest in their constituents are the votes which they cast in the elections? Say, folks, isn't it about time to bestir ourselves and with the mighty weapon of organization land a knock-out blow in the solar plexus of those who promise only to deceive? Why not this fall, throw partisan politics to the wind, and put some real MEN in Congress and the state legislature to take the place of the political windjammers and gas throwers.

Good Work

REPRESENTATIVES of all the farm organizations in Gratiot county held a joint meeting the other day and unanimously agreed to work for the candidacy of Milo D. Campbell for Governor. Then they put in one more good lick for the cause of agriculture by endorsing Ora D. Aitken, a farmer of New Haven township, for the state legislature.

If there is anything more important for the farmers to do this fall than to elect a man for Governor who has a broad and sympathetic understanding of the needs of agriculture, it is to elect actual, horny-handed farmers to the state legislature. Many claim that this is more important than the governorship. Be that as it may, it will be of tremendous assistance to Gov. Campbell, if he can have men in both houses of the legislature upon whom he can depend to carry out his reforms.

We have had many able governors in the past whose hands have been tied by an unsympathetic and reactionary legislature. The "immortal nineteen" effectually blocked the best efforts of one of the best governors Michigan ever had. To avoid a repetition of this let us by all means select men for the House and Senate whom we know to be progressive in spirit, thought and action to co-operate with a Governor who will, we believe give Michigan an administraton of economy and efficiency that will long be remembered in the annals of the state.

A Great "Discovery"

THE DETROIT newspapers have made a great "discovery." They have suddenly unearthed the fact that the farmers around Detroit are getting less than 50 per cent of the consumer's dollar for the milk they sell. For years and years farmers have sold milk to dealers in the city of Detroit. The consumer has used the milk and paid for it, without even wondering where it came from or what persons shared in the distribution of his dollar. The newspapers,—those wonderful advance guards of civilization and education,—have published eons of pages about almost every conceivable subject which affects the people of Detroit with the exception of food. Apparently newspaper writers have known no more about the source and original cost of food than the benighted consumer, so they have left the subject pretty much alone. But now after all these years they have just made the startling discovery that the farmer produces food, for the most of which he receives considerably less than 50 per cent of the consumer's dollar. Mebbe in another century we shall be able to educate our city cousins to some more essential facts about the farming industry.

What the Neighbors Say

"GOOD WAGES, FAIR INTEREST AND PRICES TO MATCH"

The fellow who said "you can't unscramble eggs" said a mouthful. The net result of trust-busting so far have been to slightly increase the office expenses of the unscrambled companies and furnish an excuse for still higher prices. The sooner all anti-trust laws are repealed and every industry organized into the strongest kind of a trust, the better for all concerned.

A popular slogan just now is "cost plus ten per cent." I don't want the extra ten per cent. Fix prices so that after paying all other expenses I have for my own work as good wages as I would pay an equally efficient hired man and fair interest on capital invested and I don't ask a cent of profit. But I doubt the practicability of abolishing profits entirely. The price that would just suit me would be low for some farmers on poor land and give my smarter neighbors a handsome profit. But such profits, so far as they are due to superior efficiency and if divided fairly among those whose efficiency produced them, will tend to raise the general standard of efficiency, cheapen production and eventually make lower prices possible. Just what per cent to allow above average production cost so as to encourage efficiency without putting too many of the less efficient producers out of business is a separate problem for each industry to be solved by experts familiar with that industry. Ten per cent or more may be necessary in some industries at first, in others a much smaller per cent may be sufficient, and frequent revisions to meet changing conditions will be necessary. Instead of fixing off-hand a rate that we guess will be about right for us farmers, let us raise a standard to which the wise and honest in all industries can repair: "Good wages, fair interest and prices to match."—*Stacy Brown, Ionia Co.*

Most people aren't satisfied with "fair interest and good wages." It seems to be human nature to keep all you have, and get all you can. By necessity the farmer has received less than a "fair interest" and this ought to be an object lesson to others, but it seems that it has not so served.—Editor.

A SUGAR BOYCOTT

As the spokesman of the farmers' needs and rights the BUSINESS FARMER has no equal. It is Michigan's great farm paper. Let us hope it will become America's great farm paper. No farmer, no matter what other farm papers he may take, can afford to be without it.

Isn't it about time to start a sugar boycott to bring the price of sugar down to the basis upon which farmers received pay for their beets? I notice that if an outsider speculates in sugar the government is hot on their trail, but the sugar companies can speculate seemingly without stint. What's the difference?

I enclose $2 for 3 years subscription. When you have to raise the rate I hope I will be able to dig up the price.—*Howard Smith, Genesee County.*

I'm afraid the boycott wouldn't work. It has been tried elsewhere with little success. It is an outrage that the American people have to pay such prices for sugar when only a handful of capitalists get the benefit of the high prices. We cannot believe that the government will let the sugar profiteers get away with their gains, but the administration has made some peculiar discriminations the last two years so we may be prepared for anything.—Editor.

FARMERS FOR LEGISLATURE

There has been quite a little written in your paper in regard to a farmer governor. Now I think if we are to have a farmer governor, it is just as important to have more farmers in the legislature and senate to held the governor in having good laws passed in the interests of agriculture. I have tried to keep in touch with the affairs of our state and think every man who was on the committee which voted not to report warehouse bill out of the committee but let it die a natural death should be asked to stay at home and some farmer take his place who will not be cajoled by any man or class of men. As this will be a very important session of the legislature it is important that every voter weigh this well before voting.—*A Close Observer, Benzie County, Mich.*

Well spoken. The chairman of the committee which refused to report out the warehouse amendment until the eleventh hour is a farmer. His name is Wm. E. Ivory and he lives in Lapeer County. We do not know what the farmers of Lapeer county are going to say to Mr. Ivory when he comes up for re-election this fall. Personally Ivory is a mighty fine chap, but his recosd in the legislature shows that he is not the man for the job. If Ivory and those farmers like him in the last legislature would use their influence to prevent the people from voting on the warehouse amendment, we wonder what action they would take on other matters of legislation in which the farmers are interested. We are glad to see you taking an interest in politics. Talk it with your neighbors and let's all pull together to poll the biggest farmer vote at the coming primary that was ever cast in Michigan.—Editor.

DO THE PEOPLE RULE?

I would like to give my opinion on the political situation. The people at the primaries expressed their preferance for Senator Hiram Johnson for president. It seems as though the newspapers are knocking him, not openly, but they seem to have nothing to say in his favor. Is it because they do not get enough money out of him? It seems as though it is time we had an honest, business administration and a man at the helm who can not be moved by the interests and against the common people. I believe we would have such a man in Senator Johnson. Talk about the people ruling when our people whom we have chosen to represent us go contrary to our wishes in electing delegates as they did at Kalamazoo—*Mrs. A. S. R., Milford, Mich.*

I attended the convention at Kalamazoo, but not as a delegate. I was told that I might be seated with the Macomb county delegation if I would vote with the majority for Gov. Sleeper against Congressman Cramton for delegate-at-large. This, I refused to do, and because I was not a regularly elected delegate, withdrew. Macomb county gave Senator Johnson the largest percentage of its vote of any county in the state, but only two of its eighteen delegates were pledged to vote for Johnson. I felt that the people of Michigan having given Johnson their vote at the primary, the delegates to the State convention should elect Johnson delegates to the national convention. Sleeper was for Lowden; Cramton for Johnson, but the great majority of the delegates from Cramton's district, the seventh, would have voted for Sleeper in preference to Cramton had they not both withdrawn. They were perfectly willing to betray the wishes of their constituents. But that's the old convention system right over again, in which the people do NOT rule. —Editor.

A CONSUMER HEARD FROM

I was pleased to receive your letter of the 21st ultimo, and thank you for the pains you took to explain some things on the milk question, referred to in my letter to the *Detroit News*. That *News* letter, I might say, however, was not meant for the farmer, or the producer of milk, but rather for the Detroit distributor of this very essential food who claims he must have 100 per cent on the cost price to him for his profit and expense. I asked for a sworn statement of the net profits of these Detroit concerns, but they "stand mute" on the question and Judge Tuttle, no doubt will advise them that this is a "constitutional right."

I was born and raised on the farm, where most of our cleanest and best citizens were born, and have not forgotten my father's struggle to keep a balance on the right side of the ledger and quite often it was a struggle to keep the proverbial wolf from the door."—*Geo. A. Kennedy, 360 Hancock Ave., Detroit.*

Mr. Kennedy had a communication in one of the Detroit dailies in which he criticized the decision which prevented the Fair Price Board from reducing the price of milk. We wrote to Mr. Kennedy giving him the farmers' side of the proposition and the above letter is his reply.—Editor.

Lower Your Milk Production Cost

Our booklets show you how to feed Unicorn the right way—how to cut the cost by feeding less.

Right now, more than ever before, you are forced to hold down the cost of milk production, or work without profit.

A quality feed, Unicorn Dairy Ration, will help you do this.

Quality in Unicorn means two things:

1. Using only the best feeds obtainable.
2. Putting them together the right way.

Everywhere, the "high men" in cow testing associations, who make the largest net profit, are Unicorn feeders.

Dairymen have cut their grain bills ten per cent and more by feeding Unicorn.

You cannot say that your production cost has touched bottom until you have fed Unicorn.

CHAPIN & COMPANY, Chicago

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

"I AM A farmer's daughter and I expect to be married in June. We can't afford anything very expensive but I would like something nice and yet simple. I have light hair, blue eyes and a light complexion . How should I dress? In what color and what kind of cloth? I don't expect to wear a veil so how should I dress my hair and should I wear flowers in it. How far from the floor should my skirt be? Can you print a pattern for me in M. B. F.? It is to be in the evening, so what would you suggest for refreshments? I intend to make the dress myself."

Undoubtedly the question confronting you is one which a good many girls are asking this spring, and so I am glad to take it from the space which we have used for our Readers Own Column, and give it first place this week.

In the first place let me congratulate you on your decision to have a simple dress inasmuch as you are to make it yourself and cannot afford an expensive one. Really the ideal wedding gown of all generations has been simply made, no matter how expensive the material of which it was fashioned. That is the reason it has been possible for girls today to remodel and wear their mother's wedding gowns.

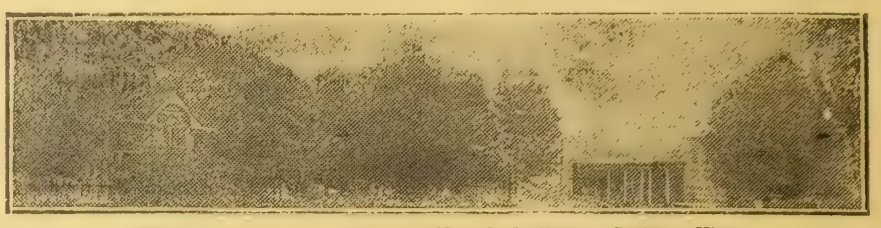
As to color—in my opinion there is no choice. White is for the bride and always has been. No matter whether you are dark or light, white is universally becoming, universally worn and it is such a sensible thing to have inasmuch as it can later serve the purpose of a fine summer dress, if it is simply made and will not look "bridey" six months from now.

The material is greatly a matter of choice and the limit is fixed only by the amount you wish to spend. White satins are only for those who can spend a large amount and have a dress which they will wear only perhaps a half dozen times in their life time. If you wish silks, there are lovely white wash silks, the material of which is so lovely that they need no trim. Then of course there are the Georgettes, which are trimmed only with a simple design in pearl beads. If not made elaborately and carefully handled a dress such as this can be tubbed. However if you would have something appropriate, lovely and yet inexpensive, why don't you choose mull or organdie, both of which materials are girlish and lend themselves to the part very readily.

You did not give me your weight nor your height, and as this has everything to do with the style you will choose for your wedding dress pattern, I really cannot advise you or print a pattern which would suit your particular style. If you are inclined to be at all stout, the slim line can be attained through the judicious use of the long panel, but be sure and do not have any ruffles. On the other hand if tall and slim, you could have the skirt made of two or three deep ruffles on the short overskirt can be used. Then again there is the neck line. A round neck is unbecoming to one with a long slim neck unless a roll collar is fitted so that it breaks the line in the back. The front can be cut as low as you wish if you use the roll collar half way around. If you have a short fat neck, the round or dutch necks will be becoming. I find that you did not give me your address on your letter so I cannot write you personally.

The length of the skirt is nine inches from the floor, but Dame Fashion is so fickle that I would advise you to have a very deep hem put in so that this length can be changed later.

Flowers are worn to fasten the veil in place, but inasmuch as you do not intend to wear a veil, I would not wear flowers in my hair. Rather I would depend on carrying a pretty shower boquet. June is the month of roses and you will be able to secure from friends lovely roses and if you can secure some lilies of the valley for the ends of the shower ribbons, you will have a boquet of which there is no finer.



Attractive farm home of Mr. and Mrs. J. Buffington, Rushton, Mich.

For supper refreshments I would suggest creamed chicken in pastry shells which can be made at home by using gem tins and lining them with pie crust, baking it as you would the shells for tarts. This will serve the purpose just as well as the expensive pastry shells. Serve hot buttered rolls with this and celery and olives or tiny little cucumber pickles. It is not at all necessary to have potatoes at your wedding supper, but if your guests have driven some distance and you wish to have them, I would suggest that you prepare a quantity of mashed potatoes before hand and make the lovely brown potato patties. A salad is also nice to serve with this sort of a supper. You can have fruit salad or cabbage salad. It is too early for tomatoes or they would make the ideal salad to serve with such a supper, using a small firm one for each person, scooping out the inside and filling it with chopped celery mixed with mayonnaise, and placing the tomato on a lettuce leaf.

Then of course you will want ice cream—home made if possible as it will be so much richer and better, and your bridal cake and coffee.

OUR READERS' OWN COLUMN

Dear Editor Woman's Department. —We appreciate the efforts of the M. B. F. and wish you all manner of success. I enjoy the woman's page and find it very helpful. Saw your article on housecleaning and I have a hint I would be glad to pass on: If those wishing to run a curtain rod in the hem of a curtain will wind the end of the rod with thin white cloth and tie this on with thread, it will run into the curtain much more easily and also save tearing the curtain material.—Mrs. C. E. H.

Dear Miss Ladd—My niece graduates next month. She lives in Grand Rapids and I do not know her likes and dislikes very well, but want to send her some nice little gift. Can you suggest something?—Mrs. A. L.

Dear Mrs. L—Why not a book? Every girl graduate is fond of good books. They have learned the value of them, and there is a certain pride in the accumulation of one's own library. Any one of the stories by Mary Roberts Rinehart are interesting to a girl. They are well told and will be sure to please. However, if the family of your sister does not happen to possess a set of Mark Twain's works, any one of his books, in a good binding makes a book which can be used to start a set and is one of the very nicest gifts that can be made. From time to time an additional volume can be added in the same binding and this makes a present which is valuable because books of this character can be read again and again while the popular fiction has served its purpose with one reading. It would be well to consult with your sister—find out what kind of reading the niece likes best—and then be guided by this in your choice of a book.

It gives the editor of this page a great deal of satisfaction to receive letters such as came last week in which the writer, from Gladwin county, enclosed a picture of her newly completed home and asked that we assist her in choosing the best kind of plants, trees and shrubs to beautify the grounds. It tells us us that the little articles we prepare from week to week meet with approval and are the sort of articles which are interesting and useful.

NOTICE: Will Mrs. Homer Henny please send me her correct address. This was not placed on the back of the baby picture submitted and we are anxious to return the picture of her child.

THE INNATE LOVE OF HOME

NO MATTER how happy we may be elsewhere, home is concentrated in one tiny place, and there is that in us which makes it impossible to scramble our affections all over the globe. We have to roll them up, when the final test comes, to one doorway, one little room—somewhere. It may be in Utah or Texas, Maine or Georgia, California or Connecticut. Not that we love the rest of the world less, but that we love one little spot more. We love humanity, but not to the extent that we love our very own. And that concentrated love is what makes civic pride. And it makes marriage possible, and fatherhood and motherhood. If we scatter our emotional citality too much we will find ourselves strangely lacking in real friends. For we are but human; and one country, one flag, and one little town, if we are made of the right stuff, mean more to us than any other.

KEEP LAMPS SHINING BRIGHTLY

A GOOD many industrious and cleanly disposed housewives like Aladdin of old, believe in rubbing their metal lamps. Aladdin got what he wished for when he rubbed his glim producer, but the housewife generally gets, in the course of time, what she doesn't want; namely, a shabby appearing lamp, for it doesn't take long to rub the lacquer off metal.

Lamps wouldn't be permitted to remain shabby very long if housekeepers knew how simple a process it is to re-lacquer or re-enamel them. Paint dealers, druggists and dealers in plumbing supplies sell the lacquers and enamels in small quantity containers. Directions for applying usually come with them.

If desired it is possible to make a lamp look like a new one. For instance, a plain brass lamp may be enameled in white or ivory by using the proper undercoating. Other preferred effects are as easily obtainable. So while Aladdin could get something with his lamp that the women of the present day cannot get, they may console themselves by the thought that they can do things with their lamps that he couldn't do.

RENEW WINDOW SHADES

WINDOW shades that have deteriorated can be made to look almost as good as new at small cost and with little trouble. Go to a paint store and buy a can of ordinary flat wall paint. Reduce it by adding twenty-five per cent of turpentine. Remove the curtains from the rollers; tack them down smoothly on a bare floor or table and apply one coat of the paint. To eliminate brush marks go over it immediately with a dry stiff-bristled brush. If it is desired to have the shade harmonize with the decoration or trim of the room, any color of flat paint may be obtained with which to accomplish it.

WEEKLY CHEER

It's the song ye sing ,and the smile ye wear,
That's a-makin' the sun shine everywhere.

James Whitcomb Riley.

People

By Marguerite Wilson, in The Independent

Sometimes when I am happy and at rest,
I think I like all kinds of people best;
Even the shallow, round-eyed gossips give
A little zest to life. So let them live!
Just to be near my kind and hear them talk
Seems very good to me. Oh, dearer far
The racket on the streets where people walk
Than all the prairie's quiet spaces are.

But when I think more keenly, I confess,
There are a few that I like somewhat less
Than others; those who smugly speak to me
With minds elusive as crabs upon the rocks.
Who reach limp fingers out too languidly
When they shake hands; whose kindness only mocks.
I hope that they may prosper in some good way
And find them friends according to their needs,
Die, without doing much harm, some quiet day,
And reach the heavens of their several creeds.

But I like people who can make things grow,
Whose hands are wise to move the quickened earth
In spring, so that the new vine-tendrils know
An easier grace and a more confident mirth,
I like the makers of a thousand things,
Of music, magic of words, or mighty wings
That cut the winds as they go droning through
The wondering deeps of the defiant blue.

And always I can find out much of good
Of people who know how to handle food;
I think there is some merit of heart or head
In any person who can make good bread,
And make it lovingly, and put away
The golden-crusted loaves as if to say,
"It is no small matter to remake mankind
Daily with flour, the body and the mind."

I like firm health that never comes by chance,
And by a quick handshake, and a greeting meant,
A sudden glint of hardness in the glance,
And slow thought spoken out of strong content.
I like an athlete as I like a tree,
And both are very beautiful to me.
I like men with the manners of great kings
In all the little worlds of common things,
Shrewd, humorous men, still quick to kindliness
With dream they laugh at, rather than express,
And busy women, ample and motherly,
Guarding the little children they have borne
Or making their homes houses of refuge, free
To all who are unmothered and forlorn.

Mellow old autocrats to whom the years
Have given wisdom, and young pioneers
Who lay rough hands upon a living truth
And hold it with the passion of their youth.
And those who can be gray through middle-age.

And every questioner, and every sage—
All those have my respect; wholeheartedly
I would give thanks for all their gifts to me.
Since I have been poor and sick my words would bless
The sick and poor with every gentleness.
And since I have known sadness very well,
I care for the sorrowful more than I can tell.
And I revere the flower-like, serene.
Spirits that bloom on hills where air is pure,
Lonely and rare with a long climb between
Their world and the lower world that I endure.

But dearest are the homes where children play,
Where men smoke quietly to end the day,
Where women sew and sing and dream and brood,
Declaring, without speech, that life is good,
Where with some homely ritual of delight
The year's high festivals are made more bright.
Oh, when in such a simple home I rest,
I think that I like simple people best.

The Children's Hour

DEAR CHILDREN: The days of kite flying and marbles is here—as well as the days of planting—that is what life is made up of—a little work and a little play.

Those boys who are fortunate enough to belong to the Boy Scouts are taught how to build a fire without matches, but for the benefit of those who are not, here is a very good method which you can try after you have raked the yard for mother or piled up the brush for father.

Fire without matches may be produced with a handful of dry grass and two pieces of wood, one called the tinderwood, and the other a piece of very hard or very soft wood that is called the drill or spindle. A handful of dry grass is placed on a solid rock or board, and a notch is cut in the tinderwood. The tinderwood is then placed on the dry grass and the spindle is inserted in the notch in the tinderwood. The spindle is made to spin at a fast rate between the palms of the hands until a coal is produced. Then the dry grass is taken up in the hands and blown on to make a blaze. It is then dropped on the ground and dry twigs and other grass piled on.

A much quicker method than using the palms of the hand is to have a bow with a leather thong stretched on it. The spindle is fixed with one turn around it and made to revolve very fast in the notch of the tinderwood.

We have such a lot of letters this week, and I have a nice little poem for you and we can't crowd out our weekly puzzle so I won't write you a long letter. Affectionately yours.—LADDIE.

THE TOWN OF YAWN

My friend have you heard of the town of Yawn
On the banks of the river Slow?
Where blooms the Waitawhile flower fair,
Where the Sometimeorother scents the air
And the saft Goeasys grow?
It lies in the valley of Whatstheuse,
In the province of Letherslide;
That tired feeling is native there—
It's the home of the litless I don't care,
Where the Putitoffs abide.
The Putitoffs never make up their minds,
Intending to do it tomorrow;
And so they delay from day to day
Till they business dwindles and profits decay
And their days are full of sorrow.

—*The Store Magazine.*

OUR BOYS AND GIRLS

Dear Laddie—I am in the 7th grade at school. My teacher's name is Miss Maude Hughes. I have one sister, Fern, 9 years old and a brother 18 years old. We live on a 120 acre farm. We have six horses, fourteen head of cattle and about seventy lambs. My father takes the M. B. F. and likes it very much. I also like the little boys and girls letters in the Children's Hour. I have found the seventh and eighth bird of the bird puzzle and am sending them to you. I will close so you will have room for some other little boys or girls letters. Yours truly, Hazel Williams, Elsie, Mich.

Dear Laddie—I am a girl 9 years old and in the 3rd grade at school. My teacher is Miss Una Gage and we like her very well. My grandpa takes the M. B. F. and likes it very much. We live on a 240 acre farm with the Huron river running through it. We live about 4 miles from Brighton. I like to read the letters and stories in your paper. I have one brother, his name is John and he is 7 years old. We have 6 cows, 5 horses and about 50 chickens and one pig. I hope to see my letter in print. Yours truly, Clara A. Dymond, Brighton, Mich.

Dear Laddie—I thought I would write you a letter to see if I could win a prize. I am drawing a picture. We take the M. B. F. and like it. I like to read the boys and girls letters. I like the complete story best. I am going to teach when I get big. I am 11 years old and in the fifth grade. I have five brothers and one sister. We have two horses and two cows and two calves and about ten hens. I guess I will close, hoping to see my letter and pictures in print.—Daisy Timmon, Paw Paw, Mich.

Dear Laddie—I am a little girl eight years old and live on 70 acre farm which lies between two lakes. My father takes the M. B. F. and likes it very much. We have three cows, three horses and two calves. For pets I have a dog and three cats, and five little kittens. I have one sister and two brothers. We raise vegetables to sell at the lake. I am in the third grade. I will close for this time hoping to see my letter in print.—Adaline A. Zylman, Vicksburg, Mich.

Dear Laddie—I have been reading the boys and girls letters in the M. B. F. and like them very much. I am a boy 13 years and in the seventh grade. My teacher's name is Miss Cawell. I live on an 80 acre farm. We have 3 horses, 5 cows, 40 chickens, 12 little pigs, 3 calves. I have 4 sisters and 3 brothers. I have just had the measles. One of my sisters is married and lives three miles from here. Hoping to see my letter in print.—Ralph Bush, Shepherd, Mich.

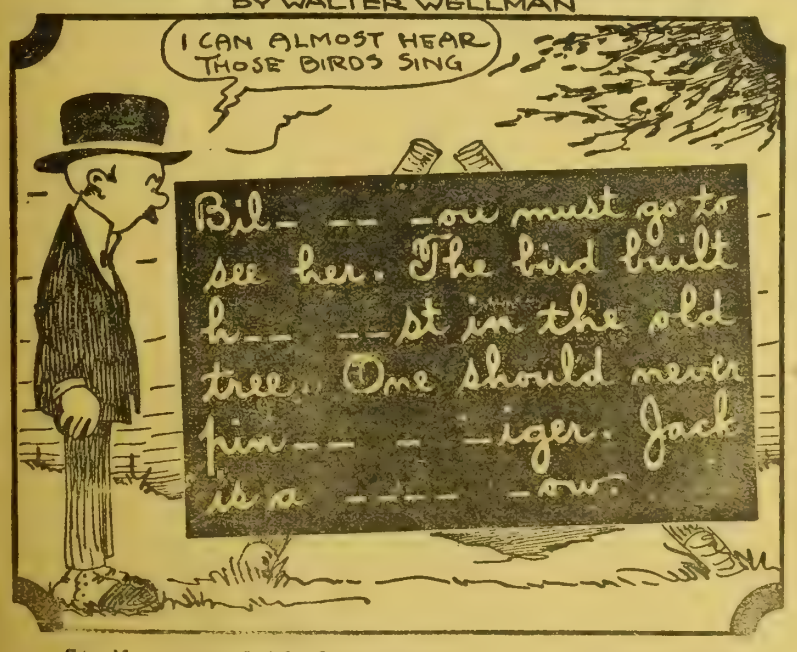
Dear Laddie—I am eleven years old and I am in the fourth grade at school. My teacher's name is Miss Christine Juhl. There are two rooms in our school. I go to Juhl school. For pets we have four cats and two rabbits. We have four horses, 24 cows and about 90 chickens. I have four brothers. As my letter is getting long I will close for this time, haping to see my letter in print—William W. Juhl, Sandusky, R 1.

Dear Laddie—I am a girl 11 years old and in the sixth grade at school. My birthday is on the 26th of July. I have 2 brothers and one sister. We have 3 cows and 3 horses. My father takes the M. B. F. and we like it very much.—Helen Rogers, Munger, Mich.

Dear Laddie—I am a boy 12 years old. I go to school and am in the 6th grade. We live on a 5 acre farm. My father works in Detroit and my mother takes the M. B. F. and I help her do the work on the farm.—Gusty Patrix, Lapeer, R 1, Michigan.

CONCEALED BIRDS

BY WALTER WELLMAN



I CAN ALMOST HEAR THOSE BIRDS SING
Bil- -- -ow must go to see her. The bird built h-- --st in the old tree. One should never tim-- - -iger. Jack is a ---- -ow.

See if you can finish the sentences so they will make sense and, at the same time, use only the names of birds in doing so.

Answer to last week's puzzle—Pasadena, Cal.; Parkersburg, W. Va.; Williamantic, Conn.; Fresno, Cal.; Wilmington, Del.

DURABILITY OF THE DE LAVAL

This illustration is reproduced from a photograph of Mr. Jacob Rimelspach, in Ohio, and his DeLaval Separator, which has been in use for over 25 years.

The machine was brought in on a local De Laval Service Day to be looked over by the service man.

There was nothing the matter with the separator, and after it was cleaned up and oiled Mr. Rimelspach took it home with the comment that it ought to be good for another 25 years.

The De Laval Separator gives the greatest value for the money, because it gives better and longer service. Mr. Rimelspach's experience is equaled by the records of a large number of De Laval machines.

Considering its greater durability alone, the De Laval is the most economical separator to buy; and with its cleaner skimming, easier running, greater capacity and unequaled service, the price of a "cheaper" machine is high in comparison.

If you don't know the De Laval agent in your community, write to the nearest De Laval office

THE DE LAVAL SEPARATOR CO.

WHITE BLOSSOM **SWEET CLOVER**

BETTER THAN RED CLOVER FOR SOILING AND A VALUABLE HAY CROP

Does not winter-kill. Succeeds on all kinds of soil. Better than red clover as a soil builder. Prepares the land for alfalfa and other clovers. Equal to alfalfa in feed value. We do not handle Southern seed, but offer choicest selections of Michigan grown; 99.75% pure; high germination, scarified, best in the world. Selling at about half the price of red clover seed, every farmer should investigate it. A Special Bulletin explaining cultivation and uses of this most valuable legume, sample of seed and our 1920 Seed Book free, on request. We are headquarters for Michigan Clover, Alsike, Vetch, Peas, Northwestern Alfalfa, etc.

THE C. E. DEPUY CO., - - Pontiac, Michigan

BLACK FLAG

15c 40c 75c Except West of Rockies

Saves Young Chicks

Lice and mites kill chicks. Black Flag will save them. Blow into feathers of setting hens and down of chicks to kill head and body lice; blow into cracks in coops and nests to kill mites. Use powder gun. Kills insects by inhalation. Bugs don't eat it—they breathe it, and die. Destroys ants, flies, fleas, mosquitoes, bedbugs, roaches, some moths, and lice on animals, birds and plants. Harmless to people and animals. Look for BLACK FLAG trademark and red-and-yellow wrapper. At drug, department, grocery and hardware stores, or direct by mail on receipt of price.

U. S. Gov't (Bulletin 771, Agri. Dept.) shows glass containers keep insect powder freshest. Buy Black Flag in SEALED GLASS BOTTLES instead of "insect powder" in paper bags or boxes.

Dyed Her Faded Skirt, Also a Coat

"Diamond Dyes" Make Shabby Apparel Just Like New—So Easy!

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, draperies,—everything!

A Direction Book is in package.

To match any material, have dealer show you "*Diamond Dye*" Color Card.

WANTED MICHIGAN FARMS IMPROVED OR UNIMPROVED. HUNDREDS OF buyers from this and other states are looking for Michigan improved farms and unimproved farm lands. I know how to reach these buyers. Write me a plain, short description of what you have to sell and I will send you particulars, without obligation. Mr. Smalk, care of The Business Farmer, Mt. Clemens, Mich.

MARKET FLASHES

MICHIGAN FARMING CONDITIONS

The number of men that have left the farms of Michigan during the past three years is three times as great as the number of Michigan men that died or were killed in the Civil War. It would require the present male population over 15 years of age, of Lansing and Flint to replace them. There are enough vacant farm houses in Michigan to conveniently house the population of Grand Rapids. The number of farm houses vacated within the past 12 months could easily accommodate all of the people in the city of Jackson with homes.

Eight and seventy-four hundredths per cent of the farms of the state are wholly idle this year, an area of approximately 1,668,000 acres, equal to about five ordinary counties. The total men and boys over 15 years of age on the farms of the state is 230,000, or 32.5 acres to be worked by each man or boy.

These figures are based upon a complete survey made during the past four weeks by the Michigan Crop Reporting Service under the joint supervision of Mr. Coleman C. Vaughan, Secretary of State and Verne H. Church, Field Agent, U. S. Bureau of Crop Estimates, and aided by the Office of the Superintendent of Public Instruction. A blank was mailed to each rural school director asking for a report upon the farms of his school district. The compilation of these reports shows that 18,288 farms are idle this year as compared with 11,881 last year. While the abandonment, which in many cases is temporary because of the lack of tenant farmers, is least in the best farming sections, it is found to be a community movement. Many districts show no abandonment, but where families began leaving the act seems to be contagious until, in some cases, one-third to one-half of the school district had migrated to the city. In the south-central district only 4.7 per cent of the farms are idle, and in some counties only three per cent. In the northwest district of the Lower Peninsula, 19.2 per cent are idle and occasional counties report 25 per cent or more.

This abandonment does not tell the whole story. A large percentage of men on farms are past fifty years of age and without help. The average size of farms is 91.5 acres, and there are but 11 men and boys to each ten farms, or but one man or boy to each 82.5 acres, with many of these unable to do a full man's work. There are 30,300 vacant houses on farms, 10,000 of which have been vacated within the last year.

Of the 276,000 men on farms three years ago 46,000 have since left; 30,000 of them during the past year. This unprecedented exodus from the farms indicates that city and industrial life have become more profitable and satisfactory than farm life. A recent preliminary survey conducted by the State Farm Bureau shows similar and comparable results, and that there would be a decrease of 15.8 per cent in the acreage of cultivated crops this year as a result. It's report also shows that the number of dairy cattle has decreased 11.3 per cent during the past year.

As Michigan is only typical of the conditions found in most of the other states, it is evident that the production of farm crops will decline as long as the present situation continues, and as long as the cost of producing these crops follows so closely the price the farmer receives. With a steadily decreasing supply and increasing demand, the price of food will continue to advance.

The only remedy is a reversal of present conditions through an increase in the number of food producers and a corresponding decrease in the number of non-producers of food. This reversal will only come when the remuneration for growing food crops becomes as great in proportion, taking into account investment, risk and labor, as that of other occupations; and when farm life takes on attractiveness equal to that of city life.

LAST MINUTE WIRES

DETROIT—Oats dull. Corn and wheat steady. Shipments of grain increasing. Beans higher and firm. Potatoes in fair demand.

CHICAGO—Corn and oats decline on receipt of large shipments. Cattle and hogs lower. Provisions down 15 to 30 cents.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT CONTINUES UPWARD

WHEAT PRICES PER BU., MAY 18, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	3.07		3.26
No. 2 White	3.05		3.26
No. 2 Mixed	3.05		3.22
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.65	2.36½	2.86½
No. 2 White	2.60		
No. 2 Mixed	2.63		

Wheat continues to advance nearly every day and the market remains firm. Foreign demand is given credit for most of the strength. It is estimated that America cannot fill the demands from Europe and close observers are unable to predict the outcome. Exporters are bidding any price to secure wheat and there appears to be no quantity that will satisfy them. The strike is still holding back the movement and stocks are smaller than a week ago. Dealers are attempting to lower prices but their efforts only cause the market to go higher. Reports of good growing weather and that there will be plenty of cars for the grain still in the farmer's possession causes no downward tendency whatever. The talk of plenty of cars is all propaganda it appears, as a western railroad man recently stated at a meeting of the dealers in Chicago that there was no chance of large receipts because the railroads did not have the equipment to move the grain. Conditions in the market at present point to higher prices for wheat.

CORN ADVANCES

CORN PRICES PER BU., MAY 18, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		2.12	2.30
No. 3 Yellow	2.15		
No. 4 Yellow	2.10		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.80	1.76	1.95¾
No. 3 Yellow	1.77	1.76	

During the past week many dealers in corn sold nearly all their holdings in an attempt to lower the price and were doing it quite satisfactorily when suddenly they became frightened and began buying, with the results that corn reached a record level. Commission houses are advising against buying which shows the market is in a strained position and looks as if corn prices were due for a drop. The planting averages behind in Michigan but not in all states. Illinois reports corn planted early this year and a larger acreage than last. And it is estimated that the acreage will average higher in the United States than it was a year ago. Corn must seek lower levels soon because, as I have said in these columns before, farmers cannot raise hogs and cattle for market with feed at the present prices.

OATS LOWER

OAT PRICES PER BU., MAY 18, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.26	1.16½	1.47
No. 3 White	1.25	1.14	
No. 4 White	1.24		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.74	.70	.81
No. 3 White	.73½	.68¾	
No. 4 White	.72½		

Oats and corn, for the first time in many months, seems to have parted company. Reports of plenty of cars and good growing weather appears to have caused oat prices to reverse and start downward but I believe this weakness is only temporary, owing to the small acreage planted this year.

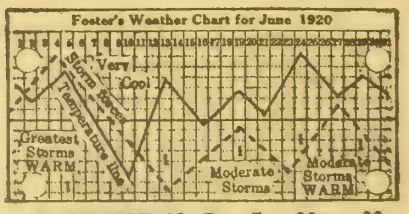
BEANS ACTIVE

BEAN PRICES PER CWT., MAY 18, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.85	7.75	8.00
Red Kidneys		13.50	15.25
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.50	7.75	8.00
Prime		7.00	7.50
Red Kidneys			12.25

Receipts of beans are small and the market is called steady to firm. Some sales have recently been mentioned at a small advance but the greater part of the trading is done at unchanged prices. Several bean raising states report a smaller number of acres will be planted this year than last. It looks as if beans will be a good crop for farmers in Michigan to raise this year.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., May 22, 1920—Warm waves will reach Vancouver, B. C., about May 27, June 8, 10, 16 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of May 28, June 3, 11, 17; plains sections 29, June 4, 12, 18; meridian 90, great upper lakes, Ohio-Tennessee and lower Mississippi valleys 30, June 5, 13, 19; great lower lakes and eastern sections 31, June 6, 14, 20, reaching vicinity of Newfoundland about June 1, 7, 15 and 21. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

June temperatures are expected to average about normal with highest temperature waves crossing meridian 90, as they move eastward, near June 3, 13, 24, and lowest temperature waves near May 30, June 9, 16 and July 3. The June 9 cool wave will arrive earlier in Canada and will carry frosts farther south than usual. The severest storms will be during first week of June. I hang out the danger signal for them. Following those severe storms will come a great change in the cropweather which will not be much like the cropweather of the past several months. For the balance of June less extremes of wet and dry will prevail and moisture will be more evenly distributed.

A new feature will be noted in the weather chart. The broken line represents the intensity, or degree of the force, in the storms. Where that broken line goes highest on the chart the storms are expected to have greatest force. Of course I can not give the exact days. All weather features are included in the word storm. If the center of the storm passes over your locality you first get clear skies followed by warmer, cloudy, warm, stormy, rain or snow, clearing, cooler, all these may be included when I say storm.

W. T. Foster

RYE HIGHER

Rye on the Detroit market advanced 5c and is quoted slow and steady at $2.25 for No. 2. Receipts are small and local demand is not important.

Exporters are talking rye in large lots, but the greater part of this was purchased some time ago; in fact, it is believed that foreigners own most of the visible supply of rye in this country. Some dealers, states a reliable grain trade paper, have promised orders that they are unable to fill.

POTATOES FIRM

SPUDS PER CWT., MAY 18, 1920		
	Sacked	Bulk
Detroit	7.50	
Chicago	7.40	7.50
Pittsburg	7.50	
New York		8.00
PRICES ONE YEAR AGO		
Detroit	2.13	2.00
Chicago	2.00	2.00
Pittsburg	2.40	2.30
New York	2.60	2.35

There is nothing new in the potato situation on the Detroit market. Michigan potatoes are about out of season and dealers are depending on Canadian potatoes to supply the needs of our state, but demand must be light as Canada's supply is none too great. New potatoes are a little lower but they are coming to market in very small quantities. The Detroit market is firm and consumers are more inclined to purchase than at any time since the boycott was inaugurated. Demand in Chicago remains fairly good.

BOSTON WOOL MARKET

The Commercial Bulletin says: "The market has been dull this week for the most part and prices are easing a bit, except on the choice fine wools the world over."

Prices as quoted by that journal are:

Ohio and Pennsylvania fleeces—Delaine, unwashed, 95c@1; fine unwashed. 72@73c; 1-2 blood combing, 83@85c; 3-8 blood combing. 65@67c.

Michigan and New York fleeces—Fine unwashed, 70@73c; delaine unwashed, 95c; 1-2 blood, unwashed, 80@82c; 3-8 blood unwashed, 64@66c.

LIVESTOCK MARKETS

DETROIT—Cattle: Market heavy, cattle very dull, all others steady at last week's close; best heavy steers, $12; best handy weight butcher steers, $11.50@12.25; mixed steers and heifers, $10@11.50; handy light butchers, $9@11; light butchers, $8@9; best cows, $9; butcher cows, $7@8; cutters, $6; canners, $5@5.75; best heavy bulls, $9@9.50; bologna bulls. $8@8.50; stock bulls. $7.50@8; feeders, $9@10.50; stockers, $7@8.50; milkers and springers, $85@115. Veal calves: Market active, $2 higher than last week's close; best, $16@17; others, $10@15. Sheep and lambs: Market steady; best lambs, $17; fair lambs, $14@15; light to common lambs, $8@11; fai rto good sheep, $10@11; culls and common, $4@6. Hogs: Market 50c lower than last Thursday; mixed hogs, $14.50; pigs, $14.25; heavy $14.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Synopsis of Preceding Chapters

FRANCIS MORGAN, a New York millionaire, becomes bored with society and decides to take an extensive fishing trip. Regan, Francis' broker, plans to ruin Francis through his Wall Street holdings. Regan pays Torres, a dark-skinned visitor from the Carribean Islands who knows of a treasure buried by a pirate ancestor of Francis,' to lure young Francis away. The lure works and Francis starts out alone. He lands on an island whither he has been beckoned by a girl on the shore. The girl mistakes Francis for a lover with whom she has quarreled. Francis explores another island where he meets a young man who gives his names as Henry Morgan and proves to be a relative of Francis.' He is also hunting for the treasure. They form a partnership. Francis learns that Henry is the lover of the girl he met and that her name is Leoncia Solano. Francis returns to the first island where he is captured by Torres and the Jefe Politico of San Antonio. They proclaim him to be Henry, whom they wish to hang for a murder he did not commit. They are about to hang him when Henry appears. They release Francis and throw Henry into prison. The Solanos and Francis release Henry and they escape to the boat that Francis has chartered. They are pursued by Torres and the Jefe with his soldiers. They land on an island where they procure horses and start through the hills with the Jefe and his gang in pursuit. Torres with the Jefe and his gendarmes succeed in capturing the Morgans and their friends, but as they are about to torture Henry and Francis they are surrounded by a band of men. These men are followers of a blind-man, called "The Cruel Just One," who lives in the hills. The men take their captives before their leader who passes judgment on them. The Morgans and Solanos are freed. A price is put on the Jefe's head, which Francis pays, then the Jefe, Torres and their soldiers are freed also. Francis protects a peon who to show his gratitude tells him that his father will lead them to a hidden treasure. The peon and his father with the Morgans start on a search for the treasure. Leoncia follows and at the end of the first day catches up with them. They are attacked by a band of strange men, but succeed in driving them off and again resume their search. They explore a cave in which, it is believed, the treasure is hidden.

"BUT A couple of emeralds and a couple of rubies, no matter what size should not constitute the totality of the Maya treasure," Henry contended. "We are across the threshold of it, and yet we lack the key——"

"Which the old Maya, back on the barking sands, undoubtedly holds in that sacred tassel of his," Leoncia said. "Except for these two statues and the bones on the floor, the place is bare."

As she spoke, she advanced to look the male statue over more closely. The grotesque ear centered her attention, and she pointed into it as she added: "I don't know about the key, but there is the key-hole."

True enough, the elephantine ear, instead of enfolding an orifice as an ear of such size should, was completely blocked up save for a small aperture that not too remotely resembled a key hole. They wandered vainly about the chamber, tapping the walls and floor, seeking for cunningly-hidden passageways or unguessable clues to the hiding place of the treasure.

"Bones of tierra caliente men, two idols, two emeralds of enormous size, two rubies ditto, and ourselves, are all the place contains," Francis summed up. "Only a couple of things remain for us to do: go back and bring up Ricardo and the mules to make camp outside; and bring up the old gentleman and his sacred knots if we have to carry him."

"You wait with Leoncia, and I'll go back and bring them up," Henry volunteered, when they had threaded the long passages and the avenues of the erect dead and won to the sunshine and the sky outside the face of the cliff.

Back on the barking sands the peon and his father knelt in the circle so noisily drawn by the old man's forefinger. A local rain squall beat upon them, and, though the peon shivered, the old man prayed on oblivious to what might happen to his skin in the way of wind and water. It was because the peon shivered and was uncomfortable that he observed two things that his father missed. First, he saw Alvarez Torres and Jose Mancheno cautiously venture out from the jungle upon the sand. Next, he saw a miracle. The miracle was that the pair of them trudged steadily across the sand without causing the slightest sound to arise from their progress. When they had disappeared ahead, he touched his finger tentatively to the sand, and aroused no ghostly whisperings. He thrust his finger into the sand, yet all was silent, as was it silent when he buffeted the sand heartily with the flat of his palm. The passing shower had rendered the sand dumb.

He shook his father out of his prayers, announcing:

"The sand no longer is noisy. It is as silent as the grave. And I have seen the enemy of the rich Gringo pass across the sand without sound. He is not devoid of sin, this Alvarez Torres, yet did the sand make no sound. The sand has died. The voice of the sand is not. Where the sinful may walk, you and I, old father, may walk."

Inside the circle the old Maya, with trembling forefinger in the sand, traced further cabalistic characters; and the sand did not shout back at him. Outside the circle it was the same—because the sand had become wet, and because it was the way of the sand to be vocal only when it was bone-dry under the sun. He fingered the knots of the sacred writing tassel.

"It says," he reported, "that when the sand no longer talks it is safe to proceed. So far I have obeyed all instructions. In order to obey further instruction, let us now proceed."

So well did they proceed, that, shortly beyond the barking sands, they overtook Torres and Mancheno, which worthy pair slunk off into the brush on one side, watched the priest and his son go by, and took up their trail well in the rear. While Henry, taking a short cut, missed both couples of men.

CHAPTER XV.

"EVEN SO, it was a mistake and a weakness on my part to remain in Panama." Francis was saying to Leoncia, as they sat side by side on the rocks outside the cave entrance, waiting Henry's return.

"Does the stock market of New York then mean so much to you?" Leoncia coquettishly teased; yet only part of it was coquetry, the major portion of it being temporization. She was afraid of being alone with this man whom she loved so astoundingly and terribly.

Francis was impatient.

"I am ever a straight talker, Leoncia. I say what I means, in the directest, shortest way——"

"Wherein you differ from us Spaniards," she interpolated, "who must garnish and dress the simplest of thoughts with all decorations of speech."

But he continued undeterred what he had started to say.

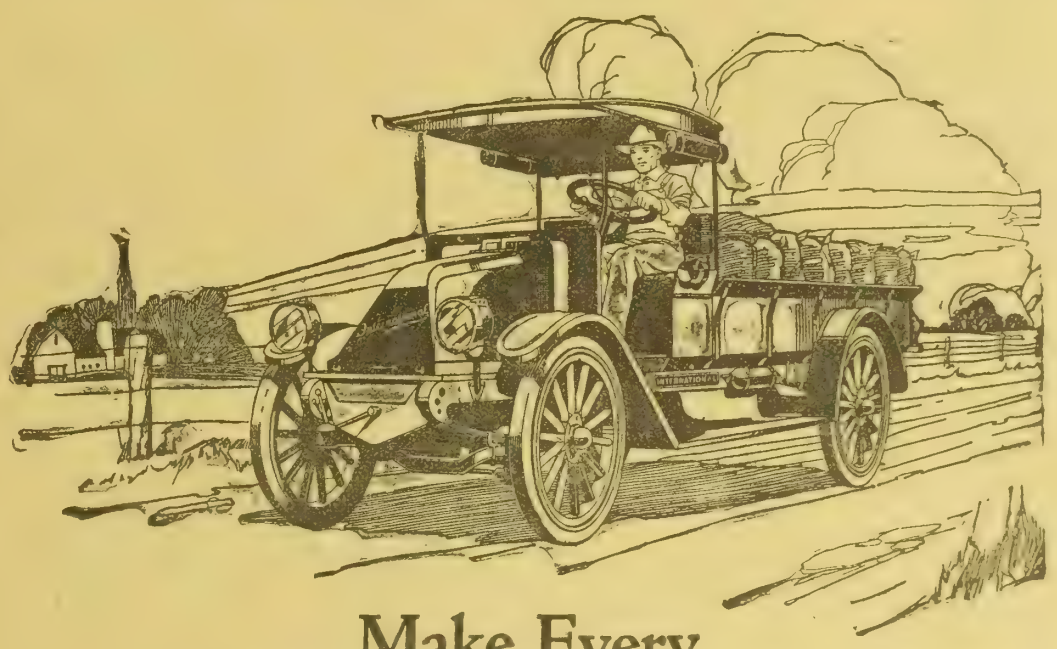
"There you are a baffler, Leoncia, which was just what I was going to call you. I speak straight talk and true talk, which is a man's way. You baffle in speech and flutter like a butterfly—which, I grant, is a woman's way and to be expected. Nevertheless, it is not fair . . . to me. I tell you straight out the heart of me, and you understand. You do not tell me your heart. You flutter and baffle, and I do not understand. Therefore, you have me at a disadvantage. You know I love you. I have told you plainly. I? What do I know about you?"

With downcast eyes and rising color in her cheeks, she sat silent unable to reply.

"You see!" he insisted. "You do not answer. You look warmer and more beautiful and desirable than ever, more enticing, in short; and yet you baffle me and tell me nothing of your heart or intention. Is is because you are woman? Or because you are Spanish?"

She felt herself stirred profoundly. Beyond herself, yet in cool control of herself, she raised her eyes and looked steadily in his as steadily as she said:

(*Continued next week*)



Make Every Minute Pay Dividends

DURING these days of short working hours, high wages and unsettled labor conditions, every hour saved for essential work is money in your pocket. Every hour you spend on the road between your farm and town represents unproductive time. During your busy season someone is getting high wages for this time, or you personally are spending valuable time. Make every minute pay dividends. Reduce the number of hours spent on the road and increase the hours of productive farm work.

You can haul your farm products to town with an *International Motor Truck* and haul supplies back to the farm in about one-fourth of the time that would be required with a team and wagon—a road saving of 300%. Thereby you save, during the year, many hours for necessary farm work—hours and minutes that total into days. You save money in wages, or at least make the high wages that you are paying someone pay you greater returns.

International Motor Trucks are made in nine sizes, from ¾ ton to 3½ ton—a size and style for every hauling requirement. A letter or post-card to the address below will bring complete information descriptive of these low-cost hauling units that make every minute pay dividends.

Farmers Service Bureau

(Prompt, careful attention given to all complaints or requests for information addressed to this department. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

KEEPING CHILD FROM SCHOOL

I have a little girl who was six years old when she entered school last fall but has passed her seventh birthday since. Can she be compelled to continue in school? I have had her out about two weeks on account of bad roads and my needing her help. She has a mile and a quarter to go.—A Subscriber, Osceola County.

Under the statement of facts I think you would be obliged to send the child to school. The law designates the ages between 7 and 16 and to avoid going to school they must be physically unable to attend. If they live 2 1-2 miles away then children under 9 years may be exempt. You probably need the child's assistance but it would be a greater injury to deprive your child of its education.—*W. E. Brown, legal editor.*

MICHIGAN ELECTION LAWS

Where can I get a copy of Michigan election laws. I expected I was a voter till last spring. I came from England when 2 years old but my father never got out only his first papers but when I became of age I voted and voted for fifty years. I did not know about my father not finishing his papers.—E. J., Jackson County.

Copies of the election laws may be obtained from the Secretary of State, Lansing, Mich. As you have supposed yourself entitled to citizenship and have actually exercised the rights and privileges of citizenship I would think it advisable for you to make special application under Act of June 25th, 1910, found on page 264 of the Michigan Pamphlet of the Election laws, edition of 1917.—*W. E. Brown, legal editor.*

ORDERING FENCE REMOVED

I built a fence on my back forty and my neighbor is building a stone fence right up tight to my fence. Now has he a right to do this, and if not how will I go to work to make him remove it.—A. F. H., Marquette County.

You do not say whether your fence is a line fence or not but I conclude that it is and that your neighbor is building his stone fence on his land. I am of the opinion that he has a right to do so.—*W. E. Brown, legal editor.*

COLLECTING PAYMENTS TWICE

If I bought an article and paid for it in monthly payments, but the firm from which I bought the article from after one or two years say now they are going to make me pay it again. Can they do it? I have no record of the article I bought and I am under age. Please explain in your paper and thank you.—A Reader, Midland County.

If you can convince the court or jury that you have paid for the article by partial payments you can not be compelled to pay for it a second time. You can make proof of payments by your own testimony or the testimony of any one else who can swear to the payments.—*W. E. Brown, legal editor.*

THREE MILES TO SCHOOL

Is there such a thing as a certin distance a child can be compelled to walk to school. When the distance is over three miles. Can taxpayers be compelled to run a conveyance. Schoolhouse three miles distant is out of debt and enough taxpayers close by able to support a new one.—W. K., Bay County.

The school law provides that where the school house is over 2 1-2 miles by the usual travelled route a child under 9 years of age can not be compelled to attend school. School districts can not be campelled to furnish conveyance for transportation of children to and from school. If, however, transportation is provided by the school district the pupil must then attend even if the distance is over 2 1-2 miles by the usual travelled route.—*W. E. Brown, legal editor.*

CANADIAN CENSUS

Is there a census taken in Canada and if so how often.—Subscriber, Eaton County.

There is a Dominion of Canada census taken every ten years. Every five years there is a census taken of the prairie provinces, that is, Manitoba, Saskatchewan and Alberta.—*The Grain Growers' Guide.*

THE COLLECTION BOX

(Editor's Note: Farm folks annually lose thousands of dollars in their dealings with firms located in distant cities because of dishonesty, misunderstanding, over-sight or theft of goods in transit. In the majority of cases in a dispute over a transaction the farmer loses. Every month we receive scores of complaints from our readers over this kind of transaction. We take the matter up with the interested party and usually succeed in securing a settlement. Dishonest firms fear publicity and it is frequently in the hopes of avoiding it that they settle without fuss. Where it is clearly shown that the firm from whom the farmer has bought or to whom he has sold is honest and that the delay in payment is excusable, we do not hesitate to absolve the firm from blame, but no judgment can be too harsh for those who deliberately swindle the farmers, or who refuse to answer letters pertaining to the transaction. If any of our readers have had difficulty in getting settlement with any firm with whom they have done business, they may place the case in our hands and we will do everything possible to collect their money.)

CHICAGO FIRM RETURNS $19.62

"The fourth of last September I sent my first order to P—— and sent them a check for $19.62 for an overcoat and gloves. They were a long time sending them, claiming they were out of stock when I ordered and I would have to wait a few day. Finally they sent the coat, but such a coat. It was no good, so I returned it, but have been unable to get either a good coat or my money back. They kept saying they would make it good, but finally refused to answer my letters. I really cannot believe that they have done this with the intention of being dishonest but for some reason they cannot get it straight on their books.—*Mrs. G., Macomb County.*"

This matter was taken up with P—— on April 21st, and they replied that a settlement would be made and on May 4th we received the following letter from Mrs. G.:

"Editor of M. B. F.—I wish to thank you for your kindness. Today, May 4th, I received a check for the full amount due me from the company you wrote to in my behalf. They had my money for over seven months and I had given up hopes of ever hearing from them again."—*Mrs. M. G., Macomb County.*

COMMISSION FIRM MAKES GOOD

"In November, 1919, I sent by express a box of dressed poultry containing six geese and two turkeys to The Holmes Stuwe Co., Detroit. The geese weighed ten pounds each and one turkey weighed ten pounds and the other twenty-five. Remittance was made for only one goose and one turkey. I wrote them twice and sent an addressed envelope and stamps and asked them if that was all they received, and what condition the box was in when it reached them, and I have had no reply to my letters. The price of the geese was 30c per pound and the turkeys 42c, and they sent a check for $10.82."—*Mrs. C. G., Mikado, Mich.*

On April 30th we were able to forward Holmes Stuwe Co.'s check for 17.66, to Mrs. G., who acknowledged receipt of same as follows:

"Dear Editor: I received the check in settlement against Holmes Stuwe Co., of Detroit and will say I'm well satisfied. Thank you for your help. This is a wonderful paper, at least we think so, and all our neighbors who take it. Would you please tell me why they would not settle with me. I think August Baerwolf and his friends had better go back to the land from where they came. We are doing nicely in our dry county. Once more I will thank you for your help. Keep the good work going."—*Mrs. Chas. G., Mikado, Mich.*

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. Minimum size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. CATTLE

HOLSTEIN-FRIESIAN

Purebred Holstein Cattle For Profit

"Both milk and fat are produced at lowest rate in general by the cows consuming the MOST FOOD." This conclusion was reached by Prof. H. H. Wing, Professor of dairy husbandry at Cornell, after a year's observation of the herd at the University experiment station. Holsteins are large and healthy, capable of converting large quantities of coarse feed into the best of milk suitable for all purposes, particularly in demand for infant feeding and for cheese making.

If you are keeping cows for profit, investigate Holsteins.

Send for Free Illustrated Booklets. They contain valuable information for any Dairyman.

THE HOLSTEIN-FRIESIAN ASSOCIATION
295 Hudson Street
Brattleboro, Vermont

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

FOR SALE
THOROUGHBRED HOLSTEIN COWS
combining blood of Traverse City and Maple Crest stock, granddaughters of Friend Hengerveld De Kol Butter Boy.
Prices $300 and up

J. CARL JEWETT, R. 5, Mason, Michigan

Crop Reports

JACKSON (S)—Weather cold and rainy. Farmers who sowed their oats early, report that the seed is rotting in the ground. Sugar scarce and is sold in pound packages, when it can be secured at all, from 30 to 35 cents a lb. Nearly all the small towns have no sugar, and are unable to secure any. A few potatoes were offered at $4.50 per bushel and found ready sale. Farmers are plowing for corn. Feed in the pastures is slow coming on and hay finds ready sale at $30.00 per ton. Eggs, 42c; butterfat, 55c lb. Hired girls demand and get $7 per week and Sundays off and they are not plentiful either.—G. S.

MONROE (N. E.)—Farmers are very busy the last few days finishing oat sowing, land in fair shape, having a nice rain, only too cold for this time of the year. Wheat looking fair, meadows are picking up. Oats that are up doing fairly well, if it rains much will make late for corn also. Milk producers around here think it is time right now to distribute their own milk in Detroit. Only one man raising sugar beets this year that I know of, rest are not going to plant at any price this year, quite a few raised other years. There are no regular market prices just now, as buyers can not get enough of any one thing for a car, and most is shipped by truck farmers are buying hay from one another when they can get it from $28 to $35 per ton. Hay very scarce and hard to get. Some buying oats for feed and seed, some corn for feed. Farmers are forgetting party politics this year and election will not run to no certain party this fall, but be divided as to best men, especially in states where candidates are personally known. Talk to your neighbors about our farmer candidates and explain about the conditions. If your neighbor reads M. B. F. he knows how the land lays, but not all read it.—L. S.

TUSCOLA—Still sowing barley and oats. No corn planted yet. Weather cold with frosts at night, ground a little too wet just now on low ground to work. Not selling but very little and not much to sell but a few oats and little pigs. There is one or two farmers holding about 100 bushels of beans apiece for $8 per cwt. There is going to be a lot of beans planted this year here, also potatoes if the weather warms up in time.—R. B. C. The following prices were offered at Caro: Wheat, $2.60; corn, $1.65; oats, $1.04; rye, $2; buckwheat, $3.50 cwt.; beans (C. H. P.) $7 cwt.; hay, $24; potatoes, $2.75; hens, 27@30c; springers, 27c; butter, 58c; eggs, 40c; beef steers, 9c; beef cows, 6c; veal calves, 10@13c; sheep, 5@8c; labms, 13@14c; hogs, 11@14c.

ST. CLAIR—Farmers just about thru oat seeding. Some are working on their corn and potato ground. The soil is in good condition but the weather is cold and dry. Farmers not selling much now. They have no time to go to market and they haven't got much to sell. Wheat, rye, meadows and pastures are at a standstill for want of rain and sunshine. Some auction sales yet but buyers are bidding about 1-3 less than they were last fall.—I. J. The following prices were offered at Smiths Creek: Wheat $2.70@2.80; corn, $1.60; oats, $1.10; rye, $1.75; No. 1 timothy, $3p@33; No. 1 light mixed, $32@32.50; wheat and oat straw, $10@12; beans (C. H. P. Pea) $6.50; potatoes, $4; hens, 30c; springers, 35c; butter, 60@70; butterfat, 60; eggs, 40; sheep 10@12; lambs, 14@15; hogs, 12@13; beef steers, 8@12; beef cows, 6@8; dressed calves, 22@24.

GENESEE—The weather has been fine this week and the farmers have been busy planting oats and barley. They are now fitting the ground for corn and planting early potatoes. Farm labor is very scarce. There is a shortage of gasoline and kerosene here and if it keeps up much longer farmers will not be able to use tractors. Sugar is also very scarce and very high in price. The farmers are not selling much. Those who have beans are holding them for higher prices.—C. W. S. The following prices were offered at Flint: Wheat, $2.85; corn, $2; oats, $1.20; buckwheat $3 cwt.; beans (C. H. P.) $7; beans (red kidney, $11; hay, $27; potatoes, $3.60; cabbage, 7c lb.; cucumbers, $3.25 per doz.; hens, 35c; springers, 35c; ducks, 32c; geese, 32c; turkeys, 40c; butter, 65c; eggs, 44c; beef steers, $10@11; beef cows, $8.75@9; veal calves, $18@19; sheep, $12@13.50; lambs, $19; hogs, 15.00.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELLS

CO-OPERATIVE ASSOCIATIONS REPORT PROGRESS

The number of co-operative marketing associations in Michigan are rapidly on the increase and most of them have profited by the mistakes of the early venturers and are making a success of their business. During recent months scores of co-operative associations have been formed for the buying of elevators, the shipping of live stock, the manufacture of butter, etc. Among the more recent attempts to organize associations is listed the co-operative elevator movement in Nashville and at Harbor Beach.

"In view of the success of the Nashville Creamery and the Nashville Live Stock Shipping Ass'n, both of which are co-operative companies," says the *Battle Creek Journal*, "the farmers in the vicinity of that village are now organizing a co-operative elevator company. The company will be organized with a capital stock of $40,000, of which over $12,000 has been subscribed. The board has options on both of the Nashville elevators which will be taken over as soon as organization is completed, and it is thought that the company will be ready for business about July 1st. It is believed the capacity of both elevators will be necessary for the business it is proposed to conduct."

The farmers of Harbor Beach have made an offer to the Michigan Bean Company for its Harbor Beach elevator, at $10,000. In case the Company accepts the offer a stock company will be organized and the business purchased. In case the company does not accept the offer it is proposed to purchase a site in the village and construct a campeting elevator.

SHIAWASSEE PRODUCERS JOIN STATE ASS'N

A hundred or more milk producers in the vicinity of Owosso have taken membership in the Michigan Milk Producers' Ass'n, according to the *Lansing State Journal*, and will sell their milk through that organization to Detroit distributors. It was announced that the Detroit Creamery Company which takes most of the milk produced in Shiawassee county would soon advance the price to $3.40 per hundred. The Belle Isle Creamery Co., which operates a receiving station and dairy plant at Owosso has been paying that price for some time past. It is stated that the low price being paid for milk has threatened the milk industry in Shiawassee county as well as in the state at large as farmers could not produce milk for $2 50 a hundred and pay the present high prices for grain as they have been obliged to do for some time past. Many farmers have already sold their dairy cows. By joining the state association the farmers appoint that body as their selling agent agreeing to abide by the rulings of the association which are much the same as the state requirements in regard to sanitation in the handling of milk. They also agree to abide by the decision of the state association in any dispute.

ORDER CLOVER SEED

Farm bureau members in the vicinity of Ypsilanti have ordered about $5,000 worth of seeds this spring. They were able to do this at a considerable saving in price. It was through the efforts of the state farm bureau that it was possible to do this. Several farmers have already saved their first year's dues in the state farm bureau. Farm bureau members in the vicinity of Chelsea have also availed themselves of the servic of the state farm bureau office and have ordered about $2,000 worth of seeds at a considerable saving.

Farmers from Clinton, Shiawassee, Eaton and Ingham Counties unloading wool at the Michigan State Farm Bureau Warehouse at Lansing.

Reduced Potato and Bean Acreages Indicated

Reductions of 5 per cent in the acreage planted to potatoes last year and of 29 per cent in areas devoted to beans are indicated for this season in reports just received by the Bureau of Crop Estimates, United States Department of Agriculture. The reports came through the field agents of the bureau who on May 1 inquired of growers in important producing states concerning their intended plantings. High prices for potato seed and the farm labor shortage are the principal reasons given for the reduction in potato plantings. The unsatisfactory market for beans is given as the reason for the smaller acreage planned for that crop. The reports show that for the States covered the potato acreage will be 95 per cent as large as last year, while the bean acreage will be 71 per cent of last year.

New York reports the intention to plant 97 per cent of last year's acreage in potatoes, Michigan 90, Wisconsin 95, Minnesota 89, Colorado 84, Idaho 95, and Calofirnia 110. Aroostook County, Maine, which produces 60 per cent of the potato crop of New England, intended to plant as much or more, but deep snows, strikes and embargoes have delayed receipt of fertilizer, and plantings will depend upon the amount received in time.

New York reports an intended acreage in beans 90 per cent as large as last year, Michigan 75, Wisconsin 70. Colorado 65. New Mexico, 80, Idaho 100. California will plant 60 per cent of all varieties, limas being 90 per cent and other varieties 45 per cent of last year, although a poor barley crop in Sacramento and San Joaquin Valleys may increase plantings of the latter.

Final plantings of beans and potatoes will be estimated by the Bureau of Crop Estimates on July 1.

The potato crop last year was 358,000,000 bushels—54,000,000 bushels less than in 1918, and 83,000,000 less than in 1917, but 70,00,000 more than in 1916. It was about 3 per cent smaller than the average crop of the preceding ten years, and 6 per cent smaller than the average crop of the preceding five years. The plantings last year were large enough to have produced with an average yield a crop of 390,000,000 bushels.

The bean crop of the United States last year was about 12,000,000 bushels. While only about three-fifths as large as the crops grown on the exceptionally large acreages of 1918 and 1917, the 1919 crop was almost equal to the crops of 1914 to 1916, which averaged between 12 and 13 million bushels. The planting as now indicated—about 800,000 acres—with a yield equal to the average of the last five years would produce a crop of 8,250,000 bushels.

13 U. P. COUNTIES HAVE FARM AGENTS

Thirteen county agricultural agents in the upper peninsula, out of fifteen counties, is a record indicative of the increasing interest being displayed in the matter of the utilization and development of the region's idle acreage. Mackinac is the latest to fall in line, a decision of the board of supervisors at a recent meeting providing for a county agent. Ontonagon and Keweenaw counties are now the only two not maintaining county agents, and this, presumably,, for the reason that the industrial interests of both counties center, largely, about the mines.

The recent exodus of skilled labor to the factories, however, has brought out the fact that where there are farms there is increased stability of labor conditions, and it is believed that the mining interests are inclined to look upon the farm as a direct adjunct to their activities, and that they will, in the near future, encourage the matter of county agents as an auxiliary to their own operations.

Following are the county agents now working in Cloverland: Alger, C. J. Johnson; Baraga, L. V. Benjamin; Chippewa, E. L. Kunze; Delta, B. P. Pattison; Dickinson, Karl H. Miller; Gogebic, C. E. Gunderson; Houghton, Leo M. Geismar; Iron, Dwight C. Long; Luce, R. H. Cameron; Marquette, L. R. Walker; Menominee, Irving Kirshman; Schoolcraft, C. P. Pressley.

NEW COUNTY AGENT FOR CASS

C. W. Kidman, who comes here to take up the duties of county farm agent, will also take over the work of manager of the county farm bureau. With these two important duties to perform he will be a busy man, and will earn the salary which will be paid him.

A CORRECTION

We are advised that the "Van Camp" referred to in a recent article about the government's suit to prevent the misbranding of beans is not the well known Van Camp Packing Co., of Indianapolis, but George Van Camp & Sons Company of Westfield, Ind., who are in no way connected with the first mentioned concern. This information is given us by Chatterton & Son, of Lansing, who state further:

"It is conceded by every posted elevator man in the State of Michigan that the Van Camp Packing Co., of Indianapolis has done more to advance the Michigan bean to its present high standard than any other packing firm or any other bean firm in the United States. For a great many years their full page ads in the periodicals have called the attention of the public to the fact that they were packing Michigan beans, the best article obtainable, and in consequence of the reputation they have established for packing a high grade article, they are one of the few firms engaged in the packing of beans who are still in the business. Having established a reputation for packing Michigan beans only, they would certainly not jeopardize their good name by packing a foreign article."

Would Business Evade Its Share of Taxes?

Campaign Started for Huge Slush Fund to Shift One Billion in Taxes From Business to Consumer

DO THE business interests of the country sponsor the proposal suggested in the accompanying letter which came by chance into the hands of the Michigan State Farm Bureau? Is business so harrassed by taxes that it would create a monster lobby for the purpose of escaping a billion dollars in taxation which has justly been levied against it. We do not believe it. We do not believe that business in general is so mercenary or so shortsighted or so pressed that it would shift this burden upon the backs of those even less able to bear it.

If business will not pay these taxes, who will? Surely not the wage earner who is already overburdened by the innumerable "war taxes" that are collected somewhere down the line on nearly everything he purchases. Surely not the small town property owners who are already struggling under mountainous taxes of state and county levy. Surely not the farmers whose greatest burden always has been and still is, taxation, and who are themselves complaining, and justly so, we believe, of the unequal distribution of taxes.

The government has borrowed huge sums of money against the credit of the people of the United States. The interest on this debt must be paid, and preparations must be made for paying upon the principal. Money must be raised, and there is no other way provided, except through some form of taxation. The cause for the tremendous liabilities of the country was the great war. But we must not assume that the monies which the government spent in this conflict were thrown into the sea or otherwise destroyed. Far from it. All the billions found their way into somebody's pockets in exchange for munitions and supplies of war. The government paid a goodly price; and the beneficiaries received a goodly profit.. Industries that had struggled for years to make a showing cleaned up fortunes during the war. New manufacturies came into existence overnight and in many cases earned enough profit from government orders to make their stockholders independently rich. It is no longer any secret that big business thrived amazingly during the war and that of all classes of industry received the most benefit financially.

We have in this country two classes of people. One of them is always seeking to evade its share of public responsibility. If there are taxes to be paid they always want the other fellow to do the paying. If there are concessions to be made in the name of the public welfare, they always wait for others to do the conceding. They are selfish, arrogant, unpatriotic citizens. It is this class of citizens who made the most out of the war and are doing the most complaining because they have to help foot the nation's bills. It is this class of citizen without a doubt who is paying $25 per $100,000 of his capitalization into a slush fund for the purpose of shouldering his just taxes upon his fellow-man.

The other class of citizen is willing to pay his way. If he receives a benefit from the advantages that government affords he pays his share without complaint. He does not spend a hundred dollars' worth of time in seeking to avoid a fifty dollar income tax payment. He does not whine when the cost of government is necessarily high, but cheerfully contributes his portion, good citizen that he is. There are thousands of such as these who will have no use for the under-handed methods of "The Manufacturers' and Merchants' Committee on Taxation," and will refuse to contribute any sum of money to still further burden the consumers of the country and aggravate the unrest among the masses.

Would Put Burden on Farmers

As we understand it, the Ralston-Nolan bill would transfer one billion dollars in taxes from business to land, or in other words to the backs of the farmers. Of course, the farmers will not stand for that a single moment. They are now at their wit's end to secure the money necessary to pay their taxes already assessed against them, and any scheme to saddle a greater burden upon them will be resented and vigorously opposed. It may seem surprising, however, that the Ralston-Nolan bill is receiving some serious consideration in committee, and it might be well for the farmers of Michigan to get in touch with their representatives and suggest that they align themselves against the bill before it gets out of committee.

"We Propose to Reduce Federal Taxes on Business 25%"

Dear Sir:

Business OUGHT and MUST have a reduction of at least 25 per cent ($1,000,000,000) of its federal taxes.

The Ralston-Nolan bill (H. R. 12397) is the only bill so far introduced into Congress that will make this reduction possible.

We want—YOU want—this bill to go through.

This Committee has now begun a systematic and carefully planned effort to GET this bill through.

Large quantities of printing and postage, the maintenance of an office with adequate clerical help, a Speaker's Bureau, Publicity Department and other necessary adjuncts, however, cost money—a good deal more money than a few persons can or ought to bear.

For practical and effective results a fund of $500,000 is needed. With a little support from each, however,—say $25 for each $100,000 of capital—this fund, we believe, can be raised—that is, it can be raised if each is willing to do his share.

May we count on your support to the extent above suggested? If so, kindly fill in the blank attached and mail to our treasurer, Mr. Fenton Lawson.

Respectfully submitted,
COMMITTEE OF MANUFACTURERS AND MERCHANTS ON FEDERAL TAXATION (Inc.)
(Signed) Otto Cullman, Secretary.

Prices Decline as Speculators Flood Markets With Grain Holdings

Huge Supplies Are Thrown on Market Causing Greatest Fluctuations of the Season

AS WE go to press the grain markets of the country are in a semi-demoralized condition Corn tumbled 13 cents a bushel, oats 6 cents and other grains in proportion on the Chicago market last Friday and the liquidation has been going on more or less steadily ever since.

There are several reasons for this sudden liquidation. Perhaps the foremost is the curtailment of living expenses all over the country and the tacit agreement among consumers to go without rather than pay the high prices asked. This boycott is directed specifically against food and clothes and other necessaries of life. There is no indication that it will be directed against the luxuries of life. Added to the feeling among the consumers that the cost of living is too high and the generally unsettled business conditions of the country resulting from the defection of the railroads, the numerous strikes and the scarcity of raw material. These factors alone discourage business from forging fearlessly ahead even were money plentiful and readily available. But it is not. The worst feature of the present situation, and one that gives everyone a panicky feeling in the pit of his stomach is the insistency of the banks that loans be liquidated. For months past the money market has been gradually tightening up. During the past weeks thousands of loans have been called in forcing business men to suspend their plans for expansion and curtail expenses.

"Fear of a glut of supplies at distributing centers had much to do with the extreme weakness of the grain markets and of the sympathetic action of provisions," says a

Business Farmer Presents Farmers' Case to City Newspapers

The following telegram was dispatched to the editors of the Detroit News and Journal as a result of a story which appeared in the state press regarding the alleged outrages committed by sugar beet growers in the Saginaw Valley and the alleged statement of W. H. Wallace that paying farmers' price asked for this season would mean 60c sugar to consumer:

"If Mr. W. H. Wallace, of the Michigan Sugar Company has been correctly quoted in Saturday's Journal that paying farmers price asked for sugar beets this year means 60 cent sugar to consumer he does not tell the truth and we can prove it. It is a dastardly attempt to turn the public against the farmer in his just struggle for a fair share of the profits of the beet sugar industry. The farmers want a contract this year that will pay them about 8 cents a pound for the sugar in their beets. The manufacturers made nearly as much net profit as they paid the farmers per ton of beets last year. Under contract they want the farmers to accept this year they stand to make a net profit of seventeen dollars on every ton of beets which they purchase for sixteen dollars gross. As man to man is this fair? Beet sugar represents less than sixteen per cent of total sugar consumed in United States. Of this only a fraction is produced in Michigan. Therefore, no matter what manufacturers made farmers in Michigan it could not materially affect the price to the consumer. Let the manufacturers be satisfied with a profit of 20 per cent and there is no need of sugar costing the consumer more than 20 cents per pound. We now have 30c sugar. Of that the farmer got 5c, the manufacturer 7 to 10 cents and the speculators the balance. Under the old contract for every extra dollar over $10 which manufacturers paid for beets they got $1.40 or more. Farmers are merely asking an even division of the profits and by the eternal they are entitled to it. They grow the beets. They do all the manual labor. They take all the chances. They have been raising beets at a loss while the manufacturers have been profiteering. Is it better for the people of Michigan that the millions paid by the consumer for Michigan sugar go to profiteering stockholders of sugar companies living in Detroit and New York City or at least a fair portion to the hard-working farmers of Michigan to be spent in Michigan for farm supplies and machinery. In the name of truth and justice I beg of you to get the facts in this sugar beet controversy. Please do not convict the farmer until you have heard his case. Please get in touch with C. E. Ackerman, manager Michigan Sugar Beet Growers' Ass'n, of Durand We condemn in the strongest possible manner the use of force or lawlessness against the beet growers who have turned traitor to their organization and think that investigation will show that these methods do not have the sanction of the leaders in the sugar beet fight. The great majority of Michigan farmers believe in law and order and will gain their just ends without the use of unlawful methods."

FORREST LORD, Editor Michigan Business Farmer.

Michigan Fruit Gives Promise of Banner Crop

Pioneer Orchardists Declare Present Prospects Best in History of Michigan Fruit Industry

"THE prospects for fruit this year are the best I have ever seen during all the years I have lived in western Michigan," said Jas. Nicol of South Haven to a representative of the BUSINESS FARMER during a tour of inspection of the many fine orchards of Allegan and Van Buren counties. "Look at that," he said, pointing to a row of vigorous buds on a peach twig, "there are ten peaches where one would be enough. Every tree in this orchard and on all the orchards around here are likewise loaded ,and unless we get a killing frost within the next week or two we are going to have a wonderful fruit year."

While nearly everyone else has been complaining of the lateness of the season the fruit men have been blessing it. They have had their experiences with early springs when hot weather in April started the buds to swelling only to cut down by killing frosts in early May. Last year "Bloom Sunday" occurred on April 25th, but few of the blooms ever reached fruition. Frost after frost thinned their number and as a result the Michigan peach crop was practically a failure. About the 7th or 8th of May this year it looked certain that the peach orchards would be in full bloom by the 16th in Allegan and Van Buren counties but a visit to a number of the best orchards in the region on that date revealed only one or two trees that had started to bloom. Farther south in Berrien county most of the early fruit was approaching full bloom on the 16th.

The present year has been ideal for the natural budding and blossoming of the fruit orchards. At no time has there been a warm enough spell to give the buds a sudden start. They have developed very slowly, accumulating vitality from the parent tree and showing every sign of vigor and promise of fruiting. Hence there is rejoicing in western Michigan and the heart of every orchardist teems with hope over the prospect.

"It is our turn," said Mr. Nicol, "to have a good year. We have had so many poor ones, and have lost so much money in ruined trees and crops that we are certainly entitled to have a bumper crop this year." "And," he added, "I think we are going to get it."

Great Fruit State

In view of the many times repeated statement that Michigan is a great fruit state it is not easy to understand the many abondoned orchards and straggly, pest laden trees which one encounters on a trip through the fruit regions. Here and there is a wonderful orchard, every tree as sturdy and clean limbed as a pine. It shows the results of careful nursing. It tells of an owner who knows and loves fruit trees and cares for them as religiously as he cares for the animals on the farm. One needs only to catch a glimpse of such an orchard to know that it is properly pruned and sprayed and that the ground is rich with fertilizer. There's a difference between the orchards that receive attention and those that are left to make their own fight against the pests and an impoverished soil. And the orchard that is cared for pays for its keep many times over. But the orchard that is neglected can never be a commercial asset to any farm.

Farmers neglect their orchards for the same reasons that they neglect their farm. Lack of help, insufficient returns, poor seasons, etc. And yet, experience has demonstrated that properly cared for fruit trees will in the majority of years return as good a profit as any other branch of husbandry. The past several years have been especially discouraging to fruit growers despite the high prices paid. So little of the fruit reached maturity, and so many of their trees were killed outright during the severe weather of 1919 that a good many fruit growers gave up in despair. Not so with all. Along the shores of Lake Michigan from the southernmost part of Berrien county to the northernmost part of Emmet county are men who believe in fruit; in the future of Michigan as a great fruit state. They refuse to be overcome by the occasional setbacks. They are investing money right along in additional orchards and trees. Thousands of pears, peaches and apples have been planted this year in southwestern Michigan and farther to the north there are many new acres set this year to cherry trees.

One of the finest and most promising peach orchards in western Michigan is owned by a former Chicago attorney. Mr. Urion. This gentleman owns several hundred acres of good fruit land six or seven miles northeast of South Haven. In 1917 he gave up his law practice entirely, moved his family to the farm, and banked his all on peaches. In a single block he has between six and seven thousand peach trees, to say nothing of the apples and the pears.

Jas. Nicol is another successful fruit grower in this section and is president of the Michigan Horticultural Society, as well as a member of the executive committee of the State Farm Bureau. He owns and rents a total of 170 acres of land nearly all of which is set to fruit trees which will bear heavily this year. Mr. Nicol is a pioneer in the fruit game and has been a leading factor in the development of the industry along both scientific and marketing lines. He desires to see Michigan forge to the front as a fruit state and is doing his share to help it along. He is a persistent advocate of proper methods of production grading, packing, etc., and his own success and the success of his neighbors are due in a large measure to the close application of these methods.

Mr Nicol is one of a number of South Haven farmers, who, rather than see two splendid orchards of the vicinity go into the hands of strangers and be neglected, formed a local syndicate and purchased them. The management of the orchards was turned over to Mr. Frank Warner, himself a large and successful fruit grower, rated as one of the best orchardists in western Michigan. Mr. Warner has spent the better part of his life among fruit trees and the orchards under his care which we visited showed the result of his intelligent direction.

There is a growing disposition on the part of the fruit growers of western Michigan to quit root, grain and dairy farming and devote their entire attention to their orchards. The only setback to this plan is the difficulty of securing manure, and it is most probable that perhaps some dairy farming will be found necessary on this account. But when men are willing to bank their all upon fruit, it must be that they have unlimited faith in that crop as a profit-producer. It means that orcharding will be done on a much larger and more efficient scale than heretofore; that the very best of scientfic care will be given to orchards; and that greater progress will be made in the standardizing of varieties and the discovery of strains best suited to Michigan's particular climate and soil. If 1920 is as good a fruit year as it promises to be Michigan will again come into her own as a fruit state.

A cherry orchard in Northwestern Michigan

Campbell Speaks "Right Out in Meetin'" Before National Mfrs. Ass'n

MILO D. Campbell, of Coldwater, Mich., candidate for governor, told the annual meeting of the National Manufacturers' Association, at New York City, that "not 10 per cent of labor is radical," but that "even the so-called Reds are not more dangerous or disturbing to industry than the manufacturers who raise prices at pleasure and spread discontent among workmen in other industries where competition is sharp and profits small."

Speaking on "The Farmer and the Closed Shop," Mr. Campbell said no one could challenge labor's right to organize; bargain collectively and strike, and likewise that no one could challenge the employer's right to conduct either an open or a closed shop. "It is not organization and the closed or open shop that concerns the industrial world most at this time," he said, but "the radicalism that is found in the ranks of labor and in the ranks of capital." He advocated limitation of profits and approved profit-sharing as a solution for present ills.

Farmers Study Tax

The farmers are studying the income tax returns of big corporations, the speaker continued, and both the farmer and worker are "observing the colossal stock and other dividends being declared almost daily and showing earnings from 25 to 800 per cent profit with very much of the capital on which these earnings are declared consisting of blue sky."

"New capitalizations are also going on at the rate of more than $1,500,000,000 a month," he said. "This means that dividends must be earned on all this enormously increased capitalization and that wage workers, farmers and consumers must carry the burden."

The farmers have petitioned thru every farm organizations of the country for relief from the tyranny that prevents them from collectively selling the products of their own toil. The only opposition they have found openly against them has been from a few chambers of commerce in some of the larger cities, and their only organized support has come from the American Federation of Labor.

Praises Strike Attitude

"A year ago I believed that there was a tendency on the part of radical elements of organized labor to override law and the Constitution and to try to secure by force, intimidation and unlawful means their demands on employers. The steel and coal strikes seemed a direct challenge and the Boston police strike was a direct blow at sovereignity of the government. Because of this danger, I refused to join in a call for a conference of farmers with the American Federation of Labor to be held at Chicago last December.

"But the danger of labor radicalism is being at least temporarily removed by the organization itself. The switchmen's strike and the attitude of the American Federation of Labor has been one deserving of commendation.

"It has been asked whether there was likelihood of a working or political alliance of farmers and labor The problem is one not easy to answer. The sympathies are alike, but their position is on opposite sides of the counter. One is buying, the other selling. Their common interest would be in shortening the distance between them. The farmer would profit with high priced food and low priced labor. while the laboring man would profit with low priced food and high priced labor.

Weary of Benevolence

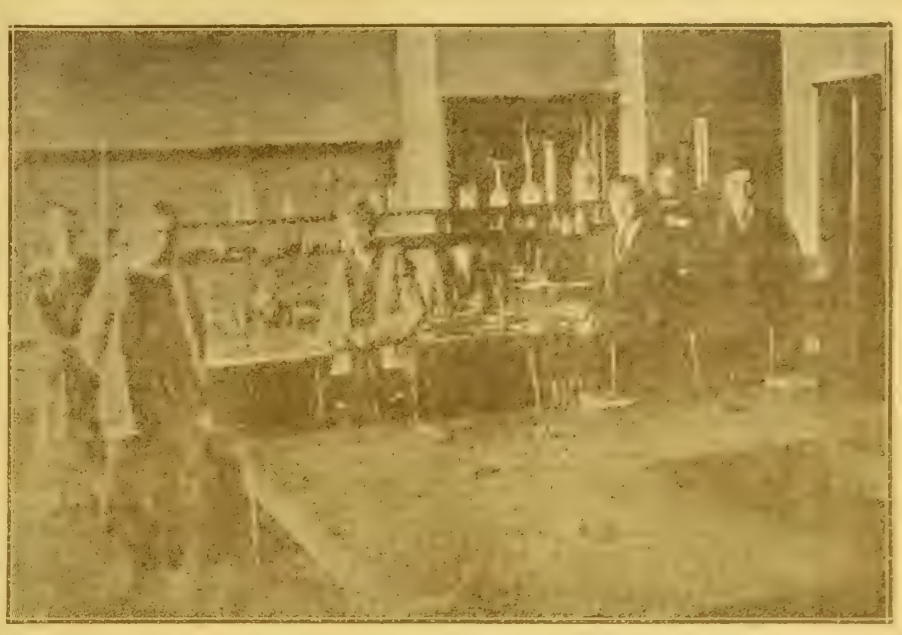
"On the other hand both labor and farmer begin to feel their lack of representation in government and industry. They are weary of benevolence for many a slave has had that. They want a voice in the government they support and in the industry their hands have created."

State Shares Expense of New School System

Will Pay $600 to $900 per year to School and $200 for Each Vehicle Used in Transporting Pupils

WILFORD L. COFFEY
Assistant Superintendent of Public Instruction

Class of boys in gymnasium of Stambaugh township school district.



Science room of Iron River township school district.

IN ORDER that inequality now existing between the opportunity afforded rural and city children may be reduced, the legislatures of 1917 and 1919 passed and amended a law providing state aid if rural schools consolidated. Under this act a rural school district is defined as any school district, primary or graded, that does not contain within its limits an incorporated village or city having a population exceeding 1,000. This provision in the law makes it possible for the one-room and village schools to unite to form strong consolidated schools, or it makes it possible to have consolidation of several one-room schools.

Provisions is made for two classes of schools, class (a) and class (b).

Class (a) are rural agricultural schools with less than twenty acres of land, and a corps of teachers consisting one principal and two or more teachers who are engaged in teaching for at least nine months during the year. To schools of this kind the state will pay annually $600, and $200 for each vehicle used in transporting the pupils.

Class (b) are rural agricultural schools with twenty or more acres of land, a part of which is used for agricultural demonstration purposes. This class of schools must employ a corps of teachers consisting of a principal, who is employed for 12 months, and two or more teachers for ten months. To schools of this kind the state will pay annually $900 and $200 for each vehicle used in transporting the pupils.

The procedure for securing one of these schools is as follows:

1. The school board should hold a meeting and prepare a resolution to submit to the legal voters of the district the question of uniting the territory of the district with that of other contiguous rural school districts for the purpose of forming a rural agricultural school district as provided in Act 226 of the Public Acts of 1919, as amended.

2. If a school board of a rural agricultural school district will not call a meeting of legal voters for the purpose of voting upon the question of organizing a rural agricultural school district, the legal voters may require the board to do so by presenting it with a petition signed by at least ten per cent of the legal school voters of the district.

3. The director or secretary of the school board of the rural school district which is to vote upon the question of consolidation must post at least three notices in the district. These notices must be posted twenty days ,not including the day of posting.

Cooking class of Iron River township school district.

4. The notices of the meeting must state the year, month, day and hour that the polls are to open.

5. The polls must be kept continuously open for seven hours, and the school board must provide a suitable ballot box.

6. The school board conducts the voting, counts the ballots, and notifies the county commissioner of schools if the district votes in favor of consolidating its territory with that of other rural school districts.

7. A majority vote of the legal voters present and voting is sufficient to authorize the consolidation of the territory of the district with that of other contiguous school districts.

8. The county commissioner of schools calls the first annual meeting in a rural agricultural school district. The voters at the first annual meeting select a school board of five members for the rural agricultural school district.

9. The Superintendent of Public Instruction, upon request, furnishes to school districts the forms of notices, form of ballot, and full instructions for organizing a rural agricultural school.

Eleven consolidated school districts have been formed under this act since May, 1918. Seven of them are now in operation. These seven will consume the appropriation made available for the years 1919 and 1920.

Objections to Consolidated School

The above concludes the series of articles upon the subject of Consolidated Schools by Mr. Coffey, but they do not by any means tell the whole story. Obviously Mr. Coffey writes in a biased strain. He tells us of the advantages of the new system, but does not speak of the disadvantages, of which there are many. Before proceeding farther along this line it is well to say that the BUSINESS FARMER believes the Consolidated School system has come to stay, and in the majority of localities where the new school has been built and the advantages clearly seen the opposition is rapidly dwindling away. Nevertheless, it is not good policy or business to blind the eyes of those who must pay the major expense of the system, to its numerous shortcomings. It is far better to admit them frankly, discuss them thoroughly and endeavor if possible to overcome them.

Napoleon School Troubles

Mr. Coffey has named the Napoleon school among his list of successful Consolidated schools. Napoleon is a little village in the southeastern part of Jackson county. The people of the several school districts surrounding this village voted to adopt the Consolidated system. Opposition developed in one of the districts farthermost from the village, but despite the almost unanimous vote against the proposition in that district the proposal carried and last fall the Napoleon Consolidated School was started. Unfortunately the school authorities were obliged to use a two story structure in the village pending the erection of a new and modern building. This was far from ample to accommodate all the pupils and consequently the school has been very much over-crowded as a result of which further criticism and opposition developed. The election provided for the issuance of something like $27,000 for the erection of a new school, but when the board advertised for bids the lowest price was nearly double the amount authorized by the electors. This also added to the dissatisfaction over the new system and the opponents now have a majority in the district and are prepared to restrain by injunction any attempt on the part of the school board to let bids for a school house costing more than the specified amount. All of these developments are not the fault, of course, of the new system. A mistake was made in trying to operate under the new system until a modern school house could be built at moderate cost. In other localities the most bitter opponents have become reconciled after the school was built and they have once used it as a community center and noted its many, many advantages over the old single and double room district school.

While the Napoleon school is hardly typical, we believe our readers will be interested in the troubles with which it has been beset, and we have prevailed upon Mr. L. G. Palmer, director of the Napoleon school to give our readers the benefit of his observaions. His article will appear in an early issue.

Citizenship class of Stambaugh township.

From Producer to Non-Producer

A LOT of men who are selling their farms and going to town are making the mistake of their lives and will regret it before another year is up. We are facing a food shortage. Of that there is no doubt. A food shortage means nothing to the man who owns a farm and produces enough to feed himself and family. But it is the greatest calamity that could befall the man who must buy every ounce of bread, potatoes and milk for himself and family.

The farmer who quits tilling the soil and goes to town does not merely change his place of residence. He changes his occupation. He ceases to be a producer of food, and has not only cut off the supply for himself and family but for many others who depended upon the crops from his farm. Let a sufficient number of producers become non-producers, and what happens? The food supply drops off; men begin to feel the pangs of hunger, and not even the highest wages that can be paid will fill their stomachs or keep them contented. Consequently there is a back-to-the-farm movement. It starts with the poorest paid of the cities, and eventually spreads to all classes. Factories are forced to shut down; wages decline; and the movement to the farms becomes a migration.

That is a condition we do not want, and can forestall if we only use our foresight and common sense. The majority of men operating farms today are farmers in the strictest sense of the word. They know their job better than anyone else knows it, and far better than they know any other job. They should stick to that job. Granted that they do not receive the returns they ought to have. Granted that of all jobs in the world theirs is the most speculative and arduous. But consider that great strides are being made today in putting farming where it ought to be as the nation's greatest industry. Consider also that leaving the farm will not solve the problem. On the contrary it will aggravate it. The thing to do is to persevere through the present discouragements, raise all the food that it is possible to produce, and by all means prevent the factory workers of the city from becoming land hungry and entering into competition with you. If the men on the farms will stay on the farms and produce just a trifle more food each year to meet the growing demands of the cities, we need have no fear of a back-to-the-farm movement and a resulting over-production of food.

From the Lakes to the Sea

AN AGITATION affecting the entire northern half of the United States west of the Great Lakes is being carried on by commercial interests for the purpose of creating sentiment in favor of the proposal to open the water channels between the Lakes and the Atlantic ocean to accommodate ocean-going vessels. The project would be financed by the federal government, and we are told, would be of tremendous value to the industrial and agricultural interests of the middle west.

While it is clear that the industrial cities would be the greatest beneficiaries of such a plan, it could not help but be of great value to the farmers as well. At present, a large quantity of Michigan food products are transported by rail to eastern ports, consumed there or put aboard ship for export to Europe. Freight rates are high; car service is most unsatisfactory and several needless middlemen's charges take tolls which in the aggregate represent a goodly portion of the amount paid per bushel or pound of product. Let ocean-going vessels dock at Detroit, Saginaw, Alpena and other lake ports, and the farmers would always have ready transportation facilities at a rate far below the rail tariff. Moreover, the opening of the doors of the world's markets to our crops would open the way for farmer-owned sugar-factories, packing houses, and other finishing plants, which would enable the farmer to participate in profits which now goes to others. We believe this project should have the support of the farmers of Michigan.

Bringing the Department of Agriculture to the Farmer

THE EDITOR of the Business Farmer is going to Washington next month, having been appointed a member of a committee of eight agricultural editors to visit the Bureau of Markets and Division of Publications, study theier activities and make a report to the American Agricultural Editors' Association. This will simply be in line with the program of this association to bring the Department of Agriculture and all its useful activities straight to the farm door and make it a truly representative instrument for the farmers of America.

I do not want to go to Washington single-handed. I want to take with me the opinions of the readers of the Business Farmer to guide me in my investigations. I want to know in what respect, if any, the Bureau of Markets is not meeting all the needs of the farmers of Michigan. I want to know in what manner, if any, this Bureau can be made of more practical benefit to individual farmers and farmers' associations. The Bureau of Markets is one of the most important, if not the most important, bureaus of the entire department. Farmers generally take more interest in its work than in that of any other bureau. There is no doubt but what this Bureau has assisted wonderfully in the economic development of agriculture. Neither is there any doubt but that the surface of its possibilities has just been scratched and that it can be made many times more useful and valuable. If it occurs to any reader what this Bureau can do to further assist the farmers of Michigan in grading, inspecting, packing and marketing their products, I wish they would feel free to write me their suggestions.

"Them Was the Good Old Days"

OUR enterprising crop correspondent of Shiawassee county, sends us the following interesting report dated March 18, 1901:

"In these days the word 'profiteer' had not been coined. Common labor called for $1.50 per day of ten hours or more; skilled labor $2.50 and $3 per day. Flour was 60c for 25 pounds; cane sugar, 20 pounds for $1; brown sugar a little less; coal, $4 a ton; stove wood, $1.50 a cord. Kerosene was 8 and 10 cents a gallon; tea not over 40 cents a pound and coffee 15 to 20 cents, and farm hands were paid $18 to $20 and board per month. A farm wagon could be bought for $40 to $50; a heavy harness complete, $28 to $30; plow about $14. The prices paid for farm produce about averaged up with the prices paid by the farmer for the things he had to purchase of the merchant and dealer. For instance, wheat was 70 cents; corn 23 cents, oats 26 cents; rye 50 cents; timothy hay, $10; beans, $1.50; potatoes 60 cents; poultry 6 cents; butter 10 to 14 cents; eggs 11 cents; hogs, $6.50; beef, $5.50, etc. The prices paid for the farm produce about averaged up with the prices paid by the farmer for the articles that he had to purchase of the merchant and dealer. Therefore, the prices of today will about meet on that basis, and yet the cry of hard times is heard on every side while the reason of this is that the people of the present time are living too fast and too often beyond their abilities. Many strive to outdo their more forehanded neighbors and quite often are the very ones to raise the cry of hard times and excessive profiteering."

Yes, those were the "good old days." You could order the hired man around as much as you pleased and there wasn't much danger of his quitting. You could buy all the machinery you needed without putting a second mortgage on the farm. You could drive old Dick to town without passing a single joy-rider and you could sit near the cracker barrel in Jim Peters' store and munch to your heart's content while you discussed the politics of the day. Then with your buggy loaded down with 50 cents worth of provisions you could jog contentedly homeward, without waiting for the children to come from the moving picture show.

Yes, sir, those were the good old days, but we wouldn't want them back just as they were. If we could but go back twenty years and take up the pleasures and advantages we used to enjoy and mingle them with the pleasures and advantagees we enjoy today, discarding all that is inconvenient, expensive and unlovable, how happy we would be.

Sugar

AMOUNT Clemens newspaper, the owner of which is a stockholder in the Mount Clemens Sugar factory, says the reason for the high cost of sugar is because A buys it from the factory sells it to B; B sells it to C; C to D, etc. It is reported that a certain wholesaler in a certain southern Michigan city cleaned up $5,000 on a carload of sugar which he never saw. He simply sold the bill of lading. A Detroit sugar house recently stated that nearly every lot of sugar which they bought nowadays carried a different price, which made it necessary for the retailers to charge different prices to the consumer.

We are all interested in these reasons for the high price of sugar, but the mere stating of them will not bring the price down. The Department of Justice has been trying vainly for months to catch the nigger in the woodpile, but that gentleman has successfully eluded Mr. Palmer, and the mystery of high sugar prices is no nearer a solution than ever. We know this much. That the farmer who grew the beets from which much of the sugar was made that is now selling at retail at 30 cents a pound received less than 5c per pound. What we do not know are the profiteers that got the other 25 cents.

The high price of sugar is going to raise hob with all canning operations this year and will be quite an item in the family grocery bill. The farmer, however, is in a position to add to the family sweets without much labor or expense by growing a little sorghum or a few sugar beets from which syrup can be extracted and boiled down.

Let the Wife Do It

A DETROIT editor tells us that there is no cause for alarm because of the shortage of farm labor. The problem can easily be solved by letting the farmer's wife don a pair of overalls and go forth and labor in the fields. The writer paints a pretty picture of the farmer's wife at the wheel of the tractor, her figure clad in denim, her hands neatly gloved, and a becoming straw protecting her complexion from the sun. To the uninitiated of the city driving a tractor or riding a cultivator looks like child's play, and gives the farm woman an opportunity to relax between the hours when she must get the meals.

No, no, brother editor, this is no solution of the farm labor problem. When your women of the cities give up their teas, their matinees and other social functions; when instead of dawdling their time away before their mirrors and spending their afternoons galloping through the shopping districts, they take their places at the machines in the factories, then will our farm women become farm hands and help do the hard manual labor if there is no other way to get it done. But so long as the people of the cities spend their time in frivolities and their money in riotous living, never will our farm women become any greater menials than they already are, not even to save the race from hunger. That may be cruel, but it is just.

What the Neighbors Say

LAWLESSNESS

Some time ago I read in your paper a reward for the arrest of persons guilty of destroying property belonging to those growing beets for the sugar companies. It certainly was timely as the work of destroying property is heard of in every direction. This part of the country is no exception to the rule. It is certainly to be regretted that a class of people so free from lawless methods should now turn and adopt such methods. I am sure we have had enough of strikes and lawlessness on the part of the unions without the farmers turning out as bad. Of the farmer it is said that "together we stand; divided we fall." Lawlessness is already dividing the farmers of Merrill and vicinity and already much bitterness has been brought about because some of the farmers are in favor of destroying beets belonging to those who are growing beets. No cause that was ever won will stand through force. I have heard threats of all kinds the last few weeks. Some have been told that if they grew beets they would have no neighbors; others that their property would be destroyed. I would not belong to such a gang. The beet growers' association has been made a failure because one class of the farmers are in favor of law and order and another in favor of brute lawlessness to gain their ends.

How sadly we are in need of compulsory arbitration that would compel both parties to a dispute to arbitrate. It would settle many labor disputes and put an end to so many strikes and lockouts which are a curse to our country. Whether the beet growers' association wins out or not, let's have law and order and decency if we don't have anything else.—*W. G., Merrill, Mich.*

No good American can sanction the malicious destruction of another's property. It is not only an offense against justice, but a violation of the law of the land, punishable by fine and imprisonment. It is closely akin to mob rule, and heaven forbid that the farmers of Michigan should ever be accused of taking the law into their own hands. On the other hand, we must admit that the disloyalty of members of an organization which seeks only what is fair and just is cause for great provocation among the loyal ones. It is not to be wondered at that the farmers who for the sake of the principle that is at stake and for the sake of the future of the sugar beet industry have refused to plant beets this year should feel hurt and angry when their neighbors desert the cause and plant beets in violation of their pledge not to do so. Does not such disloyalty, in fact, work an injury to the loyal ones, as great an injury perhaps as might in turn be visited upon the property of those who plant beets. Of course, there is no actual destruction of property, but there is something almost equivalent to it. I suppose that when the loyal beet growers talk of destroying the property of others who are growing beets they only intend to retaliate for the injury done to them. It is said that the tobacco growers of the south would never have been organized and paid a decent price for their crop had it not been for the terrorizing hand of the night-raiders who went from plantation to plantation destroying the crops that had been planted. Thousands of tobacco growers who could not at first see the advantages of organization owe a debt to those men who through force prevented them from growing tobacco under the old conditions. I am not citing this instance, mind you, to in any way excuse lawless methods, but I think it is only fair to those men who have sacrificed for this cause and the future welfare of their neighbors, to say a word in their behalf. Justice will be secured for the beet growers of Michigan without the use of force and without the assistance of those who have the penny so close to their eye that they cannot see a dollar a foot away.—Editor.

COUNTY GOVERNMENT IN MICHIGAN

Do you know: That Michigan is behind the times in the matter of county government?

That a great majority of the states of the union have adopted modern forms of government similar to such as we have represented by the Commission-Manager government in our cities?

That county government in Michigan, has come down to us practically without change since the Constitution of 1850?

That there is no responsible "head" in the county?

The head of county government is represented by a Board of Supervisors of from 24 to 48 or more in number, meeting from 2 to 4 times a year?

The county officers are elected by vote of the people and are not responsible to the Supervisors?

There is no centralized authority?

There is no requirement in the county for centralized purchases or competitive bids?

There is no one whose duty it is to really audit the bills of the county officials?

County officials being created by the constitution and governed by the Legislature are really in a separate jurisdiction from the Supervisors?

County government, so-called, is not county sel-government at all, but simply state government of counties?

No citizen can be expected easily to become intimate with a government, the source of which is far away even though it prescribes a system local in its application?

There is absolutely no possibility of a short ballot?

The present system is a weak chain of isolated offices facilitating evasion of responsibility and making an elusive and difficult organism for the people to control?

—*O. Roy Hatten, Sec'y, Grand Rapids Citizens' League.*

The above statements were contained in a printed communication received by the M. B. F., and other publications of the state. Its purpose is plain: To revolutionize the present form of county government and put all county business in the hands of a commission of qualified farmers and business men. What do you think of the idea? We should like to hear from our readers on this matter.—Editor.

AGAIN, THE MILK TEST

A farmer's elevator is in operation here known as the Highland Produce Ass'n. I understand that the real idea in organizing it was that it was to be a real benefit to the farmers. Yet quite recently during the switchmen's strike they deliberately raised prices on all their stock,—not new stock, remember, but stock that they had on hand since early winter. What is this but profiteering?

Also a man located there is buying farmers' milk and shipping it to the Detroit Creamery. Time after time checks are given the farmers marked test 3.5 when no test had been taken for months. This is not idle guess work. I have a letter from the Detroit Creamery to prove the statement. It was sent when I made complaint to them about the injustice of our tests. In this letter they stated that they had written their buyer of our complaint and that no doubt he would be glad to pay whatever was due us. Did he? Well, I should say not. He never mentioned it. He looked like a sneak the first time he met us; afterwards he felt that he was safe enough. The farmers are not getting paid for the goods they sell.—*Mrs. A. S., Milford, Mich.*

The question as to whether a dealer should raise his price on goods when the market price goes up is a much-mooted one. His excuse is that some day these goods must come down and that he must make enough profit when prices are advancing to cover his losses when they decline. I do not know what difference this would make to a co-operative association, however, unless possibly the manager desires to make a good showing. What the association earns is the farmer's gain; what it loses is the farmer's loss. So it really doesn't matter whether the association charges a little more today and a little less tomorrow. It all comes out in the wash anyway.

The man who can find a solution to this milk test problem will be entitled to a crown and gold medal. In the case you cite, it seems to me clearly a matter for your state Milk Producers' Ass'n. If the local buyer is not paying you for all the butter fat in your cream, the state association should come forward and force him to do so. Have you reported the matter to Secreary Reed?—Editor.

ANTI-FORDNEY

Enclosed find check for $1 to pay up my subscription as far as it will.

You are doing fine; keep it up. I would like very much to have the BUSINESS FARMER take a straw vote in the 8th congressional district to see if the farmers could not get together and pick a candidate for congressman. I think Fordney has outlived his usefulness for the people and is only useful to himself and his interests.—*W. H., Corunna, Mich.*

I hope none of our readers have formed the opinion that the discussions in the Business Farmer regarding Mr. Fordney and the bean tariff have been of a political purport. For such is not the case. We have no enmity against Mr. Fordney. We have no desire to deprive him of his job as long as he performs good and faithful service for ALL his constituents. It has been our belief that Mr. Fordney laid down on his job when the farmers' bean tariff bill needed his assistance. Mr. Fordney has said nothing or done nothing to dispell that conviction. We could not, however, engage in a political controversy involving the office of congressman. It would lead us into endless fray and misunderstanding. If the farmers of the 8th district are not satisfied with their congressman they have the votes to elect another one. The only condition by which we would take part in congressional elections would be in the event of a farmers' slate covering every congressional district in the state.—Editor.

FARMER SUGAR FACTORY

I wish to write and tell you that the farmers here in Cambrai township, Hillsdale county, have some money and time to help build a beet sugar factory in Michigan. Why don't somebody start the machine going? I have just been helping to organize the Farm Bureau here and would be glad to help in the beet sugar line. Why, I believe the farmers around here would raise a few beets and ship them to such a factory. Can't something be done?—*W. J. F., Hillsdale, Mich.*

You talk like business. Wish a few more of our farmers would get the same viewpoint. No reason in the world why the farmers of Michigan cannot own and have in operation one or more sugar plants by 1922 at the very latest, and possibly a year earlier. But have patience. The manufacturers have opened the way for this very thing and it is bound to come.—Editor.

REGULATION OF INDUSTRY

Good wages are not necessarily high wages. If half of it will buy a good living, one dollar a day is good wages. Five dollars a day is not, if it costs $4.97 to live. If the prices are based on production casts—the chief item of which is labor—it matters little just where wages are fixed. The important thing is to fix and maintain prices in some definite and reasonable relation to wages.

Suppose we classify all labor, mental and physical, according to the efficiency of the worker and the desirability of the job. Fix wages at one to five dollars a day standard for all industries. It will then be practical, beginning with the simplest raw materials, to figure with reasonable accuracy the average direct labor cost of each commodity, add reasonable percentage for interest, insurance, etc., and fix standard prices high enough for safety and yet low enough to enable every worker to live comfortably and, if efficient and thrifty, to become more or less of a capitalist.

This can't be done, however, by leaving each industrial trust free to fix and maintain its own prices and wages. To leave the matter to congress or a commission appointed by the president would be as foolish, since most of the members in either case would either be prejudiced or ignorant of the problems involved. Regulation of industry can be safely intrusted only to a national industrial congress, fully and fairly representing all industries and all classes of labor.—*S. B., Ionia County.*

Sounds sensible, all right. But it has always seemed to us that to fix prices on any commodities in which there is free and unrestrained competition penalizes industry and discourages initiative. How about it?—Editor.

PICKLES

Enclosed you will find my check for $2 for 3 years subscription. I like your paper, think it just what the farmers need to help them get together and get in closer touch with the consumer. Your stand for beans and beets is O. K., but they are not the only things that need attention. A short time ago I was in a store at Merrill and asked the store keeper how much his dill pickles were. He said 15 cents per pound. I looked them over carefully and found they were the pickles that they sorted out at our station last season for nubs and crooks, for which we received 50 cents per 100 lbs., of 1-2 cent per lb., grown, picked and delivered at the company station at Wheeler. Produced and delivered for 1-2 cent per lb.; sold to the consumer for 15 cents per lb. Can you beat it?—*O. S., Merrill, Mich.*

Nope, that can't be beat. I have heard of a good many cases of profiteering, but this is the most profitable case of profiteering that has ever come to my attention. Just for the fun of it, why not ask the grocer where he bought those pickles and we'll trace the pickle profiteer to his lair.—Editor.

$1 PER HOUR

Your little editorial "One Dollar Per Hour" is all right. A good, bad or indifferent farmer is entitled to as much per hour as any good, bad or indifferent mechanic, and there are a lot of mediocre mechanics that get it but do not earn the dollar per hour. Besides there is no more essential citizen than the farmer. He works more hours per year than the vast majority of the people that make the business world go. The farmer should get one dollar per hour, plus 7 per cent on his investment and 15 per cent depreciation, and when that day comes I believe the world will be better off. I do not agree with the M. B. F. in all that it prints but I do think it a mighty good publication.—*W. O. Gunn, 109 N. Dearborn St., Chicago.*

It is good to get these occasional letters from the people who live in the cities and consume the farmers' products. It is good to note that many of them are in sympathy with the farmer and have an understanding of his problems.—Editor.

The Week's Editorial

PROFITS

A business that pays 10 per cent net to its stockholders year in and year out is considered a pretty fair investment.

A business that yields 100 per cent profits is one that anybody would like to buy into.

But what is to be said of a business that pays its stockholders several times 1,000 per cent all the time, and whose stockholders number over 100,000,000?

That is what the stockholders—the people of the United States—are getting in profits out of the United States department of agriculture, according to Secretary Meredith.

"The department of agriculture makes for its stockholders—the people of the United States—a profit of several times 1,000 per cent cent per year on all money invested in it," declares the secretary. "As evidence that it is paying big returns I will give but a few typical items out of a large number that could be cited. We spent $250,000 establishing Durum wheat in this country. The Durum wheat now produced here is worth $50,000,000 a year. We spent less than $200,000 introducing rice and establishing the industry in California. The rice crop in that state is now worth $21,000,000 a year. We spent $40,000 introducing Egyptian cotton, breeding it up and establishing the industry in arid regions of the southwest. The American Egyptian cotton crop is now worth $20,000,000 a year. We discovered a serum that prevents hog cholera, and its use, as demonstrated by the department, has reduced losses from that disease by $40,000,000 a year."

It is sometimes said that governmental activities lack initiative and cannot be run as well as private business—*Detroit Times.*

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

DECORATION DAY

TO THE mothers who gave their stalwart sons and the wives who sent their young husbands forth to fight in the recent world war—every day is Memorial Day. It is fitting however that a day should be set apart when the world should pause in its mad rush for wealth and position to think of those whose life work is finished—for they who are gone from this earthly home— all had some object which they sought to attain, and it is for us who remain to "carry on" as one of our ex-soldiers wrote just before he answered the roll call:

"To you who go forward from where I left off,
Though dark be the pathway each mile
The torch I have lit will yet flame to the sky,
Carry on!—make my dying worth while.

I like the idea of planting a tree for the one who has gone—let there be something living to symbolize them and their life work—not just a flower that wilts or a shaft of cold marble—but something which will benefit mankind.

And what lovlier tribute to those whom you would remember could there be than the adoption of a helpless little child. If you are young and strong and able to care for a baby—you will find the blessings will return ten fold to you. Children are something to love—to live for, and incidentally to keep us from growing selfish or self-centered. There are ways innumerable in which we can celebrate the day which are truly unselfish, for what is more selfish than grief? We cannot all do the same kind of work—but for each of us there is a task and if we bend our every energy to that task we will truly "Carry On."

One of our prize winning kodak pictures

"The Dog of It"—By David Wharton

When he jumps on you with muddy paws,
When an ancient bone he gnaws,
You'll hear some cynic say
In a cold disgusted way,
"That the dog of it."

"The dog of it"—perhaps 'tis true,
But when you're down and out and through,
When you haven't a single friend,
His love lives to the end.
That's the dog of it.

When the heart most loved grows cold,
And you're ugly, poor and old,
Though he hasn't enough to eat,
He follows with love at your feet.
That's the dog of it.

And when you're under the ground,
Forgotten your lonely mound,
He will remember, and steal away
To lie beside it night and day.
That's the dog of it.

He would leave the fields Elysian,
And deem it but a joyful mission
To enter e'en the gates of hell
If there your soul should dwell.
That's the dog of it.

SEEN IN CITY SHOPS

IT'S TIME summer was here whether the weather man decides to send it or not and so the stores are stocked up with summer wearing apparel.

Even the white hats have come in—both dress and sport models. No matter what Dame Fashion decrees we shall wear in the spring, be assured that when the warm days really get here we will all be decked out in the white hats—whether they be sailor for the suit, sport for the outing costume or dress for the pretty summery dresses. But here's a tip. If you would wear your hat the second season don't buy a combination white hat. By that I mean a silk and straw or a Georgette and straw because I made that mistake last year and this spring when I pulled it down from the closet shelf and decided that it must be cleaned this spring, I found that I had struck a snag. The hat cleaners told me they cleaned only straw while the cleaners who clean my suits and dresses informed me that if it were all silk they could clean it but no combination hat. So I have taken it home and the first day I have any time in daylight I am going to see what I can do with it myself—in the meantime I want you to profit by my experience.

For the real young girl, the best dress is lovely of organide and much more appropriate than silk. Nothing lends itself to the fashioning of the graduation gown better than this material.

And the ever present voiles are as lovely as ever and are certainly most satisfactory for the business woman or the woman who wants an all-around dainty pretty summer frock.

And now the shops are replete with their showing of summer suits—mostly of wool Jersey, and they are both comfortable and pretty—and withal much less expensive than the spring suits of other material, and if you do not get a decidedly sport model you can put a lining in it later and wear it until it is time to wear the heavy coat. Of course they come unlined.

THERE IS NO DEATH

There is no death! The forest leaves
Convert to life the viewless air;
The rocks disorganized to feed
The hungry moss they wear.

There is no death! The dust we tread
Shall change, beneath the summer showers
To golden grain, or mellow fruit,
Or rainbow-tinted flowers.

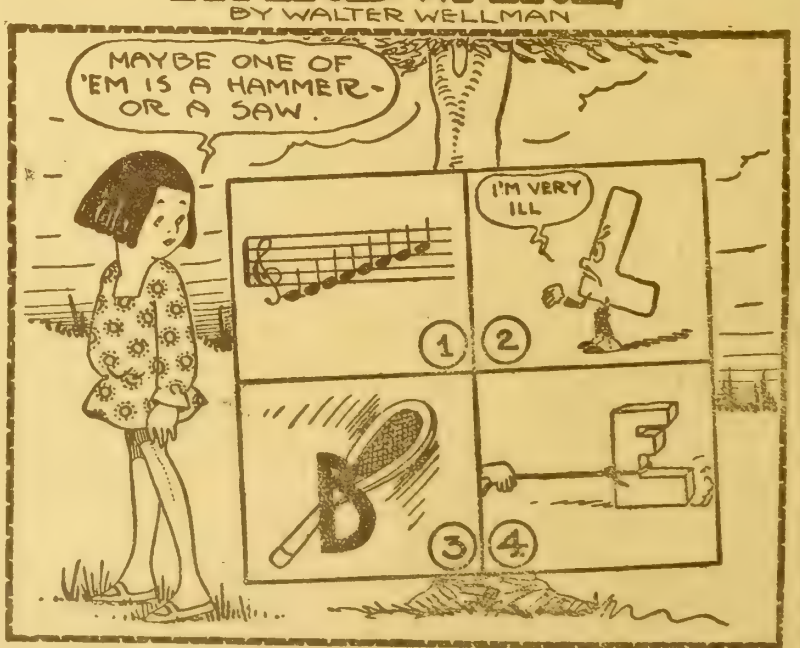
There is no death! the leaves may fall,
The flowers may fade and pass away—
They only wait, through wintry hours,
The warm, sweet, breath of May.

—J. L. McCreery.

The Children's Hour

DEAR CHILDREN: From the letters received it is interesting to see how many of you little folks are raising chickens, and also how many are learning to assist father and mother with the work in the house and around the barn. That means if you start as early as this you will surely know how to do many things well when you are old enough to earn your own living. Another inquiry comes about a camera. I have answered this before but am glad to advise you again that for ten new paid subscribers at $1 each a camera will be sent you. Be sure when sending in the subscribers to send them with the money all together and tell us what the prize is you desire.

I must tell you of the "hike" I took last Saturday afternoon. I boarded an interurban car and went just outside of the city limits where I found some woods. And there I found lovely blue and yellow violets and wild cherries so that when I came home we had the house full of flowers. And I also took with me a basket which I brought home filled with dandelion green. We took just a little lunch with us of cookies and apples and my how good they did taste after we had tramped for miles over the rough ground. And while I was tramping around I though of my little friends of the M. B. F. and how they enjoyed the birds concert every day—saw the wild flowers and had time to build air castles—for you know I like to build air castles. And I believe that if we never strive for anything—wish for it and then help to make our wishes come true, that we won't get very far in this world. So let's all build air castles—and then set ourselves to the task of putting a solid foundation under them and making of them honest-to-goodness realties. Affectionately—LADDIE.



Here are represented four things which can be purchased at a hardware store. See if you can make out what they are.

Answer to last week's puzzle: Lory, Erne, Chat, Heron.

OUR BOYS AND GIRLS

Dear Laddie—I am a girl 12 years old. I go to the Warren school and am in the 6th grade. My father takes the M. B. F. and likes it very well. I live on a 60 acre farm. We have 3 horses, 7 cows, 1 dog, 2 cats, 10 rabbits and a pigeon. I have 3 sisters and 1 brother. My brother's name is Edward. I would be pleased if some of the boys and girl would write to me. My address is Irene Schindler, Kawkawlin, Mich., R 1.

Dear Laddie—Papa takes the M. B. F. and likes it very much. I like to read the children page. There are lots of nice stories in it. This is the third time I have written to the M. B. F. but I never saw my letter in print, so I thought I would write again. I am a girl eight years old and in the third grade at school. I am writing this all myself.—Beulah Tracezinga, Yale Mich., R 2.

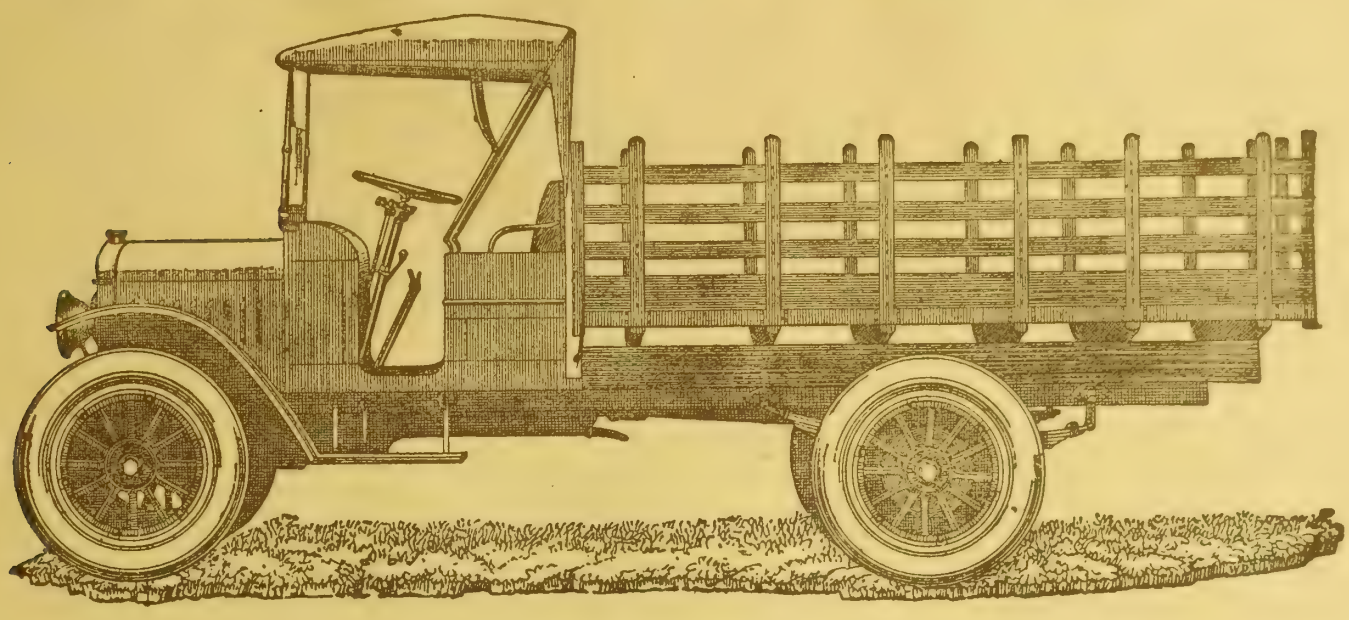
Dear Laddie—I am a girl 12 years old and am in the sixth grade. I go to the Warren school and my teacher's name is Miss Evelyn Kinyon. We have 45 scholars in our school. For pets I have two cats. I have two sisters and one brother. We live on a 60 acre farm. We have one dog. Its name is Sport. I am going to draw a picture. I will close for this time.—Josephine Guenther, Bay City, Mich., R 4, Box 64.

Dear Laddie—My father takes the M. B. F. I am in the sixth grade. My teacher is Sister Zita. I think she is a very good teacher We have 4 1-2 miles to go to school. I have 3 brothers and 3 sisters. Well I will close for this time. The names of the birds which are the Bobolink, Ricebird, Finch, Heron, Eagle and Barbet. Yours truly, Agnes Salchert, Rosebush, Mich.

Dear Laddie—I am a girl 9 years old and in the 3rd grade. We live on a farm. We have 4 horses and 6 cows, and we have 5 pigs and one calf. I have a dog for a pet. And we have an 80-acre farm. My father takes the M. B. F. and likes it very well. I have three brothers. We have over 100 chickens. My teacher's name is Miss Lees.—Ruby Eckerd, Pinconning, Mich.

More miles per gallon
More miles on tires

MAXWELL 1½ TON TRUCK



A transportation investment which will pay the careful owner 100% dividend at the end of the first twelve months.

ABBREVIATED SPECIFICATIONS

ENGINE—Four cylinders cast en bloc with Hot Spot and Ram's-horn intake manifold; cone clutch running in oil; transmission bolted to engine; bore, 3⅝ inches; stroke, 4½ inches.

GASOLINE SUPPLY—Capacity 10½ gallons; positive feed.

TRANSMISSION—Three-speed selective type.

STEERING—Left side drive; 18-inch steering wheel; irreversible worm steering gear, adjustable.

CONTROL—Gear shift lever in center of driving compartment and operated at right of driver; spark and throttle controls operated on quadrant underneath steering wheel; also foot accelerator.

WHEELBASE—124 inches.

TIRES—35 inches by 5 inches pneumatic cord.

REAR AXLES—Worm drive; semi-floating type; extra heavy malleable iron housing.

FRONT AXLE—Heavy drop-forged steel I-beam.

SPRINGS—Front, 38 inches long, 2¼ inches wide; rear, 52 inches long, 2¼ inches wide; both semi-elliptic.

FRAME—Pressed steel construction.

MATERIALS—All steel used throughout Maxwell trucks is made from our own formulae, as specified by our chief metallurgist.

CHASSIS EQUIPMENT—Electric generator, storage battery, electric head and tail lamps, electric horn, complete set of tools, including jack and tire pump with pneumatic tires; seat and front fenders.

Standard Warranty

MAXWELL MOTOR CO., INC., DETROIT, MICHIGAN

MARKET FLASHES

WHEAT LOWER

WHEAT PRICES PER BU., MAY 25, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	3.07		2.80
No. 2 White	3.05		2.90
No. 2 Mixed	3.05		2.86
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.65	2.36½	2.36½
No. 2 White	2.80		
No. 2 Mixed	2.69		

Grains are suffering a bad slump. Wheat during the past week went as high as $3.17 for No. 2 red on the Detroit market and then dropped back to $3.07. At present the market is very weak and dealers all look for lower prices owing to increase in the number of cars available for shipping grain. The Interstate Commerce Commission has ordered 20,000 box cars fit for carrying grain shipped to the grain districts at the rate of 660 cars daily. Reports from various sections of the country show the crop in fair condition but the acreage small. Export demand continues good. Recent press dispatches from England say it believed that war bread loaf may once more be British fare. From France comes word that their wheat crop promises a yield nearly up to the nation's requirements. Mr. Samuel M. Vauclain, president of the Baldwin Locomative Works, has just returned from a business trip to Europe and he says we need not worry about Europe so far as food and other direct necessities are concerned because what they need is transportation facilities and machinery.

CORN PRICES TUMBLE

OORN PRICES PER BU., MAY 25, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.92	2.06½
No. 3 Yellow	2.00		2.04½
No. 4 Yellow	1.95		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.83¾
No. 3 Yellow	1.86	1.62⅞	1.90¾
No. 4 Yellow	1.83	1.62⅞	1.87¾

Millions of bushels of corn has been thrown on the market during the past few days with the result that corn turned toward lower levels, some dealers look for a heavy demand now that consumers can secure the grain in quantities. Consumption has been almost at a standstill for some time and plants using corn have been idle and their management is eager to resume work but big dealers think they will not buy freely for the present at least for fear they might stop the downward trend of prices. Corn is expected from Argentina in greater volume owing to the government's order to shippers to export a certain amount of corn with wheat. Prices are expected to advance from time to time but it is believed that the crest of high prices is past.

OATS DROP

OAT PRICES PER BU., MAY 25, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.23	1.03	1.40
No. 3 White	1.22	1.01½	
No. 4 White	1.21		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.73	.74	.75
No. 3 White	.72½	.69¾	.77½
No. 4 White	.72½		.77

Oats are lower along with other grains, but the weakness in wheat and corn is not felt so much in oats as receipts of this grain is not as large as in the others. There is a good demand from consumers and the market is inclined to be firm and steady. Oats are being shipped in from Canada. Most of these are being brought into Eastern states at present. Some parts of the country show a small acreage while others, especially the Northwest, show a considerable increase over last year, but nearly all say the crop is in poor condition, and I do not believe the oat market will lose much of it's strength for some time at least. Of course we cannot tell what may happen to the market at any moment to change the future outlook. All we can do is give you the present outlook, and the farmer who has produce for sale should form his own opinion as to the market's future trend.

LAST MINUTE WIRES

DETROIT—All grains are dull and steady. Beans not moving freely. Live stock easy. Hay active.

CHICAGO—Corn strengthened by delayed planting. Oats unchanged. Wheat and rye active. Hogs lower. Potatoes steady.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

BEANS HIGHER

BEAN PRICES PER CWT., MAY 25, 1920			
Grade	Detroit	Chicago	N. Y.
O. H. P.	7.90	7.75	8.25
Red Kidneys		13.50	15.25
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
O. H. P.			
Prime			
Red Kidneys			

There has been another advance in beans and the market is steady and trading is inclined to be slow. It appears that the ban on potato consumption continues to bolster up beans.

FARM BUREAU URGES BEAN TARIFF

Below is a copy of a letter written by Mr. J. P. Powers, assistant secretary of the Michigan State Farm Bureau, to Congressman Fordney, under date of May 21st:

"It is the desire of the Michigan State Farm Bureau, representing more than 50,000 farmers in Michigan, that the proposed bean tariff now in the hands of the Ways and Means committee be reported out, and that every effort possible be made to secure favorable action on this in the house.

"This is a matter of vital importance to hundreds of Michigan farmers, and as has undoubtedly been called to your attention, a survey of the United States Bureau of Crop Estimates has disclosed that the 1920 bean acreage will undoubtedly be less than in the past, and our information is that unless the bean industry of the United States is bolstered by the enactment of a tariff, such as is proposed, it will deteriorate even more seriously in the future.

"Possibly the opposition to this tariff, which we understand is mainly from city representatives, can be overcome by pointing out to them that while a tariff on beans now would place the price of the American grown commodity higher than at which the imported variety is now sold, it would be a temporary condition, for if the American bean industry collapses we will be mainly depending in the future on imports which would probably sell at an even higher rate than would prevail now with the tariff in effect."

POTATOES FIRM

SPUDS PER CWT., MAY 25, 1920		
	Sacked	Bulk
Detroit	5.67	
Chicago	7.80	
Pittsburg	8.00	
New York		6.85
PRICES ONE YEAR AGO		
Detroit	2.13	2.00
Chicago	2.00	2.00
Pittsburg	2.40	2.30
New York	2.50	2.35

Old potatoes are scarce on the Detroit market and are quoted firm, but the market is very slow; scarcely enough buying to make a market. New potatoes are coming to market in fairly large quantities now. Other cities are as follows: Chicago, good demand for good stock; New York, demand light, movement slow; Pittsburg, demand and movement moderate.

HAY IN DEMAND

	No. 1 Tim.	Stan. Tim.	No. 2 Tim.

RYE DULL

Rye has been dull all of the past week and the price is down 25c owing to a lack of demand. It is quoted at $2 for No. 2 on the Detroit market.

WOOL PRICES SLUMP AT BOSTON

Auctioneers said they were virtually giving wool away when prices at the final sale by the British government at Boston May 21 went slightly below the low level established in the break of the day before. These quotations, from 10 to 20 per cent under recent prices, did not pass the dollar mark per pound for greasy wool or $2 for clean wool in any lot.

PRICES DECLINE AS SPECULATORS FLOOD MARKETS

(*Continued from page 3*)

news dispatch. "In this connection the belief was widely accepted that a drastic order would be issued for the railroads to move grain on a priority basis. Another special bearish influence was the continued attention given to the cutting of merchandise prices in department stores at different cities, whereas little or no notice in the confusion was taken of the recovery of Liberty bonds."

All kinds of business are now feeling the effects of the stringency in the money markets, and the turning of grain into liquid assets is but one of many to have been expected results. Many farmers themselves are no less to blame than the dealers for the crash in the grain markets. They have been holding their supplies waiting for the highest possible speculative profit. They, too, have now been obliged to place their holdings on the market, thereby aggravating the unsettled conditions.

How It Will Affect the Farmer

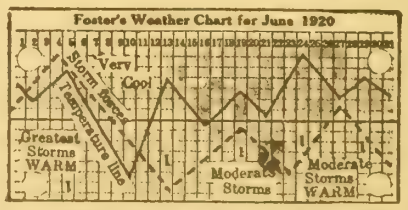
It is all too apparent that the long looked for business depression has set in. How extensive it will be, what classes of people it will affect the most, how long it will last, etc., are all matters for conjecture. As for ourselves, we have no fear that the situation will develop into anything like a panic or cause business in general any material losses. We are told that the past week or two has seen an unusually large number of business failures; that one of the largest department houses is now upon the verge of bankruptcy and others are to follow. We look upon many of these reports as clever propaganda intended to frighten people into cutting down their needless expenditures and getting back into the old habits of thrift.

We cannot possibly see how the farmer is to be seriously affected by these changes. We would expect, of course, that a business depression would temporarily at least, cause a decline in the prices of food products, but we do not believe that it is possible to have a long period of low food prices, for the simple reason that the best efforts of the consumer to economize on his food cannot materially decrease the consumption. Folks may cut their clothing bill in half by the simple expedient of buying goods of lower quality and less style, but food is food, containing so many calories of heat, etc., and every consumer must have a definite portion each day to live. Were there a surplus of foods at the present time we might have cause to fear a long era of low prices. While the present prices on grains may be in part speculative, they are mostly determined by the supply and demand and cannot be much lower.

After the crops are harvested this fall we may be forced to change our attitude on some of these matters. Of course, there will be a determined effort on the part of the consumer and the government to take advantage of the new crops by trying to force prices down. We do not believe they will succeed. The farmer has become accustomed to the higher prices; he has learned something about the world's supply and demand and his common sense tells him that if he only uses a little judgment when it comes to marketing the crops this fall that he will get his price. It goes without saying that the farmer cannot accept much less than prevailing prices and make a profit on his year's business.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D.C., May 29, 1920 —Warm waves will reach Vancouver, B. C., about June 2, 10, 16, 21, and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of June 3, 11, 17, 22; Plains sections 4, 12, 18, 23; meridian 90, upper Great Lakes, Ohio-Tennessee and lower Mississippi valleys, 5, 13, 19, 24; lower great lakes and eastern sections, 6, 14, 20, 25, reaching vicinity of Newfoundland about June 7, 15, 21, 26. Storm waves will follow about one day behind warm waves.

Temperature trends of June are expected to begin a reversal that will continue all summer and general average temperatures are expected to be as much above normal as they have, for several months past, been below normal. This change will be gradual and June will probably not average much above normal temperatures.

Rains of the week centering on June 5 are expected to be heavy in many sections, following which much less rainfall is expected and much better cropweather where there has been too much rain. There are no indications of the excessive evaporation that makes the drouths so destructive of crops, but as an average of the whole I expect much less rain on this continent than has fallen during the past several months. The lessening of rain where, moisture has been too great and an expected increase of moisture where deficiencies have prevailed, are counted on to improve crops generally following June 6.

I am not expecting much hail. I cannot locate hail storms and there is no way to dodge them. I am fairly successful in giving the dates of hail storms and do not expect hail in June after 6th. I still expect northern frosts during the week centering on June 5. Temperatures on meridian 90 are expected to be low near June 9th and then gradually go up more rapidly than the season would suggest and reman up till close of month.

W. T. Foster

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

"I CAN be Anglo-Saxon, English, American or whatever you may choose to name the ability to look things squarely in the face and talk squarely into the face of things. She paused and debated cooly with herself, and cooly resumed. "You complain that while you have told me that you love me, I have not told you whether or not I love you. I shall settle that forever and now. I do love you——"

She thrust his eager arms away from her.

"Wait!" she commanded. "Who is the woman now? Or the Spaniard? I had not finished. I love you. I am proud that I love you. Yet there is more. You have asked me for my heart and intention. I have told you part of the one. I now tell you all of the other; I intend to marry Henry."

Such Anglo-Saxon directness left Francis breathless.

"In heaven's name, why?" was all he could utter.

"Because I love Henry," she answered, her eyes still unshrinkingly on his.

"And you . . . you say you love me?" he quavered.

"And I love you too. I love both of you. I am a good woman, at least I always used to think so. I still think so, though my reason tells me that I cannot love two men at the same time and be a good woman. I don't care about that. If I am bad, it is I and I cannot help myself for being what I was born to be."

She paused and waited, but her lover was still speechless.

"And who's the Anglo-Saxon now? she queried, with a slight smile, half of bravery, half of amusement at the dumbness of consternation her words had produced in him. "I have told you, without baffling, without fluttering, my full heart and my full intention."

"But you can't!" he protested wildly. "You can't love me and marry Henry."

"Perhaps you have not understood," she chided gravely. "I intend to marry Henry. I love you. I love Henry. But I cannot marry both of you. The law will not permit. Therefore I shall marry only one of you. It is my intention that that one be Henry."

"Then, why, why," he demanded, "did you persuade me into remaining?"

"Because I loved you. I have already so told you."

"If you keep this up I shall go mad!" he cried.

"I have felt like going mad over it myself many times," she assured him. "If you think it is easy for me thus to play the Anglo-Saxon, you are mistaken. But no Anglo-Saxon not even you whom I love so dearly, can hold me in contempt because I hide the shameful secrets of the impulses of my being. Less shameful I find it for me to tell them, right out in meeting, to you. If this be Anglo-Saxon, make the most of it. If it be Spanish, and woman, and Solano, still make the most of it, for I am Spanish, and woman—a Spanish woman of the Solanos——"

"But I don't talk with my hands," she added with a wan smile in the silence that fell.

Just as he was about to speak, she hushed him, and both listened to a crackling and rustling from the underbrush that advertised the passage of humans.

"Listen," she whispered hurriedly, laying her hand suddenly on his arm as if pleading. "I shall be finally Anglo-Saxon, and for the last time, when I tell you what I am going to tell you. Afterward, and for always I shall be the baffling, fluttering, female Spaniard you have chosen for my description. Listen: I love Henry, it is true, very true. I love you more, much more. I shall marry Henry . . . because I love him and am pledged to him. Yet always shall I love you more."

Before he could protest, the old Maya priest and his peon son emerged from the underbrush close upon them. Scarcely noticing their presence, the priest went down on his knees, exclaiming in Spanish:

"For the first time have my eyes beheld the eyes of Chia."

He ran the knots of the sacred tassel and began a prayer in Maya, which, could they have understood, ran as follows:

"O immortal Chia, great spouse of the divine Hzatzl who created all things out of nothingness! O immortal spouse of Hzatzl, thyself the mother of the corn, the divinity of the heart of the husked grain, goddess of the rain and the fructifying sun rays, nourisher of all the grains and roots and fruits for the sustenance of man! O glorious Chia, whose mouth ever commands the ear of Hzatzl, to thee humbly, thy priest, I make my prayer. Be kind to me, and forgiving. From thy mouth let issue forth the golden key that opens the ear of Hzatzl. Let thy faithful priest gain to Hzatzl's treasure—— Not for himself, O Divinity, but for the sake of his son whom the Gringo saved. Thy children, the Mayas pass. There is no need for them of the treasure. I am they last priest. With me passes all understanding of thee and of thy great spouse, whose name I breathe only with my forehead on the stones. Hear me, O Chia, hear me! My head is on the stones before thee!"

For all of five minutes the old Maya lay prone, quivering and jerking as if in a satalepsy, while Leoncia and Francis looked curiously on themselves half-swept by the unmistakable solemnity of the old man's prayer, non-understandable though it was.

Without waiting for Henry, Francis entered the cave a second time. With Leoncia beside him, he felt quite like a guide as he showed the old priest over the place. The latter, ever reading the knots and mumbling, followed behind, while the peon was left on guard outside. In the avenue of mummies the priest halted reverently——not so much for the mummies as for the sacred tassel.

"It is so written," he announced, holding out a particular string of knots. "These men were evil, and robbers. Their doom here is to wait forever outside the inner room of Maya mystery."

Francis hurried him past the heap of bones of his father before him, and led him into the inner chamber, where first of all, he prostrated himself before the two idols and prayed long and earnestly. After that, he studied certain of the strings very carefully. Then he made announcement, first in Maya, which Francis gave him to know was unintelligible, and next in broken Spanish:

"From the mouth of Chia to the ear of Hzatrl—so it is written."

Francis listened to the cryptic utterance, glanced into the dark cavity of the goddess' mouth, stuck the blade of his hunting knife into the key hole of the god's monstrous ear, then tapped the stone with the hilt of his knife and declared the statue to be hollow. Back to Chia, he was tapping her to demonstrate her hollowness, when the old Maya muttered:

"The feet of Chia rest upon nothingness."

Francis pushed against the female deity with his hand and found that she moved easily. Gripping her with both hands, he began to wrestle, moving her with quick jerks and twists.

"For the strong men and unafraid will Chia walk," the priest read. "But the next three knots declare: Beware! Beware! Beware!"

"Well, I guess that nothingness, whatevevr it is, won't bite me," Francis chuckled, as he released the statue after shifting it a yard from its original position.

"There, old lady, stand there for a while, or sit down if that will rest your feet. They ought to be tired after standing on nothing for so many centuries."

A cry from Leoncia drew his gaze to the portion of the floor just vacated by the large feet of Chia. Stepping backward from the displaced goddess, he had been just about to fall into the rock-hewn hole her feet had concealed. It was circular, and a full yard in diameter. In vain he tested the depth by dropping lighted matches. They fell burning, and, without reaching bottom, still falling, were extinguished by the draught of their flight.

"It looks very much like nothingness without a bottom," he adjudged, as he dropped a stone fragment.

Many seconds they listened ere they heard it strike.

"Even that may not be the bottom," Leoncia suggested. "It may have been struck against some projection from the side and even lodged there."

"Well this will determine it," Francis cried, seizing an ancient musket from among the bones on the floor and preparing to drop it.

But the old man stopped him.

"The message of the sacred knots is: whoso violates the nothingness beneath the feet of Chia shall quickly and terribly die."

"Far be it from me to make a stir in the void," Francis grinned, tossing the musket aside. "But what are we to do now, old Maya man?—From the mouth of Chia to the ear of Hzatzl sounds easy—but how?—and what? Run the sacred knots with thy fingers, old top, and find out for us how and what."

For the son of the priest, the peon with the frayed knees, the clock had struck. All unaware, he had seen his last sun-rise. No matter what happened this day, no matter what blind efforts he might make to escape, the day was to be his last day. Had he remained on guard at the cave entrance he would surely have been killed by Torres and Mancheno, who had arrived close on his heels.

But, instead of so remaining, it entered his cautious timid soul to make a scout out and beyond for possible foes. Thus, he missed death in the daylight under the sky. Yet the pace of the hands of the clock was unalterable and neither nearer nor farther was his destined end from him.

While he scouted, Alvarez Torres and Jose Mancheno arrived at the cave opening. The collosal, mother of pearl eyes of Chia on the wall of the cliff were too much for the superstition-reared Caroo.

"Do you go in," he told Torres. "I will wait here and watch and guard."

And Torres, with strong in him the blood of the ancient forebear who stood faithfully through the centuries in the avenue of the mummy dead, entered the Maya cave as courageously as that forebear had entered.

At the instant he was out of sight, Jose Mancheno, unafraid to murder treacherously any living, breathing man, but greatly afraid of the unseen world behind unexplainable phenomena, forgot the trust of watch and ward and stole away through the jungle. Thus, the peon, returning reassured from his scout and curious to learn the Maya secrets of his father and of the sacred tassel, found nobody at the cave mouth and himself entered into it, close upon the heels of Torres.

The latter trod softly and cautiously, for fear of disclosing his presence to those he trailed. Also his progress was still further delayed by the spectacle of the ancient dead in the hall of mummies. Curiously he examined these men whom history had told about and for whom history had stopped there in the antechamber of the Maya gods. Especially curious was he at the sight of the mummy at the end of the line. The resemblance to him was too striking for him not to see, and he could not but believe that he was looking upon some direct great-ancestor of his.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

CUTTING WEEDS ALONG R R

The railroad runs across my place and the section foreman refused to cut the milkweed and other weeds last summer when I asked him. I reported him to headquarters and they never even answered my letter. I went to our Highway Commissioner and he said it was their place to do it but he didn't know how they could be found to do it? If I done the work could I force them to pay me? What is the best way to go at it? And are they compelled to keep public crossings open in the winter? Can I compell my adjacent farmer to build and keep up one-half of the fence if he is not using the land adjoining? We all think your paper the best.—L. L. F., Grand Traverse County.

Section 4609, C. L. 1915, provides that if any R. R. company fails to cut the noxious weeds "it shall be lawful for the overseer of highways to cut and destroy * * *at the expense of the corporation on whose lands said Canada thistles * * or other noxious weeds shall be so cut at the rate of $3 per day for the time necessarily employed in cutting and destroying to be recovered in any court of competent jurisdiction." I would be of the opinion that the overseer might hire you to do the cutting and you could through him, recover the pay. I do not know of any requirement for keeping crossings open in winter. The construction of the court as to partition fences is that one is not required to maintain partition fences unless his own land is enclosed.—*W. E. Brown, legal editor.*

FERTILIZER COMPANIES

As per the articles that have been appearing in your paper regarding soils, would ask where the unmixed fertilizers can be purchased to best advantage to farmer located in St. Joseph County, Mich., and who having a large acreage (over three hundred acres) must use the unmixed fertilizers in most instances. We much enjoy your paper and find it valuable. Have we a county agent in St. Joseph county and what services could be asked of them for an organization of women?—F. T. W., Pigeon, Mich.

We have purchased our commercial fertilizers from the Solvay Process Co., of Detroit. That is, the nitrogen carriers and the potash and the acid phosphate from a number of dealers in different parts of the state. Some of it has come from the Agricultural Chemical Co., of Detroit; some from Swift & Co., of Chicago, and some from several retailers.—*M. M. McCool, Prof. of Soils, M. A. C.*

Editor's Note: As a further suggestion, write the Solvay Process Co., and the Agricultural Chemical Co., stating your fertilizer needs and they will be glad, we are sure, to assist you in getting the proper fertilizers. Mr. J. M. Wendt is the county agent of St. Joseph County. His address is Centerville. If the organization to which you refer is of an agricultural nature, I feel sure that Mr. Wendt will be glad to give you his assistance.

REPAIRING HIGHWAYS

We are living on a township line road running east and west which is almost impassable at this time of the year or any other time after a rain. The road does not belong to the township where we vote but to the township to the south side of the road. (We are on the north side.) There has never been any work done on this road and the center of the road is lower than the sides. We are on a rural route and there are several houses on this mile. Is there a law to compel them to fix this road and how would one go at it?—P. J. S., Gratiot County.

Practically the entire control of the highway and what repairs shall be placed thereon is vested in the highway commissioner unless you desire, with your neighbors, to proceed under section 4674 of the Compiled Laws.—*W. E. Brown, legal editor.*

A WARNING FROM A FARMINGTON SUBSCRIBER

Enclosed find $2 for a 3-year subscription to your valuable paper. Have any of your subscribers ever said anything to you about joining a grocery buying company? Last February a man by the name of Ogden called here, and represented himself as agent for such a firm. I paid him $2 for membership fee, and then I was to get my groceries at wholesale prices. I have never seen him since or heard from the firm I wouldn't have joined only that a neighbor, a cousin of his, came here with him, so thought he was O. K. I am not writing to ask that you do anything as far as I am concerned, but thought if you heard of him in any other part of the state you could warn people through your paper.—W. H. T., Farmington, Mich.

We ought to have the name and address of this firm who was to supply you with the groceries. It looks like a bunco game, and if it is it ought to be checked before any more are hoodwinked out of their two bucks. Thanks for the warning, but give us the name of the firm and let us look into its proposition.—Editor.

MARRIAGE OF COUSINS

Will you please tell me through your paper the states that allow cousins to marry—A Subscriber, Grand Traverse County.

I am not in possession of the marriage laws of all of the states. I am unable to give the information required.—*W. E. Brown, legal editor.*

COMMUNITY THRESHING OUTFIT

Would like to know if it would be compulsory to be incorporated in the State Co-operation in order to purchase a community threshing outfit.—A. M. W., Saginaw County.

The purchase of a community threshing outfit would be subject to such conditions in the first place as the manufacturer would be willing to sell upon. The purchasers may for an association in the nature of a partnership to conduct their own business and file their organization papers with the county clerk if they do business under an assumed name so you could collect for the services rendered. You could become incorporated and file your articles in the way the statute provides, each one taking so much stock. There is no law that compels either way. Good business might require one or the other way.—*W. E. Brown, legal editor.*

THE COLLECTION BOX

DETROIT FIRM RETURNS $41.50

"After some correspondence with the R—— Mfg. Co., Detroit, I sent them a check for $10 supposing from their correspondence they would then send a bath tub on 30 days trial. Soon after they wrote they could not send the tub in that way but I could deposit balance with my banker. They said you however take no chance when you order on our regular terms because the tub is sold to you under a 30 day guarantee. It must make good or we buy it back at the end of that time. I sent balance, $31.50, Dec. 18, 1919. January 16, 1920, the tub was shipped from Detroit. In due time I received the tub. I notified them that it was not complete and up to their guarantee and I would ship it back. I got no answer to my letter so shipped it back February 21, 1920.

"Have written them once or twice since but cannot get them to answer. Is this company reliable and collectible? Can I employ you people to look after this matter for me? Find enclosed subscription blank and check for two dollars. Thanking you in advance for an answer to my question.—*L. R. P., Grand Blanc, Mich.*

Knowing this firm to have a reputation for honesty and good service, we wrote them about this matter expressing our belief that a misunderstanding existed. No reply. Again we wrote. Still no reply. A third time, and—a reply, advising that settlement had not been made because the returned goods had not been received, but stating that despite this fact a check for $41.50 was being mailed to our subscriber. On May 3rd we received the following from Mr. P.:

"Well, I will say you brought some pressure to bear on these people, neither of us could get them to answer our letters. Received the check in full for which I thank you. If you will let me know your charges will send same by return mail. Again thanking you, etc."—*L. R. P., Grand Blanc, Mich.*

There is no charge for this service.

HIGHER TOWNSHIP TAXES

I am enclosing a stamped envelope for reply and I hope you will help me out. Here is my case: I own 40 acres in Sheridan township, Huron County, but I live in Paris township, Huron County. Now two years ago I paid taxes on the 40, valuation $2,500, $26.62. One year ago I paid on the same 40 and same valuation, $62.36, of which $11.75 was drain tax. This year I paid taxes on the same 40, valuation $2,800. $83.29, of which $11.75 was drain tax. Now I think that almost equals our friend Ferris of Gratiot County, told of in this week's Business Farmer. But here's the point. Two years ago my town tax was $22.88, this year it is $27.66. Now the other items I understand. Drains cost money, and roads and schools, but they are worth it. State tax is high. Alright, but I can't see how town tax can jump from $3.40 to $37.66 in two years. Should the State tax be the same on the same valuation in any township?—P. C. B., Huron County.

I think the supervisor or town clerk of the township should be able to explain the raise in township taxes. The State Tax should be the same percentage in all townships in the same county, but might be different in townships of different counties owing to the different percentages of the State Equalization. Each county being equalized by itself.—*W. E. Brown, legal editor.*

LIVE STOCK YARDS

Please publish in your paper the name and address of a stockyard in Detroit, Saginaw and Bay City. I would like to ship a few veal calves to be sold in either one of these cities, and would appreciate it very much if you would connect me with the best companies.—A faithful reader, John S., Rhodes, Mich.

There are no live stock yards in Saginaw or Bay City, as neither point is favorably situated as a distributing center. These sections produce a good deal of their own meat and the balance is shipped in from the packing companies. Detroit has a live stock yard, but the amount of live stock sold there is small compared to scores of other cities. Live stock yards and companies merely provide the cleanance facilities for live stock. They do not deal in them. There are several reliable commission firms in Detroit who will handle your stock for you. Names and addresses of these will be sent to anyone interested.—Editor.

GALE RIDING PLOWS

A good many of us farmers around here four years ago bought Gale riding plows which are in A No. 1 condition at present and we think one of the best plows made, but now we cannot get any plow points. If we had the pattern it is possible we could get some one to make them for us. Can you help us out in any way? We cannot afford to throw them away and buy new ones which the dealers want us to do. Thanking you for any help which you may be able to give us.—Earl W., Mattawan, Mich.

We wrote the Gale Manufacturing Co., asking them where our subscribers could secure the plow points. Their reply follows: "Plow points for Gale Riding Plows can be obtained from the Moore Plow & Implement Company, Greenville, Mich., to whom the patterns for these plows were sold. Kindly advise your subscribers accordingly, and oblige."

COMMISSIONER MUST APPOINT OVERSEERS

At last spring election Custer township changed from postmaster to overseer and divided the township into four districts and the road commissioner was to appoint four overseers. He appointed three and let one district go and said he done the work. Can the road commissioner do the overseer's work and collect commissioner's pay. Can the road commissioner spend the money that the overseer should have spent and not appoint an overseer?—J. C., Mason County.

You do not state by what authority they established the four road districts. Under the facts stated, I believe the commissioner should appoint four overseers as the law provides. I am of the opinion that he should not perform the duties of an overseer and draw commissioner's pay. Section 4482 provides: "No person shall be eligible to the office of overseer of highways who is not a resident taxpayer in the district for which he is elected or appointed and no person shall hold the office of commissioner and overseer at the same time.—*W. E. Brown, legal editor.*

Vol. VII, No. 39. MT. CLEMENS, SATURDAY, JUNE 5, 1920 $1 PER YEAR

Flowers that Bloom in the Springtime

In this issue:—Sugar Plants will Run with Lower Tonnage—Australian Government Distributes Food Products—Corn for Michigan Muck Lands—Why Packer Control Legislation Should be Adopted—Laying Out Fields for Tractor Plowing.

Australian Gov't Distributes Food and Protects Farmer and Consumer

By NATIONAL BOARD OF FARM ORGANIZATIONS

SUGAR is sold in Australia, and in abundance, at eight cents per pound; first class cuts of beef retail at from sixteen to eighteen cents a pound and other foods are in proportion, the Hon. Edward Theodore, Premier of Queensland, Australia, told a representative of the National Board of Farm Organizations a few days ago. Mr. Theodare said these moderate prices were made possible by the elimination of the speculative middleman which has been accomplished in the State of Queensland.

Profiteering in foodstuffs is not entirely unknown in Queensland, Mr. Theodore said, but the government has found and applied a remedy. The remedy is simple, effective and complete, the youthful premier declared. If the food profiteer refuses to desist from his practice the government doesn't put him in jail; it simply enters into competition with him, thus forcing him to trade on reasonable terms.

"I notice," said Mr. Theodore, "that beet sugar growers in the United States are complaining that while they are getting four cents a pound for the sugar in their beets, the speculators are selling the product at prices reaching as high as thirty cents a pound. A situation of this kind in Australia would be impossible. It is made impossible because the government itself has assumed the duties of the distributor or the middleman as you call him here.

"Of course there is difference in the cost of production in the United States and Australia, but allowing for everything, sugar in this country should retail at less than one-half the present rates. All the labor in the sugar area of Queensland is performed by white men who receive from four dollars and a half to about six dollars a day for their toil.

"But at eight cents a pound to the retailer the planters are making very comfortable fortunes. They are making fortunes because they are getting all that their product brings minus the actual cost of placing it in the hands of the consumer.

"There is one sugar refinery in Australia and it is a monopoly. We could have suppressed it by the simple process of establishing a government plant. But instead of taking such drastic means of forcing compliance with the public demand for sugar at moderate prices the government invited this concern to co-operate. The refinery met us more than half way and the result is that for reasonable compensation it acts as a distributing agent. The shareholders in the refinery receive substantial annual dividends.

"The water, however, has been squeezed out the stock and artificial boosting of securities has ended. Personally I don't care what profits the refinery makes as long as the consumers of sugar are able to get this very necessary food at prices which can be properly regarded as moderate."

"Is not this state Socialism?" the prime minister was asked.

"Not at all; it is simply good business sense," was the reply. "I am not a Socialist. There is not a Socialist in my cabinet and very few, if any, in the Queensland parliament. We simply sought and found a practicable way of curbing profiteers. Sugar may have gone to 20 and 30 cents a pound in Australia if we had not used the methods to which I have referred in resisting such improper efforts to get rich quick.

"If such immoderate prices had been demanded for sugar the farmers would still, as they are doing in this country, collect but a small percentage of the gross sum realized. As it is the cane growers are getting well paid for their labor, the refiners are getting a fair compensation for their service and the workmen are getting good wages. The whole problem is summed up in the one word co-operation. This can be done through private effort or under governmental direction. The way which proves the most effective is the wise way."

The premier said the meat profiteers were unhorsed when the government went into the cattle business. He declared that the speculators determined to filch from the farmer as well as the consumer but when the government went into the meat business they were obliged to meet the government's terms.

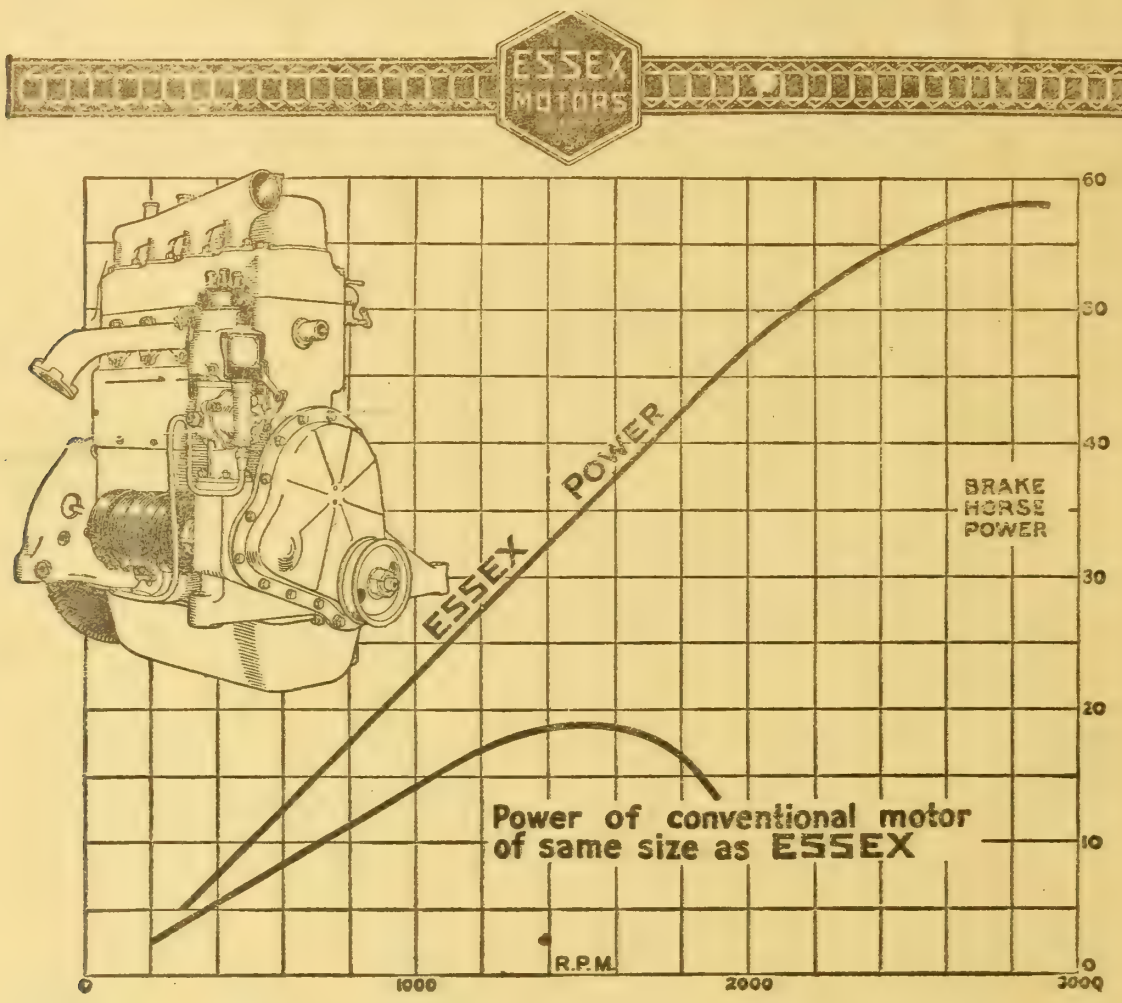
"We went into the cattle buying and meat distributing business, not for profit but merely as the agent of both the producer and the consumer," said Mr. Theodore. "The consequence was that in getting his supplies the speculator was obliged to pay the stockman as much for his beef as the government was willing to give him. We gave him what, after a thorough survey of the whole situation, taking in the cost of production and all other elements, what would leave him a fair margin of profit to compensate him for his investment both of labor and money.

"Then we charged the consumer just enough above the original cost of the beef to take care of all overhead expense. This policy naturally forced the speculator to meet our terms, something he could not do and continue to be a speculator. There is nothing more reprehensible in the conduct of a merchant than to engage in artificial speculation in food products. But you can't cure this evil by putting the profiteers in jail, although they ought to be there.

"You must devise a means for beating them at their own game and on their own ground. We have done this in Australia. The results are shown in the fact that speculation in farm products is reduced to a minimum and profiteering, if practiced at all, is done on a very small scale."

Mr. Theodore said the farmers of Australia were well organized. He expressed surprise that there should be any considerable opposition in or out of congress, to such a measure as the Capper-Hersman bill which gives the farmers an unquestioned right to collectively market their products.

"There is no opposition anywhere in Australia to a system which makes direct dealing between the producer and the consumer possible," said Mr. Theodore.



Note How Essex Trebles Motor Power

The swing of interest to light cars, led by champions of the Essex, calls for particular caution.

Some may think of Essex only as one of a finer type, marking a general advance in standards throughout the light car field.

But the facts quickly expose that mistake. The Essex Motor is patented. No larger than standard motors that yield but 18 H. P. at utmost, the Essex delivers 55 H. P. And Essex performance, so enthusiastically admired by all motordom is the product of that exclusive invention.

Essex has set the greatest official endurance record of 3037 miles in 50 hours. It has never been equalled by any car, regardless of size or price. And Essex made the world's 24-hour road record of 1061 miles.

All Results of Its Patented Motor

For cars of its piston displacement it has set every official record from 1 to 50 hours. And in its first year it set a selling record never equalled in motor history.

It creates a new standard of light car capacity in a totally new type. And it cannot be copied. Do not forget that. You can get the abilities for which these records stand, only in the Essex.

Essex Motors, Detroit, Michigan

$14,500 IN SPECIAL PRIZES FOR HOLSTEINS, 1920

For the current year, the Holstein-Friesian Association of America, through its committee on special prizes, offers fourteen thousand five hundred dollars to be distributed as awards at fairs for the excellence of exhibitions of Purebred Holstein-Friesian cattle.

It has been the custom of this Association to stimulate Holstein breeding interests throughout the country by appropriations of prize monies and in some instances by the award of suitable prize cups and plates to winners in various classifications.

Up to the present time it has been deemed practical and expedient to limit this award of prize money mainly to distribution at state fairs and expositions of national scope.

You will find enclosed $1 for another year of the M. B. F., as it is the life we much enjoy. I would not be without it as it helps very much in getting an old hayseed straightened out and getting him in shape for farming. I am sending in another "victim" who I think will enjoy the M. B. F.—*Thos. O'Rourke, Otsego County.*

Sugar Plants will Run with Lower Tonnage

Refusal of Over Eight Thousand Farmers to Grow Beets Under Old Contract Will Mean Shorter Run for Factories

TWO THINGS are now apparent in the sugar beet controversy. One of them is that the factories will not grant the growers a conference this year, and the other is that they will be short of tonnage.

All kinds of excuses have been given by the manufacturers to explain their contempt for the growers' organization. One of them is that a certain leader of the organization, with whom they would presumably have to treat, is not a sugar beet grower. Another that the price asked by the growers would be ruinous to them. Still another that they had all the acreage they needed so why bother to have a conference.

The actual reason why the Sugar Beet Growers' Association has been unable to win its fight this year is not hard to find. The blame rests upon the shoulders of certain farmers who number no more than the fingers on the two hands. "Eighty per cent of our members are loyal and will grow no beets," said Manager Ackerman as late as May 29th. But the other twenty per cent which raised the white flag of surrender have made it possible for the factories to run. Go into any sugar beet section of Michigan where farmers have planted beets, interview them, and you will find in the majority of cases that they simply followed the lead of some prominent farmer who either did not join the Association or was tempted into a betrayal of the Association by a bonus from the factories or the glittering promise of $16 beets. The stock argument is, "I had no intention of planting beets, but So-an-So planted some, so I thought if he was going to I might just as well." And so it goes, like a bunch of dominoes stood on end. Knock one of them down and the entire line topples over. We say again that the responsibility for the defeat of the sugar beet growers can be traced to less than a dozen farmers who by their own disloyalty to the Association encouraged others to be disloyal. Had the dozen stood loyal they would today be growing beets under a new contract, a contract that recognizes them as business men and gives them a fair portion of the profits.

Why Some Farmers Grow Beets

THE BUSINESS FARMER has received several clippings of articles written by farmers and published in various papers in the sugar beet districts. Requests have been made that we answer them in these columns. To do so would require much more space than we have to spare so we will have to confine ourselves to a brief discussion of the principal points raised by these farmers who have not only decided to grow beets but have been encouraging their neighbors to do likewise. It is plain to be seen that fully one-half of such articles are inspired by the sugar manufacturers. There is a touching reference to the money the manufacturers have loaned to farmers "at seven per cent." There is a casual mention of the mortgages that have been paid from the sugar beet crop. One would gather from a reading of some of the articles that the sugar factories were doing the farmers a favor in accepting their beets.

Other articles have been written by farmers in defense of their own intention to grow beets and possibly represent the sincere convictions of the writers. One such letter came from a Clare county farmer who was going to grow beets for the first time because the striking sugar beets growers had said they would grow beans which had always been his main cash crop. His argument was that if the beet growers were going into competition with him in the bean business that he would have to get even by growing beets. But he didn't figure far enough. He didn't see that the only case in which the beet growers would grow beans was in the event of the factories not conceding them a conference and that the only thing that would prevent a conference would be the disloyalty of just such men as himself.

A well-to-do farmer of Gratiot county, according to his letter in the *Alma Record*, will grow beets because the world is short of sugar, labor is striking, speculators are profiteering, and the farmers ought to set an example for the others by working hard and being satisfied with less prices, the assumption of the reader being that the farmers never having done an honest day's labor in their lives and having made large profits in previous years can now well afford to play the part of the big brother and do a little sacrificing for the rest of the world.

Such a spirit of brotherly love and renunciation would gain the admiration of all mankind were it not for the very facts which our farmer friend has stated. With labor striking, capital profiteering, every kind of business in the world straining in mighty competition for more than its share of the consumer's dollar, the farmer must as a matter of necessity see to it that the other fellow does not get any more of his share of the dollar. For heaven knows the farmer gets a small enough share as it is. Its an imposition to expect that the lowest paid industry in the world shall make any more concessions at this time to the profiteers in other industries. Charity begins at home. Let the farmer organize and secure such prices for his products as will enable him to give his family the comforts and conveniences enjoyed by the average business man of the city, and he can then afford to talk about philanthropy unto others.

The correspondent in the *Alma Record* also contends that the figures showing the cost of growing beets have been padded. He can speak only for himself. But there is ample evidence to show that the farmers who produce eighty to ninety per cent of the beets sliced in Michigan factories cannot grow them year in and year out under present conditions for the price guaranteed in this year's contract. It is admitted that some years this can be done, but how is our friend going to make up the losses of the poor years? All other business enterprises create sinking funds and surplusages to tide them over in lean years. Why not the farmer?

This same correspondent claims that the statements about the profits of the manufacturers are exaggerated. Presumably our friend has some figures of his own which have not been made public, and if he will send them to us we will be glad to publish them in the columns of THE BUSINESS FARMER. Such figures as have been published in THE BUSINESS FARMER showing the profits of the manuractu rers have been copied verbatim from official publications of the United States government. Yet, our friend asserts that "any person with common sense can see they are not the truth." If they are not the correct figures, please Mr. Farmer, give us the right ones. We have asked the manufacturers to do this in a conference, but they have refused. They, too, say "the person of ordinary intelligence can take these claims for what they are worth." Possibly, Mr. Farmer, you own some sugar stock and because it hasn't paid you the dividend which the government figures show the manufacturers have earned, you think the figures are incorrect. But how do you explain the $350,000 in Liberty bonds and the $5,000,000 surplus fund shown in the last annual statement of one of Michigan's leading companies?

Threats of Violence Propaganda

The state press has carried many lurid stories of the alleged acts of violence and terrorism perpetrated by beet growers against the disloyal members of their association. Investigation has shown that the great majority of these reports are groundless, and are spread by sugar factory representatives for the purpose of injuring the good name of the farmers. One of the alibis given by Mr. Joel C. Merriman, a representative in the last session of the legislature, for planting beets this year after he had agreed not to do so, was that he could not sanction the threats of violence he heard. Who does sanction them? Because there are a few hot-blooded fellows who step over the deadline is no reason for the entire army to desert. Reforms would never be won, and progress would mark time if the majority lost courage and quit the fight because of the irresponsible acts of the minority. It might be mentioned in passing that Mr. Merriman was one of the sixteen farmers in the last session of the legislature who could not trust the people to vote on the warehouse amendment.

It is also worthy of mention in passing that the same week the Deckerville local consisting of twenty members, of which Mr. Merriman is one, voted to plant beets, the Peck local, twenty miles away, with 286 members voted almost unanimously not to plant beets, the vote being 275 against planting and 11 for. This local also passed a resolution condemning "any violence to the person or property of any farmer in this vicinity who desires to grow beets in 1920." Another resolution that was adopted is as follows:

"Resolved, that we jointly agree not to exchange work in any way or aid any farmer, except in case of sickness, in any work on his farm, who attempts to grow any beets during the summer of 1920 under contracts not approved by the Beet Growers' Ass'n."

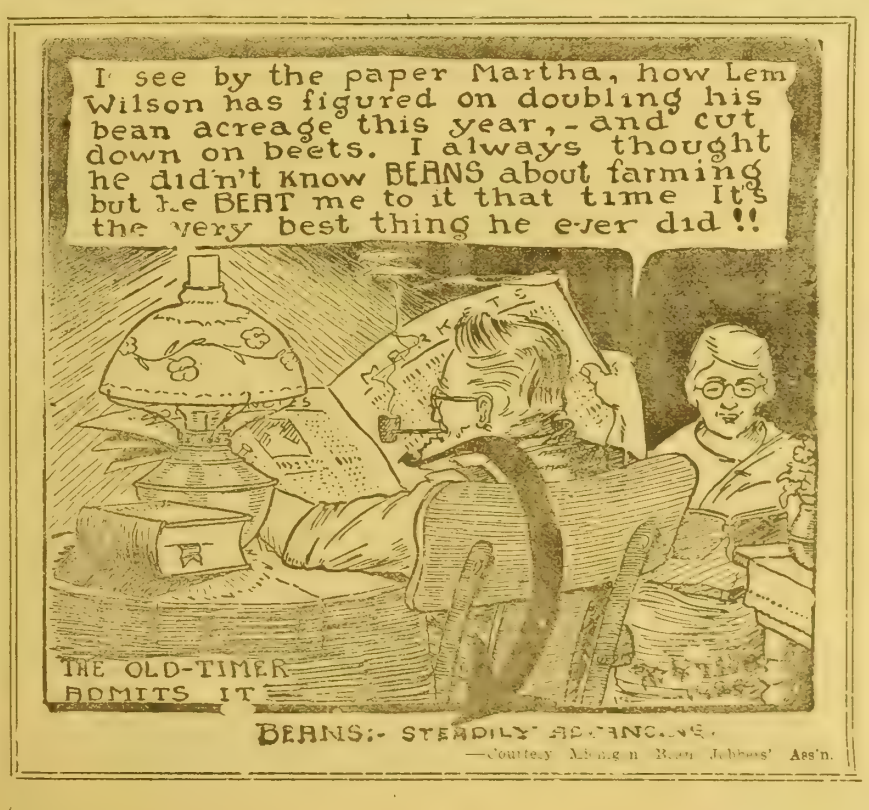
Sugar Beet Tonnage May Be Short

From what evidence as can be obtained it seems certain that many of the factories will have a short run. In the first place their acreage is not what it ought to be considering the normal abandonment and losses of crops. In the second place a large percentage of the acreage has been contracted with farmers in out of the way places, men who have had no experience in growing beets and the suitability of whose soil is open to question.

As to what the price of sugar may be no one can say. In the absence of government regulation it is likely to be high. But the government ought and we think will take some hand in regulating sugar prices. There are approximately 200,000 farmers in Michigan who do not produce sugar beets and therefore must buy sugar. Since a few thousand of their brother farmers have signed contracts which guarantee them $10 per ton for beets, or a possible 4 cents per pound for the sugar in the beets, they will logically assume that this price is satisfactory to the growers and should object to paying 20 to 30 cents a pound for sugar. Might it not be well to petition the federal government to set a price to the consumer at around, say 10 or 12 cents a pound which will pay the farmer what he wants, give the manufacturer a fair profit and a reasonable price to the consumer.

Getting Ready for Another Year

Manager Ackerman tells us that the failure of the Association to win its fight this year will not deter them from continuing it and plans are being made now to thoroughly canvass the entire sugar beet territory by fall and secure every beet grower and prospective beet grower as members. The Association has placed an order for buttons showing a sugar beet, which will be distributed to the members. The proposition of farmer-owned sugar factories will likewise be taken up, and investigations will be conducted showing what success farmers have attained in this and other countries in the co-operative owing of these plants.



I see by the paper Martha, how Lem Wilson has figured on doubling his bean acreage this year,- and cut down on beets. I always thought he didn't know BEANS about farming but he BEAT me to it that time It's the very best thing he ever did !!
THE OLD-TIMER ADMITS IT

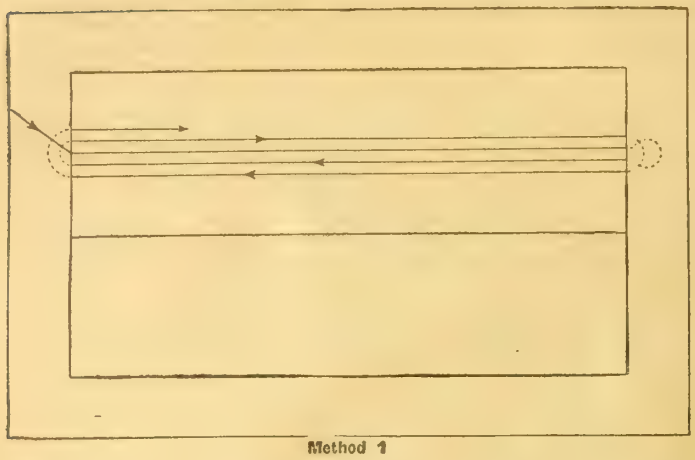
Laying Out Fields for Plowing With Tractor

Tractor Concern Describes Eleven Different Methods for Most Efficient Plowing of Fields



Method 1

Method 5

Method 3

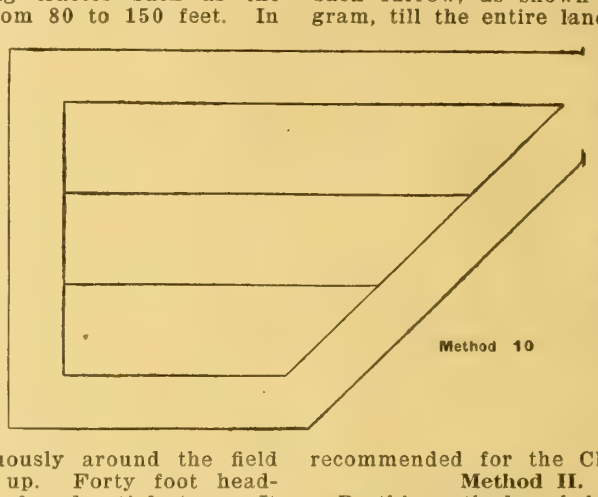
THE prime object of the farmer who plows with a tractor is to do a good job of plowing. He also desires to do away with the use of horses altogether in opening up a land, or in finishing it; and by laying out his fields properly, the plowman can easily accomplish this. The farmer also wants to reduce to a minimum the time spent turning corners or ends with the plows raised. Time wasted in useless turning, or traveling unnecessary distances across the field, reduces considerably the amount of land turned in a day, and lessens the efficiency of the tractor. The great efficiency is obtained when the plows are left in the ground all the time; but this does not always result in the best plowing. The short turning radius necessary when the plows are left in the ground makes awkward work for most tractors. The Cletrac is well adapted for these short turns because of its small turning radius.

The two methods in common use are: (1) the plows are raised at each end, (2) the plows are left in the ground. The advantages of the first named methods are: (1) the short, awkward turns are reduced, (2) it is easier on the operator as he does not have to bother with the corners, (3) there is less space left in the corners, (4) it is generally agreed that a better quality of plowing results. The advantages of the second method are that (1) no time is lost by raising the plows, hence more work is accomplished in a day, (2) the tractor operates more efficiently as fuel is not being burned while the plows are idle, (3) the number of dead and back furrows is greatly reduced. It can be said, however, that the method where the plows are idle at the ends is the most popular method.

Plows Lifted at the Ends

The first thing is to determine the width of the lands and how wide to leave the headlands in which to turn. It is an individual question as to the width of the lands but some of the determining factors may be mentioned. In sections where there is a heavy rainfall or the land naturally needs draining the land should be narrow, and thereby making numerous dead furrows to take care of the water. The topography of the land or the shape of the field must also be taken into consideration. The wider the lands the greater the amount of time wasted in running idle across the ends of the fields, also the fewer the dead furrows. A two-plow tractor will plow a strip of 40 rods wide laid out in six lands in about 1 1-2 hours less time than if it were laid out in three lands. A satisfactory width of land for a short turning tractor such as the Cletrac is from 80 to 150 feet. In demonstrations it should be less, to save time, usually 50 to 75 ft. It is best to leave an unplowed strip on each side of the field, the same width as the headlands, so that the tractor can plow continuously around the field in finishing up. Forty foot headlands will be found satisfactory. It is better to have wide headlands rather than narrow ones.

If the field is to be finished with no irregular unplowed strips between the lands or at the edges, it is necessary that the headlands be of a uniform width and to have the first furrows as nearly straight as possible. If there is a road or lane at the end of one side of the field



Method 10

where the outfit can turn, it may be preferable to plow out both sides of the field and the end near the lane, with the body of the field, leaving only the headland at the end of the field.

Care should be taken in measuring out the lands prior to starting; these can be "stepped off" as a rule quite accurately. Markers or stakes may be placed about every 150 ft across the field to insure a straight furrow.

Method I

The first step necessary is to mark off the headlands of uniform width around the entire field.

The next step is to measure off a land of the width desired, then set stakes along the middle line of the land. Lay a back furrow along this line. Continue plowing around this back furrow, as shown in the diagram, till the entire land is plowed. Mark off another land and plow in same manner; continue this till the entire field is plowed. The greatest objection to this method is the numerous back and dead furrows; but it can be highly recommended for the Cletrac.

Method II.

By this method each land is plowed to a dead furrow instead of around a back furrow, as in Method 1.

Measure off the width of land desired and set stakes along this line. Start the land by plowing through this line, turning to the left and come down along the line of the headline running parallel to this line. Continue to plow around the land till there is a dead furrow in the middle of the land. If the lands are the same size as in Method 1, there will be the same time wasted in idle running across the ends and the same number of short turns at the dead furrows as there were at the back furrows in Method 1. Dead furrows occur where the back furrows occur in Method 1, hence if these Methods are alternated each year, there will be a tendency to level the field by smoothing out the back and dead furrows. This is probably the most popular method in use for the caterpillar tread type of tractor.

Method III.

This is a combination of Method 1 and 2. Starting at one corner of the headland run a single furrow (throwing the furrow in) entirely around the headland. This will serve as a guide for raising and lowering the plows. Note the method of turning the outfit at the corners. The second land is plowed first and is plowed around a back furrow in the same manner as in Method 1. After the second land is finished the first land is plowed in the same manner as in Method 2.

Method IV.

This method tends to eliminate the short turns which occur when finishing up a land. Start the land the same as in Method 2. Plow around this land turning to the left until the strip in the center is too narrow for convenient turning at the ends. Now measure off a new land of the same size as the first land. Start plowing along this line and turn to the left at the headland and continue plowing out the narrow strip in the first land. After a dead furrow has been made on the first land, continue plowing the second land until a narrow strip remains and then repeat the process till the field is plowed. It is an indivdual question whether the extra travel is preferred to the short turns. It is evident that the wider the strips left in the middle the greater amount of idle time spent on the ends.

Method V.

In this method the entire field is laid out at one time by plowing all the back furrows before starting to plow the main body of the field. This method eliminates the short turns which occur at the opening of a land. If one trip across the field each way does not plow a strip wide enough to turn conveniently at the ends, the procedure can be repeated sev

Searching for Corn That Will Mature on Muck

Experiments Show Indian Corn Most Successful on Muck as It Can be Sown Late and Harvested Early

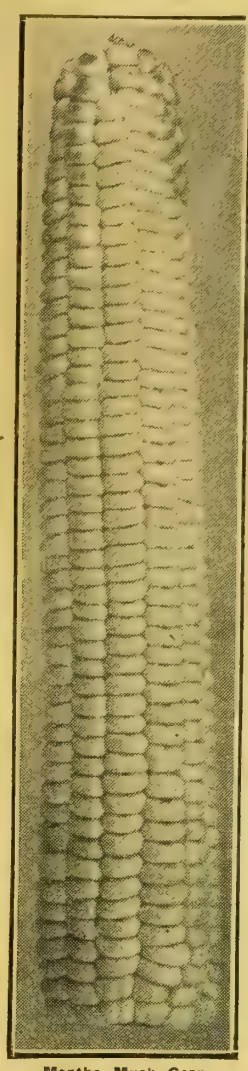
By E. L. WOODHAMS
Supt. Mentha Ranch, A. M. Todd Co.

THE QUESTION of the possibility of successfully growing corn on muck land is an old one, probably as old as muck farming. The results arrived at seem, as we read over the old reports, to vary directly with the season in which the experiments were conducted. If the season described happened to be hot and dry with an absence of the frosts which are the bane of the muck farmers existence, then the experimenter said that corn was an entirely feasible proposition, whereas if the season were cold, wet and frosty, corn was declared to be an unprofitable crop for muck soils. In other words in reading the reports carefully, we almost invariably find the weather to be the limiting factor.

In discussing the question you will please pardon the writer for using the personal pronoun rather often as we are to tell our own experiences, those being the only ones concerning which we are qualified to speak with authority. About ten years ago, we began to raise, or rather try to raise, corn in connection with out mint farming. Perhaps you, as farmers, have noticed that nearly every farmer has the best and earliest strain of corn in his neighborhood—much as your team can outpull any other round about. So when we first tried to raise corn we went to the best high ground farmers and secured seed of the earliest maturing varieties that we could locate in the neighborhood—varieties that we were assured, were the earliest in our part of Michigan. We tried them out faithfully and were rewarded with enormous stover and ears that filled out finely but that apparently did not know enough to realize that they must stop playing and get to work and ripen up if they were to be of any use to us. You muck men know of your sorrow that you are "living on borrowed time" if you have crops that are not mature by Sept. 10, that is providing our old friend, June Frost (not Jack Frost) has not happened along early in the season. It has been our experience that no local corn that will grow on the high ground of Lower Michigan, will ripen on the muck, more than two years out of five—in other words just often enough to keep you "hoping."

After two or three years of this it occured to us, which was not a brilliant idea at all, that we had better try to find some seed which was raised in a locality with a shorter season. Now that is what we had overlooked largely, the fact that in bringing corn onto the muck we were really moving it to a place further north by several hundred miles as far as the length of growing season was concerned, as well as attempting to grow it in a new environment as regards an abundant supply of moisture right through the season. These high ground corns were used to a drouth in August which would help to ripen them, and I do not believe that there is a plant that is so quickly and easily modified as in the corn plant. It is generally agreed that it was of Mexican origin and a tropical plant. It has become acclimated as it was moved north until today there are varieties of corn that mature in less than 70 days and others that require 200 days.

In reading done in this connection we came to the conclusion that the most wonderful corn growers in America were not the farmers of Iowa and Illinois who have a climate made to order for the production of mammoth crops of corn, but rather the tribes of American Indians who roamed the plains long before Columbus discovered America and who had adapted the corn plant to almost whatever climate they found as they wandered. The Indians of each section from the cold climate of the Dakotas to the heat of New Mexico had their varieties of Maize and the early French explorers exclaimed in wonder at the agriculture they found among the Indians. The Indians grew two general varieties—the hard or Flint kinds which they used to make hominy and the soft or flour corns from which the squaws made corn flour. The following are some of the varieties that were grown and the peculiar part of it is that the strains were kept pure until the white man drove the Indian away and disturbed his civilization. There were soft yellow, soft white, red corn, spotted corn, blue corn, yellow flint, white flint, clay-red corn, pink corn, black corn, sweet corn, mixed yellow and red and others. A day could be well spent in studying the agriculture of these first American "champion corn growers" but time does not permit it here. We have grown many of these corns and I will try to explain by the samples the nature of the varieties.



Mentha Muck Corn

Some of these corns are so small that they cannot be cut by machine, although we must remember that they all grow larger on the muck than in their natural home in the northwest. It is largely due to the efforts of Messrs. Oscar Will & Co., and of Messrs. Northrup King & Co., that these early American varieties have not entirely died out.

They are nearly all of a very leafy habit of growth and so make excellent silage, the leaf AREA being far more important than the HEIGHT OF STALK which the large Iowa corn shows. The Mountain Experiment Station has done valuable work in measuring the leaf areas of these Indian corns as compared with the tall and less leafy varieties. Of all these Indian corns we have found that a white flour corn that we have bred up shows the most promise. This corn at first was mixed—containing 8, 10, 12, 14, and 16 rows and we are still working to see which is the most promising.

Personally we feel that no corn should be grown on muck unless it can be planted as late as June 10 and be ready to cut before Sept. 10. The June frosts are too apt to cut it down if planted in May. As a grain crop we do not advise corn unless one is willing to put it into silage if a frost comes too early but as a silage proposition we feel that this white flour corn is going to be a winning combination as it can be grown intermingled with soy beans for the silo. There is no doubt but what the small farmer will find it a safe grain crop nine years out of ten as well, but we would not advise any farmer putting his money into several hundred acres of corn to harvest as grain. The frost danger is always present and there are other crops such as roots and hay that are safer and pay as well. But if the small farmer has a silo, then we feel justified in recommending this White Flour corn or else Smoky Dent as silage corns. Of the two the White Flour will mature earliest although there are strains of the Smoky Dent grown in Dakota which are equally early.

(The above article was prepared and read at the Muck Farmers' Convention by Mr. E. L. Woodhams.)

KILL CORN DESTROYING BIRDS

Shall we kill the crow, hawk and owl? I would say, yes; they are all very destructive to our poultry, game and corn crop. They can be easily exterminted by the use of strychnine and this is the best time to do this, when they just return from the south and are hungry. I use a hen that has died during the winter months. Pick the feathers from the breast, cutting slices through the breast and thighs, placing a few grains of strychnine in them. Place the hen in the center of a back field and visit it every day, adding a few more grains of strychnine they eat the flesh off. I have practised this for several years and have not killed a dog or cat as they never travel the center of fields. They always follow the fences. Cats do this for protection. There is not a single hawk to be seen in our neighborhood and but few crows.—*F. Moore, Newaygo, Mich.*

"My Favorite Breed of Sheep for Northern Michigan Farms"

WE ARE contemplating purchasing 1,000 head of sheep in the near future to be placed on a section of wild land in Midland County. May we ask your opinion as to the kind of sheep you would consider as the most profitable and which are the easiest keepers and healthiest sheep?

We have been advised to purchase Western Sheep from either Minnesota or Iowa, for the reason, that they do better in large numbers.

Can you quote us from the experiences of other large Michigan sheep raisers whom are purchasing from the West?

HESSE BROTHERS,

YOU ASK me what class of sheep I consider the best and most profitable to run in northern Michigan.

I consider the best ewe to keep in any country is a half-blood ewe. That I mean by that is a ewe that is part Merino and part Lincoln, Cotswold, Shropshire or Hampshire.

I prefer either a Lincoln or Cotswold cross, or so-called white-faced ewes. This cross is the most popular in the west because they shear better and are better rustlers for feed when feed is short although the latter, or black faced are more popular in the south and central states. Probably because they are more on the mutton type of sheep.

The Merino sheep are the hardiest, best shearing and longest lived sheep that can be had. But to run them in large bands in this state. The lamb is usually small and weak and the ewe is not a very good milker at its best, and so the percentage of lambs raised would be small. Also they are very slow maturing and subject to hoof troubles. Such as foot rot, fouls, etc.

The coarser breed of sheep I mentioned are more subject to intestinal troubles, shear light and shear a grade of wool that is very undesirable at present 1-4 blood. They are a short lived sheep and last but not least they are so large that when we have such long winters they eat so much more than a smaller sheep that makes it very expensive to winter them.

Their advantage is that they are early maturing sheep, free milkers and wonderful mothers.

In a half blood sheep you get a combination of the two that makes a good mother, shears a good fleece of desirable wool and crossed with a Hampshire or Shropshire ram gives an early maturing desirable lamb for market.

I have on hand on my ranch here between five and six thousand ewes. Most of them half-blood ewes that I expect to sell some part of them this year. As sheep are selling so high in the West I don't think it would be advisable for any one to try to get any ewes there this spring.

Ewes are selling as high as $25 and in some parts of the West they are selling as high as $30 dollars.

This is due largely to the big shortage caused by the very dry season in the northwest last year and the southwest the year before.

You asked for my opinion and I have given it to you and hope it explains fully all that you requested. —*Chas Burtless, Washtenaw County.*

BLACK FACED SHEEP

REGARDING the most profitable breed of sheep for Mr. Hesse, I would say, by all means, the black faced lambs for the butcher and the black faced fleece (the middle wools) for the highest price, also all black faces are classed middle wools and mutton type, you want this dual breed, in the order named Shropshire for form, Oxfords for size, Hampshire for milk, but poor in form, Southdown ranks with Shropshire for form but run small in size.

If Mr. Hesse can obtain a foundation flock of good black face ewes 2 years to 4 years old, use for first three years, a pure blood Shropshire ram to give conformation, then switch onto a pure blood Oxford ram for 4th and 5th years to increase size, for Shropshire lambs will naturally run smaller if you do not make this change. Use Oxford ram for at least two years, and then come back to the Shropshire ram. The wise shepherd will catch on.

If grade black face ewes can not be had use western Merino ewes, not older than four years, under any consideration, and by all means use a black face ram, never Merino rams.

Save the ewe lambs for breeding stock, using black face rams. The third generation of ewe lambs will produce as fine middle wool breeding ewes as one could desire. All northern Michigan wants them.

The Merino lamb is not popular with the butcher. The size and quality is not there—nor is the fleece (fine wool) so valuable.

For profit, the middle wools, or black faces always.

The proper time to buy breeding ewes is in the middle of the summer, when taken from its lamb, providing the udder is sound, likewise the teeth.

Breed ewes no earlier than Nov. 15th to bring lambs by April 10th, when weather is warm and losses light.

In selecting a foundation flock, it is very important to remember, that when the breeding days of a black faced ewe is over, the carcass will possess a mutton value in many cases equal to the original investment.

You will find no mutton value in the carcass of an aged Merino. You can not even work it off on the hired man. It is practically a dead loss. But the price of the different breeds of ewes will determine your selection.—*John G. Krauth, Presque Isle County.*

Why Packer Legislation Should be Adopted

Summary of Federal Trade Commission's Findings Show "Big Five" in Virtual Control of Many Commodities

THERE have been nine hearings within the last few years on legislation to control the meat packing industry. The hearings within recent years have been based upon the most thorough, fair and complete investigation ever made of any big industry, the investigation of the meat packing industry made under order of the President by the Federal Trade Commission.

Trade Commission's Findings

In their report to the President in July, 1918, the Federal Trade Commission stated:

"Answering directly your question as to whether or not there exist monopolies, controls, trusts, combinations, conspiracies, or restraints of trade out of harmony with the law and the public interest, we have found conclusive evidence that warrants an unqualified affirmative. * *

"It appears that the great packing concerns of the country—Swift, Armour, Morris, Cudahy and Wilson—have attained such dominant position that they control at will the market in which they buy their supplies, the market in which they sell their products, and hold the fortunes of their competitors in their hands."

Control of Transportation Maintains Packers' Position

"* * * If these five great concerns owned no packing plants and killed no cattle and still retained control of the instrument of transportation of marketing and of storage, their position would not be less strong than it is."

"The producer of live stock is at the mercy of these five companies because they control the market and the marketing facilities and, to some extent the rolling stock which transports the product to the market.

"The competitors of these five concerns are at their mercy because of the control of the market places, storage facilities, and the refrigerator cars for distribution.

"The consumer of meat products is at the mercy of these five because both producer and competitor are helpless to bring relief." * * *

The Commission's summary of its findings states, "Five corporations—Armour & Co., Swift & Co., Morris & Co., Wilson & Co., Inc., and the Cudahy Packing Co.—hereafter referred to as the 'Big Five,' not only have a monopolistic control over the American meat industry, but have secured control, similar in purpose if not yet in extent, over the principal substitutes for meat, such as eggs, cheese and vegetable-oil products, and are rapidly extending their power to cover fish and nearly every kind of foodstuff." * * * *

"The monopolistic position of the Big Five is based not only upon the large proportion of the meat business which they handle, ranging from 61 to 86 per cent in the principal lines, but primarily upon their ownership, separately or jointly, of stockyards, car lines, cold storage plants, branch houses, and the other essential facilities for the distribution of perishable foods.

"The menace of this concentrated control of the Nation's food is increased by the fact that these five corporations and their five hundred and odd subsidiary, controlled, and affiliated companies are bound together by joint ownership, agreements, understandings, communities of interest and family relationships."

How the Packers' Power is Used

"The power of the Big Five in the United States has been and is being unfairly and illegally used to—

Manipulate live stock markets; restrict interstate and international supplies of foods; control the prices of dressed meats and other foods; defraud both the producers of food and consumers; crush effective competition; secure special privileges from railroads, stockyard companies and maunicipalities; and profiteer."

Packers' Profits

"The packers' profits in 1917 were more than four times as great as in the average year before the European war, although their sales in dollars and cents at even the inflated prices of last year had barely doubled. In the war years, 1915, 16, 17, four of the five packers made net profits of $178,000,000.

The Meat Industry

"The most satisfactory single index of the proportion of the meat industry controlled by the Big Fve is the fact that they kill in round figures 70 per cent of the live stock slaughtered by all packers and butchers engaged in interstate commerce. In 1916 the Big Five's percentage of the interstate slaughter including subsidiary and affiliated companies was as follows:

Cattle	82.2
Calves	76.6
Hogs	61.2
Sheep and lambs	86.4

"Swift & Co. is the greatest butter distributor in the United States handling in 1916, in round figures 50,000,000 pounds, or nearly as much as the combined sales of the two largest non-packer organizations.

"Judged conservatively by trade estimates, the Big Five packers handle at least half of the interstate commerce in poultry and eggs and in cheese. The packers are also important factors in the preparation and distribution of condensed and evaporated milk and are rapidly increasing their proportion.

Staple Groceries and Vegetables

"Recently the big packers began dealing in various staple groceries and vegetables, such as rice, sugar, potatoes, beans and coffee, and increased their sales at such a rate that in certain of these lines they have become dominant factors. Here again the immense selling organizations of the packers, built up in connection with their meat business, assures them almost certain supremacy in any line of food handling which they may wish to enter.

Fertilizers

"The fertilizer industry lies at the base of the American food production. The packers, controlling the disposal of more than two-thirds of the offal produced in the packing industry, have become the most important factors in the manufacture of animal fertilizer ingredients and have strongly entered the field of production of mineral ingredients. In mixed fertilizers they produce 19 per cent of the total.

Instruments of Control and Monopoly

"These stragetic positions, which serve not only to protect the control

(*Continued on page* 17)

Regulating the Packer

THE PACKERS are as hard to catch as the Fourth of July greased pig. Now you have them and now you don't. Now you are sure that the Big Five is the greatest octopus that ever fastened its tenacles upon the country, and then after reading some of their literature you are just as sure that they are as harmless as lambs. The efforts of some of the farm organizations and the Federal Trade Commission to bring the packers within the regulating reach of the United States government have not met with conspicuous success. Hearings after hearings have been held, but the legislation providing for the control seems no nearer adoption than when first introduced. To keep the interest alive, the various Washington offices of the various farm organizations have been sending out articles to the farm press giving the gist of the testimony submitted at the hearings, etc. The accompanying article is submitted by the Farmers' National Council which has been particularly insistent that Congress adopt some legislation for controlling the packers. The facts set forth are worthy of attention and should arouse every producer of live stock to immediate action through his representative in Congress.—Editor.

Gleaner Clearing House Example of What Organized Farmers Can D

GRANT SLOCUM, head of the Gleaners, tells us that an audit has just been made of the books of the Gleaner Clearing House Ass'n, and shows total assets of nearly one half million dollars, with surplus and undivided profits of nearly $50,000. Upon the strength of this showing and upon what the recent experience of this marketing association has shown the possibilities of co-operative marketing to be, the stockholders have voted to increase the capital stock to one million dollars, and the Michigan State Securities Commission have already issued its license for the sale of the stock.

Discussing the showing made by the Gleaners, Mr. Slocum said:

"I do not believe that any other farmers' organization in the United States has made a showing equal to ours. Thousands of dollars have been spent in organization work which has been wholly cared for from the profits of the Association. And aside from this the present management inherited certain losses which could not be avoided by unexperienced operators during the first year, when several local plants were taken on at a time when it was impossible to get an efficient buying and selling organization.

"At the present time every plant is either on a paying basis or actually making profits. The Association knows where every local branch stands and knows monthly the actual condition of the entire organization.

"It is not the intention of General Manager Lewellyn to take on new plants here and there, regardless of location, opportunities for business and general conditions. The Association has already refused to take on nine elevators because of the fact that too much money had been invested for the volume of business that could be expected from the adjacent territory. A general survey is made of all localities where Gleaner elevators are to be established before the investment is accepted. Business is being conducted on a business basis and therefore success is assured.

"General Auditor Bredshall has all plans laid for the co-operative operation of all local plants and commencing with the next fiscal year, patronage dividends will be paid at each point. This was under the old order of things, but with fourteen plants now in operation, every local stockholder will participate in the profits of his local branch through co-operative patronage dividends. And just as soon as the Gleaner Corporation is organized as a sales, buying, operating and financing branch, all stockholders will participate in the profits made through this corporation. This simply means that the farmer will participate in the profits on his products from the time they leave his fields until they reach the hands of the retailer.

"The work of the Association is now but in its infancy, after twelve years of successful operation," continued Mr. Slocum. "No farmers' organization in the United States has a better standing in the leading market centers, and you will find by consulting the commercial agencies, that none have a better financial standing. Men of experience and ability, men of vision, forward looking business men, are now interested in the work of our organization. It's plan stand the test. The Gleaners do not claim to be wonder-workers. They realize that there is nothing about the word co-operation that is going to lift them over the rough spots on the business highway—strict business principles must be applied in order to make a business organization successful—and then the profits are distributed co-operatively. "Big Biz," if you please, with the word "Co-operative" inserted between the words "Big" and "Biz." That's the Gleaners."

As a publication which is interested in the progress of all farm organization the BUSINESS FARMER congratulates the Gleaners upon the splendid showing they have made. That they will make still higher records in the co-operative business field under the leadership of the big business men who are managing their co-operative marketing association, there can be no doubt. A million dollars sounds like a pretty big capitalization for farmers' co-operative organizations but as has been pointed out in these columns before there is no reason why the farmers should not have as big business enterprises as capitalized as other men. The very size of the amount gives one a feeling of business and security, and the Gleaners will undoubtedly find within another two or three years that even this capitalization will not be large enough to finance their rapidly expanding business.

When we consider the work that is being done by the Gleaners, the Grange and the Farm Bureau along co-operative lines, we have the feeling that the farmer is gradually coming into his own.

Alvin F. Bredshall, being duly sworn deposes and says that he is the General Auditor of the Gleaner Clearing House Association, and that the above statement, to the best of his knowledge is true in substance and in fact.

ALVIN BREDSHALL.

Subscribed and sworn to before me this 11th day of May, A. D. 1920.

Rosanna Boyland, Notary Public.

My commission expires March 21st 1922.

Copyright 1920, by The Goodyear Tire & Rubber Co.

"We haul local growers' fruits and delicate vegetables, such as lettuce, on pneumatics—Goodyear Cord Tires—because they are marketed in better condition this way and buyers give first choice to produce so protected. Our Goodyear Cord Tires run everywhere in cultivated fields and in a sandy orchard and deliver mileages to 15,000."—C. C. McIntosh, of McIntosh & Andru, Truckmen, Palmetto, Florida

AS statements like this make apparent, more and more farmers are preventing the bruising of fruit, mutilation of delicate vegetables and much shrinkage in livestock by hauling on Goodyear Cord Tires.

In this way they reverse the situation that existed when solid-tired trucks or wagons were used with a resulting loss in crops, stock weight and general income due to slow, jarring transport.

On the resilient Goodyear Cord Tires a farm truck delivers smoothly and quickly, safeguarding the original condition of the load so as to secure the best prices for it.

The able pneumatics thus become important factors in the marketing of perishable produce and carefully fattened animals, as well as in practically all the work of raising and handling on and off the farm.

The excellent and often unusual mileages obtained from these tires attest the toughness of Goodyear Cord construction developed with that extraordinary manufacturing carefulness which protects our good name.

Farmers' records, detailing how pneumatics assist crop moving, motorization, chores and other activities, can be obtained by mail from The Goodyear Tire & Rubber Company, Akron, Ohio.

GOODYEAR CORD TIRES

MARKET FLASHES

WHEAT DULL

WHEAT PRICES PER BU., JUNE 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	3.12		3.12
No. 2 White	3.10		3.12
No. 2 Mixed	3.10		3.10
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.55		2.60
No. 2 White	2.53		
No. 2 Mixed	2.53		

Considerable strength was shown in the wheat market last Saturday and prices advanced when cables were received that Argentina had placed an embargo against further exportation of wheat, but later news showed the first report to be false and that they intended to export more than ever. This last report seems unreasonable. It is estimated that exporters own 37,000,000 bushels of wheat in Argentina, which, to all indications, is the entire supply of the grain available there at the present. And Argentina has been trying to force exporters to buy 1 1-2 tons of corn with every ton of wheat and has wanted a little oats and flax taken in addition to the corn, so it does not look as if they would export for a time at least. Export demand has fallen off some during the past week, but is beginning to revive. France and England are out of the market at present. From present prospects wheat will stay up until the turn of the year, but after that all is dark. Weather conditions from now on will determine the market's trend from that point. A prominent grain trade journal says that perhaps $5 will be seen by cash wheat but it is a safe bet that there will be some mighty hard sledding before it gets there. Weather conditions have been rather favorable in this country of late and reports show promise of a larger yield than was predicted a month ago.

CORN ADVANCES

CORN PRICES PER BU., JUNE 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.91	2.16½
No. 3 Yellow	2.05		2.14
No. 4 Yellow	2.00		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.93
No. 3 Yellow	1.83	1.66¾	
No. 4 Yellow	1.80	1.66½	

There has been a scarcity of corn all week and the price has been firm with a small advance. It is believed that larger receipts will soon commence to appear on the market. Consumers have stood aside to allow prices to go as low as they would. They have quit buying trusting that prices will be more to their liking later. The public has been doing without corn so long that dealers wonder how the market will be affected when supplies become plentiful and consumption is resumed. A large demand is expected. Argentina claims to still have about 800,000 tons of old corn to sell before touching the new crop, of which, they estimate they have a surplus of 4,000,000 tons.

OATS FIRM

OAT PRICES PER BU., JUNE 1, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.23	1.07½	1.40
No. 3 White	1.22	1.07	
No. 4 White	1.21		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.73	.70	.79½
No. 3 White	.72½	.68¾	
No. 4 White	.71½		

There are light offerings and scattered buying in the oat market. The weather conditions have been very favorable for this grain. Conditions in the market at present point to higher prices. The East needs large quantities of oats before the new crop, and the Canadian supply will be exhausted within another month. "Argentina has several hundred thousand tons of oats yet," says a prominent grain paper.

RYE AND BARLEY

Rye has advanced 10c and is quoted at $2.10 for No. 2 on the Detroit market.

Regarding the future trend of the market the *Rosenbaum Review* says as follows: "Prices have dropped along with other grains. Barley is likely to stay down. Rye is not. Foreigners want the latter. Germany being the best buyer, but there is little or no hope of export demand for barley and with only a moderate demand and some Canadian grain arriving from time to time is looks as though some further recission in price was probable. After a drop of over 25c on rye it looks like good business to look for a substantial rally, especially if Europe comes into the market in volume. The outlook for the new barley crop is fairly good, even though the Pacific coast has lost its outlook for a bumper crop. The June 1st returns on rye will be better than those of a month ago. If wheat is worth $2.70@2.75 for August shipment and $2.65@2.70 for September, then certainly September rye is worth close to $2. Barley prices seem high as compared with oats and for the 1920-21 season may possibly have to be figured on as a feeding grain almost exclusively, as the industrial call will scarcely be much larger than last year and the outlook for the crop is fairly good—at the moment. The Northwest is putting in more feed grains this season and that means a lot of barley.

LAST MINUTE WIRES

DETROIT—Wheat stronger. Beans steady. Rye is lifeless. Advance in corn, caused by Argentine ban. Potatoes scarce and higher.

CHICAGO—Corn and oats higher. Exporters calling for wheat. Hogs lower. Provisions drop.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

FEDERAL Reserve banks continue to call in their loans. But it is like trying to keep an apple under water—you push it down one place and it comes up in another. Loans are called in one direction only to have inflation appear in another. It has been proposed that the banks charge a higher rate of interest on non-essential loans, but this would be difficult to carry out for the reason that it is hard to distinguish between essential and non-essential business. Take for instance, the cut-rate sales of the department stores, the 20 to 50 per cent reductions in prices, forced by bankers, applied to essentials as well as non-essentials.

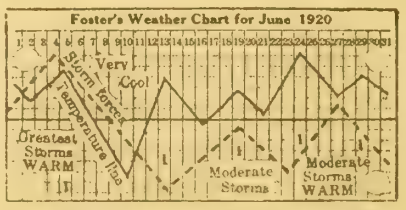
As a result of called loans we will see a gradual sagging of prices, including some foodstuffs. It was learned last week that there is food in storage on which loans have been running for over a year. Such loans are going to be called.

Grains in general strengthened up during the past week and higher prices are noted on some markets owing to the light receipts. Stocks remain small, especially corn. Reports come from both Eastern and Western markets of little or no corn on hand.

"The trade anticipates a liberal movement from the country as soon as the cars arrive from the East, but it will take several weeks before the full effect of these can be felt," says a press dispatch. "With large amounts of wheat on hand in the Southwest and banks loudly clamoring for a reduction of loans, a great many cars will probably be sent to that section rather than into the cornbelt."

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., June 5, 1920. —Warm waves will reach Vancouver, B. C., about June 10, 16, 21, 26 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of June 11, 17, 22, 27; plains sections 12, 18 23, 28; meridian 90, upper Great Lakes, Ohio Tennessee and lower Mississippi valleys 13, 19, 24, 29; great lower lakes and eastern sections 14, 20 25, 30, reaching vicinity of Newfoundland about June 15, 21, 26, July 1. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control cropweather of this continent from near June 10 to near July 1, and the new cropweather conditions that will occur and determine cropweather and crops of 1920 will be fully inaugurated but is expected to make only gradual changes. One feature is almost sure to be manifest during the period June 10 to July 1; a decided change to higher temperatures and before we are thru the summer we will be longing for cooler weather. This will be general east of Rockies crest, but it is almost universally true that long periods of high temperatures east of Rockies bring corresponding low temperatures west of the great ridge.

Storm forces are expected to be weaker during balance of June than they were for the three weeks previous to June 10 and temperatures are expected to rise from June 10 to July 1 more than the season suggests. Moisture for balance of this season will largely come from the northern part of the Atlantic and feed into the lows as they come from the northwest. In turn this condition will call for much warm air from the Gulf of Mexico and Caribbean Sea to move northward east of Rockies and colder air to move southward west of the Rockies. Readers are expected to remember these statements in order that they may better understand future forecasts.

Most severe storms of the next six months will be during the weeks centering on July 16; Aug. 11 and 25; Sept. 11; Oct. 3 and 25; Nov. 8; Dec. 12. Such storms have much to do with cropweather and if you are interested in weather events you should watch these Bulletins for further information on these storms. The storms predicted for week centering on June 5 will be due when this Bulletin is published and particular interest is centered on the predicted northern frosts of that week.

W. T. Foster

The May barley delivery at Chicago did not decline as fast as the cash for the latter was at a big premium. Readjustment has been completed.

BEANS LOWER

BEAN PRICES PER CWT., JUNE 1, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.85	7.75	8.25
Red Kidneys		13.50	15 25
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.			
Prime			
Red Kidneys			

After a drop of 5c the bean market is steady, but only moderately active. The *Monthly Crop Reporter* estimates this year's bean crop, in the main bean producing states, in comparison to last year's as follows: New York 90 per cent, Wisconsin 70; Colorado, 65; New Mexico, 80; Idaho, 100 and Michigan 75.

Michigan elevator operators do not agree with the *Reporter* in estimates for this state. They say Michigan will plant a normal acreage this year. Let us hope so, because it looks as if they would be a profitable crop to raise this year.

POTATOES HIGHER

SPUDS PER CWT., JUNE 1, 1920		
	Sacked	Bulk
Detroit	8.84	
Chicago	8.00	
Pittsburg	5.00	
New York		6.95
PRICES ONE YEAR AGO		
Detroit	2.10	2.00
Chicago	2.00	2.00
Pittsburg		
New York		

Movement of old potatoes is hardly enough to make a market and the price is higher. New ones are not moving much better and prices are following the trend of old potatoes. Fewer acres of spuds will be raised this year according to the Bureau of Crop Estimates report. They say New York will plant 97 per cent of last year's acreage; Michigan 90 Wisconsin 95, Minnesota 89, Colorado 94, Idaho 95, California 110 and Maine is expected to plant 100.

HAY CONTINUES IN DEMAND

The estimated acreage of hay in Michigan is 2,517,000 or about 5 per cent under the acreage of last year. There was loss of new seedings in some northern counties by drought and grasshoppers and in some southern counties by drought which more than offsets the tendency to increase the amount of land in grass and pastures this year. The May 1 condition of 84 indicated a production of 256.000 tons or 2 per cent under the estimate for last year at the same about 318,000 tons and the lack of railroad transportation has retarded the shipping of this surplus which under ordinary circumstances would have been killed out. In some of the western and northwestern counties which had a light crop last year there are practically without any hay now. Pastures are backward. Hay is in demand and firm and with light receipts.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

PROGRESS IN CO-OPERATION

Mr. C. H. Gustafson, president of the All-American Farmer-Labor Co-operative Commission and chairman of the executive committee has just made public the action of the meeting of the executive committee recently held in Washington.

The entire executive committee was present including, in addition to President Gustafson, who is president of the Nebraska Farmers' Union, Warren S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers; Hon. Herbert F. Baker, President of the Farmers' National Council, and member of the Supreme Council National Gleaner Federation; O. H. McGill of the Washington Co-operative Timber Mills; George P. Hampton, Managing Director of the Farmers' National Council.

Mr. Gustafson stated that the meeting of the executive committee which lasted for two days was most encouraging. The members, who have been in touch with the development of co-operative organization throughout the country, report that the demand for active and effective co-operation is increasing so rapidly that it is difficult to keep up with it. One important evidence of this is the fact that the University of Wisconsin and the University of Nebraska have recently established departments to train co-operative managers. The executive committee authorized the creation of a committee on direct trading to consist of representatives of three producers, and three consumers co-operative organizations to secure information and disseminate it as to existing producers and consumers co-operative organizations and to work out plans for better distribution through direct trading between farmers co-operative organizations and organizations of consumers. A committee on legislation was also authorized to work for adequate national legislation regarding co-operative organizations, and to work out a uniform state law for co-operative organizations.

The Committee on Banking and Credits had already been created with Mr. Warren S. Stone as chairman, and Mr. Fred C. Howe as secretary, reported its plans to stimulate the establishment of co-operative banks which are essential to the widest development and growth of co-operative organizations and of direct trading.

The committee decided that the next meeting of the All American Farm Labor Co-operative Commission should be held in Lincoln, Nebraska on Lincoln's birthday.

Mr. George P. Hampton, Managing Director of the Farmers' National Council was selected General Manager of the Commission; Fred C. Howe, as Secretary; Oscar H. McGill Director of Field and Extension Work; and Benjamin C. Marsh, Director of Legislation and Publicity.

It was decided to hold state conferences on co-operation as the co-operative movement develop.

STATE FARM BUREAU HELPS CANNING PLANTS

To prevent loss of hundreds of thousands of dollars to Michigan fruit growers, the Michigan State Farm Bureau is actively at work endeavoring to get a preferential shipping rating for canning plants in Michigan. The majority of the 100 canning plants in the state may be unable to operate on their scale this summer, because of inability to secure cans, coal and sugar.

Paralysis of the railroads by the recent switchmen's strike and the resulting jam of freight and empties at many important junction points is responsible for the predicament of the canners.

With a good fruit year in prospect and an excellent market in sight, one of the busiest seasons in sometime faces the canneries if they can get the necessary cans, coal and sugar for operations. Practically all of the plants have their cans ordered in the east, but can't get shipment. They are not only having difficulty in getting coal shipped them, but also in the purchase. And sugar, while it is scarce, is almost prohibitive because of the soaring price.

While these canneries can operate without sugar, they can't without cans and fuel. At this time of the year, usually they are stocked with both. The Interstate Commerce Commission will be appealed to by the farm bureau in efforts to get the canneries that will permit cans and coal to be shipped to them on the grounds that the food stuffs involved represent a public need.

The sugar problem places the canneries in a quandary. If they can without sugar, they are unable to put out their usual brands, and their usual trade is disappointed. If they use sugar at its present price, a considerably higher price for canned goods next winter is certain. For example, two canneries in Berrien county last year paid approximately $50,000 for the sugar needed. This year the same quantity of sugar will cost approximately $125,000.

FEDERAL FARM LOAN BANKS SEE DULL SEASON

Federal farm loan officials in a recent conference found no way to avoid a summer of inactivity in loaning operations.

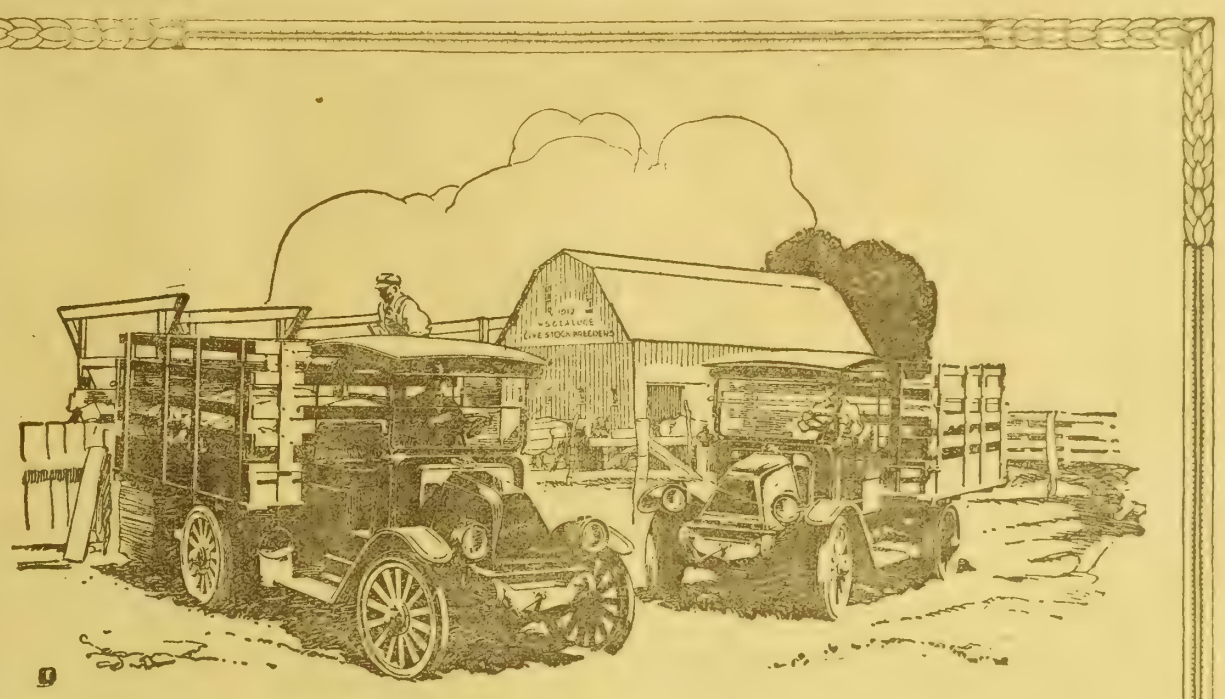
Despite the fact that the 12 land banks have borrowed about $16,000,000 from private banks to loan to farmers, more than $50,000,000 in applications for loans have accumulated. In going into the open market for funds the banks are losing one-half of one per cent interest, the government rate being 5 1-2 per cent and the private rate 6 per cent.

To offset this loss the net income of the 12 banks has averaged $240,000 monthly since the first of the year. The banks also have assets of $30,000,000 on which no liens have been placed and Commissioner Lobdell said there was no reason for uneasiness as to the system's financial situation.

ST. JOHNS PLANS CO-OPERATIVE ELEVATOR

Plans for the co-operative owned elevator has been put under way, 35 representatives from the territory feeding into St. Johns met, discussed and adopted the plan they will pursue in the organization of this enterprise.

The plan proposed is as follows: No capital stock will be issued; money will be raised for the purchasing or building of the elevator by loans to the association of $100 per member, that is, when a membership is issued the man signing agrees to loan to the association for ten years a sum of $100, for which the association issues an investment note to the member, which note, when properly filled in, provides that 6 per cent shall be received on the $100 loan each and every year until paid.



Your Rail-less Railroad

YOUR live stock and the produce from your fields, carried in freight trains to the cities, thunder past countless danger-signs with the warning, "Look Out for the Cars!" Each one of these marks the crossing-place of a country road—a road without rails, leading to railroad and town. Each one marks a farmer's right-of-way.

Since your farm is a 1920 enterprise, probably it is fitted with most of the following modern equipment—the telephone, good lighting and heating, a silo, a manure spreader, a cream separator, an automobile, an engine, a tractor.

But have your hauling problems found their proper solution? Are the time-losses and difficulties of a decade ago still impeding your endless carrying of farm loads?

Government statistics show that in 1918 alone, 350,000,000 tons of farm produce were transported to local shipping centers in motor trucks. The same national figures prove also that American farmers are the greatest users of motor trucks—among all industries. No progressive farmer can afford to overlook impressive *facts* like these.

Your name and address mailed to our office at Chicago will bring you descriptive folders that will prove interesting and instructive. Put an ***International Motor Truck*** at work on your farm and on the roads which are your right-of-way. Handle all your miscellaneous farm hauling with railway efficiency. The nine ***International Motor Truck*** sizes range from ¾ ton to 3½ ton. Keep in mind that these trucks have been made for years by the makers of good and trusted farm machines.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

STILL gazing and speculating, he was warned by approaching footsteps, and glanced about for some place to hide. A sardonic humor seized him. Taking the helmet from the head of his ancient kin, he placed it on his own head. Likewise, did he drape the rotten mantle about his form and equip himself with the great sword and the great floppy boots that almost fell to pieces as he pulled them on. Next, half tenderly, he deposited the nude mummy on its back in the dark shadows behind the other mummies. And, finally, in the same spot at the end of the line, his hand resting on the sword hilt, he assumed the same posture he had observed of the mummy.

Only his eyes moved as he observed the peon venturing slowly and fearfully along the avenue of upright corpses. At sight of Torres he came to an abrupt stop and with wide eyes of dread muttered a succession of Maya prayers. Torres, so confronted, could only listen with closed eyes and conjecture. When he heard the peon move on he stole a look and saw him pause with apprehension at the narrow elbow turn of the passage which he must venture next. Torres saw his chance and swung the sword aloft for the blow that would split the peon's head in twain.

Though this was the day and the very hour for the peon, the last second had not yet ticked. Not there in the thoroughfare of the dead, was he destined to die under the hand of Torres. For Torres held his hand and slowly lowered the point of the sword to the floor, while the peon passed on into the elbow.

The latter met up with his father, Leoncia and Francis, just as Francis was demanding the priest to run the knots again for fuller information of the how and what that would open the ear of Hzatzl.

"Put your hand into the mouth of Chia and draw forth the key," the old man commanded his reluctant son, who went about obeying him most gingerly.

"She won't bite you—she's stone," Francis laughted at him in Spanish.

"The Maya gods are never stone," the old man reproved him. "They seem to be stone, but they are alive, and ever alive, and under the stone, and through the stone, and by the stone, as always, work their everlasting will."

Leoncia shuddered away from him and clung against Francis for protection, her hand on his arm.

"I know that something terrible is going to happen," she gasped. "I don't like this place in the heart of a mountain among all these dead old things. I like the blue of the sky and the balm of the sunshine, and the widespreading sea. Something terrible is going to happen. I know that something terrible is going to happen."

While Francis reassured her, the last second of the last minute for the peon were ticking off. And when, summoning all his courage, he thrust his hand into the mouth of the goddess, the last second ticked and the clock struck. With a scream of horhor he pulled back his hand and gazed at the wrist where a tiny drop of blood exuded directly above an artery. The mottled head of a snake thrust forth like a mocking, derisive tongue and drew back and disappeared in the darkness of the mouth of the goddess.

"A viperine!" screamed Leoncia, recognizing the reptile.

And the peon, likewise recognizing the viperine and knowing his certain death by it, recoiled backward in horror, stepped into the hole, and vanished down the nothingness which Chia had guarded with her feet for so many centuries.

For a full minute nobody spoke, then the old priest said: "I have angered Chia, and she has slain my son."

"Nonsense," Francis was comforting Leoncia. "The whole thing is natural and explainable. What more natural than that a viperine should choose a hole in a rock for a lair It is the way of snakes. What more natural than that a man bitten by a viperine, should step backward? And what more natural, with a hole behind him, than that he should fall into it——"

"That is then just natural!" she cried, pointing to a stream of crystal water which boiled up over the lips of the hole and fountained up in the air like a geyser. "He is right. Through stone itself the gods work their everlasting will. He warned us. He knew from reading the knots of the sacred tassel."

"Piffle!" Francis snorted. "Not the will of the gods, but of the ancient Maya priests who invented their gods as well as this particular device. Somewhere down that hole the peon's body struck the lever that opened stone flood-gates. And thus was released some substerranean body of water in the mountain. This is that water. No goddess with a monstrous mouth like that could ever have existed save in the monstrous imaginations of men. Beauty and divinity are one. A real and true goddess is always beautiful. Only man creates devils in all their ugliness."

So large was the stream that already the water was about their ankles.

"It's all right," Francis said. "I noticed all the way from the entrance, the steady inclined plane of the floors of the rooms and passages. Those old Mayas were engineers, and they built with an eye on drainage. See how the water rushes away out through the passage—Well, old man, read your knots, where is the treasure?"

"Where is my son?" the old man counter-demanded, in dull and hopeless tones. "Chia has slain my only born. For his mother I broke the Maya law and stained the pure Maya blood with the mongrel blood of a woman of the tierra caliente. Because I sinned for him that he might be, is he thrice precious to me. What care I for treasure? My son is gone. The wrath of the Maya gods is upon me."

With gurglings and burblings and explosive air-bubblings that advertised the pressure behind the water-fountained high as ever into the air. Leoncia was the first to notice the rising depth of the water on the chamber floor.

"It is half way to my knees," she drew Francis' attention.

"And time to get out," he agreed, grasping the situation. "The drainage was excellently planned, perhaps. But that slide of rocks at the cliff entrance has evidently blocked the planned way of the water. In the other passages, being lower, the water is deeper, of course, than here. Yet is it already rising here on the general level. And that way lies the way out. Come!"

Thrusting Leoncia to lead in the place of safety, he caught the apathetic priest by the hand and dragged him after. At the entrance of the elbow turn the water was boiling above their knees. It was to their waists as they emerged into the chamber of mummies.

And out of the water, confronting Leoncia's astounded gaze, arose the helmeted head and ancient-mantled body of a mummy. Not this alone would have astounded her, for other mummies were overtoppling, falling and being washed about in the swirling waters. But this mummy moved and made gasping noises for breath, and with eyes of life stared into her eyes.

It was too much for ordinary human nature to bear—a four-centuries old corpse dying the second death by drowning. Leoncia screamed, sprang forward, and fled the way she had come, while Francis in his own way equally startled her, let her go past as he drew his automatic pistol. But the mummy, finding footing in the swift rush of the current, cried out:

"Don't shoot! It is I—Torres! I have just come back from the entrance. The water is over one's head and higher than the entrance, and rocks are falling."

"And your way is blocked in this direction," Francis said, aiming the revolver at him.

"This is no time for quarreling," Torres replied. "We must save all our lives, and, afterwards, if quarrel we must, then quarrel we will."

Francis hesitated.

"What is happening to Leoncia?" Torres demanded slyly. "I saw her run back. May she not be in danger by herself?"

Letting Torres live and dragging the old man by the arm, Francis waded back to the chamber of the idols, followed by Torres. Here, at sight of him, Leoncia screamed in her horror again.

"It's only Torres," Francis reassured her. "He gave me a devil of a fright myself when I first saw him. But he's real flesh. He'll bleed if a knife is stuck into him—come old man! We don't want to drown here like rates in a trap. This is not all of the Maya mysteries. Read the tale of the knots and get us out of this!"

"The way is not out, but in," the priest quavered.

"And we're not particular so long as we get away. But how can we get in?"

"From the mouth of Chia to the ear of Hzatzl, was the answer.

Francis was struck by a sudden grotesque and terrible thought.

"Torres," he said, "there is a ke or something inside that stone lady mouth there. You're the nearest Stick your hand in and get it."

Leoncia gasped with horror as sh divined Francis' vengeance. Of th Torres took no notice, and gaily wad ed toward the goddess, saying: "On too glad to be of service."

And then Francis' sense of fa play betrayed him.

"Stop!" he commanded harshly himself wading to the idol's side.

And Torres, at first looking on puzzlement, saw what he had escap ed. Several times Francis fired h pistol into the stone mouth, whil the old priest moaned "sacrilege! Next, wrapping his coat around h arm and hand, he groped into th mouth and pulled out the wounde viper by the tail. With quick swing in the air he beat it head to a jel against the goddess' side.

Wrapping his hand and ar against the possibilty of a secon snake, Francis thrust his hand int the mouth and drew forth a piece worked gold of the shape and si of the hole in Hzatzl's ear. The ol man pointed to the ear and Franc inserted the key.

"Like a nickle-in-the-slot-ma chine," he remarked, as the key d appeared from sight. "Now what going to happen? Let's watch f the water to drain suddenly away

But the great stream continued spout unabated out of the hole. Wi an exclamation, Torres pointed to t wall, an apparently, solid portion which was slowly rising.

"The way out," said Torres.

"In, as the old man said," Franc corrected. "Well, anyway, let start."

All were through and well alon the narrow passage beyond, when t old Maya crying, "My son!" turn and ran back.

The section of wall was already d scending into its original positio and the priest had to crouch low order to pass it. A moment later, stopped in its old position. So a curately was it contrived and fitt that it immediately shut off stream of water which had been flo ing out of the idol room.

Outside, save for a small river water that flowed out of the base the cliff, there were no signs of wh was vexing the interior of the mou tain. Henry and Ricardo, arrivin noted the stream, and Henry obse ed:

"That's something new. The wasn't any stream of water he when I left."

A minute later he was saying, he looked at a fresh slide of roc "This was the entrance to the ca Now there is no entrance. I won er where the other are."

As if in answer, out of the mou tain, borne by the spouting strea shot the body of a man. Henry a Ricardo pounced upon it and dra gde it clear. Recognizing it for t priest, Henry laid him face dow ward, squatted astride of him, a proceeded to give him the first a for the drowned.

Not for ten minutes did the man betray signs of life, and not u til after another ten minutes did open his eyes and look wildly abo

"Where are they?" Henry asked

The old priest muttered in Ma until Henry shook more thorou consciousness into him.

"Gone—all gone," he gasped Spanish.

"Who?" Henry demanded, sho memory into the resuscitated o and demanded again.

"My son; Chia slew him. C slew my son, as she slew them all

"Who are the rest?"

Followed more shaking and re titions of the question.

"The rich young Gringo who friended my son, the enemy of rich young Gringo whom men c Torres, and the young woman of Solanos who was the cause of all t happened. I warned you. She wo not have come. Women are alw a curse in the affairs of men. her presence, Chia, who is likew a woman was made angry. T tongue of Chia is a viperine. By tongue Chia struck and slew my s and the mountain vomited the oce upon us there in the heart of

What shocked him even more was the dagger thrust between Leoncia's eyes.—Chapter 20.

ountain, and all are dead, slain by hia. Woe is me! I have angered ie gods. Woe is me! Woe is me! nd woe upon all who would seek the acred treasure to filch it from the ods of Maya!"

CHAPTER XVI.

MIDWAY between the out-burst ing stream of water and the rock slide, Henry and Ricardo ood in hurried debate. Beside iem, crouched on the ground, moan- l and prayed the last priest of the layas. From him by numerous iakings that served to clear his ad- led old head, Henry had managed extract a rather vague account of hat had occurred inside the moun- in.

"Only his son was bitten and fell to that hole," Henry reasoned opefully.

"That's right," Ricardo concurred. He never saw any damage, beyond wetting, happen to the rest of iem."

"And they may be, right now, high above the floor in some chamber," enry went on. "Now if we could tack the slide, we might open up ie cave and drain the water off. If ey're alive they can last for many ys, for lack of water is what kills uickly, and they've certainly more ater than they know what to do ith. They can get along without od for a long time. But what gets e is how Torres got inside with em."

"Wonder if he wasn't responsible r that attack of the Caroos upon ," Ricardo suggested.

But Henry scouted the idea.

"Anyway," he said, "that isn't the esent proposition—which proposi- n is: how to get inside that moun- in on the chance that they are still ive. You and I couldn't go thru at slide in a month. If we could t fifty men to help, night and day ifts, we might open her in in forty- ght hours. So, the primary thing to get the men. Here's what we ust do. I'll take a mule and beat back to that Caroo community and omise them the contents of one of ancis' checkbooks if they will me and help. Failing that, I can t up a crowd in San Antonia. So re's where I pull out on the run. the meantime, you can work out ails and bring up all the mules, ons, grub and camp equipment. so, keep your ears to the cliff— ey might start signalling through with tappings."

Into the village of the Caroos nry forced his mule—much to the luctance of the mule, and equal as much to the astonishment of e Caroos, who thus saw their ong-hold invaded single-handed by e of the party they had attempted annihilate. They squatted about ir doors and loafed in the sun- ne under a show of lethargy hid- g the astonishment that tingled ough them and almost put them their toes. As has been ever the y, the very daring of the white n, over savage and mongrel breed this instance stunned the Caroos inaction. Only a man, they could t help but reason in their slow y, a superior man, a noble or over- ing man, equipped with potencies ond their dreaming, could not re to ride into their strength of mbers on a fagged and mutinous le.

They spoke a mongrel Spanish ich he could not understand, and, turn, they understood his Span- ; but what he told them concern- the disaster in the sacred moun- n had no effect of arousing them. th impassive faces, shrugging oulders of utmost indifference, they ened to his proposition of a res- and promise of high pay for ir time.

"If a mountain has swallowed up Gringos, then is it the will of d, and who are we to interfere ween God and His will?" they re- ed. "We are poor men, but we e not to work for any man, nor we care to make war upon God. o, it was the Gringos' fault. This not their country. They have no ht here playing pranks on our untains. Their troubles are be- ween them and God. We have ubles enough of our own and our es are unruly."

long after the siesta hour, on his rd and most reluctant mule, Hen- rode into sleepy San Antonio. In main street, midway between the court and the jail, he pulled up at sight of the Jefe Politico and the little fat old judge, with, at their heels, a dozen gendarmes and a couple of wretched prisoners—run-away peons from the henequen plantations at Santos. While the judge and the Jefe listened to Henry's tale and appeal for help, the Jefe gave one slow wink to the judge, who was his judge, his creature, body and soul of him.

"Yes, certainly we will help you," the Jefe said at the end, stretching his arms and yawning.

"How soon can we get the men together and start?" Henry demanded eagerly.

"As for that, we are very busy—are we not, honorable judge?" the Jefe replied with lazy insolence.

"We are very busy," the judge yawned into Henry's face.

"Too busy for a time," the Jefe went on. "We regret that not to-morrow nor next day shall we be able to try to rescue your Gringos. Now, a little later——"

"Say next Christmas," the judge suggested.

"Yes," concurred the Jefe with a grateful bow. "About next Christmas come around and see us, and, if the pressure of our affairs has somewhat eased, then, maybe possibly, we shall find it convenient to go about beginning to attempt to raise the expedition you have suggested. In the meantime, good day to you, Senor Morgan."

"You mean that?" Henry demanded with wrathful face.

"The very face he must have worn when he slew Senor Alfaro Solano treacherously from the back," the Jefe soliloquized ominously.

But Henry ignored the later insult.

"I'll tell you what you are," he flamed in righteous wrath.

"Beware!" the judge cautioned him.

"I snap my fingers at you," Henry retorted. "You have no power over me. I am a full-pardoned man by the President of Panama himself. And this is what you are. You are half breeds. You are mongrel pigs."

"Pray, proceed senor," said the Jefe, with the suave politeness of deathly rage.

"You've neither the virtues of the Spaniard nor of the Carib, but the vices of both thrice compounded. Mongrel pigs, that's what you are and all you are, the pair of you."

"Are you through Senor?—quite through?" the Jefe queried softly.

At the same moment he gave a signal to the gendarmes, who sprang upon Henry from behind and disarmed him.

"Even the President of the Republic of Panama cannot pardon in anticipation of a crime not yet committed—am I right, judge?" said the Jefe.

"This is a fresh offense," the judge took the cue promptly. "This Gringo dog has blasphemed against the law."

"Then shall he be tried and tried now, right here, immediately. We will not bother to go back and re-open court. We shall try him, and when we have disposed of him, we shall proceed. I have a very good bottle of wine——"

"I care not for wine," the judge disclaimed hastily. "Mine shall be mescal. And in the meantime, and now, having been both witness and victim of the offense and there being no need of evidence further than what I already possess, I find the prisoner guilty. Is there anything you would suggest, Senor Mariano Vercara e Hijos?"

"Twenty-four hours in the stocks to cool his heated Gringo head," the Jefe answered.

"Such is the sentence," the judge affirmed," to begin at once. Take the prisoner away, gendarmes, and put him in the stocks."

Daybreak found Henry in the stocks with a dozen hours of such imprisonment already behind him, lying on his back asleep. But the sleep was restless, being vexed subjectively by nightmare dreams of his mountain-imprisoned companions, and, objectively, by the stings of countless mosquitoes. So it was, twisting and squirming and striking at the winged pests, he awoke to full consciousness of his predicament. And this awoke the full expression of his profanity. Irritated beyond endurance by the poison from a thousand mosquito bites, he filled the dawn so largely with his curses as to attract the attention of a man carrying a bag of tools. This was a trim-figured, eagle faced young man, clad in the military garb of an aviator of the United States army. He deflected his course so as to come by the stocks, and paused, and listened, and stared with quizzical admiration.

"Friend," he said, when Henry ceased to catch breath. "Last night, when I found myself marooned here with half my outfit left on board, I did a bit of swearing myself. But it was only a trifle compared with yours. I salute you, sir. You've an army teamster skinned a mile. Now if you don't mind running over the string again, I shall be better equipped the next time I want to do any cussing."

"And who in hell are you," Henry demanded. "And what in hell are you doing here?"

"I don't blame you," the aviator grinned. "With a face swollen like that you've got a right to be rude. And who beat you up? In hell, I haven't ascertained my status yet. But here on earth I am know as Parsons, Lieutenant Parsons. I am not doing anything in hell as yet; but here in Panama I am scheduled to fly across this day from the Atlantic to the Pacific. Is there any way I may serve you before I start?"

"Sure," Henry nodded. "Take a tool out of that bag of yours and smash this padlock. I'll get rheumatism if I have to stick here much longer. My name's Morgan, and no man has beaten me up. Those are mosquito bites."

With several blows of a wrench, Lieutenant Parsons smashed the ancient padlock and helped Henry to

We have the exact size and type of battery to replace the one in your car •

USL STORAGE BATTERY SERVICE

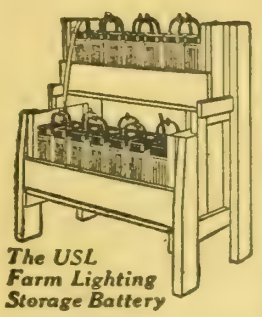
You want a battery that *fits*

"YOU'RE right. You can't put a short, fat battery into a long, slim box in your car. Then you want a battery with terminals that will shake hands like old acquaintances with your car's wiring terminals.

"But the main thing is to give you a battery with the right capacity to work in harmony with your car's electrical system. Your cutting-in-speed counts—that's the speed at which your generator begins to do business—and the number of amperes it feeds into the battery. Those are just some of the conditions your battery must work under. What it all means is that you want a battery of the right capacity to digest the current fed into it and to handle its work without strain.

"We have USL Batteries in all sizes and types to replace batteries of all makes. But we won't sell a battery if your old one is repairable. No matter what its make, if its plates are still sound enough, we'll rejuvenate and guarantee it."

When you *do* need a battery, your nearest USL Service Station will sell you a USL with extra-wear Machine-Pasted Plates. It will be an actually *new* battery, too. The factory ships it "Dry-Charged" so you get it—not partially worn out but *fresh*.



The USL Farm Lighting Storage Battery

USL Golden Rule Service Stations—*everywhere.*

The Farmer and the Country Newspaper

THE ATTITUDE of the average country newspaper toward the farmer is beyond understanding. Instead of being a help to the farmer it is frequently a hinderance. Instead of showing any interest in the farmers' efforts to make their business more profitable, it confines its editorial discussions to town issues. Or, in cases of controversy between the farmers and the people of the towns, instead of championing what seems to be the fair and just phase of the issue, the country newspaper invariably sides with the people of the towns, be they right or wrong.

When Congressman Fordney, for mysterious reasons which he has not seen fit to divulge, withdrew his support from the bean tariff bill, nearly every newspaper in his district printed an alibi for him. Instead of getting the wires busy and using their columns to convince Mr. Fordney that he ought to get this bill out of his committee and help to preserve Michigan's bean industry, nearly every last partisan newspaper publisher of the eighth district resorted to dirty slurs and lying statements about the Business Farmer and the agricultural leaders who had worked tooth and nail to secure this much needed legislation, because they had dared to criticize the political wig-wagging of Congressman Fordney.

When the sugar beet growers asked the manufacturers for a conference and a fair division of the beet profits, what did the country publishers do? Some of them, honest and justice-loving fellows that they are, gladly gave the use of their columns to the growers to present their side of the case, and occasionally wrote an editorial in their behalf. Others were deliciously "neutral," breaking their neutrality only on occasions to publish an extensive "interview" with the manager of a sugar factory, setting forth of course, the factory's side of the controversy. For some reason the country publishers were not so anxious to "interview" the beet growers and give the public a few worth-while facts instead of deceitful propaganda. In some instances the publishers even went so far as to charge the beet growers for printing notices of their meetings and articles presenting their side of the issue.

Why is this so?

Agriculture is the foundation which supports nearly every town, merchant and newspaper in the bean and sugar beet districts. Take away the farmers and let the farms lie idle for a single year and what would happen? Merchants would lock their doors. Spiders would weave their web across the ink fountains of the newspaper presses. Weeds would grow in the streets. The towns and the counties would become insolvent because there would be no one to pay the taxes.

The towns and villages of Michigan are as dependent upon the trade of the farmers as the engine upon the boiler which provides it with steam. The merchant's and the country publisher's business thrive only as the farmer's business thrives. Shut off part of the steam from the cylinder head and the engine loses power. Let there be poor crops and shut off part of the farmer's trade and the annual inventory will show that the merchant and the publisher have suffered as a consequence.

Millions are being made out of Michigan's sugar beet crops. But only five out of the twenty to thirty cents that the consumer pays for sugar goes to the farmer. Part of this five cents eventually finds its way into the coffers of the merchant and the newspaper. But no benefit is had out of the other fifteen to twenty-five cents if we except the paltry fraction of a cent per pound which is expended locally in labor and supplies in towns where sugar factories are located. The major part of the wealth that is created by the men who grow the beets goes hundreds of miles away from the place where the beets are produced and the several communities are that much the poorer.

It ought to be a matter for rejoicing on the part of the country merchant and the country publisher when the farmers organize to secure a better price for their products. For it means that much more money kept at home; that much more money spent in the merchant's store who in turn spends it for advertising and printed matter; that much more money spent in public improvements. It means better farm homes, more farm conveniences, more automobiles, more tractors, better dressed farm-folks. It means a more prosperous and contented citizenship. It is all for the good of the people of the towns fully as much as of the people of the farms. Then why, in the name of the seven wonders, do not the merchants and the publishers help the farmers to secure what is rightfully theirs instead of putting obstacles in their way? You can search us. It's a mystery too deep for us to fathom.

In Memoriam

IT'S RATHER unusual to write a memorial day editorial after memorial day has passed, but it is our conviction that every day should be memorial day, hence these brief thoughts may not come amiss. Anyway, memorial day doesn't mean so much to us old-fashioned folks as it used to. Time was when the entire town and countryside turned out in their Sunday best and marched to the cemetery, there to do reverence to the soldier dead. They went because they wanted to go. They got a vague sort of comfort from standing with bowed and uncovered heads before the graves of the unknown dead while the band played a few solemn notes or the preacher read briefly from the Bible and the village choir or soloist sang, "Nearer My God to Th ee," in soft, sweet tones that brought tears to the eyes of every listener.

But that was before every other inhabitant owned an automobile and baseball games and fishing excursions became popular Decoration day pastimes.

It rather seems to us, shameful as the thought is, that people now observe this hallowed day rather from compunction than a sincere desire to pay homage to the dead. The faithful ones who defy the blistering sun or chance the sudden rainstorm to march in the parade are pitifully few compared with other years.

All this is regrettable. It is a reflection upon our national spirit. It ought not to be. Perhaps it is natural that as the older veterans who added a more or less tragic meaning and picturesque touch to Decoration day ceremonies, pass away, their friends and their relatives should lose a part of their interest in the observance of this day. But they ought not to entirely erase them from their memories. They ought, in decent respect for those who have died in defense of home and country visit their graves on this occasion and make those few veterans who are left to feel that their departed comrades have not been entirely forgotten.

But it was not the purpose of this editorial to criticize. If we observe Memorial day only as a part of our duty as good citizens little is gained by such observance. It is inspiring to recall to mind the deeds of good men and women. Reflecting upon their accomplis ments we are ourselves made better, more u right, more sincere, more ambitious to li worth-while lives and perform worth-whi deeds. When we think of the countless tho ands who have died in battle and lie in marked graves and the other countless tho ands who survived the wars and died of age, we are led into pondering over the ca for which they fought rather than their in vidual greatness. Even the poorest citiz who stands before the graves of such as th must feel an awakening of patriotism and a sire to be a better citizen as his mind takes the full significance of the cause for wh these men fought and died.

So then Memorial day holds a meaning each one of us, and it is a meaning not hard understand. We are not worthy the name Americans if we do not take part in the a nual observance of that day and if we do also during our leisure moments of other da turn our thoughts into the channels of patr ism which led our forefathers into wars t have preserved this democracy to us and posterity.

Playing the Game Square

THE WORLD is full of small men. W backed into a corner and defeated in argument they snarl like a pack of coyot They cannot take an honest licking. They always full of excuses. Their vocabulary sists largely of "ifs" and "buts." When t do not approve of the contentions of oth instead of coming out into the open and ar ing the case on its merits, they get behind tree and shoot their poison darts of innuen insults and lies hoping to hurt their oppon in the eyes of the public. They are always cusing others of having ulterior motives. W a politician is criticized for not doing his p duty his critics are invariably charged having partisan designs. It is becoming most impossible nowadays for the lover of g government to express his honest opinions the shortcomings of those who are trying administer the government and making a ry mess of the job, without getting it in neck from the friends of the mess-maker. will have better government and better me run the government when we all acquire courage to face the real issues even at the pense of inviting the targets of our small- ibred enemies, and take a beating if necessa

The Farm Bureau and Politics

LET THERE be rejoicing. The Farm reau is after all going into politics. least such is the declared purpose of the I Farm Bureau Federation, according to a st ment which appeared in a recent issue of official publication. This statement says:

"From all sides comes the query: 'Wil farm bureau ignore politics?' Not exactly. ignore politics, and by that act refuse to ac a share of responsibility, would be distinctly American. For politics is a part of the machi of American government.

"The federation will concern itself with and measures rather than with parties. It have absolutely nothing to do with the poli stew from a partisan standpoint. But when tions develop that have a bearing upon the a cultural interests of the country, or quest that deal with the life and stability of Amer institutions, depend on it the Farm Bureau F eration will be found very much in evidence."

Three cheers for the Iowa Farm Bur Federation. Its declarations upon this imp ant subject of politics sounds a little diff than the initial semi-official declaration of Michigan State Farm Bureau, which dec that it would steer clear of politics, concer itself NOT with MEN but with MEASUR But the Iowa people have learned from ex ience that measures are meaningless, use things unless good men are elected to c them out, hence, in their estimation, men c first. So, too, in good time will the leader the Michigan State Farm Bureau learn truth, and encourage their members to take active part in political campaigns the election of men who can be depended u at all times to represent the people and m tain the glory of the Commonwealth.

What the Neighbors Say

OUR REACTIONARY FARMER LEGISLATORS

I noticed in your issue of the M. B. F. under date of May 22nd, the letter, "Farmers for Legislature." If I remember the writer was from Benzie county. I was glad to hear from him. I have been asked several times by good busy farmers of Tuscola county who the seven men were that voted against the warehouse bill and I had forgotten who they all were. I know of one from our own county who lay in with W. E. Ivory against the farmers on the warehouse bill. I wish you would give us the names of the seven who said by their votes that the farmers did not know what they wanted. We as agriculturists want to keep an eye open for those fellows as some of them are now looking for another job and more pay to do us again.

Some of them were very anxious to have an investigation of Nathan Simpson and the binder twine at Jackson prison, one of the good things that came our way. That was all right if these had been a shadow of a doubt of anything wrong but when the committee gave him and the Gleaners a clean slate not one of them said, "that is good," but hung their head when asked about it.

If there ever was a time when farmers should disregard parties and vote for men that will give agriculture some consideration and by so doing will help every other honest business in our state, it is this coming election. We should stand for men in our districts that we know are interested and will dare to do the fair thing under all conditions.

I wish you would tell through the BUSINESS FARMER why we have to pay from four to five dollars per pound for yarn when we are only offered about fifty cents for our wool. I am ready with the rest of the flock owners of Michigan to look into this question and see who is responsible. If this wool is not needed now we'd better take care of it until it is.—*J. J. E., Tuscola County.*

Instead of seven there were sixteen "farmer" legislators who could not trust the people to vote on the warehouse amendment. They are as follows: Orville E. Atwood, Newaygo county; Harrison H. Averill, Ottawa county; Chas. O. Blinn, Tuscola county; Burney E. Brower, Jackson county; Henry Cross, Jr., Gladwin county; Miles S. Curtiss, Calhoun county; Herbert M. Gowdy, Berrien county; Albert G. Griggs, Oakland county; Will C. Hartway, Macomb county; Arlie L. Hopkins, Manistee county; Wm. E. Ivory, Lapeer county; John L. Martin, Shiawassee county; Joel C. Merriman, Sanilac county; Edward G. Reed, Kalamazoo county; Henry T. Ross, Livingston county; Fred B. Wells, Cass county. One of these, as you will note, is from your home county.—Editor.

PROPOSED PAROCHIAL SCHOOL AMENDMENT

Editor The Business Farmer:—You are doubtless aware of the campaign being instituted in behalf of the adoption of an amendment to the State Constitution. The proposed Amendment is as follows:

"Section 16. All residents of the State of Michigan, between the ages of five years and sixteen years, shall attend the public school in their respective districts until they have graduated from the eighth grade; Provided, that in Districts where the grades do not reach the eighth; then all persons herein described in such District shall complete the course taught therein.

"Section 17. The legislature shall enact all necessary legislation to render Section sixteen effective."

This proposed amendment is to be placed upon the ballot to be voted in November next, and the effect of this amendment, if adopted, will be to prohibit all sectarian or religious schools for children between five and sixteen years in the State of Michigan.

At the present time sectarian or parochial schools are being conducted by Protestant and Roman Catholic denominations. Will you kindly permit me some space in your valuable journal to raise the question, is legislation of this character fundamentally right from the viewpoint of the American conception of civil government which insists that the State cannot interfere with the province of the church in its religious activities, provided those religious activities do not abridge the equal rights of the people at large, or menace the welfare of the state in its government.

In raising this question and in opposing the amendment, I am not proposing any unfriendly pronouncement against the public school system. Not for a moment would I say aught against this American bulwark of liberty. It is the best devised system possible for the purposes for which it was brought into being. Our public school is a conservator against possible inroads of un-American policies, and has produced some of our greatest statesmen, financiers and leaders of thought. It is an important factor in the development of American citizenry and must needs be continued and sustained by general taxation.

I submit, however, Mr. Editor, that a church school system is not necessarily an enemy of the state; it is not necessarily a breeder of unpatriotic impulses, anarchism and the like. Just as loyal American came from the church schools in proportion as come from the public schools. But, if at any time it should be found that any schools, designed for instructing children of whatsoever age are teaching by precept or example anything that is antagonistic to the nation's welfare, and thereby become the breeding place for anarchism or bolshevism or unpatriotic impulses, the police power of the state is available and should be exercised to put out of business such school system.

Moreover, any system of education, secular or sectarian, which finds it necessary to do business behind closed doors and adopts a curriculum of studies which teaches policies inimical to the best interests of Americanism and will not bear the light of day; or, instills into the minds of the young a spirit of unfriendliness for the American government, and favor the government of some foreign potentate, the civil authorities should promptly lay hands on it and close it out. And if the Wayne County Civic Association knows of any such enterprises being conducted in Michigan or elsewhere, it should report the facts at once to the public as well as to the proper authorities. If the police power is not sufficient, then the legislature should provide the proper statutory laws.

But the proposed amendment runs counter to the inalienable rights vouchsafed by the American Charter of Liberty, based upon the Declaration of Independence which asserts that "life, liberty and the pursuit of happiness" cannot rightly be abridged by statutory or constitutional law. Without going into the comparative merits of the public or secular and the secterian or church school systems, is it not the inherent right of parents to begin the religious training of their children for the kingdom of God while they are young and impressionable? Is there not a hereafter for which to prepare? Is this the only world possible? And does death end it all?

There are many who contend that the public school should be "Christianized" by introducing religious instruction and by compulsory reading of the Bible "without comment." But those good friends are either unmindful of, or antagonistic to the foundation upon which our forefathers built this great nation,—and these forefathers were Christians themselves.

Let the state continue to give opportunity for free public education, along the only possible lines, secular, and let the church look after the spiritual interests of their school children, bearing in mind, of course, the need of common school instruction. The state cannot rightfully interfere. But, if the American people elect to close up church or parochial schools and debar sectarian education to children whose parents desire it and pay for it, and compel all children to attend the public schools, they must be prepared for a movement to be inaugurated whereby the public schools will be sectarianized, which would ultimately mean that the denomination with the strongest voting capacity would be in control. And, is there any doubt as to what such a contingency would precipitate?

In our judgment, therefore, the proposed amendment to the Constitution of Michigan is un-American and unnecessary. I thank you for space to insert these thoughts and suggestions.—*S. B. Horton, Secretary Religious Liberty Association, Kalamazoo, Michigan.*

A NON-PARTISAN

Enclosed find check for $3 for a five year renewal. Although nominally a Democrat I voted for Lowden and expect to vote for Campbell. Less party and more politics, it seems to me, is what we farmers need to help ourselves out of the hole we are in. I don't need to say I like your paper for if I had not I would not have renewed.—*D. E. T., Genessee county.*

Mr. Campbell needs the votes of the democratic farmers in the primary more than he does in the election, but because of the fool act of the last legislature in making it impossible for a man to be a candidate on more than one party ticket, democrats who vote for Campbell in the primaries will have to enroll as republicans. A good many loyal democrats have signified their intention to do this very thing, and we think the winning of the governorship by the farmers is of such moment that every democratic farmer in Michigan can afford to renounce his party ties at the coming primary election and throw their support to Campbell. What do you think about it.—Editor.

MILK PLANT, CONSOLIDATED SCHOOLS AND SUGAR BEETS

I have decided to send in my views on the milk question which I think corresponds with the most of my neighbors. We seem to feel that the farmers should own the milk receiving stations in the Detroit area, also a central sales agency in Detroit and allow the grocery trade or distributors to handle it upon a commission basis, but maintain control of it until it reaches the consumer. I quite realize that this would mean some fight but we have got to start it before we can gain our rights and I can't quite understand where we will gain anything by putting it off.

In regards to consolidated schools would say that our township votes on consolidation June 5th and the farmers in my vicinity are going to oppose it. One of my acquaintances that lives on Grosse Isle in the Detroit river told me that they have bonded so much down there that his neighbor can't rent his 160 acre farm for enough to pay the taxes and if we continue the way we are going the state won't be much better off in the near future.

In closing would like to say that there is quite a number of farmers raising beets in this locality this year but not those that receive the M. B. F.—*J. B. D., Genesee County.*

No, nothing can be gained by the farmers putting off the control of their own business. Eventually the farmers will put their own prices on their dairy products and follow them through to the consumer, so why not do it now. Wish you would give us the name of that Grosse Isle farmer. Would like to know how much of his taxes are due to the consolidated school and how much to other public expenses. If what you say is true about the readers of M. B. F. not growing any beets it ought to be to the interest of every M. B. F. reader to see that his neighbor gets the paper. In numbers there is strength and when the majority of farmers of Michigan read the M. B. F. we'll win our just fights without a single defeat.—Editor.

GRIT AND LOYALTY

We had a dandy big meeting here last Saturday evening and during the meeting we found out some people will tell stories claiming one good and loyal member left our association and planted beets. It is not so. He has no contract and the one he had he returned telling them more money for beets. We are planning on having another meeting next Saturday evening, also trying to get a good speaker for that evening. We were late in getting our Sugar Beet Growers' Association started but so far we are one hundred per cent true, and willing to say we stay that way until we get our just and lawful dues, then we will grow beets, and lots of them. Yours truly.—*F. E. S., Bay County.*

Men, we know it takes grit, courage and 100 per cent loyalty to take a stand like this when farmers elsewhere are renouncing their vows to their association and are planting beets. Manager Ackerman says that 80 per cent are loyal, but the other 20 per cent have raised Cain. How blind they are. With everything in their favor they have fallen by the wayside, hopelessly beaten. Some day they will rise and thank their lucky stars for such neighbors as had the courage to stick to the fight to the bitter end and eventually win the recognition for which they have been striving. All is not lost if some remain loyal.—Editor.

COMPLIMENTS TO BAERWOLF

I am a reader of your paper and must say I'd never be without it. I read the letter of Mr. Baerwolf and am much disappointed over him. My opinion of him is that of an old woman. She was given a spelling book to read and when she returned it was asked how she liked the book and she said, "Oh, all right, only I couldn't get the run of the story." I guess that's what's the matter with Baerwolf. I must say it it the most valuable farm paper I ever saw. I think my subscription must be out for some time so I am enclosing check for $2 for three years. Why, this is the cheapest buy I ever made in my life. —*H. F., Prescott, Mich.*

I surely hope that you may receive your money's worth out of M. B. F. the next three years. We expect of course, to continually improve the paper and make it of even greater usefulness to those who read it.—Editor.

The Week's Editorial

WHY FOSTER FARMING?

Employers who are in need of more help have been somewhat critical of The Press for defending the interests of agriculture and deploring the drift of man power from country to city. That is natural, of course, for a man's own problems are the problems that seem most vital to him, but it is the duty of a general newspaper to look to the good of the general public which it seeks to serve. A hope for the prosperity of agriculture is a hope for the prosperity of the whole people. When farmers desert the industry to which they were born like passengers deserting a sinking ship then manifestly something is wrong with agriculture. To learn what is wrong a searchlight must be turned on agriculture, and the Press has been trying to help in turning on the searchlight.

Even should the United States be able to live for some time by importing food the sources of supply would in time be exhausted as the growth of other countries absorbed all their production. Therefore the problem of successful farming in America and for America must be settled sooner of later, and the sooner the better.

The present trend is likely to lead to disaster within ten years. Every time a farmer sells a herd of cows for beef and takes a factory job he not only reduces the milk supply to the extent of his production but he eliminates the reproductive possibilities of dairy cattle by many times the number of cows he actually sells, for a good dairy cow, in ten years of useful life, will give to her owner at least four good heifers. The loss of a herd therefore is a loss to the general public which never can be made good. Herein lies one of the causes of 14-cent milk in Grand Rapids.

So it is in all other branches of farming. It is not simply for the sake of farmers that agriculture should be fostered. Prosperous agriculture will make still more prosperous cities.—*Grand Rapids Press.*

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

"WITH prices on everything so high and help absolutely impossible to get, a vacation is out of the question for us," remarked Mrs. Pinney, to her neighbor in town who was planning on her summer vacation trip.

"Then why don't you interest some of your neighbors and friends in the country and town who are situated as you are and secure a Chautauqua here for a week this summer," suggested the friend, who realized that after all a vacation was simply a change—seeing and talking with different people—getting their ideas—seeing how the other half of the world lived, etc. And that the next best thing to travel and books was a summer Chautauqua which is growing more and more popular every year.

These two friends talked the matter over at quite some length and finally decided that it was an excellent suggestion, but how to proceed they didn't know, until the idea came to write the Woman's Department of M. B. F., for said Mrs. Pinney, I have found that the editor seems to be able to get us just the help we need whenever we write her.

And so last week in my mail came an inquiry as to what a Chautaqua would cost and how to get one. Never before had I realized the immense good these summer Chautauquas do the people in general until I started to look up the information for our friends. I found that in 1919 sixty-two hundred Chautauquas, covering one hundred thousand sessions with an attendance of fifteen million people, was the record made. This total number of sessions cost the people who participated in their benefits ten million dollars, but the concensus of opinion was that America as represented by her citizens who took advantage of this wonderful opportunity for intensive learning and pleasure, never spent ten millions of dollars in a better way.

Instance after instance was brought to light where a boy or girl, after hearing one of the instructive and intensely interesting lectures was fired with enthusiasm to make more of his life than before—was given a new line of thought. Or other instances were cited where young people who were gifted with musical talent but who hated to practise were enthused to take up their tasks anew.

Mothers in homes who were unable to attend many such interesting meetings previously—and men who perhaps thought they wouldn't find anything of value there, left with a new grasp of a situation—these people who came to them from afar—who had travelled around our entire country did not bring a narrow self-centered opinion—they are the broadest people you can meet anywhere.

Then too there is the opportunity for social intercourse such as only comes a few times during the year—such as at the County Fair or at a Chautauqua. Friends from afar greet and clasp hands—opinions are exchanged before and after the meeting which are worth a great deal.

But over and above all other advantages stands the educational advantage of a Chautauqua, and the farmer's wife is just the one who has been hungering for something of this kind. Yes, and her husband has also. While a woman is about her household duties and a man is at work on the farm, their brains are busy—every minute in the day—and they are both glad of this opportunity to start a new train of thought.

Cities and small towns are coming to realize more and more each year that the farmer is the backbone of this country—that he is a business man and not a hayseed; that he will support something worth while—that while he does not want "high brow" stuff, he does want anything which will interest, amuse and instruct him and his family of growing children.

Many a family cannot afford to leave the farm or home and take a vacation—and father will not go because mother cannot leave and the same thing is true of mother—but through the Chautauqua a touch of the outside world is brought right to the home town.

But the time, some one is thinking, a farmer cannot afford to spend his afternoons sitting inside a big tent in town listening to speeches or music, no matter how good and instructive they are. And right here is where the Chautauqua managers have forethought, for they have provided the same entertainment both afternoon and evening of their stay, and it is a real rest after the supper things are cleared away to drive into town and sit in these big cool tents, it is indeed a fitting finish to the day and a wonderful change.

If you are interested enough to talk to your neighbors and friends about this and find that there are enough progressive citizens in your community who, for their children's sake as well as for their own, are willing to pledge the amount they need to bring the Chautauqua to their town, you will almost always find that the amount will quickly be covered by the advance sale of season tickets—for everyone from far and near who is progressive, will want to attend, but it is for a few in this, as in everything else, to start it—to talk it up—and to do the advance work of getting it there.

If you are seriously interested and wish to know more of their plans, special courses, dates, cost, etc., write direct to the Chautauqua Institute, Chautauqua, N. Y. Ordinarily we do not feel like giving names and addresses through our paper as we feel that it is free advertising, but the editor is so strongly in favor of anything that will be for the good of the community that we gladly give this information, and do so without the knowledge of the Institute.

The old cradle still has its place along the edge of the woods and in corners where the reaper will not go. Picture submitted by Mrs. Chris Rasmussen, of Coral, Michigan, of her husband and small son.

"POLLYANNA" IS DEAD

SO WELL known is the author of the "Glad Books," as they are popularly termed, that this was all the heading needed as the message was flashed across the wires by the Associated Press.

She worked long and faithfully before recognition came her way to any extent, and did so in the face of bodily pain. Her first Pollyanna story did not appear until 1913, although she was author of about 200 short stories.

Her writings were true to her own views of life—for she always found something to be glad for—in spite of her physical suffering. It was given her to dream dreams which were to come true, although the toll exacted for her overwork was a shortened life.

Besides being an author she was a choir and concert singer of note and also a teacher. In 1893 she married John Lyman Porter and when the reaper called, she was in her fifty-first year.

Her best known books are of course "Pollyanna," "Pollyanna Grows Up," "Just David," and "The Road to Happiness." Other books are "Cross Currents," "The Turn of the Tide," "The Story of Marco," "Miss Billy," "Miss Billy's Decision," "Miss Billy Married," and "The Road to Understanding."

WORTH CONSIDERING

HUNDREDS of years ago a river flowed from the mountains of Northern China to the sea. Although not deep, the current was swift. Coolies carrying heavy burdens could not ford it.

Queer, humpback bridges were built across it—such as you see on "willow" plates—and over these the coolies crossed in safety.

Years passed, the stream dried up—but they continued to cross over by way of the bridge. Toiling with their heavy loads over the cumbersome stone—while they could save limitless time and labor by going over the now dry river bed.

Are you still going over the bridge of years ago, or using your brains over the shortest route?—*Reliance Bulletin.*

WHERE IS THE BAREFOOT BOY?

ONLY A few short years ago and the boys were looking forward to vacation time when they might discard shoes and stockings and all during the summer months, with the exception of special days and Sundays, roam over fields at work or play, with the feet free and unhampered. Of course occasionally you stepped on a thorn, or a sharp stone, but very early in the season the feet became hardened, and oh what joy to be able to wade through any little stream you came across and climb anywhere without being afraid of spoiling your shoes or having to clean them when you returned at night. Oh, yes, of course Mother always insisted that before bed time those dirty feet must be scrubbed and we didn't always have warm water—and sometimes we wished we might sneak into our beds without going through the formula of cleaning up—but anyhow shoes didn't bother us.

Now it's different. The other day I read in the city paper of one boy who had left school and gone to work and when found and questioned by the delinquency officer he stated that he wouldn't go to school without shoes as good as the other boys wore and one of his playmates had just paid $13.30 for a pair of shoes—just think of it—$13.30 for a pair of shoes. I wonder if we are somewhat to blame for the high cost of clothing? Are we too proud to wear clothes that are not quite so good as the other fellow has and therefore the manufacturers keep boosting the price of the finer product, knowing full well that we will find a way to pay the price and that we will insist on having the best. Holland recently imported some wooden shoes to America—but they went begging of course—they fact of their coming didn't worry the American manufacturers at all—they knew full well we wouldn't wear them.

There is absolutely no question but that we could lower the price of things if we would only buy what was absolutely necessary and if we were willing to worry less and work more. How well do I remember when only a little girl of getting up at five o'clock in the morning, feeding the chickens and walking two miles to school and two miles home again at night—feeding the chickens at night again—filling the wood box, clearing the table and assisting with the dishes. And now we must have an automobile every where we go with gasoline at 29c per gallon. And no wonder that fresh vegetables are so high when there are so few—where are the gardens every housewife used to have? Formerly we raised all we ate on our table right at our back doors with the exception of sugar and meats, spices and coffees. Now we buy everything in pound lots—think of it—potatoes by the pound!

Spring was in the air—and with that air of listlessness that comes to one I was wondering what to have to eat when I should go home from the office. I wandered into the corner grocery store where a Greek and his whole family had bought out the former American grocer who kept his store open only eight hours a day and hired help—delivering all his goods. I realized that that so-called foreigner had a right to make good. There are his wife and two sons all working, and they are there every evening to serve those whose duties keep them from doing their trading in the middle of the day. And they keep no delivery wagons, you carry home what you purchase in a sack or basket. And there I saw a huge bushel basket of dandelion greens. Oh, joy! Just what I had been longing for. Timidly I asked the price. Twenty-five cents per pound said he. I simply gasped, for you know how they wilt and how few there are in a pound. I went home, dug out my old shoes and an old suit, got on an interurban car, and only a few miles from the very heart of the city I had the most wonderful afternoon filling my market basket with greens enough for several meals and all it cost me was 10c car fare, a little recreation in the fresh air during my afternoon off duty.

And I planned great plans, built great air castles while in God's great out-of-doors. And in my mind's eye I saw the time not far distant when the peak in high prices would be reached and the real estate dealers would be glad to sacrifice a lot to me at a reasonable price just outside of the city limits where I could build me a little cottage with a good sized yard for flowers and a garden.

Just a few weeks ago some typists in the city set a scale of prices which they were willing to pay and which they pledged they would maintain. And the limit as just where the luxury tax was added. For instance, they set $10 as the limit to be paid for a pair of shoes and $35 for a dress, while they stated they would pay $50 for a suit. Presto, next morning appeared ads from four different leading stores in that city advertising sales on just those articles and everyone of them at just the limit these girls had pledged themselves to pay. And yet the merchants tell us they are not profiteering. They state it is all the farmers who are charging so much for food stuffs.

Weekly Cheer

Let us learn to anoint our friends while they are yet among the living. Post-mortem kindness does not cheer the burdened heart; flowers on the coffin cast no fragrance backward over the weary way.—George Childs.

"HEARTS OF THREE"

(*Continued from page* 11)

his feet. Even while rubbing the circulation back into his feet and ankles, Henry, in a rush, was telling the army aviator of the predicament and possibly tragic disaster to Leoncia and Francis.

"I love that Francis," he concluded. "He is the dead spit of myself. We're more like twins, and we must be distantly related. As for the senorita, not only do I love her but I am engaged to marry her. Now will you help? Where's the machine? It takes a long time to get to the Maya mountains on foot or mule-back; but if you give me a lift in your machine I'd be there in no time, along with a hundred sticks of dynamite, which you could procure for me and with which I could blow the side out of that mountain and drain off the water."

Lieutenant Parsons hesitated.

"Say yes, say yes," Henry pleaded.

Back in the heart of the sacred mountain, the three imprisoned ones found themselves in total darkness the instant the stone that blocked the exit from the idol chamber had settled into place. Francis and Leoncia groped for each other and touched hands. In another moment his arm was around her, and the deliciousness of the contact robbed the situation of half its terror. Near them they could hear Torres breathing heavily. At last he muttered:

"Mother of God, but that was a close shave! What next, I wonder?"

"There'll be many nexts before we get out of this neck of the woods," Francis assured him. "And we might as well start getting out."

The method of procedure was quickly arranged. Placing Leoncia behind him, her hand clutching the hem of his jacket so as to be guided by him, he moved ahead with his left hand in contact with the wall. Abreast of him, Torres felt his way along the right hand wall. By their voices they could thus keep track of each other, measure the width of the passage and guard against being separated into forked passages. Fortunately, the tunnel, for tunnel it truly was, had a smooth floor, so that, while they groped their way, they did not stumble. Francis refused to use his matches unless extremity arose, and took precaution against falling into a possible pit by cautiously advancing one foot at a time and ascertaining solid stone under it ere putting on his weight. As a result their progress was slow. At no greater speed than half a mile an hour did they proceed.

Once only did they encounter branching passages. Here he lighted a precious match from his waterproof case, and found that between the two passages there was nothing to choose. They were as like as two peas.

"The only way is to try one," he concluded, "and if it gets us nowhere to retrace and try the other. There is one thing certain; these passages lead somewhere, or the Mayas would not have gone to all the trouble of making them."

Ten minutes later he halted suddenly and cried warning. The foot he had advanced was suspended in emptiness where the floor should have been. Another match was struck, and they found themselves on the edge of a natural cavern of such proportions that neither to right nor left nor up nor down, nor across, could the tiny flame expose any limits to it. But they did manage to make out a rough sort of stairway, half natural, half improved by man, which fell away beneath them into the pit of black.

In another hour, having followed the path down the length of the floor of the cavern, they were rewarded by a feeble glimmer of daylight, which grew stronger as they advanced. Before they knew it, they had come to the source of it—being much nearer than they had judged; and Francis, tearing away vines and shrubbery, crawled out into the blaze of the afternoon sun. In a moment Leoncia and Torres were beside him, gazing down into a valley, from an eyrie on a cliff. Nearly circular was the valley, a full league in diameter, and it appeared to be mountain walled and cliff walled for its entire circumference.

"It is the Valley of Lost Souls," Torres uttered solemnly. "I have heard of it, but never did I believe."

"So have I heard of it and never believed," Leoncia gasped.

"And what of it?" demanded Francis. "We're not lost souls, but good flesh-and-blood persons. We should worry."

"But Francis, listen," Leoncia said. "The tales I have heard of it, ever since I was a little girl, all agreed that no person who ever got into it ever got out again."

"Granting that is so," Francis could not help smiling, "then how did the tales come out? If nobody ever came out again to tell about it, how does it happen that everybody outside knows about it?"

"I don't know," Leoncia admitted. "I only tell you what I have heard. Besides, I never believed. But this answers all descriptions of the tales."

"Nobody ever got out," Torres affirmed with the same solemn utterance.

"Then how do you know that anybody got in?" Francis persisted.

"All the lost souls live here," was the reply. "That is why we've never seen them, because they never get out. I tell you, Mr. Francis Morgan, that I am no creature without reason. I have been educated. I have studied in Europe, and I have done business in your own New York. I know science and philosophy; and yet do I know that his the valley, once in, from which no one emerges."

"Well, we're not in it yet, are we?" retorted Francis with a slight manifestation of impatience. "And we don't have to go in, do we?" He crawled forward to the verge of the shelf of loose soil and crumbling stone in order to get a better view of the distant object his eye has just picked out. "If that isn't a grass-thatched roof——"

At that moment the soil broke away under his hands. In a flesh, the whole soft slope on which they rested broke away, and all three were sliding and rolling down the steep slope in the midst of a minature avalanche of soil, gravel and grass tufts.

The two men picked themselves up first, in the thicket of bushes which had arrested them; but, before they could get to Leoncia, she, too, was up and laughing.

"Just as you were saying we did not have to come into the valley!" she gurgled at Francis. "Now will you believe?"

But Francis was busy. Reaching out his hand, he caught and stopped a familiar object, bounding down the steep slope after them. It was Torres' helmet purloined from the chamber of mummies, and to Torres he tossed it.

"Throw it away," Leoncia said.

"It's the only protection against the sun I possess," was his reply, as, turning it over in his hands, his eyes lighted upon an inscription on the inside. He showed it to his companions, reading it aloud:

"DA VASCO."

"I have heard," Leoncia breathed.

"And you heard right," Torres nodded. "Da Vasco was my direct ancestor. My mother was a Da Vasco. He came over the Spanish Main with Cortez."

"He mutined," Leoncia took up the tale. "I remember it well from my father and from my Uncle Alfaro. With a dozen comrades he sought the Maya treasure. They led a sea-tribe of Caribs, a hundred strong, including their women, as auxiliaries; and his report in the archives, so Uncle Alfaro told me, says that they were driven into the Valley of the Lost Souls, where they were left to perish miserably."

"And he evidently tried to get out by the way we've just come in," Torres continued, "and the Mayas caught him and made a mummy of him."

He jammed the ancient helmet down on his head, saying, "Low as the sun is in the afternoon sky, it bites my crown like acid."

"And famine bites at me like acid," Francis confessed. "Is the valley inhabited?"

"I should know, Senor," Torres replied. "There is the narrative of Mendoza, in which he reported that Da Vasco and his party were left there 'to perish miserably.' This I do know; they were never seen again of men."

The Children's Hour

DEAR CHILDREN: I have a secret to tell you this week, so all be sure and read this carefully as it is a very important secret.

You know the actresses all have what they call a stage name; that is a name that they take and use just for business purposes but which really isn't their own. And so, I am going to copy them to the extent of taking another name as my "pen name," but you will all be in the secret, and know that I am just the same "Laddie" whom you have been writing to before. Hereafter please address your letters to Aunt Clare, care THE MICHIGAN BUSINESS FARMER, Mt. Clemens, Mich.

For a long time I have been searching for some short stories which we could print each week which would teach you something for you know the kind of stories I always like best are the ones which teach me something I did not know before. And at last I have found such a series, the first of which will appear this week and I hope you will enjoy reading them as much as I have. Affectionately yours, AUNT CLARE.

Making Good With Tools

By Grant M. Hyde

"THERE, Sis, how's that?" Gordon pointed with pride to a hanging flowerbox he had made to fit a new hybrid variety of flower in which his sister was especially interested.

"You said that flower ought to be hanging. See, it's all complete, tin-lined and all."

"Why, its a beauty, Gordon, it does not look home-made a bit."

"Oh, yes, it does, though," the boy retorted. "That's my own design. Didn't copy it from anywhere. No, sir, there's just one flower box in the world like that, and it's yours. Birthday, you know."

"Oh, I don't mean that it looks like a shop one, I mean it is as well made as any shop one. I hadn't a notion you could handle tools so well."

"Well, you see, sis, most of the stuff I've been making has been just for my own fun. I wanted the rough of it. But I thought you'd just look for a little finer finish, so I made it that way. Only trouble I had was in trying to think out a new pattern. I'd have asked you, of course, only being for your birthday, I couldn't."

"Well, look here, Gordon, I really can design. Father's birthday's only a month away. Do you suppose, if I designed a real pergola, with hanging baskets for those drooping creepers of his, you could make it? I believe you could, now I've seen how beautifully you have done this."

"Sure I could. It'll be a tough job to get it done in a month, but if you will draw me everything to scale I won't have to waste time and can go right ahead. We'll set it up the day before, and you find some way to keep father from going into the garden on that evening. It's a go."

OUR BOYS AND GIRLS

Dear Aunt Clare:—I have just been reading the letters in the "Children's Hour," and as I have a letter-writing spell, I thought I'd just have to write a letter to you,too. This is the third one I have written tonight. I am 15 years old taking my first year at high school, (ninth) and am expecting to pass. I am about five feet, 2½ inches tall, and have dark hair and common bluish-gray eyes. I would like to have the boys and girls write to me. Say, I don't believe many of the boys read this page as I seldom see their letters, and I'm sure Aunt Clare, hasn't the heart to put their letters in the waste basket, where I fear this one's destination will be. Your little friend, Florence Humphrey, Box 56 Hale, Michigan.

Dear Aunt Clare—I am 9 years of age and am in the fourth grade at school. I have a mile and three quarters to walk to school. My teacher's name is Miss Dorotha May Custer. My father takes the M. B. F. and we all like it very much. I like to read the Boys and Girls letters very much and I though I would write for the first time, and I hope it escapes the waste paper basket. I have four brothers and two sisters. We live on a 40 acre farm. We have 2 horses 3 colts, 2 cows, 3 calves, about 40 chickens, 7 turkeys, 3 large rabbits and a cat. Well as my letter is getting long I will close, hoping to see my letter in print.—Milton J Dalrymple, Vestaburg, Mich.

Dear Aunt Clare—This is the first I have written to you. I am a girl eleven years old. My birthday was the 27th of April. I have six sisters and three brothers. I like to go to school and hardly ever miss a day. I am in the sixth grade. My teacher's name is Mrs. Grace Hulett. I take music lessons and like music very well. We live on a hundred acre farm one quarter of a mile from the village. For a pet we have a cat. I like the "Children's Hour." We have good times gathering flowers now. I will have to close now hoping to see my letter in print.—Margaret Dernberger, Leonard, Michigan.

Dear Aunt Clare—This is the first I have written to you. We take the M. B. F. and like it very much. I am a boy 10 years old and in the 5th grade at school. My teacher's name is Miss Flossie Smith and I like her very much. For pets I have a pig and a colt. I live on an 80 acre farm and we have 5 horses 7 cows, 5 pigs and about 275 chickens. I have solved the puzzle of last week in the M. B. F. and I am also sending a riddle. Well as my letter is getting long I will close, honing to see my letter in print.—Floyd Weaver, Brown City, Mich. Which was on earth first, the hen or the egg. Ans.—The mother of both.

Dear Aunt Clare—This is the first I have written to you. My father takes the M. B. F. and likes it very much. I am a girl 12 years of age and in the sixth grade. My teacher's name is Miss C. Swanson. I like her very much. We have 26 pupils in our school. I have six brothers and two sisters and two are dead. I will close for this time and leave a little space for the other little girls and boys. I hope some of the girls and boys will write to me. Hoping to see my letter in print.—Emma Tanskala, Newberry, Mich., R 1.

Dear Aunt Clare—I have never written to you before so I will try and write now. My father takes the M. B. F. and likes it very much. He also likes to read Uncle Rube's pieces and I like to read the Children's Page. I am 12 years old and in the 6th grade at school. I have a brother and two sisters, their names are Joseph, Agnes and Rosie. We live on a 50 acre farm and have two horses, 3 cows and one heifer and about 50 chickens. I will close hoping to see my letter in print.—George Sladick, Ludington, Mich.

Dear Aunt Clare:—I am sending some pictures that I have drawn, hoping to see them in the paper. My father takes the M. B. F., and he thinks it is the best paper of all. I am 13 years old and go to the country school. I love drawing, but I have never taken any lessons. I have never written before but I have been reading the boys' and girls' letters. I took the 7th grade examination. I live on a large farm. I will close.—Burteen Ettinger, R. 4, Mt. Pleasant, Mich.

Dear Aunt Clare—I am reading the Children's Page and like it fine. I have never written to you before. I am a girl 10 years old and will be 11 in May. My teacher's name was Mrs. Martin Manzo Our school is out. I will be in the seventh grade next year. The names of the birds of last week's puzzles are Bobolink, Rice bird, Finch, Heron, Eagle, Barbet, Oriole and Linnet. Well I will close, hoping to see my letter in print.—Minnie Falls, Carsonville, Mich.

Dear Aunt Clare:—My grandfather takes the M. B. F. and we all like it real well; we could not do without it. I am a girl 13 years old and am in the 7th grade at school. I hope to pass the examination this year. I have one brother and no sisters. Hoping to see my letter in print.—Evelyn Steeby, Caledonia Michigan.

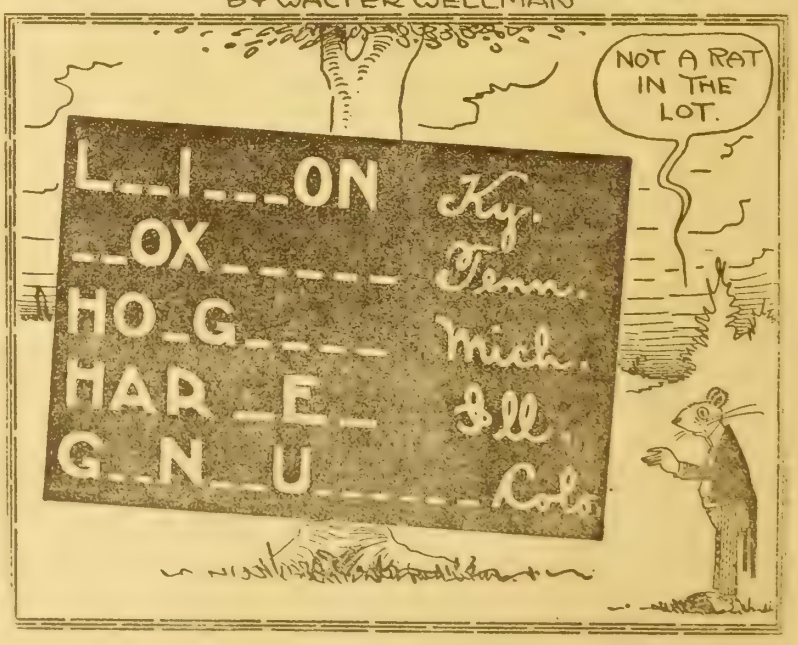
Dear Aunt Clare—I am writing the first time. I am 10 years old and in the 5th grade. I live on a 113 acre farm. I have a pair of roller skates and have lots of fun with them. For pets I have 2 cats. I have no brothers or sisters. Papa takes the M. B. F. and likes it. I like to read the Children's Page. As my letter is getting long I will close, hoping to see it in print.—Ruth Filkins, Howell, Mich.

Dear Aunt Clare:—I am 12 years old and am in the 7th grade and I am working very hard to pass the examination. I live on a farm of 120 acres. We have a number of Chester White hogs. We have a new Dodge car, and we have it running nearly all the time. For pets I have a dog, Ted and three kittens. I would appreciate it if some of the girls would write to me.—Ruth Yankie, Breckenridge, Michigan.

Dear Aunt Clare—This is the first I have written to you. I am 13 years old and in the 6th grade. We have a standard school. I live on a 60 acre farm and we have 6 cows, 2 heifers, 1 steer and 4 calves. We have 4 horses and about 75 chickens. I have four brothers and three sisters. My brother takes the M. B. F. and likes it very much. I hope to see my letter in print.—Hilda Johnson, Ludington, Mich.

ANIMALS IN CITIES

BY WALTER WELLMAN



You see here the names of five animals. The puzzle is to fill in the blanks so as to have the names of certain cities in the following States: Tennessee, Michigan, Illinois, and Colorado. Can you?

Answer to last week's puzzle: 1. Scale. 2. Sickle. 3. Bracket. 4. Pulley.

Dear Aunt Clare—I am reading the letters of the M. B. F. and I am interested in them. I am a girl 10 years old and I will be in the fifth grade at school next year. My school is out now. I live on a farm of 100 acres. We have nine cows, 4 horses, 12 pigs and 35 little chickens. For pets I have two cats. I have a little pet pig. I have two sisters and three brothers. We have a car As my letter is getting long I will close hoping to see it in print.—Vivah A. Bisard, Fremont, Mich.

Dear Aunt Clare:—My father takes the M. B. F. and likes it fine. I read the "Children's Hour" every week and like it fine. I live on a 40-acre farm. We have two horses, one pig, one cow and a calf and 27 chickens. I am 12 years old and in the 7th grade. I have four sisters and two brothers. I have not seen any letters from East Jordan yet. I will close hoping to see my letter in print.—Della Hollingshead, R.5, East Jordan, Michigan.

Dear Aunt Clare—I am 10 years of age and in the fourth grade at school, 32 children goes to the school I do. I live on a farm of 100 acres. I have got a sister and no brothers. My sister's name is Arvilla. I like to read the letters in the M. B. F. I have got five cats for pets. We have three horses and four cows and 1 calf. We have 100 chickens and two pigs. I hope to see my letter in print.—Lucile Fouch, Traverse City, Mich.

Dear Aunt Clare—This is the first I have written to you. I am a girl 12 years of age and I am in the fourth grade at school. My father takes the M. B. F. and we all like it very much. I live on a farm and we have 80 acres and 6 cows, 8 pigs, 2 horses, 65 chickens and 4 ducks. For pets I have a little dog, its name is Sport. My teachers name is Miss Eleanor Smith and we all like her very much. Will close for this time—Eleanor Egnaszak, Suptem Village.

Dear Aunt Clare—I am 10 years old and am in the 4th grade. I go to the Dickenson school. My teacher is Miss Lulu Walton. I have a brother named Arthur and a little sister, Luella. My father owns an eighty acre farm. There is a saw mill at our place now sawing our logs into lumber, which will be used to make school furniture. For pets we have a dog and two kittens. I hope to see my letter in print.—Helen Landenberger, Grant, Mich.

Dear Aunt Clare—I am 10 years of age and am in the fourth grade at school. My teacher's name is Miss Marzella McConkie. I have one mile and 3-4 to go to school. I have one brother but no sisters. My father takes the M. B. F. and likes it very much. For pets I have one dog and one little Shetland pony. Well this is all I will write for this time.—Marion E. Krum, Stanton, Michigan.

Dear Aunt Clare—I am 11 years old and in the sixth grade at school. My father takes the M. B. F. and likes it very much. I go to school in a new schoolhouse at Clarenceville. I have two miles to walk to school. I have 4 sisters and one brother. We had our sale last month and sold everything but one horse. We have bought a place and are going to move to town. Well I guess I will close.—Judson L. Vincent, Farmington, Mich.

Dear Aunt Clare—I am a girl eight years old and in the first grade at school for pets I have a little puppy dog and a cat named Fuzzy. We have a team of horses, their names are Paddy and John. We live on an 80 acre farm. We have a cow named May and a little calf named Bill. We have about 30 chickens and a pig. Well I will close, hoping to see my letter in the M. B. F. —Zelma Seeley, Red Oak, Mich.

Dear Aunt Clare—I never wrote to you before so I thought I would now. I am a boy 13 years old and am in the 5th grade. My teacher's name is Miss Zita Eddy. There are 5 pupils in our class. We have 3 horses and 5 head of cattle and I have a dog, his name is Ring. I have 7 brothers and 3 sisters. I must close and leave some room for the other children Hoping to see my letter in print.—Leo Szeszulski, Kawkawlin, Mich.

Dear Aunt Clare:—I am a little girl 7 years old and am in the third grade. My teacher's name is Mary B. Kippis, and I like her very well. I live on a 137-acre farm. We take the M. B. F. and like it fine. I read the boys' and girls' letters every week. We have 7 horses, 18 head of cattle, and a Fordson tractor. I have three sisters and three brothers. Hoping to see my letter in print. I will close.—Martha D. Hofmeister, Sebewaing, Mich.

Bright Sayings of Children

A tiny girl, on going out after dark looked up at the sky which was full of stars. "Oh, just look at the pimples on the sky," she remarked.—Mrs. V. M. H., East Jordan, Mich.

Can't Do a Good Turn

First-class Scout—Did you read about the scout who swallowed his teaspoon?

Tenderfoot—No; what happened to him?

First-class Scout—Oh, he can't stir.—*Boys' Life.*

LAYING OUT FIELDS FOR PLOWING WITH TRACTOR

(*Continued from page* 4)

eral times. After the back furrows have been plowed each land is finished as in Method 1. The whole field must be staked out before starting and care must be taken to keep the lands of a uniform width.

Method VI.

Plows Left in the Ground

A better quality of plowing results by following the previous methods than is the case when the plows are left in the ground all the time the tractor is moving, but many farmers consider the time saved to be of greater importance.

Plowing is started at the outside of the field, throwing a furrow toward the fence and turning to the left at the corners without lifting the plows. Care must be taken to make a satisfactory curve on the first round as it will be difficult to change the shape of the curve after the first round without "cutting and covering." And it is not necessary to measure any distances or place any stakes, this method is a time saver over any of the other methods. The plows are left in the ground from the time the field is started till only a small piece remains in the middle. An irregular or crooked field can just as readily be plowed in this manner as a rectangular one. This method is most popular where disc plows are used.

Method VII.

The diagram illustrates a method whereby the poorly plowed diagonals of the field and the center can be plowed. The strip of land in the center of the field should be the same width as the diagonals. The only time the plows are lifted is during the few short turns at the ends of the diagonals.

Method VIII.

In this method the corners are left unplowed. The outfit starts down one side and when within 10 feet of the corner the plows are lifted and put in again when about 10 feet beyond the corner, continuing on to the next corner where the same operation is repeated. Continue plowing around the field, leaving a strip 20 feet wide extending from the corners to the center of the field. When the strip in the center of the field has reached a width of 20 feet, plow out the diagonals as shown in the diagram 7. A great deal of rough riding is eliminated by driving over the unplowed ground as compared to the plowed ground in the previous method.

Method IX.

Often in starting a field where it is plowed around continuously, it is difficult to make an easy curve at the corners. Where the corners have a small sharp curve it is difficult to keep from missing small strips of land and at the best do a poor job of plowing at the corners. Diagram of Method 9 shows a method for starting easily around corners. Each corner is plowed out separately, and leaving a well rounded furrow to turn the corners. The greatest objection to this method is the size of the land left in the middle of the field because of the long curves at the corners. It necessitates the raising of the plows for the last few furrows in the center of the field.

Method X.

Diagram of Method 10 shows the method of laying out an irregular field. The essential requirements in plowing an irrgeular field when the plows are lifted at the ends is to keep the headland of a uniform width throughout. The body of the field can be plowed by any of the methods described where the plows are lifted at the ends.

Method XI.

Diagram of Method 11 shows another method for plowing irregular fields. The field is divided into two sections making one field a rectangular shape and the other embracing the irregular portion. Field one could be plowed by following Method 1, and eld two after Method 7, or the more simple plan of Method 6.

We believe that a better quality of work and greater satisfaction will be obtained by using the methods where the plows are lifted at the ends.

(Article and diagrams used by courtesy Cleveland Tractor Co., Cleveland, Ohio.)

WHY PACKER LEGISLATION SHOULD BE ADOPTED

(*Continued from page* 5.)

which the big packers have already acquired, but to insure their easy conquest of new fields, are:

"Stockyards, with their collateral institutions, such as terminal roads, cattle loan banks, and market papers; private refrigerator car lines for the transportation of all kinds of perishable foods; cold storage plants for the preservation of perishable foods; branch house system of wholesale distribution; banks and real estate.

Private Car Lines and Transportation Privileges

"The Big Five own 93 per cent of the total of all kinds of cars owned by interstate slaughterers, including refrigerator, stock tank, box, flat and gondola cars. The most important of these from the standpoint of monopolization are the refrigerator cars.

Branch Houses and Car Routes

"The packers' distribution of their products is effected through a system of branch houses located in the large towns and cities and a system of refrigerator 'peddler car.' routes which reach the smaller communities. Swift & Co. reach a larger number of cities and towns by peddler car than all other packers' while Armour & Co. have developed a system of delivering from their branch houses by trucks, reaching by this means over 20,000 towns, and making their total number of towns greater than Swift & Co.

The Commission showed that the packers control from 51 to 100 per cent of the stock of 27 branch yards of the big stock yards, and over 25 per cent of two other branch yards.

Packers Financial Affiliations

"In the financial field the packers' strength is based not so much on actual ownership as upon the influence which they can exert by reason of their volume of business and commanding industrial position.

"They are further entrenched in financial institutions throughout the United States, as is evidenced by a list of 61 banks in fifteen cities which relates only to the principal cities and packing centers. In each of these banks the packers are represented on the board of directors through members of the individual families, or through officers, directors, or confidential employes of the packing companies. In addition, there are a number of banks not covered by this list, in which close business associates of the packers are directors.

Recommendations of the Federal Trade Commission

The Federal Trade Commission made three important recommendations to end the evils existing in the meat packing industry:

That all the rolling stock used for the transportation of meat animals, the principal and necessary stock yards of the country, and all privately owned refrigerator cars, and all necessary equipment for their proper operation, be acquired by the railroads, and operated by the government. It recommended that they should be taken over through the Railroad Administration that being the only way in which at that time they could be made a part of the transportation system of the country.

Packers' Investments and Profits

Armour's net profits for fifty years, as reported by themselves were $179,000,000, on an original investment of $160,000. Swift & Co.'s net worth capital stock and surplus in 1896 was $14,500,000, and they report net profits for twenty-three years of $214,240,000. Wilson & Co. report their net worth in 1894 was $4,694,000, their net profits for 25 years as $44,390,000. Morris & Co. net worth in 1909 is reported as $23,229,000 and their net profits for ten years were $28,694,000. The Cudahy Packing Co., report their net worth in 1888 as $750,000 and net profits for thirty-one years, as $37,695,000.

DRAIN RIGHT OF WAY

A. B. C. own land where the water is drained from A's and B's through a tile across C's into the river. Before the tile was laid the water stood on A, B and C's land and during floods ran into the river. The tile was laid across C's land over twenty five years ago. A and B made the agreement and bought the right of C to put the tile across C's land. The writings to this have been lost. Now C's land has changed hands several times. This owner has several gullies where the water has washed down the banks from rains. One has been starting near the tile until it has reached the top of the bank. C claims the tile is causing this damage. The gully was filled last fall but has washed away again. During this time the water which is drained through ditches on bad land has not overflowed but ran through the tile. Now C stops up the tile and orders A and B to build dams on their farms and hold the water back. If there should be a hard rain it is liable to do damage to the three farms. Who would have to stand for that damage? Has C the right to stop the tile without notifying the owners? If a larger tile is wanted who would have to furnish the tile? That drain is in the natural water course and no other way for A or B to drain their land. This drain the drain commissioner has no authority over. Now A and B do not think that any of their water has caused this damage. Do A and B have to stand the damage of the gully because the rains have washed the dirt away? B has always kept his ditches cleaned so as to keep from clogging the tiles. Any advice you can give me will be greatly appreciated.—T. B., Allegan County.

It is a difficult question to determine the legal rights of the parties from the brief statement and unusual conditions existing. Without an agreement from some one having authority to make it A and B would have no right to gather the water from their land by ditches and drains and cast it upon the property of C to his damage in any different way than would go in a state of nature. A and B might buy a right of way for a drain across the land of C and in that agreement would probably lay the key as to who would be liable for the damage. If A and B bought a right of way for a drain and agreed to maintain it and keep it in repair they would of course be liable for the damage and also be bound to maintain it and upon failure C would have the right to prevent so far as possible further injury and hold them liable for what damage had been done.—*W. E. Brown, legal editor.*

SEN. JOHNSON A PROTESTANT

As further evidence of the Protestant leanings of Senator Johnson, we quote the following from a letter from Congressman Cramton who was Johnson's campaign manager in Michigan:

"I am not able to say in what church either the Senator or Mrs. Johnson have their membership. I know they are both Protestants, and that Senator Johnson was a Knight Templar at the age of twenty-two. Further, Mrs. Johnson mentioned to me one day that she and the Senator were married by a Baptist minister."

NEGLECTED TO PAY MORTGAGE

My mortgage fell due March 19, 1920 and as the local ring of shysters will not renew it, and intend to foreclose, what can I do to help myself. What can they do to me, and how?—A. Subscriber, Van Buren County.

From your statement I fear you have been improvident enough to give a mortgage agreeing to pay a debt on a day certain and then have neglected to make sure you could either meet it or secure a renewal or place the loan elsewhere. Mortgages are commendable and legitimate means of conducting business. It is the failure to meet them that makes the trouble. If foreclosure is started as would seem likely from the statements in your letter you will have one year from the date of sale to redeem, if the foreclosure is by printing a notice in a newspaper, and, if the foreclosure is in Chancery you will have about the same length of time from the commencement. In the meantime you can sell, trade, lease or work yourself, subject to the mortgage, up to the date of the termination of the time of redemption. A person to whom you sold the premises would have the right to redeem from the sale by paying the amount with interest. If you are unable to pay, unable to borrow from any one enough to pay up, and unable to renew it would look to me as though the best thing for you to do would be to sell for all you can get and quit the farming business.—*W. E. Brown, legal editor.*

COULD SOME READER ANSWER THIS INQUIRY?

Would some of the readers of M. B. F. please tell me what success they have had in having collar boils or swollen lumps, caused by working a horse in an ill-fitting collar, removed by surgical operation? Is it a mere benefit in appearance or does it permanently remove the soreness from the shoulder. This horse of mine has a swelling about midway up on the shoulder and I have been thinking of having it operated on but would like to hear first from someone who has had such an operation performed.—*W. H. S., Newaygo Co.*

BUILDING LINE FENCE

A owns the N. E. 1-4 of a section, B owns the N. W. 1-4 of the same section. A has built a 3 barbed wire fence on the north eighty rods between them B built the south eighty rods four years ago of good woven wire. Two years ago C purchases the south 1-2 of section belonging to A. Thus getting the 80 rods of woven wire line fence. Now B wants A to build his half of woven wire, but A refuses to do so claiming that he and B should have 40 rods each to build. Can B take 40 rods off of C's property and put between A and B? Can they compel C to buy 40 rods of fence for them. Who must build the fence?—R. S., Sanilac County.

Section 2210 of the Compiled Laws provides that if the division of the line fence is recorded in the town clerk's office "it shall be binding upon the parties and upon all the succeeding occupants of the lands; and they shall be obliged always thereafter to maintain their respective portions of said fence." I would be of the opinion that if that has not been done then section 2212 would apply, which provides that when any controversy shall arise and it appears that one of the parties has built the whole of the fence then the fence viewers may require the other to pay for one half of such fence and the value and collection of it to be in accordance with the provisions of the law. Under this arrangement I think C would be required to pay B one half of the fence and B would be required to pay or construct one half of the fence between them.—*W. E. Brown, legal editor.*

A CURE FOR BLUE LICE

If D. S. will try this to kill blue lice it may help. Take a bar strong laundry soap and warm water making a stiff lather all over the calf rubbing well into the hide. Leave on to dry. The stiffness after drying is what kills the lice. I have seen this done with success.—*Mrs. C. G.*

ENTITLED TO DAMAGES

As I sold my farm on a contract and since I sold it the neighbor joining it dynamited stumps on his farm and blowed them through my line fence. I would like to know to whom to look for damages, the one I sold the place to or the man that blowed the stumps. I verbally bargained for a farm, paid $100 down to hold the farm for thirty days. During this time he got a chance to sell for more money and wanted to give me my money back six days after the verbal bargain was made. Can I hold the farm or will I have to take my money back, as I am ready to pay him the whole balance as soon as he will accept it.———, Bay County.

The purchaser of the farm is entitled to damages from the neighbor who did the injury or caused it to be done. You are entitled to only your agreed price for the farm. The law provides as follows: "Every contract for the leasing for a longer period than one year, or for the share of any lands, or any interest in lands, shall be void, unless the contract, or some note or memorandum thereof, be in writing, and signed by the party by whom the lease or sale is to be made, or by some person thereunto by him lawfully authorized by writing". You will be entitled to the return of your money only.—*W. E. Brown, legal editor.*

ASSESSMENTS TOO HIGH

A, B and C own property in a small town. The former owner paid $1,150 dollars and the tax valuation was $900. Since A. B. and C. own this property the valuation has declined until we are told we can not get $800 for the lot and the tax valuation has been raised to $1,000. What little rent we get does not begin to pay our tax and insurance. So far we have not had a chance to sell at any price. Can anything be done to lower the tax on this property? If so how shall we proceed. We hired an attorney for a stated fee to look after this property, rent and collect rent, pay insurance, etc. Later we gave him power of attorney. He was to collect rent a month in advance. Now if he fails to collect rent and lets the renter move out can we hold this attorney for our rent?—A. B. C., Kalamazoo.

You should state the full facts to the Board of Review when the tax assessments are under consideration and tell them just how it stands and they should make you a reduction if they find you are justified. Your agent would be personally liable for rent he could not collect if he exercised reasonable diligence in the matter unless your contract with him was that he guaranteed the payment of the rent. If he neglected his duty he would be personally liable.—*W. E. Brown, legal editor.*

SECURING R. R. CROSSING

What steps must be taken to secure a R. R. crossing? We have tried to secure a crossing for eight years but have been unsuccessful as the company asked for $200 and our township could not raise it but last spring we petitioned for it, the tax voted and the $200 raised which under the agents directions we placed in the bank and he notified the R. R. company, but now they have raised the price to $400. What can we do?—L. B. L. Midland County.

You do not state whether the proceedings desired to establish a crossing is on a new highway or whether it is on a highway that was in existence when the railroad was built. If the highway was there when the R. R. went through then it is the duty of the R. R. to build the crossing and maintain it; but if you have laid out a new highway since the R. R. was built you will have to attend to it. Section 8243 (5) requires R. R. to build the crossings for the highways in existance and section 4314 of the C. L. 1915 provides the method of procedure when you lay out a new highway. The sections are too long to repeat here.—*W. E. Brown, legal editor.*

EXCHANGING LIBERTY BONDS

We have two $50 bonds of the second and fourth liberty loan issue in the bank for security on a small amount of money due May 1st. Today we went to get them renewed and raised to the 4 1-4 per cent and they charged us 25c on the bond. Why should we pay when it is all the government's own work or is the bank charging for sending them? When I put those bonds in I had registered bonds I wanted them to take but they would not saying they preferred the one's not registered and promising they would get them renewed when the time came—L. A. L., Isabella County.

I do not know why the bank charged 25c unless it was for interest due on your loan or for services in connection with the bond. The bank would not be obliged to render services for nothing and if you borrowed money and pledged the bonds there might be interest due on the loan more than the interest on the bond would pay.—*W. E. Brown, legal editor.*

MAKING JOINT DEED

In case of wife owning property and wishing to make it jointly with husband, is it required by the state laws that she first deed it to a disinterested party before making a joint deed between husband and wife?—N. I. McG., Genesee County.

In order to create an estate by the entirety, commonly called a joint estate of husband and wife, it is necessary that the conveyance be made to them by the same instrument. This is the reason why a conveyance is first made to another person and from that person back to the husband and wife, naming them, each by their full name, and they say "husband and wife." In this case when either dies the whole estate belongs to the survivor without any other formality and no probate is necessary.—*W. E. Brown, legal editor.*

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care of The Michigan Business Farmer.)

THEY'RE CONSISTENT GUYS

OH! But ain't strikers an' sich, the consistent guys? After tryin' their darndest to tie up everything in the country, the outlaw switchmen, now that their nice little scheme has been nipped in the bud an' things are gettin' to normal—new men in many places havin' stepped in an' helped to keep things movin'—are settin' up a loud an' wailin' cry about the farmers quittin' their jobs to take positions in the factories where wages are high an' hours are short an' where they take no chances—the pay bein' sure an' comin' every week.

In a little confab I had with one of the he bosses of the switchmen 'tother day in a restaurant, you know there is more real knowledge scattered around in restaurants an' barber shops than any number of colleges in the land can show—well this he feller after talkin' awhile about his own strike an' how it come to fizzle out, commenced yelpin' about the farmers. "Why," he sez, "the darn farmers are quittin' their jobs—leavin' their farms an' comin' into town an' gittin' jobs here an' in every city its the same," he sez. Now when a guy like that wants to talk about his own affairs your Uncle Rube scurs'ly ever busts in—jest let 'em rave, 'til they git through, so to speak. But when they beller out somethin' mean about the farmer, it kinda raises my dander an' I most genr'ly fade into 'em an' try an' find out how much they know an' everything.

So I sez to this guy, well ain't the farmers got jest as much right to quit their jobs as any other class of men, switchmen included, I sez.

"No they ain't, 'cause we've got to have stuff to eat," he sez, "an if the farmers quit where we goin' to git it?" Well I sez, it does kinda look's if we needed the farmers on the farms but mebbe I sez the farmers are a gittin' a little tired of workin' 12 to 16 hours at a small rate of pay, to feed a lot of scalawags that won't work but eight hours an' want eight or ten dollars for doin' of it, I sez.

He got warmed up quite a bit at that an' sez "What'n'hell has the hours or the wages we want got to do with the farmers. They're our main dependence an' if they quit we might as well hang up our fiddle for we can't work if we ain't got nothin' to eat."

'Zat so, I sez, well s'posin' the farmers stick to their jobs an' raise all the stuff that's needed to eat an' to wear, what good'll that do the people in the cities if the railroads are all tied up by a lot of disgruntled sons of guns breakin' their contracts and violatin' the laws an' quitting their jobs just when they're needed the most, I sez.

"Well," he sez, "if we git the wages we want, things won't be tied up—everything will be workin' fine an' there won't be no trouble," he sez.

Jess so, sez I, sounds real nice as you tell it, a nice smooth little tale, but I don't believe it, I sez, if you fellers got all you asked for, if it wuz granted to you today, tomorrow your hired trouble makers would hatch up somethin' else an' in a little while things would be tied up agin'—you fellers, I sez, has got the strike fever an' there ain't no way of curin' it 'cept by the hunger route—when you git good an' hungry, I sez, you'll be willin' to work more'n six or eight hours an' you'll be willin' to do it fer less'n a dollar an' hour, too, I sez. Fact is, I sez, the farmers has got to buck agin' this dollar an' hour game an' they can't pay that price so they don't git the help—the city gits all the men an' the farmer has to work alone—he's gittin' tired an' along in years—he's doin' all he can under the circumstances an' if there ain't enough to go 'round at the end of the season, the farmer won't be the one to blame an' by gosh, he won't be the one to suffer either, I sez. It's time, I sez that farmers, many of them have moved into town, the high wages have brought them in, farmers are out fer the coin jest the same as the rest of us an' if they can't git it off'n the farm they'll git it in the factory—the cares of the whole world don't rest 'specially on the farmers shoulders—they're no more responsible for the welfare of humanity than any other class of workers an' they think they're played a losin' game jest about long enough an' some of 'em are jumpin' the job an' they have a perfect right to do it too—jest as much right as switchmen, coal miners or any other organization, but there are thousands of good farmers still on the job, doin' all they can an' will continue to do it as long as they can.

"Yes," he broke in, "an' the confounded robbers are organizin' to boost the price of food an' everything clear out of sight. They're robbers, nothin' less," he sez.

Say! Feller!! I yelled, I'd like to talk with you awhile but you make me laugh so I can't do it—organizing? to boost the price of food? Well mebbe they are trying to get together an' git a livin' price out of their labor an' money invested an' they have a right to organize—mi gosh! I sez, you who've belonged to an organization for years, buckin' at the thought of farmers organizin? Sure, you do make me laugh, I sez, an' with that our conversation closed as he didn't seem to have anything more to say. Cordially yours.—*UNCLE RUBE.*

Sense and Nonsense

A Kindly Light

The clergyman of a poor parish was showing a rich lady round, hoping to touch her heart and so receive a big check for his people.

"We are now passing through the poorest slums," he said, as the car turned into a side street. "These people have little to brighten their lives."

"I must do something for them," sighed the lady, adding to the chauffeur: "James, drive the car slowly, and turn on the big lamps."

You Never Can Tell

A Boston man who spent the holidays in his home village related a rather amusing incident. On New Year's day he and his brother hitched up the old wagon, piled a lot of hay into the bottom for warmth, and started off visiting. A spark from one of their cigars fell on the hay in the rear of the wagon, smouldered a while and then burst into a roaring flame.

A farmer who had been driving along behind helped them put the fire out and remarked: "I'd been watching the smoke for some time."

"Then why in thunder didn't you give us warning?" inquired the city man.

"Well," responded the old fellow, "there's so many new-fangled notions nowadays, I thought you were going by steam."

A Hope That Failed

The great ocean liner rolled and pitched.

"Henry," faltered the young bride, "do you still love me?"

"More than ever, darling," was Henry's fervent answer.

Then there was an eloquent silence.

"Henry," she gasped, turning her pale, ghastly face away. "I thought that would make me feel better, but it doesn't."

In the O Zone

Doctor: Did you open both windows in your sleeping room last night as I ordered?

Patient: No, doctor, not exactly. There's only one window in my room but I opened it twice.

Platinum

It sometimes happens that a man refers to his wife as a "jewel" just because she is "set" in her ways.

You May Not Wisely Delay
Ordering Your 1920

DE LAVAL

CREAM SEPARATOR

There are a dozen reasons why this is so.

For three years it has not been possible to make enough De Laval machines to meet the demand. More than ever are being made this year, but the demand is still greater.

Cream Separators have advanced less in price than anything else used or produced by the farmer during the war years. If labor and material costs continue to advance so must separator prices.

Such an advance must come very soon from increased freight rates, if from no other cause.

Freights are still slow and uncertain. There may be unavoidable delay in getting a machine when you badly need it from this reason.

The flush of milk and hot weather are near at hand when a De Laval saves most and an inferior or half-worn-out separator wastes most.

There are still other reasons, which a De Laval best demonstrates for itself. You will have no difficulty in observing them. Every local De Laval agent will be glad to afford you the opportunity to do so.

If you don't know the nearest agent simply address the nearest main office, as below.

The De Laval Separator Co.

A New Book on

Practical Sheep Husbandry

The following are a few of the subjects this book handles and which you may want to know more about:

History of sheep and why important to know.
Different breeds and kinds to buy.
How to breed for market requirements and when.
Care of pregnant ewe and how to feed.
Docking, castrating and caring for young lamb.
Advantages of early marketing and how to feed.
Progressive system for the summer flock.
How to buy and feed western sheep and lambs.
How to produce more economical sheep feeds.
How to grade and tell when sheep are fat.
How to feed in field and dry lot or barn.

The book has over 40 illustrations, is printed on fine enamel paper and has a handsome durable binding.

Genuine Aspirin

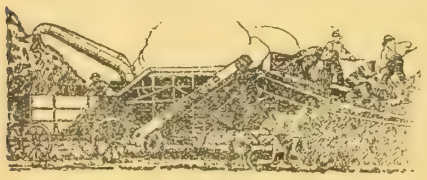
Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

It Pays Big

to advertise livestock or poultry in M. B. F.'s Breeders Directory.



72 Years' Experience

Rome wasn't built in a day. Neither was a good thresher. It takes many years to prove its dependability and show whether it will always thresh clean.

There is almost three-quarters of a century of experience back of the

Red River Special

line of threshers. Think what this means.

It means that you are not trying out someone's experiment when you thresh your grain with a Red River Special. Its builders have devoted their entire lifetime to the building of threshers and the power to drive them.

Mechanics and experts have grown old in their service, and in passing, sons have taken their places.

Result—the greatest line of threshing machinery ever produced.

Don't risk your threshing this year to an unknown, uncertain machine. Get a Red River Special and be sure of clean threshing.

It *beats out* the grain. Its big cylinder, the "Man Behind the Gun" and the Beating Shakers are real grain-savers.

If interested in threshing for only your own use, ask about our "Junior" Red River Special.

LIVE STOCK ON THE FARM

POULTRY, SHEEP AND SWINE — DAIRYING — BEEF PRODUCTION BREEDING PROBLEMS

CENTRAL MICH. POLAND CHINA BREEDERS FORM ASS'N

The breeders of Big Type Poland China Hogs of central Michigan have long felt the need of a closer fraternal spirit among themselves, as breeders, to promote public sales and for the best interest of the breed in this state, and particularly for their section of the state.

At a meeting held on May 15, 1920, E. R. Leonard, St. Louis, was elected president and C. A. Boone, Blanchard, secretary and treasurer of the Central Michigan Big Type Poland China Breeders' Association.

A sale circuit was formed for October 26to 30th, with the Boone-Hill Co., Blanchard; E. R. Leonard, St. Louis; Chas Wetzel & Sons, Ithaca; Brewbaker & Sons, Elsie and Wesley Hile, Ionia. This will be a five day circuit, the first sale circuit ever held in Michigan of the Big Types. Leading blood is well represented in the several herds, and this will afford an opportunity for the public to obtain advanced Poland Chinas at their own bids. It is hoped that the breeders of the state, as well as other states, will help make this a success.

In a short time every breeder in that territory will be a member of this association, and a large sale circuit is looked for next year, with possibly a bred sow circuit this winter.

SHORTHORN BREEDER PURCHASES HIGH GRADE SIRE

Mr. M. B. Hallstead, Shorthorn breeder who conducts a pure bred stock farm at Orion, Michigan, has purchased the Red Roan Shorthorn herd sire, Orange Goods No. 795761, bred by J. Leitch and Son of LaFayette, Illinois. This bull is a Cruickshank Orange Blossom and carries a large per cent of the same blood as Imp Villager No. 295884.

Michigan Shorthorn breeders may be mighty proud that this high grade bull has been brought to this state to help Michigan become one of the greatest livestock states in the United States.

SPRING TIPS

1. Do not fail to provide clean, warm quarters in which your cows, ewes and mares can bring forth their young. Navel ill comes from dirt.

2. It is dangerous to expose young stock, especially foals and colts to spring rain-storms. A day's exposure, if not fatal, may stop a month's growth.

3. It is bad policy to turn the stock to pasture before the grass has well started—bad for the pasture and bad for the stock.

4. When the pasture season begins, turn the stock out at night, instead of in the morning. Then they will feed through the night, and not lie down until the sun has warmed the air and the ground.

5. Get your horses into condition for spring work—the young horses especially. Many a colt has been ruined by being put to hard work without preparation. It is the same with green horses.

6. In warm weather, thorough grooming is almost as important as feeding. Without it, dried sweat, dead skin and dirt clog the pores, make the horse uncomfortable and affect his health.

7. Look out for sore shoulders and backs, especially in plowing. Be sure that your collars fit. A collar too big is as bad as one too small. If the collar rides up, use a martingale, or a girth running from trace to trace, back of the forelegs.

8. When the horses are at work on a warm day, lift up the collars now and then to cool their shoulders and wipe off the sweat and dirt with a bunch of grass.

9. Wipe off the harness marks on your horses when you stop work at noon and at night, and clean the inside of the harness, the collars especially. The salt sweat drying on the skin and on the harness is what makes the trouble.

10. If the skin is wrinkled under the collar or saddle, bathe it with diluted vinegar or witchhazel. If the skin is broken, bathe it with clean warm water containing a little salt. Fix the collar, with padding or otherwise, so that it will not touch the sore spot the next day. A little carelessness at the beginning may cause a lot of trouble to you and suffering to the horse.

11. Clean your horses at night, water them, give them a good bed, and water them again after they have eaten their hay so that they will not be thirsty all night. Let them rest an hour or more before they are grained.

BIG HOLSTEIN SALE AT HOWELL, JUNE 8

One of the largest live stock sales held in Michigan this spring will be staged at Howell, under date of June 8, when the McPherson Farms Company and the Cluny Stock Farm will offer at public auction 50 head of high grade A. R. O. Holsteins.

Mr. R. Bruce McPherson, proprietor of both farms, informs us that the list of stock offered will include a cow with a record at four and one-half years of 106.9 pounds of butter in 30 days—a daughter of this cow with a 365 day record at three and one-half years of 20,241 pounds of milk; a proven 30 pound bull—a grandson of the great King Segis Pontiac—also 10 daughters of this bull; a 29 pound bull; 2 daughters of a 33 pound sire; 5 granddaughters of the great Colantha Johanna Lad; 1 daughter of a 27 pound Sr. 3 year old; 1 daughter of a 26 pound Sr. 3 year old; 2 daughters of a 25 pound cow; a daughter of a 24 pound cow; and 8 daughters of Mr. McPherson's senior herd sire, Maplecrest Application Pontiac.

Maplecrest Application Pontiac has wonderful transmitting power and up to present date has 16 A. R. O. daughters of which 2 have completed semi-official tests of 305 days and 5 are taking this test at the present time.

"I am disposing of practically everything I have except some daughters of this sire and their off-spring," says Mr. McPherson, "retaining only a few other animals which form my foundation herd."

All of Mr. McPherson's herds are under Federal supervision and every animal offered at this sale will be tuberculin tested and sold on 60 day guarantee.

Maplecrest Application Pontiac, No. 132652. A Holstein herd sire owned by the McPherson Farms Company and the Cluny Stock Farm.

RESULTS FROM GRADE COW AND PUREBRED SIRE

What a result a banker got by breeding a grade cow to a pure bred sire can be seen in the following article:

About five years ago a hotel keeper bought a cow from a butcher that was going to be shipped out for a canner. After he bought her he bred her to Pogis 99th, the 11th off Hood Farm No. 122016, owned by the Riverside Stock Farm of Mendon, the result was a female calf, when this calf was a two year old she was put on test in a county association, as a two year old she produced 7,015 pounds of milk with an average test of 5.7 per cent and a butterfat of 400.1 pounds. This year she will finish as a four year old Jr. She has two months to go yet before the year is up. To date she has 8,206 pounds of milk with a test of 5.6 per cent and a B. F. of 462.3 pounds in the ten months that she has been tested. The total value of her butterfat was $302.58, her feed cost $81.31 that gave her a profit of $221.27 over her cost of feed. This record was made under ordinary conditions on the farm, she is owned by Mr. Estes the banker of Mendon, Mich. If there is any grade cow that can beat this let's have her record. This last record was made while I was testing her.—*Richard Strabbing, Tester, St. Joseph County.*

EASTERN WINTER AFFECTS THE HORSE MARKET

Horses and mules are selling easily and at top-notch prices on the East St. Louis market. The demand is greater than ever before in history.

Mr. Searcy of the Campbell and Reid Horse Company, says that this is not a temporary inflation, but has been coming steadily and surely for the past ninety days. The buyers from the eastern cities, particularly those from the North Atlantic seaboard, want heavy draft horses for city work and are paying from $275 to $350 for all they can get. Mr. Searcy says it is very evident that the storm experiences of the past winter have swung general sentiment very strongly in favor of good horses and mules for city hauling, and that for 100 per cent reliability in all kinds of wind and weather, the horse and mule team are right there. He predicts that the demand will be permanent from now on, and that the supply is inadequate to meet it.

A market condition which has prevailed steady and high as long as this, means that, all things considered, the horse and mule are the staple units of transportation.

HOT WEATHER HOG SHIPPING POINTERS

1. Haul or drive your hogs into shipping station in ample time to allow them to become rested and cool before loading.

2. Insist upon a clean car bedded with sand.

3. Wet down the bedding and interior of the car before loading.

4. Give only a light grain feeding before shipping. Heavy feed means more body heat generated.

5. Load not more than one hour before the train is to depart.

6. Load slowly and carefully. Avoid excitement and do not beat or bruise the animals.

7. Load not to exceed 16,000 pounds in a standard 36 foot car during warm weather.

BREEDERS DIRECTORY

(SPECIAL ADVERTISING RATES under this heading to honest breeders of live stock and poultry will be sent on request. Better still, write out what you have to offer, let us put it in type, show you a proof and tell you what it will cost for 13, 26 or 52 times. You can change size of ad. or copy as often as you wish. Copy or changes must be received one week before date of issue. Breeders' Auction Sales advertised here at special low rates: ask for them. Write today !)

BREEDERS' DIRECTORY, THE MICHIGAN BUSINESS FARMER, Mt. Clemens, Michigan.

CLAIM YOUR SALE DATE

To avoid conflicting dates we will without cost, list the date of any live stock sale in Michigan. If you are considering a sale advise us at once and we will claim the date for you. Address, Live Stock Editor, M. B. F., Mt. Clemens.

CATTLE

HOLSTEIN-FRIESIAN

Paid in Milk for Purebred Holsteins

The Reveille, Bellingham, Wash., reports that the Pacific Condensary Co., sells high-grade Holsteins to the ranchers at cost, taking payment in milk.

The company needs more milk and by introducing Holsteins expects to make dairying a profitable industry, thus increasing the acreage in dairy farms as well as the milk output per average cow. Just another instance of the standing of Holsteins among business men.

Send for free Illustrated Booklets. They contain valuable information for any Dairyman.

THE HOLSTEIN-FRIESIAN ASSOCIATION
295 Hudson Street
Brattleboro, Vermont

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

Coupon Makes All of First Payment

Nothing More to Pay for 30 Days

Think of it! You can see for yourself before you pay a cent how easily this labor saving, money making machine will save enough extra cream to meet all the monthly payments before they are due. In this way you won't feel the cost at all. You will have a separator to use on your farm and money in your pocket.

Pay Only $3.50 to $6.40 a Month

According to Size Separator You Need

You get the benefit of the great saving in time and work while the separator is paying for itself. After that the profit is all yours and you own one of the best separators made—a steady profit producer the year round—a machine guaranteed a lifetime against all defects in material and workmanship and you won't feel the cost at all. By ordering direct from this advertisement you save the expense of a catalog, postage and time, and we give you the benefit of this saving if you send the coupon below. You have the machine to use instead of a catalogue to read. You have a chance to compare the New Butterfly with other separators in your neighborhood regardless of price. You have a chance to see how much more cream you would save if you owned a separator. That is why we are offering to send you a machine from our factory to use 30 days.

30 Days' Free Trial—Life-Time Guarantee

Against Defects in Material and Workmanship. If at the end of 30 days' trial you are not pleased just send the machine back at our expense and and we will pay the freight charges both ways. You don't risk a single penny. If you decide to keep the separator we send you this coupon counts the same as a $2.00 payment. You take that much right off from our factory price on the size you select. For example, if you select a $44.00 machine you will have only $42.00 to pay in twelve easy payments—only $3.50 a month. If you select a $56.00 machine you will have only $54.00 to pay in twelve easy payments of only $4.50 a month, and so on. You can pay by the month or you can pay in full at any time and get a discount for cash. The coupon will count as $2.00 just the same. The important thing to do is

Send the Coupon NOW

whether you want to buy for cash or on the easy payment plan. We have shipped thousands of New Butterfly Cream Separators direct from our factory to other farmers in your state on this liberal plan. More than 175,000 of these machines are now in use. You take no risk whatever. You have 30 days in which to try the New Butterfly we send you before you decide to keep it. This is an opportunity you can't afford to pass by. Get your cream separator now. Start it making money for you. Send the coupon today. It is worth $2 to you.

No Discs to Clean

The New Butterfly is the easiest to clean of all cream separators. It has no discs—there are only three parts inside the bowl—all easy to wash. It is also very light running with bearings constantly bathed in oil. Free circular tells all about these and many other improved features.

IT IS ALWAYS BEST

to select a larger machine than you need now. Later on you may want to keep more cows. Another thing—remember the larger the capacity of your separator the faster it will skim and the less time it will take to do the work.

NOW This Coupon is Worth $2 To YOU

The Michigan
BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 40 | MT. CLEMENS, SATURDAY, JUNE 12, 1920 | $1 PER YEAR

Is it any Wonder that Michigan is a Great Dairy State?

In this issue: Fordney Committee Reports Out Bean Bill—Up-State Farmers Endorse Legislative Candidates—Survey of Peach Industry in New York and Michigan—Protecting the Grain From Rats, Mould and Fire.

Up-State Farmers Endorse Legislative Candidates

Farmers of Clare and Bay Districts Will Take Active Part in Coming Campaign and Election

ACCORDING to John Fitzpatrick of Beaverton, Clare county, the farmers of the Clare legislative district, comprising the counties of Clare, Gladwin and Roscommon, will go into politics this fall to the extent of endorsing candidates for both branches of the legislature and assisting the candidacy of Milo D. Campbell.

Mr. Fitzpatrick visited the editorial offices of THE BUSINESS FARMER and explained just how the farmers of his district proposed to become a factor in the coming primary and general election.

"We farmers haven't been exactly satisfied with the way this state government has been run, and with the record of our representative, so we made up our minds to take a hand this fall and see if we couldn't elect some good farmer to the legislature and help Mr. Campbell in our district. The Clare district is mostly agricultural and there isn't any reason why the farmers shouldn't name their next representative and mebbe their next senator. Heretofore the commercial interests in our district have encouraged one or more men from the rural districts to run against the farmer candidate, who usually got beaten because the farmers would not hang together. But things are different now. We held a mass meeting in Clare the other day, and appointed a committee to take this matter up. The committee has named two delegates to meet with two delegates of Gladwin county and one of Roscommon county for the purpose of endorsing a candidate.

Farm Bureau Gives Help

"The Gladwin county farm bureau has been a big help to us in that county. County Agent Atwater sent out letters to all the locals asking them to express their choice for delegates to a county meeting to elect the two representatives to act with the representatives of the other two counties in endorsing candidates. Now these delegates have been elected and we will have our meeting on Wednesday night, June 2nd, when we will endorse our man and make our plans for putting his candidacy across. We also intend to organize the entire district for Milo Campbell and believe that he will get a big vote in our district.

Democrats Will Help

"We have about 800 democratic farmers in our district," said Mr. Fitzpatrick, "but most of them say they will support Milo Campbell. I am trying to show them that in order to give Mr. Campbell much practical help they will have to vote for him in the primary and in order to do that they will have to enroll as Republicans. I am a Democrat myself, but I'm going to be a Republican long enough this fall to vote for the man I want to be the next Governor of Michigan, and that is Milo Campbell."

Mr. Fitzpatrick believes the plan that has been adopted in the Clare district will work in other legislative districts of the state and he would like to see it tried out. His suggestions are as follows:

"Call a meeting of the farmers by giving notice in each county that is a part of the legislative district (or where the district is confined to one county, in each township thereof,) each county or township to select one or two men to represent their section and meet at some convenient point and endorse candidates for the two branches of the legislature. We learned from our own experience that you cannot get a mass meeting of farmers to take the final action. We held several meetings, but a number of candidates began to bob up and influence their friends at the mass meetings to vote for them, so we found there was a division and we didn't get anywhere. I finally made up my mind that if we were to accomplish anything definite we had to let the matter be decided by just a few men who would be elected at mass meetings or in some other representative way, and we have found that whereas the majority of farmers could not agree among themselves in a mass meeting they were perfectly willing to abide by the decisions of the men whom they had chosen to endorse the candidates.

"Our main object in my district has been to use all honorable organized means to promote the candidacy of the farmers' candidate for Governor, but at the same time not to overlook the all important fact that a real farmer Governor can only direct the course of legislation in proportion to the extent which the people of the state back him up with members in the legislature who are open to conviction and will be responsive to the wishes of the people. It is a special mistake to expect that the Governor can cause the enactment of legislation beneficial to the majority of the people if they elect a majority in the legislature who for selfish reasons or lack of interest in the people's welfare oppose legislation of a fair, just and right nature. It is of paramount importance that the farmers in legislative districts who are in the majority when united to appoint a committee of farmers to take an active part in the candidacy of men who prefer to be candidates when the office goes out after the man instead of themselves forever seeking the office.

"Here in our district we propose to give due consideration to all the claims presented by the various candidates, but to base our choice upon two main qualifications: first, honesty; second, statesmanship. In other words each will be considered on his own merits, rather than his political strength, as a candidate capable of performing a public trust as it ought to be performed. The record established by these candidates in the past with reference to honesty, ability and square dealing will be carefully looked into. Neither we nor any other farmer can afford to endorse men concerning whose honesty there is any question. We cannot afford to chance the criticism and opposition that would surely result from the naming of such a man.

"The farmer is the most skeptical person we have to deal with today, for the reason that he has been lied to so many times in the past that he has just about lost faith in man-made schemes or arguments. If anyone doubts the above just counsel with the heads of the different farmer movements or even with individuals. While the farmer will admit the necessity and feasibility of this and similar plans, the question will arise in his mind, 'Will it accomplish more than the schemes that have been tried out in the past.' Yet in the majority of cases he is willing to take another chance.

"After the candidate has been chosen let someone secure the signatures of a hundred or more farmers who are personally acquainted with the candidate and can vouch for his ability, etc., approving the choice of the committee. Circulate this thruout the district and it will be all the recommendation the candidate needs for the average voter unacquainted with the candidate for office, feels that he can rely upon the judgment of a large number of his brother farmers.

"There is a good deal of complaint about the management of our state government, but just finding fault will not alter the circumstances one bit. We must elect men who are open to conviction and will be willing to give and take in solving the problems before us. Two men may admit as to the logical thing to do in regard to a given evil but at the same time are at variance as to the means to pursue in arriving at a remedy. The question of taxes is, I believe, at the head of the class. Just now a lot of different theories are being advanced on this question. It may be that if it was looked into by some competent body that possibly there is a much better way than the present system, but since we must depend upon this system for some time to come, the more sensible thing to do seems to find out whether the people who pay the taxes are getting 100 per cent in the way of public benefits. In other words are the people getting value received for their taxes. If not why not renovate the whole system? It looks like it needed it particularly right now when taxes are so high and we must make every cent count in order to carry on the legitimate business of the state, without still further burdening the taxpayers.

A Word to the Democrats

"Now, Mr. Democrat and Mr. Socialist, if you do not like the way the public pie counter is being run why you can help to run it differently. Just enroll in the primary and vote for Milo D. Campbell for Governor and send some honest-to-God farmers from your district to the legislature. Here are some interesting figures from my own district which will show you how necessary it is to have the support of the Democrats in the primary election. These figures represent the vote cast for the Secretary of State in the last election: Republican votes: Gladwin county, 926; Roscommon, 289; Clare, 979; total, 2,194. Democratic votes: Gladwin, 248; Roscommon, 143; Clare, 417; total, 808. The ratio between the votes cast by the two leading parties is somewhat similar in all the counties of the state.

"Now what I would like to point out is that if the Democrats do not enroll to offset the partion of that 2,194 who have no interest in a real farmer candidate even though he has the endorsement of the farmers' committee, with two or more candidates in the field, the farmers' candidate stands a chance of losing.

"The interests of the state and of the farming business of the state ought to be paramount to any partisan considerations. Farmers, I think, should give their united support to farmer candidates, irrespective of party or creed. The farmers are not asking for any special favors, but since they predominate in great numbers in the majority of the districts of the state they ought to have greater representation in the legislature and protect what are their just and natural rights. It will not do to send some fellow to the legislature just because he happens to comb his hair to suit you. That will not help you one whit to get a square deal. There are two many one-hobbied legislatures on the job now. General legislation doesn't worry them as they just trade votes with other single-hobbied members. Then there is the slow, take-it-easy. happy-go-lucky hooligan who does not even claim the distinction of having any interest in any hobby let alone general legislation. He just marks time until pay day."

Farmers in Politics

JOHN FITZPATRICK, a farmer of Clare county, presents herewith his ideas on the duty of farmers in the coming primary and election, also the plan that has been adopted by the farmers of his district in endorsing candidates for the legislature. We believe that the farmers in every county of the state ought to follow some such plan as this and lose no time in getting a representative expression from their neighbors on their next representative and senator. We believe that in every district, both legislative and senatorial, where the agricultural vote is in the majority farmers should signify their choice before the primary and help to elect their men. The next Governor of Michigan will be elected by the farmers. Why not make it a ten-strike and elect the majority in the legislature as well. Let us head from our readers upon this subject. Let us plan together for a campaign and an organization in every county that will put farmer candidates across. The progress of this movement in the Clare district will be carefully watched by the Business Farmer and reported to its readers.—Editor.

BAY COUNTY FARMERS ENDORSE CANDIDATES

THE BAY county court room was not large enough to accommodate the hundreds of farmers members of the Bay County Co-operative Union, who gathered there last Saturday to discuss the political situation and endorse candidates for the state legislature.

The meeting was presided over by John Purtell, president of the Union, who explained the reasons why farmers should take a greater interest in the affairs of government and the kind of men chosen to direct the government. Other farmers voiced their opinions, it being the unanimous decision that the farmers of Bay County should put a candidate into the field who would be big enough to represent both farmers and the people of the state as a whole, and to actively participate in the campaign of such candidate and in the campaign of Milo Campbell for Governor.

In response to an urgent invitation to attend the meeting Mr. Campbell canceled other engagements and drove seventy miles in the early morning in order to make train connections for Bay City. In his usual aggressive style he addressed the meeting upon current issues and congratulated the farmers for taking so keen and active an interest in the government matters.

Forrest Lord, editor of THE BUSINESS FARMER was also present upon invitation, and gave a brief talk. He also declared that the farmers of Bay county were showing their good citizenship by thus meeting, discussing the issues of the day and endorsing good men for the state legislature.

A fuller account of the movement inaugurated by the farmers of Bay County to identify themselves actively in future political campaigns will be discussed in later issues.

Farm Bureau Favors Co-Op. Sugar Plants

THE MICHIGAN State Farm Bureau has issued an announcement that it favors the establishment of co-operative beet sugar refineries in Michigan, and declares that inasmuch as the growers have failed to secure a just price by refusing to plant beets, the Farm Bureau will make efforts to establish co-operative plants in Michigan to take care of the 1921 crop of beets.

This announcement was made by representatives of the State Farm Bureau at a meeting of the directors of the Sugar Beet Association when their records for the year were closed. The beet growers' directors appointed a committee to assist in the execution of the Farm Bureau program.

"Reports presented at the meeting and a survey made previously by the Farm Bureau showed approximately only half of the normal beet acreage in Michigan has been planted this year, a condition that is sure to curtail extensively the operation of the dozen factories refining Michigan beets. Later conditions all through the beet district are so serious as to indicate that even much of the crop in the ground is not apt to be placed on the market. This labor shortage was one of the main reasons for the demand of growers for a new contract, which would have provided for a sliding scale dependent on the New York market quotations and which would have tended to equalize the profits from beets between the growers and manufacturers."

Fordney Committee Reports Out Bean Bill

Michigan Congressman Gets Action on "Fourth Effort"; Too Late to Secure Adoption of Legislation at Present Session

THE *GRATIOT County Herald* gives us the exclusive information that Congressman J. W. Fordney has secured a report on the bean tariff bill, upon his "fourth attempt." The *Herald* prints the following letter received from Mr. Fordney, dated May 27th, 1920:

Mr. J. N. McCall,
Ithaca, Michigan.
Dear Mr. McCall:

"I am glad to advise you that upon the fourth effort to get a report on the bean bill, I was successful. The Ways and Means Committee this morning reported out a bill putting a duty on beans of 2 cents per pound and on lentils, not specially provided for, 25 cents per bushel.

"At the present time the difference between the imported value of Oriental beans and the price of beans raised in this country is about $1.35 per bushel."

"Sincerely yours,
"J. W. FORDNEY.

The *Herald*, which has been defending Mr. Fordney in his failure to get action on this bill, concludes that the above letter "demonstrates the truth of every statement made by the *Herald* in reference to Mr. Fordney's attitude on bean tariff legislation," and in an accompanying editorial further discusses the matter as follows:

"The *Herald* has contended from the first time the question was raised that not only is Hon. J. W. Fordney in sympathy with increased tariff on beans and a special bill for this purpose, but that he was doing all in his power to bring a bill to this effect out of the committee and secure favorable action.

"Some readers of the *Herald* have been misled by the hostile and unfair position taken by certain speakers and writers who have left no stone unturned to prejudice bean raisers, even going so far as to insinuate that Mr. Fordney did not want the bill reported out of his committee.

"The letter received from Mr. Fordney which appears on the first page of this issue of the *Herald* shows that not only is he in sympathy with seeing that bean raisers get fair play but that he has persistently tried to get this bill reported out and not until the fourth effort was he successful.

"Not only will Mr. Fordney's success in this matter entitle him to the thanks and confidence of every bean raiser, but it will tend largely to increase the bean acreage and show that Mr. Fordney as leader of the tariff committee of congress will demand, in any general tariff bill, a tariff on beans at least five or six times as great as the present tariff of 25c per bushel passed by the Wilson administration."

Proves Business Farmer Right

While these statements may all serve very well to satisfy the conceit of the *Herald*, the *Clinton County Republican*, the *Howard City Record*, and all other weekly newspapers of the fifth district, which has impugned the motives of THE BUSINESS FARMER in insisting that Mr. Fordney had the power and should use it to get the bill reported out of the committee; to the unbiased individual who has followed Mr. Fordney's contradictory explanations of his failure to get action on this bill, the final reporting out of the bill one week before the adjournment of Congress bears all the earmarks of an eleventh hour surrender to the pressure of the folks back home.

Had Congressman Fordney persisted in his original and oft-repeated statement that he could not muster enough votes to get this bill out of his committee, the bean growers of his district might eventually have been convinced that this were true, despite all the evidence to the contrary. But in securing a last minute report on this bill Mr. Fordney brings into question the truth of all his previous statements in regard to the matter.

Of course, we are told that this was Mr. Fordney's "fourth effort," and we naturally inquire "what constitutes a "fourth effort?" Is a "fourth effort" to get a bill out of a legislative committee something like a "fourth degree" in a fraternal organization. Does each "effort" to get a bill out of a committee require months of planning, wire-pulling and other preparation? Or is an "effort" such as Mr. Fordney mentions a mere formal vote taken with perhaps a little preliminary and informal discussion with other members of the committee.

THE BUSINESS FARMER has contended from the start that Mr. Fordney occupied a position of sufficient influence to get action on this bill. Mr. Fordney denied this, but when Mr. Fordney got a report on that bill on the 27th of May, one week before Congress adjourned he proved that THE BUSINESS FARMER was right. He proved to the satisfaction of the bean growers if not to the country weeklies that he could at any time he desired have had a report on the bill. In this connection we desire to quote from a letter received by the editor of THE BUSINESS FARMER from a man whose identity we are not at liberty to disclose at this time, but who is one of the best informed men in the United States upon this matter. The letter is dated May 18th.:

"Mr. Fordney's statements on the bean tariff have been peculiarly inconsistents.

"In a printed statement taken from a Michigan paper he is quoted as saying that he could have the bill reported out of his committee and probably passed through Congress; but fearing a veto by the President, he considered such an act useless.

"In a conference at Washington during April, Mr. Fordney stated that the Democrats on the Committee, in addition to three or four Republicans, were opposing the bill.

"Mr. ——— thereupon spoke, to several of the Republicans named and found that one of the members of the steering committee, was opposing any action on the parts of the Ways and Means Committee, although he claimed to favor the bill on its merits.

"This member's reason was purely political and he maintained this stand, even though he was assured by the other that a Democratic member of the Ways and Means Committee, had openly stated he would support the bill. Such action, followed by the votes of other Democrats would remove the partisan factor and thus give the bill a show on its merits, without political color.

"Nevertheless, nothing has been done by the Ways and Means Committee.

"Among other things, Mr. Fordney was somewhat reminiscent about the time when he could sell beans at 65 cents a bushel and make a profit on the sale. This must be somewhat related to the time when you could buy a fine pair of shoes for $3.50 and a loaf of bread for 3 cents; and could hire farm labor for $1 per day with board; and could purchase all other necessaries of life, including labor, at approximately one-fifth to one-sixth of the present rates.

"It is my judgment that the tariff bill is doomed for this session, unless the Michigan growers take the matter up directly with Mr. Fordney and insist that he has the power and therefore the responsibility of putting this bill through his Committee.

"It is my personal judgment that Mr. Fordney can do it if he really wants to.

"Fordney is a man of unusual ability as well as political sagacity. I do not believe that a man of his type would fail if he had his will set to such an end.

(The names of Congressmen mentioned in the above letter have been omitted at the request of the writer.)

But if these facts are so, why then, inquire our country newspaper friends, would he not do so? For, they remind us, Mr. Fordney is an ardent protectionist. He believes in a high tariff. He would naturally favor a measure of this kind. All true, we grant, were there no other considerations.

But there WERE other considerations, far more important to Mr. Fordney and his political backers, than a tariff on beans. There was one other consideration alone for the sake of which Mr. Fordney was obliged to hood-wink the bean growers of his district. Let us not forget that last fall before there was any promise of trouble between the sugar beet growers and the manufacturers, Mr. Fordney was strongly in favor of the tariff measure. He gave Michigan people to understand that there was no question but that the bill would go through. Six weeks later there were rumblings in the sugar beet territory. The growers organized. Contracts were returned. For months it looked as if the manufacturers would not get enough acreage to run their plants. At this time the bean market was in a deplorable condition. The competition of Japanese beans was keenly felt. To have passed a tariff on beans during this controversy would have been the worst blow which the manufacturers could have suffered. For it would have put the price of beans up where it would have made this crop far more profitable than sugar beets, and the sugar beet growers would have turned to beans in large numbers. The position which Congressman Fordney holds with respect to the sugar manufacturers is too well known for us to discuss it here, but because of this position and his position on the bean tariff bill we have a right to assume that there was some direct connection between the two. It seems hardly necessary to emphasize the fact that the reporting out of the bean tariff bill came almost identical with the admission from the beet growers that they had lost their fight for this year.

Just Plain Facts

In the heat of contest or controversy the participants do not always play the game square. In controversies over the duty of public servants the critic will invariably be accused by friends of the office-holder under criticism of having hidden or ulterior designs. This is the charge that has been made by certain warm political friends of Mr. Fordney against the BUSINESS FARMER. The editor of the *Gratiot County Herald* was one to make these charges, but Mr. McCall showed himself to be a big enough man to publish the BUSINESS FARMER'S denial of these charges, and to admit that in certain particulars he was wrong. But Coleman C. Vaughan, Secretary of the State of Michigan, who is also publisher of the *Clinton County Republican*, flatly refuses the BUSINESS FARMER the common courtesy of his columns to make answer to the false statements that have been published therein concerning THE BUSINESS FARMER and its attitude toward Mr. Fordney, saying that he "quite understands the animus of the objection to Mr. Fordney."

These papers have made the charge that THE BUSINESS FARMER has personal animosity against Mr. Fordney.

(*Continued on page* 15)

$24 per Ton for California Beet Growers

THE MICHIGAN sugar beet grower who has forsaken his Association and signed the contracts drawn up by the factories will get small comfort out of the information that the California beet growers stand to receive $8 to $10 more per ton of beets than the Michigan grower can possibly receive under the old contract. The information is contained in the following dispatch from the April 25th issue of the Los Angeles Examiner:

"Two hundred million pounds of sugar, worth at least $36,000,000, will probably be produced in Southern California this season. Last season's production was about 128,000,000 pounds.

Good rains and the fact that many bean farmers are turning back to sugar beets have made this increase possible.

* * * *

"Beets are expected to average from nine to ten tons to the acre. The greatest acreage is in Orange county, Los Angeles and Ventura coming next.

"The price the farmers get is regulated by the average net price the Southern California factories receive for sugar for the season.

"They will get $24 per ton for 15 per cent beets if the average price is 18 cents per pound for sugar and $1.60 per ton additional for each 1 per cent of sugar in beets above 15 per cent."

Here in Michigan it doesn't matter what the sugar content of the beet is. The farmer gets the same price for a 14 per cent beet as he would for an 18 per cent beet. And yet that extra 4 per cent, with sugar at 18 cents a pound means at least an extra $7 per ton, ALL of which goes to the manufacturer under the Michigan contract.

The report says that 18 cent sugar means $24 beets for the California grower. That means that 15 cent sugar upon which the Michigan manufacturers have been basing their claims of $16 beets would return $20 to the California grower. If the beets tested 16 per cent or 17 per cent, as many of the California beets do, the California grower would receive from $2 to $4 additional, or a possible $22 and $24 per ton. Yet the most the Michigan grower can receive for his 1920 beets, with sugar at 15 cents is $16, and if the government sets the price on sugar, he is likely to receive far less than that.

Protecting the Grain From Rats, Mould and Fire

With Proper Precautions or Use of Modern Bins and Cribs Millions of Dollars May be Saved in the Conservation of Grains

"I DECLARE," sputtered Uncle Ezry, as he opened the corncrib door one morning and looked upon the remnants of a bountiful feed which the rats had enjoyed the night before, "it does seem hard enough to grow this corn without havin' the rats and mice eat it up after it's in the bin. I'd give a hundred dollars if some feller would tell me how to rid this farm of rats. You can't put anything away without having it chewed up by the dang varmints." And as if to add emphasis to his feelings, Uncle Ezry shut the door with a bang and strode back to the house, forgetting for the moment to feed the pigs.

There isn't a farmer living who cannot sympathize with the Uncle Ezrys who have lost hundreds of dollars through the depredations of rats and other rodents. Not all sections of the country are bothered alike by the little scavengers. Some sections are comparatively free of them; others cursed with them. None escape entirely from their mischief.

In days when corn was thirty cents a bushel, wheat fifty cents, and so on, a few bushels of grain eaten up by the rats or destroyed by mould caused the farmer no worry. But nowadays when the prices of grain are four and five times as high and the yield per acre is not so good, the loss of a single bushel is a matter of concern.

The Department of Agriculture estimates that the annual loss to the farmer by rats is $200,000,000. This year and for some years to come the loss will undoubtedly exceed that amount as the rat population has been on the increase right along and the prices of food products will probably continue to be high. It therefore behooves every farmer to not only wage a merciless campaign against the rats on the farm, but to use every precaution to protect his grain from those which he cannot destroy. It is a discouraging proposition trying to poison or trap the rats. They are wise little creatures and refuse to be caught. They probably breed very nearly as rapidly as they are destroyed. It would, therefore, seem wisdom to protect the grain so that they cannot get to it rather than to depend wholly upon wiping out the entire rat family from the farm.

In the corn belt corn has been cured for years in crude cribs made from fence rails. It is exposed to both weather and rodents and heavy losses occur as a result. The more up-to-date farmer has replaced the old-fashioned crib with modern structures, nearly all of which, however, are fashioned on the same principles and therefore have the same defects. None of the wooden structures, will, it must be confessed, afford rat-proof protection to the grain stored in them.

Several ways are suggested for making cribs and granaries more rat proof. Concrete floors should by all means be built for any kind of wooden granary and small wire netting can be placed in the walls. Several

Scene on a corn belt farm showing comparison between the old and new methods of curing corn. The first is exposed to rodents and weather. The second is rat-proof, mould-proof and fire-proof.

devices have been tried to raise the granary or crib from off the ground and the legs protected by pails, etc., but somehow or other the rats overcome this seemingly impregnable shield.

The most modern and unquestionably the most effective manner of storing grain and protecting it not only from rats and mould, but from fire as well is the steel bin or crib, of which there are several makes on the market. These cribs are scientifically constructed as to ventilation etc., and provide ideal storage for almost any kind of grain. Perhaps the greatest value of the ventilated steel bin is the facility which is offers for curing corn. This means a lot to the farmer of Michigan whose corn is frequently caught by the frost just a few days too early and in the absence of any effective method of curing it must needs put it in the silo. With corn at $1.50 or more per bushel it would be money in the farmer's pocket to cure his green corn if possible. It is claimed that millions of bushels of the green corn crop of 1917 was saved by storing and curing in steel bins whereas tens of millions of bushels stored in wooden cribs were lost entirely or fed in a moist condition. It is also claimed that the corn cured in steel bins retained 90 to 95 per cent of its germination, or a higher germination than corn which was cured in a heated room.

Speaking upon the subject of curing corn, one authority says:

"Nature has made an inevitable law that after anything comes to full maturity it begins to deteriorate. Decay follows growth. This is just as true of corn as it is anything else. Corn is a perfect feed as soon as it reaches its full maturity. Then it begins a process of drying out. If this drying out is conducted under right conditions, the corn is said to be cured, and it may be kept a year or two without loss of feeding value. If, however, anything interferes with this drying out so as to start a mould or to soften the grain, corn begins to lose its feeding value, and it has not the elements to build up the flesh on animals. The care that is taken of the corn determines the length of time of its full feeding value. If it is protected in a dry, airy structure it will harden without loss of anything except the water contained in the grains. Corn piled in close contact does not dry out so readily. Sometimes is rots. It is essential, therefore, that any storage of corn either for the market or for feeding shall have ample circulation of air.

In spite of the shortage of labor it looks as if Michigan would produce more than her share of corn this year and nearly equal her average production of the other grains. The long season of 1919 matured corn in nearly every section of the state. Corn ripened for the first time in many of the northern counties. Naturally this encourages the farmers to plant a goodly acreage this year. As has already been pointed out the value of Michigan's corn, wheat, oats and other grain crops will be great, perhaps greater than we have yet seen, so it will be good business for the farmers to use every care in securing a full crop, and when that is done in protecting the crop while they hold it in storage for marketing or home use.

Here is the experience of one Indiana farmer with a metal corn crib. Peter Nickle, in cribbing his corn, hauled one load to his metal crib, the one to a rail pen until he had filed both In the spring he had over 900 bushels of good corn in the steel crib. The corn in the rail pen was a rotten mess by spring so that when the rails were torn down it stood alone in a solid pile. An interesting incident was noticed by Mr. Nickle. On frosty morning the moisture from the corn in Mr. Nickle's steel crib could be seen rising from the ventilators as vapor. As it struck the cold surface of the ventilator it was condensed and the drops of water could be seen running down the roof of the crib.

Mr. Clarence Snyder, Shelbyville, Indiana, planated some Missouri seed corn last year. It was a little slow in maturing and was frost-killed when just past the roasting ear stage. Mr. Snyder filled one of his metal cribs with his corn and put the balance in a wood crib In the wood crib it moulded and rotted but in the steel crib it cured out perfectly with only an occasional mouldy cob. When it was run through the shredder, Mr. Snyder said milk could be pressed from the grains. When cured many of the grains were still smooth and round showing that the corn was not through growing when killed by the frost.

Why Our Times are Better Than Old Times and the New Times Should Be Better Still—

By PHILLIP FRANCIS, in "What's the Matter With Our America?"

SOME folks are always talking of the good old times. According to them, the world was better to live in years ago. The men were more honest and manly. The women were more beautiful and virtuous, the children were better behaved, eggs were ten cents a dozen, butter twenty cents a pound and you could hire help for ten dollars a month and board, and life was just one long sweet song. Such persons talk nonsense.

The world is a better place to live in now than it was twenty years ago; and it was a better place to live in twenty years ago than it was twenty years before that, and so on, and so on, clear down the line of the centuries that have passed.

About the only big thing that has continued to be as mean and brutal and disgusting as it ever was is war. And even wars are not nearly so frequent as they once were.

Our great-grandfathers were happy enough with what they had, but that was because they didn't know what they were missing. The richest of them lived in houses that had no conveniences, no sanitary arrangements, and none of those common appliances of today which give us light and heat and quantities of fresh cold and hot water and keep our buildings and our persons reasonably free from the attacks of malignant and infectious disease—to say nothing of little bugs.

The majority of them lived in dwellings which a day laborer in our times would scorn. They had no telephones, no electric lights, no furnaces, no ranges, no stoves, no matches. They had nothing, in fact, except the bare fundamental necessities of life. And the luxuries that the very few did procure are now either the common possessions or the jokes of their descendants.

The ordinary mechanic lives today much better than did kings or queens or nobles three hundred years ago. The proud and rich Queen Elizabeth was the only person in England, in her time who had a table knife and fork and spoon. The manners and habits, even of the richest and best educated classes in the seventeenth century, were disgusting. The streets of the greatest capitals, of London, itself, were stagnant sewers into which inhabitants threw from their windows the slops and the vilest filth that accumulated in their homes.

To journey one hundred miles from some interior point to one of the larger cities was a task requiring days in good weather and simply impossible in the inclement seasons of the year. Samuel Pepys, who was head of the Admiralty, a very rich man as riches then went, and who prided himself upon his refinement, frequently records the fact in his diary that he and the ladies and gentlemen who accompanied him on his tours to different parts of the country, had stopped that day by the roadside to delouse themselves.

Everybody was dirty and everybody lived in the midst of dirt and discomforts that would be intolerable to us today.

So, too, the conditions a hundred years ago, or even sixty years ago, in our own country, while infinitely better than those of two hundred years ago, were very miserable and uncomfortable compared to the conditions in which we now live. People lived hard times, made infrequent journeys, and were narrow, hidebound and provincial in their prejudices, their thinking and their conduct. Why, when my grandfather came to voting age there wasn't a railroad in the United States; nobody had ever seen a locomotive or a steamship. Persons who hazarded a wild guess that men might some day travel faster than horses could carry them were looked upon as little weak in the upper story.

Folks were ventured as far from the Atlantic seaboard as the wilderness of Ohio and Indiana and even westward Pennsylvania, bade their friends at home good bye for life and made their way over the two or three wretched roads that ran so far into the distant West, they settled down to live in a rude log cabin, and existed upon the wild game of the woods until the clearings they painfully made with their axes could produce a crop of corn, and possibly some potatoes and pumpkins. They survived it all right, but it was a hard life, a rude life, an uncomfortable life. No one in his sense would want to lead such a life today.

So the good old times is a myth

Survey of Peach Industry in N. Y. and Michigan

Prospects of Short Crop and High Prices Show That it Will Pay to Replant Peaches

By E. H. ANDERSON

Issued by Agricultural Department, New York Central Lines

ROM 1906 to 1912 extensive plantings of peaches were made in Western New York. Our Farm ords taken in Niagara county wed that in 1913 one-third of peach orchards were not yet in ring. Since the bearing age of ches in this territory is consider- from five to fifteen years, we ld expect the orchards that were yet in bearing in 1913 to main- production for several seasons, s keeping the yearly production this territory fairly stable. That has not been the case is shown the shipping records of the New k Central Railroad, which show henomenal growth to 1917, and the beginning of a decline. se records show the following oad shipments:

0	1,341
3	4,340
5	4,419
6	4,453
7	6,468
8	898
9	1,056

a our studies made on the 1915 of peaches, we found that West ginia, Ohio, Michigan, Connecti- Colorado and New York were lucing a large quantity of peach- t the same time. 1915 was rmal season, when all states had l crops and the fruit was placed the market mostly as it came the trees. But since then the ing of peaches in cold storage developed so as to disarrange the ral flow of peaches to market. ay, although the natural ripening od of New York peaches may be eek or ten days later than Ohio, t Virginia or Michigan, owing to cold storage of peaches, we may the bulk of the peach crop of one of these states competing New York grown peaches when reach the market. For this rea- before we could advise the re- l of the peach plantings in New Ohio or Michigan, it was im- nt to know what the present future status of peach produc- is in competing territories. The n of 1915 demonstrated the dis- of competition; the season of for Western New York grow- showed the advantage of large uction in any one territory with- outside competition.

nother factor that must be con- ed in a study of this kind is the ble supply of peaches coming a territory entirely outside of normal competing territory e, because of favorable weather itions or possibly labor condi- , the peach can be produced and ed into the territory cheaper it can be produced locally. This r is especially important in a y perishable nodity, where the of the crop is in the household canning. We, fore, find that future of the industry in York must take account the de- ment of peach rding in Geor- or, if the house- of the North Georgia peaches anning, certain- e will not buy York grown es in as large ities.

w York State e heavy planting l of 1906 to which included varieties as Elberta, Niagara, en, Crawford and Belle of Geor- was followed by a large crop 12, when many of the white ar ies came into bearing. This strated that, while a few of peaches would be marketed to tage locally, they were not of ng quality and were therefore ed for heavy planting in West- ew York. The season of 1912 any of these poor shipping va- left on the trees without har-

South Haven, Michigan, 1919. The orchard of one of the best peach growers of this region. Young trees in foreground and old orchard filled with apples in background.

vesting and the better shipping varieties bringing but poor prices.

The season of 1916 was one which broke well for New York State peach growers. While New York, Ohio and Michigan had fair crops, other competing sections, owing to adverse weather conditions, did not have crops. During the growing season Ohio did not get enough rain to properly mature her crop, with the results that New York state peaches commanded a fair price, $1 per bushel at loading station being about the standard.

Then came the season of 1917, which will be remembered by the New York state peach growers of today as the "Great Peach Year." Here New York state peaches reached the pinnacle of production. During this season the heavy plantings of Elbertas bore a good crop, with the result that the output of this territory was increased over that of the year previous by nearly forty-five per cent. In spite of this heavy production, New York peaches were alone in the markets, Ohio and Michigan being almost a total failure with not enough peaches coming from outside to make much impression. This season Elberta peaches brought the grower about an average of $1 per bushel. A shortage of refrigerator cars caused a large portion of the crop to be placed in cold storage for from a few hours to a few weeks. This season will go down in the annals of the New York Central Railroad as the "nightmare of peaches."

The winter of 1917-18 was the most severe that the present generation of fruit growers can remember and resulted in the killing outright of about twenty-five per cent of the peach orchards of Western New York and materially damaged the remaining trees, with the result that the older trees that bore the heavy crops of 1917 did not set fruit in 1918. So poorly did many of the orchards show up in the spring that many plantings of Elbertas were removed. The production this season did not amount to over fifteen per cent of the year previous, being confined to the plantings made about 1911 or 1912. Although the prices were very good ($2.50 per bushel) the crop was so small that only a few scattered growers made any profit.

The season of 1919 started off with promise of fair returns for the peach producers of New York. The buds came through the heavy freezes of April 25th in apparently good condition only to be met at blossom time with a period of wet weather which caused a heavy attack of Brown Rot on the blossoms. Little fruit set and Brown Rot continued to be a serious trouble until harvest time, with the result that the fruit in many orchards was entirely destroyed and the harvest was about sixteen per cent of 1917. With these conditions existing, the year 1919 has gone down in history as one of the most disastrous to the peach industry of this section. Because of the poor carrying quality of the fruit, many shipments arrived on the markets in poor condition.

On the strength of this study it is safe to conclude that the production of peaches in Western New York will not again exceed the 4,500 carload mark until new orchards are planted and come into bearing and if this production is not met inside the next two seasons, the crop under favorable conditions cannot exceed 2,500 carloads for several years to come.

Owing to several factors, we cannot expect to see a heavy planting of peach trees in this territory in the next few season:

1st. A scarcity of trees for planting ing and consequent high price; the present bearing orchards cost eight to ten cents per tree and these cannot be replaced today under forty to sixty cents per tree.

2nd. High price of labor and uncertainty of harvest help; the present orchards were set under conditions when farm labor could be secured at $25 to $28 per month—now it is from $50 to $75 per month and hard to find.

3rd. Many of the best orchard sites have been planted once over to peaches or are now occupied with apple orchards.

4th. The uncertainty of the business as shown by the past few seasons makes the risk so great as to appeal only to the most venturesome.

Michigan

For years, peach growing has been an important industry in the western part of Michigan, the industry centering in the St. Joseph-Benton Harbor-South Haven section. In this state the peach industry reached its climax of recent years in 1916. The season of 1917 was almost a crop failure. The winter of 1917-18 killed many of the orchards as it did in New York state. About fifty per cent of the trees were killed outright and the remaining fifty per cent were greatly damaged. This means that the producing power of this territory is not more than twenty-five per cent to thirty per cent of what it was before the freeze.

When we consider the future of the Michigan peach industry, we must remember that many of the best orchard sites have already borne two or three peach orchards and, like Ohio and the older peach-growing sections of Niagara County, New York, the soil has been depleted of much of its natural fertility. Peach growing on these soils from now on must take into account a careful system of soil renewal.

In 1906 the peach orchards of Michigan were almost entirely frozen out. This resulted in many new orchards being set with apples, using peaches as fillers. The planting period extended up to 1912, with the result that in many of these orchards the peach trees have already been removed. In the remainder it is but a matter of a short time before this will be done. It is rare in this section to find mature orchards of peaches that have not been interplanted, and today one can find only scattering plantings of young peach orchards.

The following factors will tend to hold down the large planting of peach trees in the Michigan territory:

1st. All the factors mentioned under New York; namely, scarcity of trees, high price of labor, best orchard sites occupied with apples and uncertainty of business.

2nd. Depleted soil fertility.

3rd. Grapes are at present being produced in these same territories and the fruit growers' attention is attracted to the grape because of its compartive certainty of production and the recent remunerative prices. Grape production will probably increase in this area by at least one-third in the next four seasons.

In this review is has been interesting to note that a great planting wave swept over New York and Michigan during the period 1906-1912. During this period large quantities of

The Parochial School Amendment

THE MAN who values his reputation and peace of mind will steer clear of any controversy of a religious nature. So it is with the old adage in mind, that "fools rush in where angels fear to tread," that we venture forth upon a discussion of the so-called parochial school amendment, which is to be submitted to the people of Michigan at the coming fall election and provides that every child in the state within certain age limits shall attend the public school. It is clearly understood that the real purpose of the amendment is to do away with the private schools of the various religious denominations which now maintain them.

This proposed amendment deeply affects the religious and civic liberties of the people of Michigan as guaranteed to them under the Constitution. Moreover, its adoption would add something like three to five millions to our state taxes. Hence, we feel free to speak and believe that every good citizen should feel equally free to speak his mind upon the subject.

We are against this amendment. First, because there is no need for it. Second, because it smacks of religious intolerance. Third, because it would add greatly to our already grievous tax burdens.

For many years certain religious denominations, in particular, the Catholic and Lutheran churches, have maintained private or "parochial" schools at their own expense. In these schools religious doctrines of the faith of the children's parents are taught in conjunction with the common elementary courses of the public school. Indeed, the only great difference between the parochial and public school, except for the manner in which they are maintained, is that religious subjects are taught in the first and not in the second. It is asserted by the opponents of the parochial school that the purpose of the school is to inculcate in the minds of the children the particular religion of their fathers and mothers and in so doing is robbing them of the chance to become informed in other faiths. Granted that this is true, what of it? We assert that in the majority of cases the offspring of Catholic parents will be Catholic whether they attend the parochial school or not, just as the offspring of Methodist parents will be Methodists, and so on. It has been asserted, but not proven, by the enemies of the parochial school that doctrines are taught which are detrimental to American ideals and prevent the children from becoming good and patriotic American citizens. In the absence of any proof that this is so, we must accept this statement as a piece of religious bigotry.

Centuries ago people fought and died and migrated to new countries that they might worship and educate their children in matters of religion as they saw fit. America became the mecca of the victims of religious intolerance. Here they set up their institutions of liberty; here religious freedom has thrived; here we boast of our liberal attitude toward all peoples, regardless of race, creed or color. The proposed parochial school amendment would set at naught so far as the state of Michigan is concerned all our flaunted sufferance of religious thought, aspiration and instruction. We have talked with a score or more of Protestant ministers, several of them leaders in the Methodist church and we have failed to find a single one who is so warped by religious prejudice as to favor this amendment.

As stated before the parochial schools of the state are supported by private contribution. The state does not contribute one penny to the purchase of buildings, equipment or the pay of instructors. Nor does the state grant any immunity from school taxes to those who of their own volition maintain the private schools. A good many million dollars are invested in the parochial schools of the state which now provide instruction to tens of thousands of children without cost to the taxpayers. Close these schools, as the amendment proposes to do, and you must replace them with other schools and maintain them at public expense.

Since, therefore, nothing is to be gained by the abolishment of the parochial school; since the proposal is diametrically opposed to all our precepts; and since its adoption would add several millions a year to the state tax roll, why should we favor it? If the religious denominations are teaching harmful doctrines in their schools which is vigorously denied by the denominations in question, let the state be given powers of inspection. But to destroy these schools altogether would be religiously narrow and economically foolish.

The Return of the Horse

THE horse is coming back into his own. Neither the tractor, automobile nor truck has entirely displaced the four-footed beast who for ages has carried the burdens of man, cultivated the soil, and made the wheels of progress go. They have tried to displace him. And therein they made a mistake. Mechanical traction and mechanical conveyance can in many cases pull or carry the loads of agriculture and commerce far cheaper and more efficiently than can the horse. But experience has demonstrated that for certain manifold jobs the horse is the speedier and more economical burden bearer, and will probably never be supplanted in these particular fields.

Horse breeders will rejoice over the happy outcome of the contest between horse and mechanical contrivance. It means nothing to the man who keeps and breeds scrub horses, for they are not wanted. Horses that used to sell at better than $100 to $150 have declined in value to $50 and $75 even during a period when the use of horses was on the increase. That simply means that the day of the scrub horse is past. He eats as much as the thoroughbred, but he cannot perform so well, and his get are a drug on the market.

Farmers who have heard that the demand was picking up for horses have found to their disappoint that they could not sell their horses at attractive prices, simply because their animals did not have the blood and consequent ability to earn their oats. These men will have to breed better horses. Then they can make their own markets.

Paying the County School Teacher

WHEN TAXES are high 'tis a bold man who dares talk of higher salaries for our public servants. But even at the danger of courting criticism we cannot overlook our plain duty to broach the subject of the salary of the country school teacher.

The a erage country school teacher is miserably underpaid. This is not because the rural folk are especially niggardly in their allotment for educational purposes, but is a fault of the school system of the entire country. We dare say that there isn't a young man or woman teaching in the public schools of Michigan, either rural or urban, who cannot go into the city of Detroit and earn from one-third more to twice as much as they are now earning. The fact that nearly every county in the state finds itself short of qualified teachers and the fact that normal colleges are not turning out anywhere near their capacity of finished instructors are indisputable evidence that the teaching profession has lost its lure, and parents stand in danger of having no one to teach their children.

The Literary Digest has started a meritorious campaign to increase the salaries of postal employes. And as Uncle Rube points out in his weekly contribution the carrier who faithfully brings your mail every working day of the year when the roads are passable and many times when no one else would attempt to travel them, is certainly deserving of better pay. But no less worthy and no less needy of our sympathies and our money are the men and women of the country schools. See to it, Mr. and Mrs. Farmer, that you give this subject some thought and at the annual school meeting of your district, start the ball rolling for living salaries for your school teachers.

The Fight That Was Lost

THERE'S AN old quotation that runs something like this, "It isn't whether you win or lose, it's how you play the game."

There is a grain of comfort in this saying to the man who has fought a good fight and lost it. There is solace in it for the sugar beet grower who months ago took a pledge for the sake of a principle, and even when others are retreating all around him, and defeat seems certain, refuses to break that pledge.

Defeat is some times sweeter than victory. For victory won by treachery and trampling upon the rights of others soon becomes wearisome. But defeat in the midst of a battle that was honestly fought for the defense of right and justice leaves the vanquished strong and determined to renew the battle.

Play the game square. Let there be no violence, no trespassing upon the rights of others in this sugar beet controversy. It is within the law of the land and good morals for loyal beet growers to collectively refuse to assist their disloyal neighbors with their work, except in cases of sickness. But to destroy their beet stand or otherwise injure their property is not good sportsmanship and is detrimental to the cause of organized agriculture. Let these short-sighted neighbors grow their beets. Leave them to the mercy of the bugs and the elements. Keep sweet. Do not envy them if they get a good stand and a good price. Everything that you produce upon your farm will be needed and will pay you fair returns. Just bide your time, and get ready for the campaign this fall. By so doing you will maintain the respect of your neighborhood and you will not be bothered with that "small" feeling which will haunt your neighbor for many a month to come.

The Money Situation

MONEY is tight. Old-timers say that's the forerunner of a panic, and if everybody believes it, we'll have the panic all right. But if folks just keep their heads and go right on sawing wood only a little harder and not spend so much money for damphoolishness, there will be no panic nor anything like one.

There is likely to be a slight depression. In fact, we're already in it, but we ought to be climbing out before long. Banks are pretty shy about loaning money except to their very best customers.

The Farmers' National Council told congress the other day that the farmers would need around $40,000,000, in addition to their local banking loans to carry them through the season, and urged that a revolving fund be created for that purpose. Indications do not show that the farmers of Michigan will suffer any more this year from lack of capital than they have in previous years. Still it would be nice to be able to fall back on our Uncle Sam for forty millions in case of emergency, and since the food problem is so vital Congress might well take the suggested action. But the country is too much worried over the prospect of food shortage to let food production suffer for want of capital. In this respect if in no other a depression or panic at this time would differ from any other with which the country has been cursed. There'll be plenty of capital for the food producer when he needs it.

What the Neighbors Say

Y. THE FARM IS BETTER THAN THE CITY

lere it is Saturday evening and I e been contentedly sitting and ling M. B. F., and I notice so h in its columns regarding farm and city life that I though I ld tell you my experience.

was born in Huron county in 6 and lived on the farm until I eighteen years old but like most I was not contented there, as in e days a boy didn't have much ding money because then the as were in the woods and the ers didn't have much money to their sons. I left home and t to Detroit where I worked all er in a shipyard and in the spring l sailing—all went well. I sailed he summer and worked in the yard in the winter for six years. so took trips through different s. I studied hard and intended rite on a pilot's license examin- but changed my mind sudden- nd thought I ought to learn a e so I started to work for the Elevator Company of Detroit and became an expert on elevators. r I was married in 1911 I was sferred to construction work in crapers and I worked at this for years. Then I was again trans- d but this time it was to the ser- department. My new work took rom home all day and any part ne night as elevators will break s, especially the electrical parts, elevators in such places as his- s, hotels, office buildings and factories must be kept running. e had a nice little home all paid but thought we would sell and to a more restricted neighbor- where I owned, and still own, . We decided to build, had plans specifications already and were ng a visit in the country where aw a nice farm for sale. Wifie I talked it over and right there nade the bargain.

here I am a real farmer on 120 . I am working longer hours I did in the city but I sure can ood and sleep sound. I always p tired in the city at 7 o'clock, here in the country I get up at lock feeling good.

e have four children and they are oys. The oldest is nearly eight old, but they do not care to go to the city because they would ave any place to play except in mall back yard or the street, ere they are out-of-doors all day g a good time and learning t nature.

veraged $45 a week in the city ouldn't seem to save much. We not spendthrifts, lived good but ve better on the farm. Some ers say, "with such wages you d of stayed in the city." All I ell them is "go and try it your- as I have had my experience ver fifteen years. I took pos- n of the farm July 4th, 1919 everything is going lovely.—*naby, Huron County.*

like to hear from the men and who have gone back to the farm re making good. There is so much and dissatisfaction everywhere ays that it seems good to hear someone who is content with their I hope you succeed. I feel that ill. Good luck to you and yours. the way I am just now reminded of ng man who visited my office the day and is very anxious to get on the farm. He is 28 years old, d. and has two children. He has the most of his life on the farm t present is working in Detroit. ants to get back on the farm. So is wife and children. He feels that s cut out for a farmer; he loves fe, and I am sure that he would good on almost any kind of a job. If any of our readers need a a manager for a large farm, or e to handle their farm on a co- ive basis they would do well to touch with this young man. I he glad to supply his name and s upon request.—Editor.

MAKES US FEEL BETTER

reading "What the Neighbors I happened to run across the speech August Baerwolf made. say he is likely a very poor r or else he would see the good ..F. is doing and I will say r that he stretched the truth he says anyone would be glad when their subscription expires, unless it would be some like him who don't know a good thing when they see it. To prove our need of the best farm paper going, find our renewed subscription for 3 years, as we want it in our mail box once a week. Yours for success.—*Mrs. E. A. S., Clare County.*

We are glad that you have found the Business Farmer to be of sufficient worth to you to renew for another three years. The subscription dollars all help to meet the rapidly mounting cost of white paper, but their value is insignificant compared with the staunch friendship of our readers.—Editor.

SUGAR COMPANY'S FAIRNESS

"I have not favored the beet strike as I have always believed there is a better if slower way to get our rights. But here is an illustration of the Owosso Sugar Co.'s fairness. My brother got the facts from a neighbor who has rented Mr. Culver's farm for the season, Culver having moved to Lansing in the hope of making a living.

"Last season, Bert Culver, of Sebewa township, Ionia county, raised beets for the Owosso Sugar Company. He fulfilled his part of the contract, even to lifting the beets in the fall, but the company failed to provide help for topping and he lost the entire crop. Later the company demanded payment for the entire cost of seed and labor but finally offered to cancel the debt if Culver would take out a contract for the coming season, which he has done.

"I cannot give you Culver's street number in Lansing but I know he lost his beets because the company failed to provide help. I have every reason to believe, and do believe, the entire story to be correct.—*S. B., Ionia County.*

Nor do we see any reason to doubt this story. It is one of the many instances where the sugar companies have violated their contracts after the seed was planted. They have therefore no license to complain of the farmer who returned his contract weeks before planting time. —Editor.

MAKE FARM HUSBANDRY PROFITABLE AND ATTRACTIVE

Make farm husbandry so inviting that it will be as easy to drift back to the farm as away from it.

Society the world over, with its innocent and thoughtless approval of selfish legislation, and customs, is much to blame for replacing farm ownership with soil robbing tenants, for abandoned farms and the empty bellies that must follow.

The greatest industry in the world upon which life and comfort depend, and the least organized, is sacrificed to selfishness and stigmatized by expansive-eared male and Jenny asses in lounge lizard raiment.

I am aware that in this money crazy age, I am whistling down the wind, advocating unselfish legislation, while gouging is the order of the day. Everybody doing it.

No protective legislation will yield so great a dividend to society, as a Federal and State privilege available to the humblest farmer, that of buying the use of the dollar on long time, for financing the purchase of farms, equipment, live stock and operation of farms, when necessary, at a rate of interest no greater than is paid by legitimate money lenders. As an insurance against empty bellies every encouragement, financial and otherwise should be accorded the hand that guides the plow.

The only permanent solution of the farm problem as I see it.—*John G. Krauth, Presque Isle County.*

You've hit the nail on the head. Against all the arguments of our professors, our scientists, our economists, our city consuls and our lawyer controlled government that farming is a highly profitable business, stands the incontrovertible fact that people are drifting to the city. If farm husbandry is so inviting as those who don't know anything about it claim, why isn't the drift the other way. The big reason why more people do not go back to the farms or stay there is the difficulty of securing capital and credit to finance their season-to-season operations. This is the crying need of agriculture everywhere.—Editor.

BROTHERHOOD OF MAN

In reply to the article in your paper signed Theo. Bengal, Fowler, would state that the majority of loyal Americans are not pro-English or is English the predominating element in our nationality. He also seems to wish to make out that Germany's warefare was a very mild affair carried on in a very humane way. The history of their treatment of the Belgians, their ruthless warfare upon women and children and non-combatants generally shows how humane they were then their alliance with the unspeakable Turk is a disgrace that will last through the ages. This fellow with the ear marks of a pro-German throws out a slur against this free country of ours. I suppose if we were allowed to carry on a propaganda favoring lawlessness and crime and the destruction of this government, he would consider this a free country. In talking with one of those who favored liquor, I made the statement that the majority ought to rule. He answered me by saying there would be a revolution in this country. This fellow was a pro-German. I believe in international unity and good will and the universal brotherhood of man. May we as citizens of this great country stand up for right and justice and moral and social betterment.—*C. E. G., Tustin, Mich.*

We have received so many letters in answer to our war record critics that it has been impossible to publish them all. The above is short and to the point, and well illustrates the sentiments of those who feel that America's entrance into the war was unavoidable and justifiable. These sentiments show that there is nothing lukewarm about the patriotism of the American farmers. We do not like the charge of pro-German which has been used so freely against good Americans who held honest differences of opinion about the war. We all see according to our light, and now that the war is over, let's lay the topic to one side and content ourselves with the immediate problems before us.—Editor.

Am glad to renew M. B. F., as it is a great paper for the farmer.—*Frank J. Foland, Livingston County.*

Uncle Rube Spinach Says:

(Letters to Uncle Rube should be addressed care of The Michigan Business Farmer.)

SERVICE AN' WAGES

WITH all the howlin' that's goin' on about more pay an' less hours, with strikes an' tie-ups, walk-outs an' lock-outs, with a general spirit of unrest pervadin' everywhere, when the majority of workers are inclined to do jest as little for their money as possible—the main idea bein' to cut down on the hours when more hours is the great need an' to do jest as little work as possible when more work should be the aim of us all—with these things constantly brought before us, ain't it kinda refreshin' to know there's one class that's ploddin' right along, rain or shine, day in an' day out, good weather or bad—they do their work with no thought of strikes, no thought of shirkin' an' with no recent increase of wages.

An' by gosh, they're a workin' for you and fer me, without 'em we'd be everlasin' goners, if these men should go on strike an' tie up the business they're engaged in, the whole darn country'd be in a ragin' panic in jest no time.

Have you guessed who I'm a-talkin' about? Well, I'm yappin' about our mail carriers—the men who in all kinds of weather an' over all kinds of roads, brings your letters an' papers an' parcels, the men you watch for so feverishly when you're expectin' an' important letter or a delayed parcel or the daily papers, when something unusual happens an' you want to get the news—the men who feth your M. B. F. to you every week an' which you couldn't get along without.

Do you know that these men are a gittin' less wages than a 17 year old boy gits in almost any factory in the country? That their wages have increased but little, if any, in the last three or five years? That they're not gittin' enough money to live decently as mail carriers should live?

It's a darn shame that men of their character an' ability should go on workin' for this government an' for your benefit an' mine, for less wages than a girl can earn workin' in an office with the most pleasant surroundings—it's a disgrace to the country an' to the people whom these men serve to have such conditions exist an' they ort not to exist—not another month.

How do you think Mr. Burleson, our wonderful post master general'd feel if he found his wages lowered to a level with our mail carriers? He'd kinda go up in the air wouldn't he? And yet in order to make a showin' for himself, in his management of postal affairs, he is willin' to put all kinds of burdens onto the poor fellers and felleresses that are so unfortunate as to have to work under him.

There never has been a time in my recollection when mail service was so hampered as at the present time, when it takes three days to git a letter from only 12 miles away, somethin' is wrong somewhere an' as in any other great business, we've got to look to the head of the institution for the cause an' for the remedy.

The Postmaster General himself, drawin' a good fat salary, keeps his helpers workin' at starvation wages so's he can show his boss, the President that he's a makin' things come out even or a little mite bettern' even. By keepin' wages down to the lowest notch he cuts down the efficiency of the service 'cause 'taint everybody that is willin' to starve jest for the sake of workin' at a gove'ment job an' under such a boss as Mr. Burleson has proved himself to be. Consequently there's a shortage of help an' that means more work for the ones who are willin' to stick it out hopin' the time will come when there'll be a change of managers an' they'll git somethin' near what's a comin' to 'em.

In the meantime ther's purty nigh a whole year yet in which ol' Burleson'll rule an' the employes, unless strong pressure is brought to bear, will have to plod along an' live on faith an' similar an' so I think it's about time you an' me did somethin' to wake the ol' kuss up an' let him know that the people of these United States don't approve of the way he's conductin' things, that we want the men who are servin' us so faithfully an' so well, to be paid a decent wage somewhere near what a factory worker or a truck driver, who has to take no examination an' has no heavy expenses connected with his job, is a gettin'.

I am makin' no plea for postmasters—their's is a political job—the plums handed down to the faithful, an' they're well paid so we needn't worry about them—but to the carriers who are the hardest worked of the whole caboodle, should come a good handsome increase in pay an' by gosh it should come without any further monkey business or delay.

Now let's take a little time from our reg'lar work an' jest write a nice letter—strong but polite ya know, to friend Burleson an' tell him it would please us quite considerable an' be to his advantage if he'd kindly see to it that our mail carriers, both city an' rural, got a nice little increase in pay an' got it darned quick, too.

Had'nt we ort to do this right away now before we forgit it? Jest let him know that we don't care a tinker's darn whether he makes a showin' to the President or not—we want the men who serve us paid enough to live on an' we want it now. Cordially yours.—*UNCLE RUBE.*

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

WHERE IS HE?

WHERE is the man who was afraid that if women got the ballot they would vote for prohibition and if the country went dry a revolution among American workman would quickly follow?

And who said that prohibition would bankrupt half the hotel proprietors of America?

That the California vineyards would be deserted and the owners impoverished?

In spite of the return of the boys from overseas, work was never more plentiful in spite of prohibition you have to speak weeks in advance for a room in order to have a place to lay your head when night finds you in a strange city—and the owners of vineyards have found quite as ready a sale for their fruit for grape juice and raisins as they formerly did.

The men who made these boasts are the same ones who said that when the men returned from overseas and again took up their places on farms and in the shops, women would be working for a mere pittance and the question of help for the busy housewife would again be solved—and yet it is an undisputed fact that never was help for the busy woman so scarce or so highly paid.

He's the same type of man who is now predicting dire ruin within a short time—someone who is always looking for trouble and it will surprise him to learn, if reverses in our prosperity do overtake us, how ready will be found the women of the land to meet them—it won't be the women who will be going from door to door to beg—the women always have and always will find a legitimate way to earn their living, and the housewife to keep her family clothed and fed.

SUMMER READING

IF YOU have just a few minutes to drop down on the porch during the summer and read, you would like a short story—one that would interest you and yet would not take too much time to read—the sort of story one drops into her bag to read on the train when they are going to take a short trip. And if you have not had time to do much reading and don't want to put your money into a book which you haven't heard about, you will find this list of short stories contains at least one or two short stories which will prove interesting. They have all been review by people qualified to know just what folks like to read.

Truly the farm life is the most independent of them all—you can't starve a person out when he has broad fields on which to grow the necessities of life, and when his barnyard is full of hogs and sheep like these on the farm of Mrs. Chas. Badger, of Reese. The best indication of the true home life however is shown by the smiling face of the young son in the foreground.

Should you desire any of these stories, just address the editor of this page and she will be glad to buy them for you. Remit the amount of the purchase price and 5c for postage.

THE PORTYGEE, by Joseph C. Lincoln.
An unusually fine novel, combining a strong plot with all those rare human qualities which have made Mr. Lincoln's books so widely popular. The book abounds in rich humor and quaint philosophy and the fine old Cape Cod types are very much in evidence in every incident of the story. $2.00

RASPBERRY JAM, by Carolyn Wells.
A wealthy man refuses to give his wife an allowance of any money she could cal lher own, although he pays her bills without protest. This is a domestic problem which colors the mysterious tragedy of this remarkable Fleming Stone detective story, one of the best Caroline Wells has ever written. $1.60

HAPPY HOUSE By Jane D. Abbott.
A reader happily termed this a "sunshine story." It bubbles with happinessand good deeds, yet there is no preaching in his writting. The characters, the scenes, the sparkling conversations will appeal to a host of readers because of the naturalness with which the story is developed. Nancy and Ann are real American girl, the kind we love to know ..$1.60

THE HOUSE OF BALTAZAR, by William J. Locke.
This novel has in it the same ingratiating qualities that made the "Beloved Vagabond" and the "Morals of Marcus Ordeyne" literary gems of extraordinary brilliancy. $1.90

HALF PORTIONS, by Edna Ferber.
These are the stories that people around us carry concealed, and would never get written if the probing eye of Miss Ferber did not find them out $1.60

THE KILLER, by Stewart Edward White.
The types in this story are just as true to the life of the west as The Blazed Trail is of Michigan. It is the story of a man who did no murder with his own hands, but with a nod to his Mexican followers, and of the man and the girl who brought him to justice. $1.75

KATHLEEN By Christopher Morley.
Kathleen wrote a letter to Joe at Oxford. It fell into the hands of one of the Scorpions and so the great Kathleen expedition was organized. A little book in Morley's comedy vein. $1.25

THE VOICE OF THE PACK, by Edison Marshall.
Adventure, nature and romance, all are combined to make this western story one of the best recently written. $1.75

STORM COUNTRY POLLY, By Grace Miller White.
The opening scenes of this nov[el] are laid in a squatter settlement [on] the shore of Lake Cayuga. The [si]tuations are intensely emotion[al] and adroitly handled, and Poll[y] herself is an adorable heroine .....

KINDRED OF THE DUST, by Peter B. Kyne.
This book ranks as one of the year's leading books from a literary point of view .....

THE MAN OF THE FOREST, by Zane Grey .....

SEEN IN CITY SHOPS

THE STOCK markets the [o]morning announced a dec[ide] drop in the price of raw silk immediately the large depart[ment] stores began to advertise silk [sa]les—they are mighty anxious right to unload some of their stock. However, unless it is the summer [ra]sport silks or something of the k[ind] the Personal Service Shopper a[d]vises you to turn a deaf ear to their [ad]s for tafetta cracks so in the sum[mer] time, and the sale price now is [not] a good stiff price—and we have [no]tion that the peak has been re[ach]ed and next fall perhaps we will [be] able to buy for what it is worth.

Dark blue accordian pleated s[kirts] are very fashionable, but req[uire] such a lot of care that unless you [live] near a tailor and are willing to s[pend] plenty of money to keep them [look]ing well, they are a poor investm[ent] for their entire style is attained through being kept plaited.

Do not be tempted to buy the [cheap] silk slip-on waists—they are a s[ham] and a delusion—one of the girls [in] our office spent all she had for [one] and the first time she wore it ca[ught] her finger nail in the weave and began to unravel and "run" just [like] a silk stocking.

It's time to stock up with [cool] wash waists and white skirts [for] the shops are showing some [very] pretty models in both and after [all] what is prettier for the warm [day] than a fresh white waist and s[kirt]? They don't necessarily have to [be] expensive to be pretty—much [de]pends upon their cut for its style [and] they are appropriate for wear [any]where.

DEAR CHILDREN: We have just celebrated Memorial Day—and as I went through the country and saw the beautiful flags displayed on homes, on the streets and the automobiles decorated with them, I felt a sort of choking feeling—I am so proud of our country and what it stands for. And then I began to think just how many days we displayed our flag. Of course we all know that every school house must display the flag every day when school is in session, but there are a number of days when we are expected to show our patriotism by displaying the flag from our homes. For instance, this month occurs Flag Day—June 14th—and from every public building Old Glory will float out into the breeze—and every home which owns a flag will proudly display it on Flag Day.

In order that we may become better acquainted with our public holiday I wish you would write me just how many days our government has asked us to display Old Glory.

For the best little letter telling the days and the reason for celebrating them by displaying the flag, there will be a nice flag. It is so difficult to send a flag through the mails when it is mounted that this little flag which I will send as a prize will be taken from the little stick but you can easily tack it on a stick again or you can use it to fly in the window of your home without it being mounted. Make your letters short as possible because there will be so many who will want to see their letters and stories in print and every week we are obliged to leave out hundreds of letters—all of which are interesting—but we simply haven't the space. Affectionately yours—AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare—I am 11 years old and have one sister, she is seven and her name is Clara. Our school lets out the 13th of May. We have had our final test in school. I am sending a picture of a rooster and hope I will get the prize. Ruby French, Elsie, Mich.

Dear Aunt Clare—We take the M. B. F. and certainly enjoy it. I am fourteen years old and in the eight grade. I have two brothers and three sisters. I am the oldest. I am sending some drawings to you. Must close Your respectfully, Margaret Brade, Kinde, Mich.

Dear Aunt Clare—I hope this letter will escape the waste basket. I am 11 years old and finishing up the seventh grade at school. Our school will be out the 25th of May. Our teacher's name is Mrs. Frances Prather. I think she is a fine teacher. We live one and one-half miles from town and just go across the road to school. We have a Buick car and a Rumely tractor. I want some of the girls to write to me. As my letter is getting long I will close, hoping to see my letter in print.—Ada Poindexter, Breckenridge, Mich.

Dear Aunt Clare—This is the first I written to you. I am twelve years old and in the 6th grade. My teacher's name is Miss Whitney. I like her very much. I am sending you the president's. They are Madison and Lincoln. I have one brother, Charlie. Well I will close.—Agnes Jawoski, Pinconning, Mich., R 4.

Dear Aunt Clare—I did not write my letter in black ink as I did my picture. I have never sent you a picture of my drawings before and I thought I would try and win a prize but I don't expect I will. I would like to have some of the girls and boys write to me. Esther Albrecht, Cedar Springs, Mich.

Dear Aunt Clare—I have never written to you before but I will now as my sister is writing. I am a girl, 9 years old and am in the 5th grade next year. For pets I have a cat. My father takes the M. B. F. and likes it very much. I have four sisters and one brother.—Sybil Detwiler Mt. Plesant, Mich.

Dear Aunt Clare—My father takes the M. B. F. and I like it very well. We live on an 80 acre farm. I have 2 sisters and one brother. We have 40 chickens and 11 little chicks. We have 80 more acres. I hope some of the girls will answer my letter. Hope to see my letter in print.—Ruth Alice Woodard, Bailey, Mich.

Dear Aunt Clare—I have written to you before but as I found the cities I thought I would write to you and send you the names of the cities. They are Pasadena, California; Parkersburg W. Virginia; Willimantic, Conn.; Fresno, California and Wilmington, Delaware. It is raining today. Papa is go[ing] Millbrook to get a team tonight. School was out April 23rd. Well I close hoping this will escape the basket.—Mae Belle Detwiler, Mt [Pl]ant, Mich.

Dear Aunt Clare—I am a girl 10 [ye]ars of age and in the 4th and 5th grade school. My teacher's name is Miss We live on a 60 acres farm. We 32 little chickens. Well it is time for the mail man, so I will hoping to see my letter in print. Nellie Burtch, Benley, Mich.

Dear Aunt Clare—My father takes M. B. F. and likes it very well. I to read the letters from the boys girls. I have one brother, his name Harry. I live on a 160 acre farm. have five horses and four colts. have 9 cows and we have 18 little I am a girl 9 years old and in the grade. Well my letter is getting June Sanderson, Chesaning, Mich.

Dear Aunt Clare—My father takes M. B. F. and likes it very well. I a shepherd dog and his name is Sh have two brothers, Don and Harold have 4 horses and 6 cows. I live 80 acre farm. I have got 6 kitten teacher's name is Miss Bessie Brow have a little bantam hen and her nam Bernice. Katherine Cooper, Be Mich.

Dear Aunt Clare—I am a girl 11 [ye]ars old and in the fifth grade. Our te[ach]er's name is Miss Sara Peck. We [li]ve on a farm of 120 acres. We ha[ve] cows, 5 horses, 1 pig and about 1[00] chickens. Mother gave me a hen [and] 12 eggs to set. I named the hen Bes[sie]. I have 3 sisters and 2 bro[thers] Hoping to see my letter in print, I Dorothy Sneder, Byron Center, Mic

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

"LOOKS as if plenty of food could be grown in a place like this," Francis began, but broke off at sight of Leoncia picking berries from a bush. "Here! Stop that Leoncia! We've got enough troubles without having a charming but very poisoned young woman on our hands."

"They're all right," she said, calmly eating. "You can see where the birds have been pecking and eating them."

"In which case I apologize and join you," Francis cried, filling his mouth with the lucious fruit. "And if I could catch the birds that did the pecking, I'd eat them too."

By the time they had eased the sharpest of their hunger-pangs, the sun was so low that Torres removed the helmet of Da Vasco.

"We might as well stop here for the night," he said. "I left my shoes in the cave with the mummies, and lost Da Vasco's old boots during the swimming. My feet are cut to ribbons, and there's plenty of seasoned grass here out of which I can plait a pair of sandals."

While occupied with this task, Francis built a fire and gathered a supply of wood for, despite the low latitude, the high altitude made fire a necessity for a night's lodging. Ere he had completed the supply, Leoncia curled up on her side, her head in the hollow of her arm, was sound asleep. Against the side of her away from the fire, Francis thoughtfully packed a mound of dry leaves and dry forest mould.

CHAPTER XVII

DAYBREAK in the Valley of the Lost Souls, and the Long House in the village of the Tribe of the Lost Souls. Fully eighty feet in length was the Long House, with half as much in width, built of adobe bricks, and rising thirty feet to a gable roof thatched with straw. Out of the house feebly walked the Priest of the Sun—an old man, tottery on his legs, sandal-footed, clad in a long robe of rude homespun cloth, in whose withered Indian face were haunting reminiscences of the racial lineaments of the ancient conquistadores. On his head was a curious cap of gold, arched over by a semi-circle of polished golden spikes. The effect was obvious, namely, the rising sun and the rays of the rising sun.

He tottered across the open space to where a great hollow log swung suspended between two posts carved with totemic and heraldic devices. He glanced at the eastern horizon, already red with the dawning, to reassure himself that he was on time, lifted a stick, the end of which was fiber-woven into a ball and struck the hollow log. Feeble as he was, and light as was the blow, the hollow log boomed and reverbrated like distant thunder.

Almost immediately, while he continued slowly to beat, from the grass-thatched dwellings that formed the square about the Long House, emerged the Lost Souls. Men and women, old and young, and children and babes in arms, they all came out and converged upon the Sun Priest. No more archaic spectacle could be witnessed in the twentieth-century world. Indians, indubitably they were, yet in many of their faces were the racial reminiscences of the Spaniard. Some faces, to all appearance were all Spanish. Others, by the same token, were all Indian. But betwixt and between, the majority of them betrayed the inbred blend of both races. But more bizzare was their costume—unremarkable in the women, who were garbed in long, discreet robes of homespun cloth, but most remarkable in the men, whose home spun was grotesquely fashioned after the style of Spanish dress that obtained in Spain at the time of Columbus' first voyage. Homely and sad looking were the men and women—as of a breed too closely interbred to retain joy of life. This was true of the youths and maidens, of the children, and of the very babes against breasts—true, with the exception of two, one, a child-girl of ten, in whose face was fire, and spirit and intelligence. Amongst the sodden faces of the sodden and stupid Lost Souls, her face stood out like a flaming flower. Only like hers was the face of the old Sun Priest, cunning, crafty, intelligent.

While the priest continued to beat the resounding log, the entire tribe formed about him in a semi-circle, facing the east. As the sun showed the edge of its upper rim, the priest greeted it and hailed it with a quaint and mediaeval Spanish, himself making low obesiance thrice repeated, while the tribe prostrated itself. And, when the full sun shone clear of the horizon, all the tribe, under the direction of the priest, arose and uttered a joyful chant. Just as he had dismissed his people, a thin pillar of smoke, rising in the quiet air across the valley, caught the priest's eye. He pointed it out and commanded several of the young men.

"It rises in the Forbidden Place of Fear where no member of the tribe may wander. It is some devil of a pursuer sent out by our enemies who have vainly sought our hiding-place through the centuries. He must not escape to make report, for our enemies are powerful, and we shall be destroyed. Go. Kill him that we may not be killed."

About the fire, which had been replenished at intervals throughout the night, Leoncia, Francis and Torres lay asleep, the latter with his new-made sandals on his feet and with the helmet of Da Vasco pulled tightly down on his head to keep off the dew. Leoncia was the first to awaken, and so curious was the scene that confronted her, that she watched quietly through her down dropped lashes. Three of the strange Lost Tribe men, bows still stretched and arrows drawn in what was evident to her as the interrupted act of slaying her and her companions, were staring with amazement at the face of the unconscious Torres. They looked at each other in doubt, let their bows straighten and shook their heads in patent advertisement that they were not going to kill. Closer they crept upon Torres, squatting on their hams the better to scrutinize his face and the helmet, which latter seemed to arouse their keenest interest.

From where she lay, Leoncia was able privily to nudge Francis' shoulder with her foot. He awoke quietly and quietly sat up, attracting the attention of the strangers. Immediately they made the universal peace sign, laying down their bows and extending their palms outward in token of being weaponless.

"Good morning, merry strangers," Francis addressed them in English which made them shake their heads while it aroused Torres.

"They must be Lost Souls," Leoncia whispered to Francis.

"Or real estate agents," he smiled back. "At least the valley is inhabited—Torres, who're your friends? From the way they regard you, one would think they were relatives of yours."

Quite ignoring them, the three Lost Souls drew apart a slight distance and debated in low sibilant tones.

"Sounds like a queer sort of Spanish," Francis observed.

"It's mediaeval to say the least," Leoncia confirmed.

"It's the Spanish of the conquistadores pretty badly gone to seed," Torres contributed. "You see I was right. The Lost Souls never get away."

"At any rate they must give and be given in marriage," Francis quipped, "else how explain these three young huskies?"

But by this time the three huskies having reached agreement, were beckoning them with encouraging gestures to follow across the valley.

"They're good natured and friendly cusses to say the least, despite their sorrowful mug," said Francis, as they prepared to follow. "But did you ever see a sadder-faced aggregation in your life? They must have been born in the dark of the moon, or had all their sweet gazelles die, or else something or other worse."

"It's just the kind of faces one would expect of lost souls," Leoncia answered.

"And if we never get out of here, I suppose we'll get to looking a whole lot sadder than they do," he came back. "Anyway, I hope they're leading us to breakfast. Those berries were better than nothing, but that is not saying much."

An hour or more afterward, still obediently following their guides, they emerged upon the clearings, the dwelling places, and the Long House of the tribe.

"These are descendants of Da Vasco's party and the Caribs, Torres affirmed, as he glanced over the assembled faces. "That is incontrovertible on the face of it."

"And they've relapsed from the Christian religion of Da Vasco to old heathen worship," added Francis. "Look at that altar—there. It's a stone altar, and, from the smell of it, that is no breakfast, but a sacrifice that is cooking, in spite of the fact that it smells like mutton."

"Thank heaven it's only a lamb," Leoncia breathed. "The old Sun Worship included human sacrifice. And this is Sun Worship. See the old man there in the long shroud with the golden-rayed cap of gold. He's a sun priest. Uncle Alfaro has told me all about the sun-worshipers."

Behind and above the altar, was a great metal image of the sun.

"Gold, all gold," Francis whispered, "and without alloy. Look at those spikes, the size of them, yet so pure in the metal that I wager a child could bend them any way it wished and even tie knots in them."

"Merciful God!—look at that!" Leoncia gasped, indicating with her eyes a crude stone bust that stood to one side of the altar and slightly lower. "It is the face of Torres. It is the face of the mummy in the Maya cave."

"And there is an inscription—" Francis stepped closer to see and was peremptorily waved back by the priest. "It says, 'Da Vasco.' Notice that it has the same sort of helmet that Torres is wearing—and, say! Glance at the priest! If he doesn't look like Torres' full brother, I've never fancied a resemblance in my life!"

The priest, with angry face and imperative gesture, motioned Francis to silence, and made obesiance to the cooking sacrifice. As if in response, a flaw of wind put out the flame of the cooking.

"The Sun God is angry," the priest announced with great solemnity, his queer Spanish nevertheless being intelligible to the newcomers. "Strangers have come among us and remain unslain. That is why the Sun God is angry. Speak, you young men who have brought the strangers alive to our altar. Was not my bidding, which is ever and always the bidding of the Sun God, that you should slay them?"

One of the three young men stepped tremblingly forth, and with trembling forefinger pointed at the face of Torres and at the face of the stone bust.

"We recognized him," he quavered, "and we could not slay him for we remembered prophecy and that our great ancestor would some day return. Is this stranger he? We do not know. We dare not know nor judge. Yours, O priest, is the knowledge, and yours be the judgment. Is this he?"

The priest looked closely at Torres, and exclaimed incoherently. Turning his back abruptly, he rekindled the sacred cooking fire from a pot of fire at the base of an altar. But the fire flamed up, flickered down and died.

"The Sun God is angry," the priest reiterated; whereat the Lost Souls beat their breasts and moaned and lamented. "The sacrifice is unacceptable for the fire will not burn. Strange things are afoot. This is a matter of the deeper mysteries which

MARKET FLASHES

TRADE AND MARKET REVIEW

Curtailment of non-essential loans is still sought by the Federal Reserve Banks. In their recent declaration of 7 per cent discount on all loans they made a move that, it is thought, will create a reserve fund in the banks to assist in the movement of grains next autumn owing to the reason that in some states, as for instance New York, the legal rate of interest is 6 per cent. And when a bank discounts a note for its customers at 6 per cent and then rediscounts the note with its reserve bank at 7 it loses 1 per cent so they must stop loans or continue losing, which banks are not in the habit of doing. Such a move as this might of proved disastrous six months ago but conditions are nearly ideal at present. Opinions differ as to whether prices are making a permanent decline. Some say that borrowers will secure loans from other directions at higher rates and add the increased cost to their products, thus causing higher prices. Others believe that the manufacturers and producers, who need money, know prices are headed for lower levels and are preparing for such conditions. But all agree if prices haven't already started that the time is not far distant when deflation will set in in earnest.

Officials of the United States Department of Agriculture see little prospects of prices declining in foodstuff for at least a year. Meat prices have declined some but not enough to be felt by the consumer. Other foodstuffs are expected to remain at their present level, and, instead of decreasing there is a probability of the most essential foods going still higher, for a time at least.

Grain markets were inclined to be rather erratic the last few days. Car shortage keeps supplies smaller than demand. The West is receiving cars from Eastern lines but only a fair amount of these are expected to be used for grain. Corn and oat prices have been acting like they had the St. Vitus dance the past week on some markets, while others report a firm market all the week. The ending of the Federal control of wheat and wheat products on May 31st, which meant the passing of the government guaranty of $2.20 leaves the dealers all at sea as what to pay the producer but it is thought prices will not decline much. Reports from the country show grains are doing nicely and the weather fine for the growing crops.

WHEAT DECLINES

WHEAT PRICES PER BU., JUNE 8, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	3.07		3.05
No. 2 White	3.05		3.05
No. 2 Mixed	3.05		2.95
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.50		2.60
No. 2 White	2.48		
No. 2 Mixed	2.48		

Prices in the wheat market are lower and the market is called easy owing to a lack of demand. Export demand has been at a standstill for several days and shippers are not buying. The expiration of government control of wheat was expected to cause a deflation of wheat prices but to date there has only been a small decline and it is expected that prices will not go much lower because export buying is expected to be renewed at any moment due to the fact that Europe must purchase its wheat of North America or practically go without as the supplies in the Southern hemisphere are near exhaustion, Australia having little or no wheat and Argentine's supply may be exhausted within the next 60 days if shipments are made as fast as they have been in the last few weeks, also the duty Argentine has placed on her wheat makes the price above what this grain can be purchased here for. Many of the exporters are willing to pay most any price to get the grain so local dealers will have to pay a good price if they wish to secure any wheat. Grain is moving very slowly due to the fact that cars are hard to secure and will be, it is thought, for some time. Reports show the wheat crop to be doing fine, but with the best of weather we will have a shortage, which the government estimates at from 250,000,000 bushels to 300,000,000 bushels.

LAST MINUTE WIRES

DETROIT—Little trading in grain market. Wheat lower. Oats, corn and rye easy. Hay scarce and firm. Beans inactive.

CHICAGO—Corn and oats show weakness owing to increased offerings. Cattle higher. Hogs strong to steady. Potatoes advance.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

CORN FIRM

CORN PRICES PER BU., JUNE 8, 1920

No. 2 Yellow			1.91½
No. 3 Yellow	1.83	1.73½	
No. 4 Yellow	1.80	1.75	

Shipments of corn are disappointing and tends to give the market strength that check any declines of importance. There is demand enough to take all the available supply but the moment prices start to advance buying is stopped. Farmers seem anxious to sell at present prices and if cars could be secured it is believed that supplies would be plentiful. However if the market starts a rather steady declines farmers will stop selling I believe, for they have received the high prices for a time and will not be satisfied with lower ones at least until things they must purchase with the money they receive from their crops has also declined in proportion. Reports from the different states complain of the late planting. In some sections of Illinois it is said there is 25 per cent of the crop to be planted yet.

OATS STRONG

OAT PRICES PER BU., JUNE 8, 1920

No. 4 White	.71½		

The East has received more liberal shipments of oats during the past week but not enough to supply the demand and buyers are snapping up everything that appears on the market. Canadian oats continue to be the main supply on the market but it is believed that Canada has about exhausted her surplus. Dealers are in hopes of lower prices soon but if late reports are true they will hope in vain. These reports say there is no surplus of oats; it has been sold.

BEANS LOWER

Red Kidneys			

There is very little to report on the bean market except a 20c drop after which the market is easy. I believe this decline has been caused by speculators merely to try to get the farmer to market his crop.

RYE ADVANCES

Rye is inactive and unchanged after an advance of 10c during the past week. It is quoted at $2.20 for No. 2 on the Detroit market. The foreign demand continues fairly good, but as in other grains, it is more a matter of getting it to the seaboard than of anything else. Various sections report the crop in good condition but rather thin.

POTATOES HIGHER

Dealers cannot supply the demand in potatoes. Old ones are about exhausted and new ones are not coming from the south in quantities large enough to affect the market. Both old and new potatoes are selling at higher prices.

The *Potato Magazine* says the most acute shortage of potatoes in many years is forecasted by its compilation of statistics of acreage planted and to be planted this year. Four factors are assigned for this serious curtailment of production: (1) scarcity of farm labor, (2) the increased cost of such labor, (3) scarcity of seed (4) cost of good seed potatoes. The pending shortage is further complicated by the fact that practically the entire 1919 crop has been marketed.

The hay crop of 1920, if it matures fully from the May 1 condition, will exceed 111 million tons, the greatest yield on record. The value of hay is second only to that of the corn crop, and at the price as of December 1, last on the farms the 1919 crop exceeded in value either the wheat or the cotton crop. At the value as of Dec. 1, 1919, the crop of this year may be worth more than the average corn crops of 1913-17, estimated at the price as of December 1.

BOSTON WOOL MARKET

The Commercial Bulletin says: "The depression in the market a week ago has continued during the current one, sales being almost nothing in this market and reports from the west indicate that the market there is very dull indeed. The primary markets are dull and hardly changed.

"The goods markets are dull and unsettled, with the mills going on short schedule generally of three to four days a week."

Quotations more or less nominal:

Ohio and Pennsylvania fleeces.—Delaine unwashed, 72@75c; fine unwashed, k62@65c; 1-2 blood combing, 70@72c; 3-8 blood combing, 60@62c.

Michigan and New York fleeces.—Fine unwashed, 60c; delaine, unwashed, 70@73c; 1-2 blood, unwashed, 68@70c; 3-8 blood, unwashed, 59@60c.

Wisconsin, Missouri and average New England—1-2 blood, 60@65c; 3-8 blood, 53@55c; 1-2 blood, 50@52c.

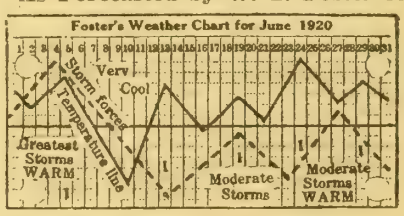
DETROIT PRODUCE MARKET

The market for farm stuff is not well supplies and there is a general tone of firmness. Demand is active, but in many cases consumers are not able to secure what they want. This is felt keenly in the potato deal. Apples are inactive and receipts of strawberries are not enough to fill the needs of the trade. The price remains high. Poultry is dull and easy. Receipts of hens and chickens are ample and consumers are not looking for the goods. Dressed hogs are steady and there is a scarcity of dressed calves, which are quoted as higher. Butter is in fair demand and steady and the same is the case with eggs. Receipts of dairy products are irregular, but there is usually enough

(*Markets Continued on page* 15)

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON D. C., June 12, 1920.—Warm waves will reach Vancouver, B. C., June 16, 21, 26 and on July 2 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 17, 22 27 and July 3; plains sections, 18 23, 28 and July 4; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys 19, 24, 29 and July 5; lower great lakes and eastern sections 20, 25, 30 and July 6, reaching vicinity of Newfoundland about June 21, 26 and July 1, 7. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control the cropweather of this continent from near June 16 to near July 7 and less rainfall, as a general average, is expected during that period. For past 12 months most precipitation has been in the lower Mississippi valleys and in the cotton states east of the Mississippi river, extending northward to near the upper great lakes and then northwestward, leaving some parts of the middle provinces of Canada and the American middle southwest with a shortage of precipitation. These cropweather conditions prove the correctness of my cropweather forecasts made more than six months ago. I made those forecasts because I knew that the moisture to water the continent must come from the Caribbean Sea and the Gulf of Mexico.

But a change has occurred as predicted several months ago and repeated several times since. This will cause a great change in precipitation and while the average, up to July 4 will be less rainfall, the moisture will be more evenly distributed and places that have been dry will get some rain while places that have been too wet will get less rain. I am counting on a general improvement in cropweather for balance of June, a general lowering of market values and advise farmers and local dealers that if they want to sell before the new crop is made now is the time to sell.

There is a hope for the dry strip in the middle provinces of Canada and the southwest American drouth. The people of these two sections occasionally suffer from drouth and are talking of leaving those sections. Don't do it. Cropweather for every part of Canada and America will average about the same for the next thirty years as it did for the past thirty years and I am all the time gaining in knowledge as to future cropweather that will assist you in anticipating the bad crop years.

W. T. Foster

"HEARTS OF THREE"

(*Continued from page* 9)

I alone may know. We shall not sacrifice the strangers . . . now. I must take time to inform myself of the Sun God's will.

With his hands he waved the tribespeople away, ceasing the ceremonial half completed, and directed that the three captives be taken into the Long House.

"I can't follow the play," Francis whispered in Leoncia's ear, but just the same I hope here's where we eat."

"Look at that pretty little child," said Leoncia, indicating with her eyes the child with the face of fire and spirit.

"Torres has already spotted her," Francis whispered back. "I caught him winking at her. He doesn't know the play, nor which way the cat will jump, but he isn't missing a chance to make friends. We'll have to keep an eye on him, for he's a treacherous hound and capable of throwing us over any time if it would serve to save his skin."

Inside the Long House, seated on rough plaited mats of grass, they found themselves quickly served with food. Clear drinking water and a thick stew of meat and vegetables were served in generous quantity in queer, unglazed pottery jars. Also, they were given hot cakes of ground Indian corn that were not altogether unlike tortillas.

After the women who served had departed the little girl, who had led them and commanded them, remained. Torres resumed his overtures, but she, graciously ignoring him, devoted herself to Leoncia who seemed to fascinate her.

"She's a sort of hostess, I take it," Francis explained. "You know—like the maids of the village in Samoa, who entertain all travelers and all visitors of no matter how high rank, and who come pretty close to presiding at all functions and ceremonials. They are selected by the high chiefs for their beauty, their virtue, and their intelligence. And this one reminds me very much of them, except that she's awfully young."

Closer she came to Leoncia, and, fascinated though she patently was by the beautiful strange woman, in her bearing of approach there was no hint of servility nor sense of inferiority.

"Tell me," she said in the quaint archaic Spanish of the valley, "is that man really Capitan Da Vasco returned from his home in the sun and the sky?"

Torres smirked and bowed, and proclaimed proudly: "I am a Da Vasco."

"Not a Da Vasco, but Da Vasco himself," Leoncia coached him in English.

"It's a good bet—play it!" Francis commanded, likewise in English. "It may pull us all out of a hole. I'm not particularly stuck on that priest, and he seems the high-cockalorum over these Lost Souls."

"I have at last come back from the sun." Torres told the little maid, taking his cue.

She favored him with a long and unwavering look, in which they they could see her think, and judge, and appraise. Then, with expressionless face, she bowed to him respectfully, and with scarcely a glance at Francis, turned to Leoncia and favored her with a friendly smile that was an illumination.

"I did not know that God made women so beautiful as you," the little maid said softly, ere she turned to go out. At the door she paused to add, "The Lady Who Dreams is beautiful, but she is strangely different from you."

But hardly had she gone, when the Sun Priest, followed by a number of young men, entered, apparently for the purpose of removing the dishes and the uneaten food. Even as some of them were in the act of bending over to pick up the dishes, at a signal from the priest they sprang upon the three guests, bound their hands and arms securely behind them, and led them out to the Sun God's altar before the assembled tribe. Here, where they observed a crucible on a tripod over a fierce fire, they were tied to fresh-sunken posts while many eager hands heaped fuel about them to their knees.

"Now buck up—be as haughty as a real Spaniard!" Francis at the same time instructed and insulted Torres. "You're Da Vasco himself. Hundreds of years before, you were here on earth in this very valley with the ancestors of these mongrels."

"You must die," the Sun Priest was now addressing them, while the Lost Souls nodded unanimously. "For four hundred years, as we count our sojourn in this valley, have we slain all strangers. You were not slain, and behold the instant anger of the Sun God; our altar fire went out." The Lost Souls moaned and howled and pounded their chests. "Therefore, to appease the Sun God you shall now die."

"Beware!" Torres proclaimed, prompted in whispers, sometimes by Francis, sometimes by Leoncia. "I am Da Vasco. I have just come from the sun." He nodded with his head, because of his tied hands, at the stone bust. "I am that Da Vasco. I led your ancestors here four hundred years ago, and I left you here, commanding you to remain until my return."

The Sun Priest hesitated.

"Well, priest, speak up and answer the divine Da Vasco," Francis spoke harshly.

"How do I know that he is divine?" the priest countered quickly. "Do I not look much like him myself Am I not therefore divine? Am I Da Vasco? Is he Da Vasco? Or may not Da Vasco bet yet in the sun?—for truly I know that I am born of woman three score and eighteen years ago and that I am not a Da Vasco."

"You have not spoken to Da Vasco!" Francis threatened, as he bowed in vast humility to Torres and hissed at him in English: "Be haughty, damn you, be haughty."

The priest wavered for the moment, and then addressed Torres.

"I am the faithful priest of the sun. Not lightly can I relinquish my trust. If you are the divine Da Vasco, then answer me one question."

Torres nodded with magnificient haughtiness.

"Do you love gold?"

"Love gold?" Torres jeered. "I am a great captain in the sun, and the sun is made of gold. Gold? It is like to me this dirt beneath my feet and the rock of which your mighty mountains are composed."

"Bravo," Leoncia whispered approval.

"Then, O divine Da Vasco," the Sun Priest said humbly although he could not quite muffle the ring of triumph in his voice, "are you fit to pass the ancient and usual test. When you have drunk the drink of gold, and can still say that you are Da Vasco, then will I, and all of us bow down and worship you. We have had occasional intruders in this valley. Always did they come athirst for gold. But when we had satisfied their thirst, inevitably they thirsted no more, for they were dead."

As he spoke, while the Lost Souls looked on eagerly, and while the three strangers looked on with no less keenness of apprehension, the priest thrust his hand into the open mouth of a large leather bag and began dropping handfuls of gold nuggets into the heated crucible of the tripod. So near were they, that they could see the gold melt into fluid and rise up in the crucible like the drink it was intended to be.

The little maid, daring on her extraordinary position in the Lost Couls Tribe, came up to the Sun Priest and spoke that all might hear.

"That is Da Vasco, the Capitan Da Vasco, the divine Capitan Da Vasco, who led our ancestors here the long long time ago."

The priest tried to silence her with a frown. But the maid repeated her statement pointing eloquently from the bust to Torres and back again; and the priest felt his grip on the situation slipping, while inwardly he cursed the sinful love of the mother of the little girl which had made her his daughter.

"Hush!" he commanded sternly. "These are things of which you know nothing. If he be the Capitan Da Vasco, being divine, he will drink the gold and be unharmed."

Into a rude pottery pitcher, which had been heated in the pot of fire at the base of the altar, he poured the molten gold. At a signal, several of the young men laid aside their spears and, with the evident intention of prying her teeth apart, advanced on Leoncia.

"Hold, priest!" Francis shouted stentoriously. "She is not divine as Da Vasco is divine. Try the golden drink on Da Vasco."

(*Continued next week*)

TEXACO
MOTOR OIL

There is nothing that takes the fun out of motoring so quickly as an engine that overheats and then knocks and sputters. And these are the symptoms of improper lubrication that indicate that bearing surfaces are touching and wearing, increasing upkeep cost and depreciation. But, with TEXACO OIL in your tank you can expect great things of your motor. You know it won't balk on the way to town, because TEXACO MOTOR OIL is the enemy of friction It won't form hard, destructive carbon, and absolutely holds compression. It is a clear, bright oil, with splendid body, as carefully refined as we know how, in a grade to fit the requirements of every car. The red Star and green T marks TEXACO.

41 STOLEN CARS RECOVERED

Valued at $35,000

Howell, Mich., May 27, 1920.—Cars stolen in Detroit, motor numbers changed, and the machines taken into Shiawassee and Gratiot counties. Clarence and Allen Somers, brothers living at Kerby, and three Italians are under arrest. Three used car dealers at Owosso stand to lose heavily as the result of the unearthing by Sheriff Sproule and deputies and two detectives from the Detroit police department.

A federal law was passed known as the Dyer Act which provides a heavy fine and penalty for transporting stolen cars from one state to another. The Detroit police officials have been suspicious that a large number of stolen cars were being passed out to the country districts for sale. The good work of the sheriff and deputies of Shiawassee county will bring them a large reward from the insurance companies and will encourage the officers of other counties to be alert to recover stolen cars.

The Citizens' Mutual Automobile Insurance Co. of Howell, Mich., which has over 45,000 automobiles insured are investigating the cars and the numbers as they recover a large number of cars every year through the co-operation with the sheriffs of the state, the Detroit police officers, and various police departments outside of Michigan.

IS FOOD SHORTAGE CRY A HOAX

I would like to ask if it is not possible that all we see in the papers about the shortage of food is reported to harry up the farmers and that low prices will prevail this fall?—Reuben Reeds, Mich.

Yes, it is possible, but not probable. We have only to refer to governmental statistics to show us that the acreage planted or to be planted to the main crops this year, such as wheat, oats, beans, potatoes, etc., will be far less than normal and that even discounting poor yield, the crops will be barely sufficient to meet the growing needs of the nation and the world. Of course, the European demand will have some effect. If the Europeans produce their normal crops this year, which hardly seems possible, we will be able to consume more of our products here at home, and prices may be considerably lower. I think, in any event, we must expect temporarily lower prices during the marketing season this coming fall unless the crops fall far short of the needs. But if the farmers will use good judgment and market their crops periodically throughout the season, I believe they will secure very nearly as good prices for the majority of them as are now being paid, barring possibly potatoes, which are extraordinarily high just now.—*Editor.*

IMPROVEMENT OF HIGHWAY

We, the residents of the southeast quarter of Gilmore county of Isabella who pays 75 per cent of the township tax wish to know if this money can be taken into other quarters and used for making roads and leave this quarter without, against the wishes of thiis quarter and if not how can this be prevented.—A Subscriber, Isabella County.

Your letter does not fully explain just how you have divided the road districts in your township. Unless there is some limitation in the arrangements of your township the highway commissioner under the direction of the board may spend the money anywhere in the township. Section 4318 of the C. L. 1915, provide that the highways shall be laid out and maintained by two highway taxes. One shall be known as the "road repair tax," and the other as the "improvement tax." Section 4326 provides that the repair tax shall be expended or worked in the district where assessed. Section 4326 later provides that upon complaint in writing to the township board by any ten or more resident taxpayers that the road repair fund is being unequally and unjustly applied, or work improperly performed then the township board may take charge of the expenditures. The highway improvement fund is also expended by the highway commissioner under the direction of the town board. I would be of the opinion that your town board would be able to properly adjust.—*W. E. Brown, legal editor.*

LAND EXEMPT FROM TAX

I have bought a piece of wild land and some has told me that I could get exempt on taxes for five years. How would I go about it to get it done?—A Subscriber, Midland County.

Act 208 of the Public Acts of 1913 provides that cut over or wild land which shall be actually purchased by any person for the purpose of making a home shall be exempt from the payment of all taxes for five years thereafter. Cut over and wild lands shall be construed to mean any swamp land or land from which timber has been removed and no part of which description claimed to be exempted has ever been cultivated. The purchaser must reside on the land and the exemption shall not extend to more than 80 acres. The exemption shall be made to the supervisor at the time the assessment of the township is made and he shall make proper entries and refer it to the board of review.—*W. E. Brown, legal editor.*

GRANGE LIFE INSURANCE

I wish to have your opinion regarding the Grange Life Insurance Company, of Lansing. Their agent visited me a few days ago and left some of their literature. Everything about this policy is so liberal that I am a little suspicious. If this company is in good standing please let me know and explain if you can how they are able to pay one more money at the maturity of his policy that he has paid in.—E. M. H. Mt. Pleasant, Mich.

While I am not entirely familiar with the kind of policy which the Grange Life Insurance Company writes, I am of the opinion that the company is reliable as it is backed by responsible men. Policies which return to the insured a greater sum than that he pays in are quite common and popular and are written by all old line companies. Insurance companies act merely as savings depositories and return to the insured at a stipulated time all the money he has paid in in addition to a nominal interest for the use of the money. This interest is not so great as might be secured by investing in stocks or bonds, but it is liberal considering the fact that the insured is protected against death for the full amount of his policy less whatever sums he may have withdrawn. You understand that the insurance companies re-invest your money at a greater rate of interest than they pay their members, giving them a sufficient margin on which to do business and pay death claims.—*Editor.*

CHANGING LOCATION

Our Republican nominee for Supervisor tells some of the voters if he gets elected he will change the road which is already surveyed, and put the road past his house and of those who he wants to vote for him. It was understood that the road was to go past our home, and it would connect with the trunk line at Pierson, and work has already been let for grading and work has been started. The road was mapped out on the map which we got from Stanton our county seat. Has the supervisor a right to change it? The road was not surveyed and staked past our place.—W. A. S., Montcalm County.

The supervisor of a township alone does not have authority to change the location of a road nor the place of the improvements. He probably means that he will use his influence to have the change made and you should be on the guard to use your influence to see that he does not, if you think the change is wrong and that your views are right. The right of the matter should prevail although the supervisor should have considerable influence with those in control.—*W. E. Brown, legal editor.*

THE COLLECTION BOX

CHICAGO COMPANY RETURNS $133.06 TO FARMER

We received a letter from one of our subscribers, Mr. W. A. L., of Huron county, in which he stated that last December he placed an order amounting to $133.06 with the ——— Company of Chicago. They acknowledged receipt of the order. He wrote them three different times after that but received no reply.

We wrote the company, which has a reputation for honesty and fairness, regarding the matter. No reply. We wrote them again and received a reply stating that they had returned the money to our subscriber. A few days later we received the following letter from Mr. L.:

"Gentlemen: I received my money from the ——— Company by today's mail and I am writing you immediately to thank you for the service you have rendered me in getting this company to refund this money.—*A. L., Huron County.*

HIS HEARING RESTORED

The invisible antiseptic ear drum invented by Mr. A. O. Leonard, which is in reality a minature megaphone, fitting inside the ear and entirely out of sight, is restoring the hearing of literally hundreds of people in New York City. Mr. Leonard invented this remarkable drum to relieve himself of deafness and head noises, and it does this so successfully that no one could tell that he is a deaf man. This ear drum is effective when deafness is caused by catarrh or by perforated, partially or wholly destroyed natural drums. A request for information addressed to A. O. Leonard, Suite 84, 70 Fifth Avenue New York City, will be given a prompt reply.—Adv.

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

BUTTER BOY ROSINA PRINCE

237572, herd sire, son of King Ona. His sire is from a 30 lb. cow that made 1,345 lbs. in one year and dam, Butter Boy Rosina 2nd 200, 540, made 29 lbs. and almost 800 lb. in ten months, she has a 33 and 34 lb. sister. Have some fine young bulls and heifers and some heifers bred to him, all from A. R. O. cows with records from 22 to 30 lbs. Write for prices.

Hampshire hogs, fall boars, ready for service and gilts. Booking orders for spring pigs.

Belgian and Percheron Stallions and mares. Imported and American bred.

SAGINAW VALLEY STOCK FARM
Eli Sprunger & Son, Props., Saginaw W. S., Mich

FOR SALE

5 HEIFER CALVES
age from 2 to 8 months
3 BULL CALVES
one ready for heavy service
7 COWS

two with 18 and 20 lb. seven day records. Five with good profitable cow testing records. Write for pedigrees and prices.

Herd free from disease

H. E. BROWN, Breedsville, Mich.
Breeder of Reg. stock only

BABY BULLS

Grow your own next herd sire. We have three beautiful youngsters—straight as a line, big-boned rugged fellows. They are all by our 38 lb. junior sire, KING KORNDYKE ORISKANY PONTIAC from splendid individual dams of A. R. backing and the best of blood lines.

Write for our sale list

BOARDMAN FARMS
JACKSON, MICH.
Holstein Breeders Since 1906

WOLVERINE STOCK FARM REPORTS GOOD sales from their herd. We are well pleased with the calves from our Junior Herd Sire, "King Pontiac Lunde Korndyke Segis" who is a son of "King of the Pontiacs" from a daughter of Pontiac Clothilde De Kol 2nd. A few bull calves for sale. T. W. Sprague, R. 2, Battle Creek, Mich.

MUSOLFF BROS.' HOLSTEIN

We are now booking orders for young bulls from King Pieter Segis Lyons 170506. All from A. R. O. dams with credible records. We test annually for tuberculosis. Write for prices and further information.

Musloff Bros., South Lyons, Michigan

BULL CALF LAST ADVERTISED SOLD, but have one more for sale. Nicely marked, straight back line, a fine individual, large growthy fellow with the making of a large bull. Would do someone a lot of good. Dam has a 27 lb. record, a large cow and a great milk producer. Sire a son of Friend Hengerveld DeKol Butter Boy, one of the great bulls.

JAMES HOPSON, JR.
Owosso - - R2 - - Michigan

REGISTERED HOLSTEINS OF BOTH Sex for Sale
WM. GRIFFIN, R. 5., Howell, Michigan

A WELL BRED HOLSTEIN BULL CALF FOR SALE

Born Sept. 25, 1919. A bull of good quality, has a good straight rump and a conformation that will satisfy you. His sire's dam is a 33 lb. cow with a 10 months record of 1,007.76 lbs. butter. This sire, King Flint also combines the blood lines of 2 families of 3 generation of 30 lb. cows and 2 generations of 1,200 lb. yearly record cows. Dam Has a 3 yr. old 7 days record of 17.97 lbs. butter.

GLENRIDA FARM
Walter T. Hill, Prop. Davison, Mich.

FORDNEY COMMITTEE REPORTS OUT BEAN BILL

(*Continued from page* 3)

That is a lie. They have charged that THE BUSINESS FARMER is controlled by Democratic influences. That, too, is a lie. THE BUSINESS FARMER is NOT a partisan newspaper. It despises partisan politics. In its independent criticism of the acts of political parties and politicians it has struck right and left and let the chips fall where they may. It stood by the President during the war where every loyal American should have stood, but today its criticism of the incompetence of the Democratic administration and its criminal negligence to provide some measure of relief for present conditions is as severe as its criticism of the bitter Republican partisans in Congress who would block every such measure of relief if they had the chance.

The criticism of Mr. Fordney was the result of his own political horseplaying. He had no one to blame but himself. Had he performed his duty as a man and a congressman there would have been no criticism. THE BUSINESS FARMER pledged Mr. Fordney its support last fall. THE BUSINESS FARMER spoke high words of commendation for his promise to assist the bean growers. And THE BUSINESS FARMER would have needed no urging from Mr. Fordney's newspaper friends of the eighth district to have applauded any efforts as he may have put forth in this direction. But he did nothing. His presence on the committee was a hindrance rather than a help. Therefore, THE BUSINESS FARMER was obliged to criticize and bring all the pressure possible to bear against Mr. Fordney in hopes that he would be moved to action. That he has finally yielded to this pressure is the admission of both himself and the editor of the *Gratiot County Herald*.

PEACH INDUSTRY IN NEW YORK AND MICHIGAN

(*Continued from page* 5)

peaches and apples were planted. Today the peaches are being removed in disgrace and the apples are coming into bearing. These young apple orchards are fortunately coming into bearing during this period when apples are bringing high prices. These conditions are right to cause another wave of heavy planting in which apples will be set almost exclusively.

At present there is little indication of severe competition in the near future in the marketing of New York state peaches. Connecticut peaches are absorbed in New England; New Jersey and Delaware peaches find ready market in the densely settled areas about New York and Philadelphia. At best, Georgia peaches are harvested two months before the western New York Elberta season and dare not be held long in storage. This leaves New York state, Pittsburg and the central and middle West with a diminishing supply of peaches.

The scarcity of peach trees with high prices is a discouraging feature to many. But when we consider that one bushel of peaches at present prices, will buy four or five trees, and the indications are that present prices will be well maintained until after another heavy planting of peaches comes into bearing, the above objection loses much of its force.

Crop Reports

SHIAWASSEE—There has been quite a marked decrease in farm products during the past two weeks except in wheat, but there is not much change in things the farmer has to purchase. Consumers are allowed two pounds and no more of sugar and from twenty-five to thirty-five cents a pound. Farmers, as a rule, have their oats sown and corn planted and are now preparing for the bean crop, the sugar beet problem remains the same and is no nearer solved than it was two months ago, therefore the acreage is greatly decreased in nearly all parts of this county and if the growers and beet companies should agree on a settlement it is too late, as the growers are putting land that was plowed last fall for beets into beans.—D. H. M.

EAST ARENAC—Weather the past few days has been real growing weather and you can bet that the farmers made mighty good use of it too. Could use a nice shower now to start the corn growing. Beans being planted and the prospects are for normal acreage owing to the beet dispute. Produce is very dull and going down in price and we wonder where Fordney will find himself if he comes up again for office. Oats are looking fine, also peas. Meadows are coming on wonderfully but need rain badly. Prospects are for a nice rain soon and I guess everybody will be happy when it arrives.—M. B. R.

OAKLAND (N)—We are having a dry time here and plowing not all done. Most of the corn is planted but some to plant yet. I have not heard of any trouble about seed corn. A good many looking for seed potatoes. This dry weather will interfere with planting. There is a good show for fruit. Wheat is doing well. Some pieces are looking bare. Everything needs rain. Feed of all kind is cleaned up as close as I have seen in a long time. Stock has just got on full pasture.—E. F.

MISSAUKEE—Farmers are winding up corn planting with a larger acreage than common. The ground is in fine condition and if the weather continues warm it will soon be up. Late potato planting has just begun and will be about 60 per cent of a crop planted on account of seed shortage. Very few beans will be planted this season but a large acreage of millet will be sown for a substitute for hay as there are very few meadows.—H. E. H.

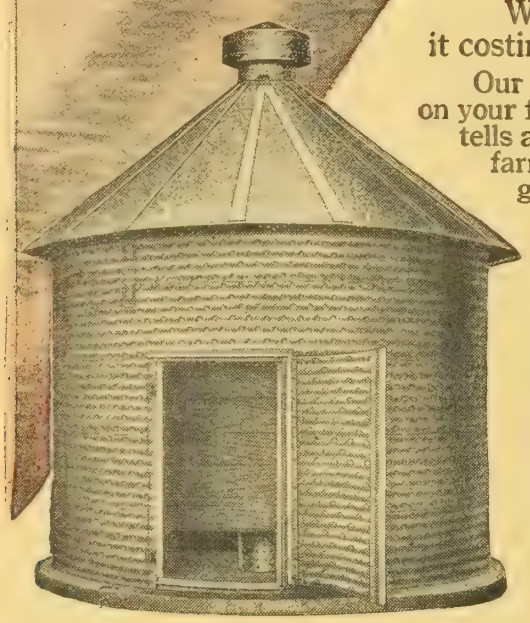
MARTIN
Cribs & Bins
promise safe, clean, dry storage for Corn, Grain, Clover-seed, Potatoes and
BEANS

Let Us Put This Corn-Crib on Your Farm

We will show you how you can put this modern, steel corn crib on your farm without it costing you a cent.

Our big, new Corn Crib Book explains how these indestructible cribs will save enough corn and grain on your farm to pay for themselves. We want to send every farmer a copy of this interesting book which tells all about Martin "Corn-Saver" Cribs — how they have driven the rats and mice off thousands of farms — how they are saving farmers thousands of dollars every year by stopping their corn and grain losses and giving them increased profits every year.

This book pictures and describes in detail these modern steel cribs and this up-to-date method of storing corn and grain. It gives the experiences of actual owners—farmers who are using Martin Cribs and know what they are talking about. Find out what Peter J. Lux the big "Indiana Seed Corn Grower" says—and read why many other farmers say that these "Corn-Saver" cribs have been the best investment they ever made. This valuable book will be sent FREE and postpaid. It tells how Martin owners obtain greater profits, absolute protection from rats, mice, fire, mould and thieves — and freedom from worry over any possible damage to the crops.



Find Out How Martin Cribs and Bins Will Protect Every Bushel of Your Bean Crop From Loss.

Martin "Corn-Saver" Cribs are Built in Circular and Oblong Styles — All Sizes to Fit Any Farm.

Martin STEEL "CORN-SAVER" Cribs

are substantially constructed of heavy corrugated steel, — built to stand up under severe conditions — no need or expense of repairs — will outlast wood cribs many times — pay for themselves in from one to three seasons through increased profits and stopping all losses. They are absolutely rat, mouse, fire and thief proof. They are built in styles and sizes to fit the needs of any farm — from 100 to 10,000 bushels capacity.

(9)

Fill Out The Coupon — Mail It Today

You Can Store Wheat, Oats and Other Grains in Martin Cribs

Because of the patented construction of the Martin Crib, you can store wheat, oats, rye or other small grains in it at harvest time and hold them until Fall for the higher prices, without losing a single bushel. Then you can refill it with corn, and in this way the Martin will yield you two big extra profits from your crops in one season.

In 1914, farmers who bought steel cribs and bins and held their wheat for higher prices, received double the price obtained by those who sold at harvest time. This year you have the same opportunity. The 1920 wheat crop is short. Prices are almost sure to go "sky-high." The farmer who stores his wheat safely in Martin Cribs or bins will get the extra profits himself instead of allowing the grain speculators to take it. Corn, too, will bring record prices this year and you can't afford to take chances with your crops by storing them in unsafe cribs or bins.

Send for This Big FREE Book and Our Special Offer

We want you to know all about Martin Cribs. That's why we have published this big, finely illustrated Corn Crib Book. We will gladly mail you a copy of this valuable book, FREE, and postpaid. Better write for your copy today and find out all about these crop-saving, money-making Martin Cribs and Bins. Find out how you can put a Martin Crib on your farm without it costing you a cent. It takes only a postage stamp to get this book. Use the coupon at the left. We will send the book by return mail and also our **Special Low Price Offer**, which we are making now for early orders.

ask-

The Man Who Owns One Here's What They All Say:

The Best Thing I Ever Bought

"The 1917 corn crop was the worst I ever saw, but my Martin Crib dried it out fine and not an ear was wasted. The Martin Crib is the best thing I ever bought."
PETER J. NICKLE, Rushville, Ind.

Martin Paid for Itself

"I would not exchange my Martin Crib for the finest crib of any other type. Considering the price of corn last year, without a doubt I have saved enough to pay for my crib. My advice to those in need of a crib is by all means to invest in a Martin Crib."
ROY B. GROVES, Batavia, Ohio.

Virginia Senator Endorses Martin Crib

"Speaking of farm assets, I surely have it in my Martin Crib. Truly, if I could not get another, $1000 would not purchase my Martin Crib. I feel like kicking myself for not having bought one in 1907, when I first began farming. It sets my farm off — a building of beauty as well as service." DR. T. S. HERRING, Jefferson, Va. Member of Va. Senate, 16th District.

Starved Out the Rats

"The Martin Steel Corn Crib is a perfect preserver of corn. Formerly the rats ate and wasted about one-half my corn. None is lost now. My corn cures and is well preserved. And corn thus cured, unquestionably has a higher feeding value for all live stock."
W. H. CRECRAFT, Liberty, Ind.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

LAND BANKS FORCED TO HOLD UP LOANS

A number of readers who have recently applied for loans through the Federal farm loan system have written to inquire when they may expect to receive their loan. The matter has been referred to the Federal Land Bank of St. Paul, whose Secretary, Mr. H. K. Jennings advises as follows:

"We will not be able to receive new applications for loans until after the decision has been rendered in the suit now pending in the Supreme Court of the United States.

"As you are aware this case has been ordered for reargument which will not take place until sometime next fall, probably in October. After the argument the court will take whatever time it deems necessary to consider the case before decision is rendered and the probabilities are that we will not, for these reasons, be able to take any applications for closing this season.

"A few days ago a joint resolution was introduced in congress authorizing the Secretary of the Treasury to purchase $32,000,000 of farm loan bonds, proceeds of which were to be used by the banks in retiring their obligations for borrowed money and complete whatever pending loans they had on hand. This arrangement gives us $4,500,000 which will enable us to clean our records entirely of all notes payable and also will clean up all actual commitments on applications which were allowed before March 1st, 1920.

It is very unfortunate for the farming interest that the Federal Land Banks were interfered with at this time. It is a well established fact that the suit was instituted by the Farm Mortgage Bankers' Association of America and all members of the association are contributing liberally for the purpose of putting the system entirely out of business.

"The best information that we can get indicates that the reargument of the case was ordered, not because there was any question about the Federal Land Banks, but on account of the status of the Joint Stock Land Banks."

HUDSON SUPER SIX

Hudson Fineness Equals Its Matchless Performance

Aside From the Supremacy of the Exclusive Super-Six Motor, Its Beauty Gives Distinction in Any Field of Fine Cars

Hudson has unremittingly kept the issue of performance to the fore. Not simply because its mastery is indisputable.

Rather because this question is vital above all. It must always be so. It must always be the measure of any car's title to worth.

Hence undue emphasis has never been placed on Hudson's four years' leadership in fine car sales. Largest sales are not infallibly proof of greatest merit. Hudson has no need to offer them as such.

Yet their importance cannot be overlooked. Here is the massed opinion of far the greatest number of owners of any fine car in the world. Some are driving the earliest Super-Sixes built—now more than four years old. Some acquired Hudsons but recently. But how unanimously they hold no car can rival it.

What 90,000 Owners Know First Hand

Those who have had their Hudsons longest are perhaps its most emphatic champions. They know it best. They have seen it pitted with triumph against every situation that can confront an automobile. Today their Super-Sixes are giving service, such as is literally beyond the performance capacity of many new cars that cost more.

Certainly no fine car is so highly regarded by such a large following.

See What It Has Done

Were its position less deserved could Hudson hold the loyalty of all these? Were its supremacy less decisive, surely five years must have discovered the rightful successor.

But time only brings fresh evidence of Hudson leadership.

In speed—in power—in acceleration—in hill-climbing, it has never been matched.

The most abusive tests to which a car was ever subjected have failed to find its endurance limit. Could other types adopt it, they might share Hudson's unmatched ability. But Hudson controls it. By right of invention Hudson alone can use it.

It will not be possible to supply all who want Hudsons. So even though you may not want your car for several months, now is not too early to place your order.

Hudson Motor Car Company, Detroit, Michigan

FARM BUREAU AFTER MORE WAREHOUSE SPACE

The Michigan State Farm Bureau has already outgrown its warehouse facilities which were acquired last April and has just completed arrangements for securing additional space in the city of Lansing. The amount of wool shipped to the Farm Bureau by members has far exceeded anticipations. To date there is more than one quarter of a million pounds in the warehouse ,and as much again reported in the hands of assemblers. Total graded to date is 208,280 pounds, and it is graded as follows:

Delaine, 7,568; fine clothing, 6,649; 1-2 blood vombing, 16.019; 1-2 blood clothing, 1,146; 3-8 blood combing, 63,737; 3-8 blood clothing, 649; 1-2 blood combing, 16,019; 1-2 1-4 blood clothing, 50,339; 1-4 blood low, 6,103; braid, 2,216; discounts, 19,961; tag, 1,680; buck, 262. There are 145 wool assembling points now at work in the state. These are scattered over 47 different counties. Five carloads not included in the above total, are reported ready for shipment south from the upper peninsula.

The Farm Bureau is investigating the coal situation with the intention of acting as purchasing agent for local units which desire such assistance. As the Bureau points out the problem is not one of price but of getting the coal at all. Fears are expressed that unless the farmers make arrangements through some organized source they may have difficulty in getting their winter supply.

The completion of the arrangements for the organization of a State Co-operative Elevator Exchange will be made June 29th and 30th at East Lansing when delegates of twenty co-operative elevator associations will be called together by the State Farm Bureau.

UNIFORM WOOL GRADES SOUGHT

Tentative types representing various grades of wool have been prepared by the Bureau of Markets, United States Department of Agriculture, in connection with its investigational work looking toward the ultimate establishment of uniform wool standards. The types decided upon by the government experts have been prepared after careful examination of thousands of samples that represent the opinion of the trade generally as to what should comprise wool standards, and which now form the basis of commercial transactions.

It is proposed to demonstrate these types to wool growers for the purpose of determining the practicability of their application upon a commercial basis. These demonstrations will be conducted by wool experts sent out from Washington to assist the Bureau of Markets field agents.

There are now no fixed wool grades in universal application, with the result that the purchase of the producer's product is based upon arbitrary standards fixed by individual buyers. It is therefore obvious that to place the business upon a uniform basis would be decidedly advantageous to all concerned.

For several years the Bureau of Markets has been conducting investigations and making a study of wool samples collected from all states and foreign countries with regard to the possibility of establishing uniform wool standards, and the work has now reached the point where the wool experts in charge of it feel warranted in submitting their findings to wool growers for consideration. Of course, it must be understood that the work is still at an investigational stage. Those interested in the demonstrations may secure full information by writing the Bureau of Markets, United States Department of Agriculture, Washington, D. C.

Michigan Crop Outlook Reported Excellent

Peninsular State Will Have Best Crops of Grain, Vegetables and Fruit in Years Judging From Progress to Date

THE MAGAZINES of the country have been full of alarming reports over the alleged abandonment of farms in Michigan and the general decrease in the acreage planted to crops. But we have seen nothing in these magazines about the excellent progress which all crops are making in this state. Nor have we seen any mention made of this fact in the crop reports published by the U. S. Bureau of Crop Estimates. The condition of Michigan crops and fruits is such as to warrant widespread publicity by all interested in the agricultural situation in general and Michigan's reputation as an agricultural state in particular. Michigan has the best fruit prospects right now of any state in the union, bar none, and she will make no concession to any other state in the condition of winter wheat, oats, rye and other grains. Regardless of what the pessimists have to say about Michigan agriculture we know and everyone else versed in the situation knows that Michigan will hold firmly to her title as one of the nation's richest agricultural states and will take off her hat to no other state when the sum total of her crops is computed next fall.—Editor.

THE PESSIMIST will find no comfort in the most recent reports from the agricultural states of the condition of crops. Almost without exception the condition of grains, fruits and vegetables is reported as good to excellent. This is particularly true of the northern states where the majority of winter food products are raised. The season has been from two to five weeks late all over the United States, but while this was discouraging during the early spring, it can now be seen that the late season was a God-send to nearly all crops and fruits.

The acreage of all crops is slightly less this year than last, nearly every state reporting a decrease. All states report also lack of labor which will handicap the cultivating and harvesting of crops. Wages varying from $70 to $105 per month and board and rooms are reported, while the western grain growers have agreed upon a minimum wage scale for harvest hands of $6 per day, and they are hard to get at that price. The Hessian fly has done considerable injury in some states, and army worms are reported at work in Missouri and adjoining states. Montana is combatting an early crop of grasshoppers but does not expect serious losses from them. A few southern states report too much moisture and a few northern ones too little moisture. But these extremes are always present. So far as the general crop situation is concerned it was never better.

Corn Progress Fair

Corn is practically all in the ground. Michigan reports the early planted varieties as growing rapidly and in good healthy condition. Iowa reports growth slow, but Ohio, Indiana and Illinois claim excellent germination and rapid growth. The total acreage planted to corn is not yet known. Only one or two states show an increase; the majority a decrease. It is expected that acreage and consequent yield will show a slight increase over last year. This is to be expected because of the strength and high prices ruling in the corn market since the first of the year.

$3 Per Bushel for New Wheat Crop

A few states report excellent progress of winter wheat but the majority are not so optimistic. Indiana's report to the Bureau of Crop Estimates, under date of June 3, says: Reports of Hessian fly coming in. Some fields badly infested. Joint worm is also prevalent. California: Condition very spotted and decline indicated. Missouri: Some damage from excessive rainfall. Condition in general spotted. More encouraging reports are as follows: Kansas: Heading in practically all portions of the state. The volunteer acreage in the west still looks promising. Maryland: Reported grain heading low. Too cool for rapid growth, but grain dealers offer $3 per bushel for new crop. Michigan: Condition improves northward and crop is good from Lansing northward in most sections. Some poor fields in southern counties. Nebraska: Condition generally splendid. Abandonment probably considerably smaller than reported.

Oats

Delaware: Outlook bright for a good crop. Florida: Shows good yields but rains interfere with harvesting. Indiana: Fields look good. Conditions favorable. Kansas: Strong and healthy but heading short. Maryland: Outlook good for a fair crop. Michigan: Germinated quickly, stand very good. Rain needed. Minnesota: Condition excellent. Missouri: Oats improving but slightly below normal. Acreage probably less than expectations. Nebraska: Improving and condition quite favorable. New Jersey: Seeding completed. Stand and condition good although late. North Dakota: Planting 80 per cent completed. Growth starting favorably. Ohio: Making good growth. Condition fair to good. Oklahoma: Improving now but stands are thin due to heavy rains and freezes shortly after sowing. Pennsylvania: Seeding completed. A good stand and excellent condition reported in southern counties.

Rye

Delaware: Condition steadily improving and a good yield is expected. Indiana: Much rye is headed out and generally in good condition. Some poorer fields are being "hogged down." Maryland: Outlook indicates fair to good yield. Michigan: Crop heading; straw shorter than usual. Stand fair. Minnesota: Condition very good. A little abandonment reported. Montana: Condition excellent. Making good growth. New Jersey: Headed out. Condition somewhat better than wheat but crop below average. North Dakota: Some improvement shown but state condition below average. Ohio: Heading out rapidly. Condition good. Pennsylvania: Heading in southern counties. Condition poor to good. South Carolina: Condition good to excellent. Wisconsin: Now over 20 inches high and well headed out in southern and eastern districts. Wyoming: Condition extra good.

Potato Prospects Poor

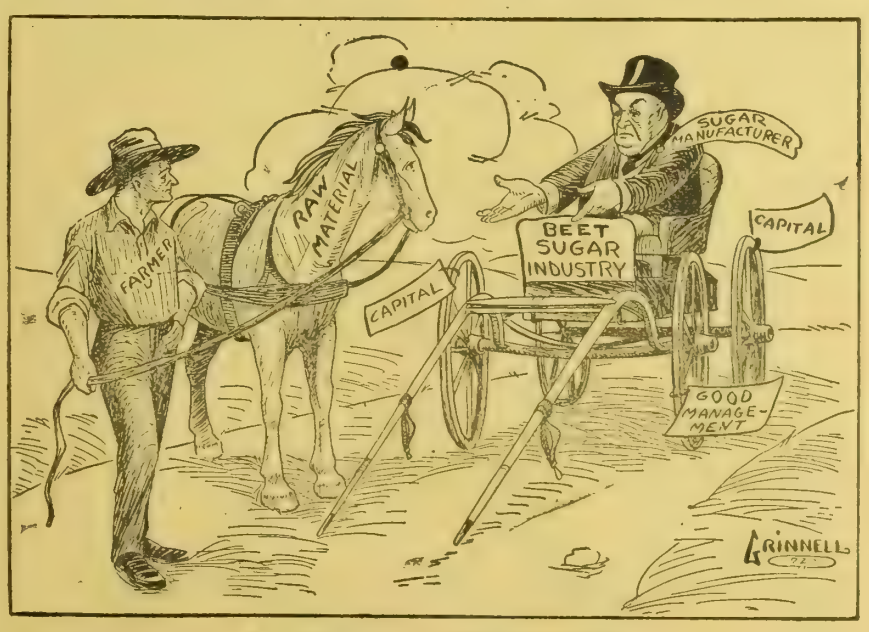
Colorado: Planting progressing rapidly. Acreage limited by high price of seed. Prevailing price being from 8 to 12 cents a pound. Connecticut and all other New England States: Planting about finished. Last half of May excellent for planting and growth in Aroostook County, Maine. Delaware: Condition fair to good but many fields "spotted" due to seed rotting. It is expected that a fair acreage will be planted to late potatoes. Indiana: High price of seed has materially reduced acreage. Kansas: Prespects particularly flattering in the Kaw Valley but stand reported thin in the Arkansas River section due to rotting of the seed. Louisiana: Early Irish potatoes now moving to market. Sweet potatoes doing well. Maryland: General condition fair to good. Prospects are good for a large crop of late potatoes. Michigan: Dealers report old stock exhausted except for an occasional car. Acreage a few per cent below last year due to labor shortage, abandonment of farms, the high cost of seed, etc. Minnesota: Planting progressing nicely. Slight increase in acreage indicated. Montana: High prices and limited supply will reduce the commercial acreage. Nebraska: Condition generally good. Reduced acreage expected. New Jersey: The crop is practically all in and is up and being cultivated in the central section. North Carolina: Irish potatoes promise very good yields. North Dakota: Planting becoming general. Increased acreage unlikely. Ohio: Acreage probably reduced. Early planted crop in. Condition good. Pennsylvania: Planting in progress in all sections. Seed scarce and high priced. Early varieties being cultivated. Wisconsin: Early potatoes showing in fields. Late being planted under favorable conditions.

Hay Conditions Improve

Colorado: From ten days to two weeks late but progressing rapidly. Connecticut and all other New England States: Coming on excellently Indiana: General condition excellent. Clover heading in southern counties and cutting will commence in about ten days. Kansas: Hay and pastures improving. First cutting of alfalfa in progress all over south and east; crop only medium. Maryland: Too cool but outlook indicates good crop. Michigan: Prospects somewhat improved though the growth is backward. Minnesota: Making rapid growth. Alfalfa generally in splendid condition. Considerable sweet clover seeded in northern section. Missouri: Conditions promise fine crop on increased acreage. Alfalfa is being cut for first time. Clover conditions favorable. Montana: Supply very scarce and is not sufficient for work stock. No. 1 timothy is selling from $45 to $60. Outlook for hay crop is good. Considerable acreage of millet, oats and other crops being sown for hay. Considerable alfalfa has been winter-killed especially in Custer, Richland and Broadwater counties. Some of this acreage has been reseeded to alfalfa and the remainder to millet, corn and other crops. Nebraska: A bumper first crop of alfalfa assured.

Fruit in General

Arkansas: Present outlook is for 90 per cent of the apple crop of last year. Strawberry movement in White County will end this week. Prices from $2.50 to $3 a crate below those prevailing the first week due to freight congestion. California: Slight decline in condition of apricots. Car shortage for shipment or deciduous fruits more pronounced. Sugar situation and can shortage also causing apprehension among canners. Colorado: All fruit from ten days to two weeks late. Peaches greatly damaged except around Palisade and Mesa County. Connecticut and all other New England States: Apples nearly in full blossom in southern New England. Indiana: All fruit crops in fine condition. Iowa Fruit prospects continue to be good. Kansas: Apple crop apparently good in the Missouri River section and most of the Arkansas River Valley. Kaw River orchards from Kansas City to Manhattan show a very light crop. Cherries show from a light crop to nothing at all. Berry crop is good and strawberry harvest is commencing. Louisiana: Peach and pear outlook is very unsatisfactory. Maryland: Late apple crop promising. Peach trees show leaf curl but fair crop is expected. Keiffer pears indicate good crop in some sections. Blackberries and raspberries promise heavy crop. Early strawberries but slightly injured by frost, late crop promising. Michigan: Present prospects for practically a full crop of all kinds. Montana: Outlook for apples is good in Flathead, Missoula and Ravalli counties. Sweet cherries and pears in Ravalli County were damaged by frost. New Jersey: Apples in bloom in northern counties; a good set is reported from the southern and central districts. Brown rot continues in the peach crop. Ohio: Prospects generally good, although a heavy drop reported from some localities. Pennsylvania: Apples, peaches and pears have set well in southern counties and are blooming in northern. No damage reported from May frosts. Washington: Some winter injury to apples reported in Yakima and Spokane district. Heavier injury in Walla Walla. In Wenatchee prospects same as in 1919.



How Can he Go Without the Horse?

How Farmers May Relieve Sugar Shortage

Sorghum and Sugar Beets Provide Source of Syrups and Crude Sugar for Cooking Purposes

FARM FAMILIES are suffering from the acute shortage and high price of sugar. They are wondering where they are going to get sugar for their canning this summer and fall, and how much they will have to pay for it if it is available at all. These questions the BUSINESS FARMER has sought to find an answer to with but little success. Although Michigan will produce a good many million pounds of sugar this year it is not likely that the people of the state, except for the farmers who grow the beets and those who have stock in the sugar factories, will receive any more benefit from this supply than they ever have.

The average individual is likely to get the idea that there is some way in which the individual farmer may extract and refine sugar from beets, sorghum, etc., but we are assured by the United States Department of Agriculture that this cannot be done except at a prohibitive cost. One of the recent inquiries received along this lines is as follows:

"I would like to know if there is any way possible that a farmer could raise his own sugar beets and do his own refining. If so will you please inform me. Enclosed you will find $1 for another year's subscription to the M. B. F. We appreciate your paper very much."—*C. Y., Mason Co.*

How to Extract Sugar

This inquiry being referred to the Department of Agriculture brought forth some interesting information, the principal part of which was that farmers could produce syrups from beets and sorghum which would take the place of refined sugar for certain cooking and table purposes. We were advised that the extracting of the crude sugar was a tedious, impractical task, and that moreover, the syrups would serve equally as well as the sugar. The letter containing this information is reproduced below. It is somewhat technical as most contributions from governmental departments are apt to be, but its conclusions are perfectly understandable:

"It is, of course, out of the question for the individual to attempt to produce refined or white sugar, tho it is possible to produce certain sugars by direct evaporation and crystallization. In the manufacture of such syrups, they are ordinarily evaporated to a density of seventy, to, say, seventy-three per cent solids. Where the character of the syrup is favorable, sugar (sucrose) will frequently crystallize out from such syrups after they have been stored for some length of time. Under the same favorable conditions, a syrup that has been evaporated to a greater density, say, eighty to eighty-five per cent solids, will crystallize more readily and will afford a larger quantity of sugar srystals. However, it does not always follow that a syrup will crystallize even when it has been evaporated to a density of eighty-five per cent solids: In the case of sorghum syrup, crystallization is more liable to occur in the product made from fully ripe sorghum than in that made from under or over-ripe sorghum, as such cane always contains greater or iess amounts of the sugar known as invert sugar which has a tendency to retard the crystallization of sucrose, and, when present in sufficient amount, to prevent it altogether. This sugar also occurs in ripe sorghum, though usually in comparatively small amounts. Solids other than sugars in syrup also retard crystallization of sucrose. Syrup made from sugar beets (or from sugar cane) will usually contain a relatively small proportion of invert sugar and for this reason the average beet (or cane) syrup is more liable to crystallize than the average sorghum syrup.

"The following methods are suggested in case it is desired to attempt to produce sugar from these syrups:

"**Crystallized Sugar.**—The evaporation of the syrup is continued until a density of say eighty-five per cent solids has been reached, and the syrup stored, preferably in a cold place, until it is considered that a satisfactory yield of sugar has been obtained; this will require several weeks to several months. Crystallization may be hastened by stirring in about one ounce of granulated sugar as soon as the syrup has cooled to about atmospheric temperature. The stored syrup should be stirred frequently in same manner in order to avoid the formation of a solid, concrete-like mass of sugar. The crystals may be freed from syrup by placing the mass in a barrel or other container, the bottom of which is provided with many small holes or fine meshed screen and allowing the syrup to drain out. The excess syrup remaining in the mass may then be removed by carefully adding a very small quantity of water on top of the mass and allowing it to drain thru. After thorough draining, the sugar should be dried.

"**Concrete.**—The evaporation is continued until test of a small quantity shows that it will form a solid mass upon cooling. It is then poured into containers, preferably comparatively small ones, and allowed to form solid blocks. A coarsely granular product may be obtained by stirring continuously while cooling. Great care must be taken to avoid scorching or buring the syrup during evaporation, and the same precaution must be taken in drying the crystalline product. These products may be used for the various purposes for which the ordinary "brown sugar" is used. However, as they will always contain more or less of the mother syrup and hence will always possess the characteristic flavor, it is believed that they will not be found suitable for use in place of refined or white sugar (granulated sugar.) The residual syrup (molasses) may be used for purposes for which molasses is ordinarily used.

"It is the opinion of the writer that the attempted production of sugar upon such a small scale will not be found at all satisfactory for general home usage. The danger of scorching the syrup becomes very great when evaporating in open evaporators to such high densities, while the final sugar is very liable to be a more or less sticky mass. The crystallized product is very liable to consist of large, irregular sized, hard, crystals while the concrefe is liable to be a dense, tough, mass; either of these products will dissolve ordinarily at a slower rate than will the sugar usually offered for sale. It is also considered doubtful whether such sugars will be found useful for any purposes than those in which the syrups themselves would be as satisfactory. Further, it is suggested that the time and labor involved will result in the net cost of the sugar being greater than that at which sugar may ordinarily be obtained.

"It is trusted that this information will be of assistance to you. If you desire further information, we will be glad to furnish you any that we may have available.—*Sidney F. Sherwood, Assistant Chemist.*

Plants That Yield Syrups

The Michigan Agricultural College has already issued a suggestion that farmers plant sorghum this year as a source of syrup, but the Department of Agriculture gives us a little more information along that line, as follows:

"As a simple, practical means of helping relieve the acute sugar and syrup shortage, the United States Department of Agriculture recommends the increased production of sorghum syrup which, it is pointed out, requires neither unusual skill nor expensive equipment to make. Furthermore, the methods of growing sorghum are similar to those of corn and in that respect involve little that is new to many farmers. Syrup manufacture is so simple that it can be carried on with profit by individuals utilizing small sized outfits of a daily capacity of 100 gallons or less. Where operations on a larger scale are feasibly, community plants having a daily capacity of several hundred gallons are suggested by the department.

"Sorghum syrup is palatable and pleasant flavored, and is an excellent table syrup. It can also be used as a substitute for other syrups or for sugar in making certain breads, cakes, etc., and as a substitute for a part of the sugar used in making preserves and the like. The cost of producing it at home is relatively low and usually an indivdual manufacturing it can readily sell any excess over his home needs to good advantage. Sorghum syrup produced during the 1919 season brought the producers from 90 cents to $1.50 a gallon, depending on the quality, marketing conditions, etc. Thus far the supply has fallen far short of the market demand.

Sweet Sorghum a Productive Source of Syrup

"The sorghum plant is similar in appearance to corn, growing about the same height and possessing about the same color. It may be grown throughout the United States in practically all regions where corn is grown, though parts of the extreme northern tier of states have a growing season usually too short for sweet sorghum to mature. In growing sorghum for syrup care should be taken to secure seeds of a sweet sorghum variety, and for planting in the north, one which matures quickly.

Sweet sorghum is grown from seed and is planted in rows about 3 1-2 feet apart. The plants should stand from four to six inches apart in the row. Approximately from five to eight pounds of seed is needed to the acre. Ordinarily planting time falls soon after corn planting, when the soil has become thoroughly warm. The stalks of the plants are ready for syrup making when the seeds which form heads at the top of the stalk are in the late dough stage, that is, just before they become dry and hard.

The machinery necessary for making syrup consists of a mill for extracting the juice from the cane and an evaporator for reducing the juice to syrup. The mill contains three iron rollers between which the sor-

(*Continued on page* 19)

Not Too Late to Plant Sorghum

THE DEPARTMENT of Farm Crops of the M. A. C. advises that both sorghum and sugar beets should for best results be planted between the middle of May and the first of June, but states that on account of the lateness of the season sorghum may do well if planted at once. Sorghum is usually planted after corn, and corn planting has only just been completed by many Michigan farmers. If the lateness of the season continues throughout the year we may reasonably expect that a fair crop of sorghum for syrup purposes can be produced from an immediate planting. The M. A. C. does not follow the Department of Agriculture in its recommendations of making syrup from beets, claiming that the syrup has an unpleasant taste.—Editor.

Meat and Livestock Situation During May '20

(*This Statement Issued by Institute of American Meat Packers*)

WHOLESALE prices of beef, continuing their decline during May, decreased from three to five cents a pound and at the end of the month were not far from the level prevailing when the United States entered the war, three years ago. Livestock producers are losing money on their cattle and many packers report losses on beef.

At the beginning of May the prospect indicated that the conditions arising from the railroad strike would be restored to normal, with a fair trade and satisfactory prices. But accumulations occurring during the strike exerted a depressing influence on prices practically througout May. Other depressing factors were importations of New Zealand lamb shipped here by the British government, the existence in "second hands" of beef bought from the government and an oversupply of dressed beef in Eastern markets.

These circumstances, coupled with declining values for hides and fats, were reflected in lower prices for cattle. Receipts were fairly large and the cattle were unusually heavy, with the result that the supply of beef has been quite large relative to demand. Wholesale beef prices furnish an interesting contrast to the price trend in many other commodities.

Popular demand for the choice cuts of beef still results in an unusually large differential between the price of meat from fore-quarters (less expensive) and meat from the hindquarters. This "spread" has narrowed slightly but nevertheless remains abnormal.

Pork

An improvement in the foreign exchange situation at many continental points resulted in more export trade to the continent than has been the case for several months. Inquiries ran more to meats than to lard.

There were no very large orders, and the improvement is slight; but the outlook for export trade to the continent is certainly better. For example, prices in francs which seem ridiculous to the foreign buyer when francs are exchangeable on the basis of seventeen and one-half francs to the dollar, seem more nearly reasonable when francs are quoted, say, at twelve and one-half.

Opinions concerning the prospect of exports to the United Kingdom are not wholly in agreement. It is asserted in some quarters that the British will be out of the market throughout the summer, except for occasional odd lots. Those holding this view believe that British stocks will be adequate until fall. Others assert that British stocks are sufficient for only a short period, but that replenishment will be made from stocks already bought and stored here, and that the British will contract for no important deliveries before September.

The British were practically out of the trade during May, with the consequence that the premium on light hogs—the kind sought by the British—was gradually wiped out.

The present high price of corn may result in free marketing of hogs by the farmers. Present hog prices, some farmers feel, do not justify the payment of the high prices demanded for corn. Furthermore, the high price of labor, corn and other feed also has resulted in a noticeable reduction in the quality of hogs, many farmers being unable to feed corn as freely as normally. A decline in quality is to be expected at this time of year, but the loss in grade is greater than is usually the case. The credit situation may have played a part in the decline of quality.

Mutton and Lamb

Frozen New Zealand lambs shipped here by the British government have depressed both beef and lamb prices. Since the domestic trade is not accustomed to handling frozen lambs the imported lambs have sold at lower values. This reacted sharply on the price of California lambs. The first California spring lambs of this season's crop sold around $19.50 per hundredweight, and speedily increased in price until within a few days they were selling as high as $20.75. Then, on account of importations of the New Zealand product, they declined until they have been selling as low as $17 to $17.50 wholesale.

(Editor's note: The above statements make no reference to the enormous quantities of New Zealand lambs imported by Armour & Co.)

Napoleon School Director Answers Critics of the Consolidated School

By L. G. PALMER *Director Napoleon Consolidated School*

Kent County Agitates Consolidated School System

"THERE is now a drive on in this vicinity to consolidate the schools. Of course only the bright side is given by those who favor it, including the school commissioner of Kent county and State Superintendent of Public Instruction. Now, I see by the letter of G. S., in the county crop report from Jackson County, that the people of Napoleon and other townships of Jackson county are not finding it so nice after once trying it out. As this question is being agitated all over Michigan and we here in southern Kent county are quite interested on one side or the other, couldn't you get us a little data on the question from places like Napoleon where it has been tried. I really think it is your duty to do this for your subscribers."—A. A. W., Byron Center, Mich.

The above letter moved us to make an investigation of the consolidated school at Napoleon, with the following results: We found that only one district out of the six had voted against the proposition; that the people of this district lived so far away from the school that it was necessary to get their children ready at 6:30 in the morning; and that this was the district which was making the most determined fight for the return of the old system. We found that the board was using an old school building of about one-half the necessary capacity pending the erection of a modern building; that the school was over-crowded, lacked modern equipment, and suffered from other handicaps which would be overcome when the new school building was erected. Our representative talked with Mr. L. G. Palmer, director of the consolidated school, who is very much in favor of the new system, but admitted that they were having their troubles. In the accompanying article Mr. Palmer sets forth his reasons why he believes the taxpayers of the consolidated districts should not return to the old system.—*Editor.*

IN THE month of June, 1919, all the school districts, whose school house was situated in the township, voted upon the proposition to unite and form a consolidated rural agricultural school, with the result that one district rejected the proposition, two others carried by only one majority each, while the other three voted in favor of consolidation almost unanimously. Only July 14, 1919 the district was formally organized and a district board elected. As it was necessary to provide more room for pupils, a bond issue was asked of the district, which upon first election was defeated, but at a second election the district authorized an issue of $27,500 in bonds which were accordingly sold by the district board. Plans for a new building were drawn, but upon the advice of the architect and the department at Lansing, bids were not asked for until March 6, 1920 and then the bids being over $55,000 we were unable to let contract and called and advisory meeting of the district.

About this time opposition began to develop and take form toward a vote to disband the district and return to the condition as we were before the vote for consolidation.

All concede that a better school can be held under consolidation than by the separate districts but the increased cost and the transportation of the pupils seem to be the greatest objections. It is admitted by all that the entire cost of the school has been more than previous years, so has the cost in all lines, so without consolidation the cost would have been greater. So the question arises, will not the better school be worth the increased cost? In the district which rejected consolidation, their taxes were only three dollars less per thousand than the consolidated district.

In looking up statistics as to the cost of transportation we find that Napoleon pays the highest price of any district in the state for this purpose being $9, $8, $6.50 and $5 per day respectfully. It being a new venture ,nearly all were afraid to take the job, but present indications are that this cost next year will be much lower. The routes were long and a mistake was made of commencing school at 8.30 a. m. instead of 9 a. m., so that some pupils had to leave home at 6:30 a. m. which made it very hard for the small pupils. Drivers have been changed on one route, which has caused some trouble, but in general parents have been generally satisfied with the transportation and it has had the effect of more steady attendance and less tardiness.

One part of the district, and that part voted almost solidly against consolidation and bonds is 6 to 7 miles from the school house, their interest lie nearer another town and they wish to get away from this school. Could this be accomplished more harmony might be secured in the district.

Another adverse argument is the location of the school, it not being in the center of the district. This site was selected because the graded school had a good building to accommodate one half the pupils so very few would change the site but think the district should be enlarged by taking in territory of other townships to the south and east where the districts are nearer than one already in. As there was not sufficient room for all pupils without crowding this is used as an objection. Some object to the teaching of agriculture, manual training and domestic science, but in time these will more than prove their value and finally some object to the school on account of the teachers, saying some of them should not be allowed to teach anywhere, but this very often occurs in the district school and also in our best city schools.

Beet Growers' Ass'n Starts Campaign for 1921 Conference and Contract

ANY NOTION that the beet growers of Michigan have lost heart because of their failure to secure a fair deal from the manufacturers this year, will be dispelled when it is learned that plans have already been laid for a more vigorous campaign the coming season. This was disclosed at a meeting of the board of directors of the Association which was held at Owosso on June 3rd.

While it is generally felt that the responsibility for losing the fight this year rests upon the shoulders of those farmers who lost their nerve at the last minute and took contracts it is not desired that there should be any bitterness over the matter, which would only cause hard feelings between neighbors and delay victory for many years to come. The Association feels that such farmers who are growing beets are making a mistake and injuring the cause of organization, but the loyal members are willing to forgive and to forget and accept these into the ranks for the next campaign, believing that with the foundation already laid, and with a better understanding of what their rights are in the matter, that the farmers will be one hundred per cent loyal another year. An intensive membership campaign will be put on at once, and no stone will be left unturned to enlist every sugar beet grower in Michigan. A little investigation will disclose to every grower of beets that it will be to his financial advantage to align himself with the Association and never again to grow beets except under a contract approved by the Association.

Nine out of the ten directors of the Association were present at the Owosso meeting, in addition to delegates invited from the largest local in each county. These directors made the following report upon the percentage of members remaining loyal to their vows not to grow beets:

Shiawassee	75
Genesee	75
Clinton	80
Gratiot	75
Isabella	70
Ingham	75
Midland	85
Saginaw	95
Bay	90
Tuscola	75
Huron	75
Sanilac	80

Directors reported that companies had around 50 per cent of a normal acreage in all counties except Saginaw and Bay where practically no beets will be raised this year. Many beets are being cultivated up and planted to other crops every day.

According to reports from directors and men from the different counties the damage done as reported in the Detroit papers is just a frame-up. Only one shack has been burned in Saginaw county and the captain of the state police stated himself that in his opinion the man that lived there burned it himself. It is claimed some farmers are dragging their own beets up and reporting it done by night raiders so that they will not have to pay for seed. No houses have been destroyed by dynamite, a couple of window lights were broken in one shack and it was reported that it was blown up (false) the sheriff of Saginaw county found a picture of the Kaiser on the wall and requested that that be removed as perhaps that was why the windows were broken.

The Farm Bureau requested that we turn the fight over to them and they would build sugar factories (we wish they would) but our directors were of the opinion that the farmers would not want to burden themselves by investing 30 to 50 million dollars in duplicate plants so decided to stay to the mat and commence at once and put on the campaign for 1921. The western associations associating. A committee of three was appointed to confer with a committee of the Farm Bureau to look up the factory building proposition and report. The manager was instructed to establish offices at Durand and buy equipment suitable.

Farm Bureau Assumes Charge of Campaign Against Grasshopper Pest

ACCORDING to J. P. Powers, assistant secretary of the Michigan State Farm Bureau, the grasshopper pest which has been unusually active in Northern Michigan for a number of seasons past, are already at work in some counties and have wrought considerable damage with more to follow unless immediate and vigorous steps are taken to combat the menace.

"The insects killing seedings and young growths already have ruined crops of hundreds of acres," says Mr. Powers. "In Leelanau, Benzie, Kalkaska, Wexford, Mason and Grand Traverse counties, scores of farmers are quitting their farms or contemplating doing so. As it is comparatively early in the season a strong fight against them will save hundreds of acres from ruination, and with this idea in mind, the Farm Bureau is arranging to take the leadership in the battle. One carload of poison, 30,000 pounds, was shipped today to Benzie county, and other counties will be assisted as soon as they are in position to co-operate.

"The particular difficulty in fighting these insects is, that the sandy cut-over lands of that section of the state are particularly appropriate for the breeding of them. Last year there were 13 county boards of supervisors who appropriated money to fight these insects. I understand that these appropriations were reduced this year and combatting efforts in 1918 and 1919 curbed the scourge extensively. It was very bad in 1917.

"Efforts will be made at the next session of the legislature to secure enactment of a measure providing for grasshopper control with adequate appropriations for the efforts. This measure is to be somewhat similar to the noxious weed law we now have in the state.

"Arrangements were made last week to provide for financial assistance to the Michigan Live Stock Shippers Exchange, which is engaged in the perfecting of community live stock shipping associations over the state. Mr. C. E. Compson, of Lansing, is manager of this exchange, which now has about 70 of the 200 associations in the state co-operating with it.

"Arrangements were made also last week for the leasing of another large three-story warehouse in Lansing, owned by the Bird estate and opposite the Michigan Central station, for use in pooling wool. This building will accommodate one million pounds and its acquisition was forced by the fact that receipts of wool are so large that the present big buildings at 221 N. Cedar street is proving inadequate. This building is practically filled now. The lease on the Bird warehouse carries with it an option to buy, which will probably follow."

Acreage Condition and Estimated Yield of Important U. S. Crops

When Will the Farmer Come Into His Own?

Eaton County Farmer Talks Straight From the Shoulder on Needs of Agriculture

By BERT TOWE, in Charlotte Republican

The Iowa Wool Growers' Ass'n., a co-operative enterprise, has a membership of 3,600, and last year marketed 1,250,000 pounds of wool, on which it saved $340,000 for farmers because of the better markets it was able to find. This is enough money to pay the salaries of all county agents in Iowa for a year.—Organized Farmer.

ONE OF the greatest needs of the farmer at the present time is co-operation in distribution and marketing. The accomplishment of this purpose will be made possible, only through the introduction of methods resulting in careful, general farming and crop cost accounting. The last quarter century has witnessed an attempt to apply a universal and powerful stimulus to production only. The next quarter century must be to the farmer a business era, in which he himself must be the active participant in an indivdual farm and crop accounting campaign as well as an active participant for methods looking to co-operating in marketing.

The financial status of the farmer has been misunderstood. Glowing press accounts of large gross receipts from special crop or enterprise, without a complete financial statement of the running expense of the farm as a whole, has misled the public and the farmer has not been in a position to defend himself on account of the lack of data on the cost of production.

While the price of farm products has risen to a high level they have not kept pace with the increased cost of production. It takes more bushels of grain, tons of hay, pounds of wool, cattle, hogs or sheep to buy any of the standard tools or necessary equipment to run a farm than it did five, ten or fifteen years ago; and the same will apply to labor.

Let us take the average price of the eight leading products of the farm of the northern states during 1919 as given by Illinois Agricultural Association, U. S. Agricultural Investigation and the Trade and Drovers' Journal of Chicago. Giving the following figures as an average in the United States, a farmer produces this food stuff, clothing and foot-wearing material. He takes to market:

Meat worth to consumer, $100; farmer receives $44, distributor, $56.

Butter and eggs, worth to consumer, $100; farmer receives, $63; distributor, $37.

Fruit and vegetables worth to the consumer, $100; farmer receives, $45; distributor $55.

Cereals, worth to the consumer, $100; farmer receives $60; distributor $40.

Wheat, worth to the consumer $100; farmer receives $49; distributor $51.

Wool, worth to the consumer, $100 farmer receives $11; distributor $89.

Hides, worth to the consumer, $100; farmer receives 10; distributor $90.

Sugar beets worth to the consumer $100; farmer receives $33; distributor $67.

The totals represent these figures: Articles worth to the consumer $800; farmer receives $315; distribution $485.

Hence the farmers get $315 out of the $800 that the consumer pays. "Oh, but hold on," says the Big Five Packing Houses, which control most of the farm products of the United States, "the farmer is making money; just look at the great wealth in the farming industry." Farming is the largest single industry in our country. Take a peek into our country banks and note who holds a large per cent of the assets of those banks. the farmer. Again it is whispered into the ear of the city dweller that the farmer has no overhead expenses like other lines of industry.

Then the Big Five goes on to show Mr. Ultimate Consumer through the big city papers and magazines, that they are running their business on a small fraction of one per cent profit. This they claim is largely due to their tremendous overhead expense.

We do not doubt their statement, but we cannot help but wonder how they have accumulated hundreds of millions in less than a quarter of a century and paid salaries to some of their managers several times larger than the salary of our president; and at the same time are able to spend the major part of the summer months in the finest resorts in the world. That they who want to inform the public know how to get the other fellows money I see two pictures: one of a man rising with the sun during the spring and summer months, sleeves rolled up to his elbows toiling from 12 to 16 hours per day except time enough to eat his meals and all members of his family doing the same thing. This man is an actual producer of wealth. The other picture is a man who rises two or three hours later, takes a shower bath in an elegant equipped room for that purpose, takes a short walk for exercise, eats breakfast around 8 or 8:30 or 9 a. m., touches a button and drives to his office in as fine a limousine as modern skill can produce, with a private chauffer to open and shut the door. This chap takes lunch at a fashionable club at noon, at about three or four p. m. he touches another button, his car drives up and he returns to his family and spends the rest of the day playing golf at his summer home. The latter gent is the fellow who fixes the prices of the products that the first fellow works, works to raise.

To illustrate during July and August and September. last year, corn was worth around $2.50 per bushel. The fellow who rode in the limousine owned the bulk of the corn at that time. When the chap with the tanned face and arms came to sell in November and December, corn dropped 100 per cent and stayed quite steadily until the major part of that crop had gone into the hands of the fellow who rode in the limousine. Then corn began to rise in price and will continue to do so until the man who wears patched overalls and a last year straw hat has another crop ready to sell. Oh, but some one says "the law of supply and demand always controls." If that be true then we are entitled to an explanation of why corn products continued to remain on a high level and many kinds of products going higher while corn had dropped 100 per cent below the high point.

Up jumps another chap who does not raise corn nor speculate in farm products, his name is Mr. Ultimate Consumer and he says "Why don't you farmers know the fellow who rides in the limousine owns or controls most all of the cereal, glucose and syrup factories in the United States?" Another thing this fellow tells us that he eats more corn products in cold weather than in warm, however the law of supply and demand appears to be in the hands of the fellow who rides in the limousine who never put a callous on his hand or sweat on his brow unless from playing golf or tennis. Now, if it is a settled fact that the farmer is is single largest wealth producer why should the other fellow be putting a cost mark upon his products. Let us take a look at the overhead expense of the farm. If the reader will pardon the personal allusion I will take my own farm of 120 acres for an example, believing I can make it more clear by doing so. Money is worth from five to six per cent in good sized loans.

Investment on land and equipment $30,000 at 5 1-2 per cent, $1,650; taxes $541.60; insurance, $100; depreciation on fence, $150; depreciation on building, $700; incidental upkeep, $200; total, $3,241.60.

A farm is no different from a factory. If you allow your equipment to run down the earning capacity is reduced accordingly. Every farm faces the above overhead expense that must be met. Everything he buys from a paper to a tractor or an automobile, the overhead is the first item on the cost mark.

If any of the above statements are incorrect or out of balance with horse sense I would like to have them intelligently disputed.

Then why should the farmer stand in his own light and continue to work twelve to sixteen hours a day and turn over a goodly portion of the proceeds of several of those hours each day, gratis, to the fellow in the limousine or on a private yacht?

Let us take one example to illustrate: A few years ago a few energetic beet growers got together and organized what is known as the Michigan Sugar Beet Growers' Association. It's object was to get a fair portion of the profits derived from that industry and the sugar beet growers of Michigan, whether members or not, have received hundreds of thousands of dollars that the sugar kings of New York City would have had in their coffers had it not been for the activity of this little bunch of men. In spite of this fact several hundred farmers in central Michigan of which there are forty or more in the vicinity of Charlotte, have signed up and "gotten in bed" with the New York sugar kings who recently under the income tax law declared a dividend of ten million, eight hundred and fifty-two thousand dollars. In spite of the increased cost of production this year's contract is not as good as last.

Apparently this giant (the farmer) who is the corner stone of all America's great wealth and industry has gone into a state of lethargy or is stalking around like a giant without bones.

As the writer sees it, the first move of the farmer is to know what the cost of production is. The next move is for the farmer to put a cost price plus a fair profit on his products the same as all other producers do. But some fellow says "you will get Uncle Sam after you for violating the anti-trust law." If that be true when we are entitled to an explanation why the price of our products should automatically or systematically go up and down; down when in the hand of the farmers and up when in the hands of the speculators. And people keep right on eating three times a day the whole year round and produce is always the lowest when they eat the most in cold weather.

In conclusion I urge it is the duty of every farmer to support all worthy farm organizations with his time, knowledge and money for none of us know it all, but most of us know a little in our time.

Clare Farmers Put Candidate in Field

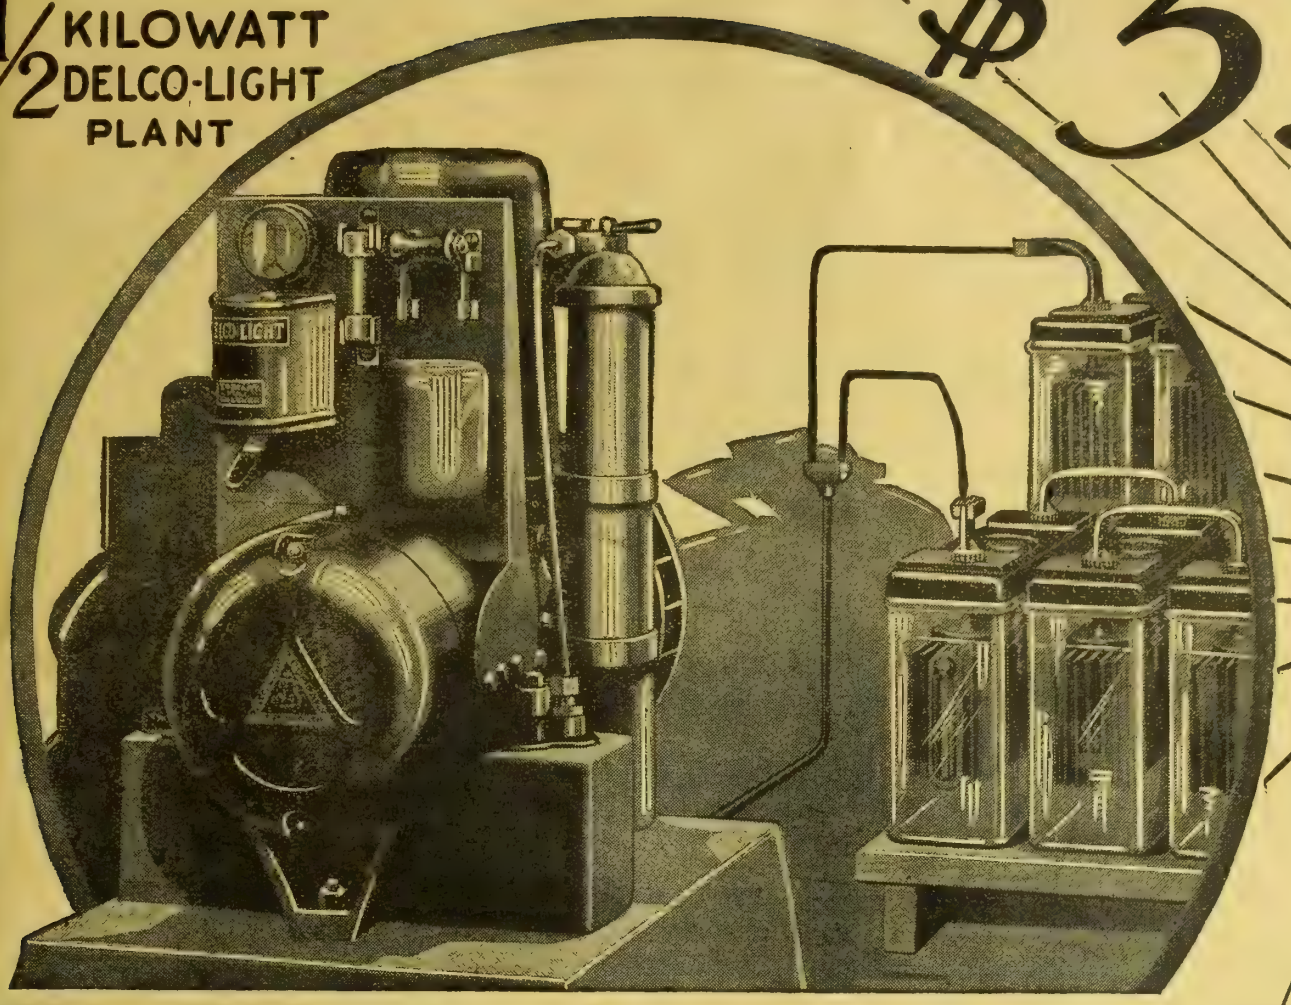
FOLLOWING OUT the plans adopted some time ago and and which were described in a recent issue of THE BUSINESS FARMER, the delegates selected by the farmers of Clare, Gladwin and Roscommon counties, met at Gladwin on June 5th and endorsed Mr. Richard Emerson, a well known farmer of Clare county, for state representative. The committee consisted of the following men: John Fitzpatrick, chairman, and George Staley, representing Clare county; Elmer Gedney and Levi Pfenning, representing Gladwin county; and Edward Coan, representing Roscommon county.

It was proposed at this meeting to hold another meeting at Gladwin on the following Saturday and have the candidate present with the committee. The committee will secure the names of prominent farmers as endorsing the selection of the committee and will use this for advertising purposes. It is believed that by this plan 75 to 70 per cent of the farmers of the district can be induced to support the candidate and insure his nomination and election.

The committee will also take up the matter of endorsing a candidate for the senatorship, this position having been held the past two years by Duncan McRae of Harrisville. It is probable that if Sen. McRae can be induced to run again he will receive the support of the farmers. Of him and his record, Sen. Herbert F. Baker writes as follows:

"I am glad to say of Sen. McRae that he is the salt of the earth. He has the courage of his convictions and no man in the legislature of 1919 has a better record for faithful service along the line of equal rights for all and special privileges for none.

"I think he is not disposed to be a candidate and it is my judgment that he should be encouraged to get into the race for in case he does not, the senator from that district is almost certain to be some two spot of a lawyer anxious to get into the good graces of the special interests. If you can do anything to get McRae back to the senate you will be performing a special service to the plain honest people of the state."



$395

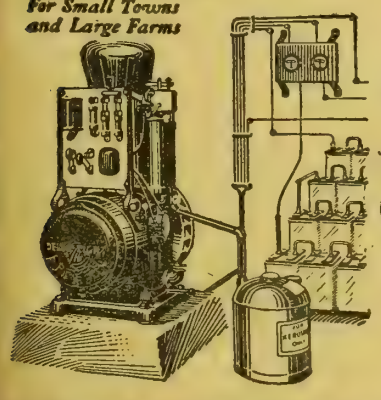
DELCO-LIGHT

A new model—the ½ Kilowatt is now added to the family of Delco-Light products—making a line of farm light and power plants that meets varied needs, large or small.

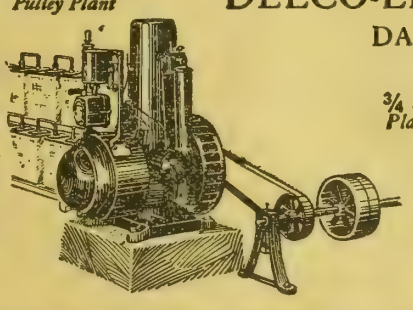
And the price is $395, f. o. b. Dayton, Ohio

The ½ Kilowatt is a smaller size Delco-Light plant, designed for installation where the use of electric light and power is not too heavy, such as in farm homes, summer camps and motor boats. The ½ Kilowatt plant with a large battery can be used for pumping water, ironing clothes and operating churns, separators and other power devices. Like the ¾, 1 and 3 Kilowatt Delco Light plants—the ½ Kilowatt has the famous valve-in-the-head engine. It is air cooled, runs on kerosene, and is furnished with a thick plate long-lived Delco-Light battery.

Three Kilowatt Plant For Small Towns and Large Farms



One Kilowatt Pulley Plant



There is a trained Delco-Light man near you who can figure your requirements and advise you as to the size plant you need.

MARKET FLASHES

TRADE AND MARKET REVIEW

From the news which found its way to Wall Street during the last few days from various parts of the country it is evident that the liquidation in merchandise and commodities which began the first of May causing lower prices has reached a point where it is due for a recovery and higher prices. Prices are expected to make a steady decline with occasional small advances. A healthy decline or advance invariably follows along these lines.

In fact, what is now going on in the markets for general merchandise and commodities is exactly what has been going on in the stock market. On the sensational advance from the low prices of 1915 the stock market did not move upward on a straight line. There was an advance followed by a drop; then another advance to a new high record followed by another decline and then another advance to new high ground. And likewise the decline from the high war or subsequent peace time records will not be made by one perpendicular drop, but by series of declines followed by temporary recoveries.

The pressure on banks for loans continues in spite of the 7 per cent rediscount rate at the Federal Reserve Banks. That borrowers are going to get the money some way is shown by the declines in Liberty bonds, caused by heavy selling.

Most of the grain markets are feeling shaky. Dealers are sure markets will be flooded with grain within the next few days, while railroad officials say they haven't cars enough available to send many to the grain sections of the country. Harvesting is expected to start in some sections of the country inside of the next week which will enable a closer estimate to be made of the 1920 crop.

WHEAT LOWER

Wheat continues to decline in the face of the facts that Australia is sure of a light crop owing to shortage of rainfall early in the season and Argentina's export tax on her wheat, which amounts to $50 a ton or about 46c a bushel. It has been believed that all of the surplus of Argentine wheat had been sold. Reports received during the past week direct from that country show that they have 2,500,000 tons or 83,100,000 bushels on hand yet but they admit that considerable of it is already owned by exporters, which leads us to believe that it is only a question of days when North America will stand alone as an offerer of wheat. Whether prices will continue downward it is hard to predict. Of course the price is above the government guaranty which ran out the first of June but as to whether they go to that level or below, most grain market experts appear to be unable to solve the problem. We are of the opinion that dealers and speculators are feeling around to find what the farmer is willing to take for his grain. One grain trade paper says, "Higher prices will prevail later in the season." The export demand remains fairly good. Great Britain is out of the market at present. Italy has removed the ban against hard wheat and Italian macaroni manufacturers will soon be in the market for foreign hard wheat. Cars are not coming very fast. One Western railroad was supposed to get 65 cars a day from the East. In 11 days it got just 25 cars all told and in the meantime had an order to send 40 cars per day to Minneapolis. Another railroad has been receiving 75 cars daily of which about 25 are fit for grain. Such a condition will continue until more cars can be built.

LAST MINUTE WIRES

DETROIT—Oats in good demand. Corn and wheat easy. Hay firm. Beans inactive.

CHICAGO—Corn and oats make small gains. Potatoes lower. Hogs advance. Beans firm.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

CORN WEAK

No. 4 Yellow	1.80		

There has been an advance in corn prices during the past week but many commission houses say the market is in a weak condition. Most all dealers are predicting lower prices in the near future due to the larger quantities appearing on the market during the last few days and to the fact that consumers are reluctant about buying, believing prices will be more to their liking soon. Reports from the country show farmers eager to sell and all cars available are being loaded with corn. Cash dealers at Chicago think the markets will soon be swamped with corn. But will it be? We cannot see it that way because how can they swamp the market if cars cannot be secured to ship it in? Of course farmers want to sell and get their money so to be ready for the coming harvest but until more cars are released for shipping grains we cannot see an overloaded market. Planting is practically all done but it is too early in the season for the condition of the crop to have much effect on the market.

Receipts of oats are very small at nearly all points and the market is firm. Dealers are anxious to secure more but, with the exception of Iowa, no state seems to have any material amount of oats to offer. For a time Canadian oats were coming to this country. Now it has changed and some of our badly needed oats are going to Canada, as they sold themselves short. New York is receiving some from Argentine. This helps to relieve the shortage there but they would be mighty pleased to get more and if the West had any, Eastern dealers would be willing to pay nearly any price to secure them as the situation has been very acute there for several months. It is said this year's crop is suffering at present from drouth and the cut worm.

RYE HIGHER

Rye has advanced again this last week and is inactive at $2.25 for No. 2 on the Detroit market with offerings very small.

"Rye visible is shrinking rapidly," says the *Rosenbaum Review*. "Seemingly this grain manages to get out of the country much faster than other grains. In fact, as compared with total stocks the exports of rye are much larger than anyone would have reason to suspect. Prices have not been much affected of late by a lack of export demand. The new rye crop will be moving before the old rye is cleaned up. Some of the former may be shipped on old contracts. Germany has been the best buyer of late, but the big premiums prevailing as compared with the July tends to restrict business. Condition of the rye crop has improved recently, due to rains and favorable weather."

Beans are holding their own it appears and are easy with little buying or selling going on at present. The planting as now indicated for 1920 will be about 800,000 acres and with a yield equal to the average of the last five years will produce a crop of 8,250,000 bushels.

I have been a reader of your paper for some time and have been quite interested in your reports for some time and in particular the bean market. I have about 275 bushel and thought I would write to you for your personal advice whether to sell at the present prices or not, or do you think that they will go higher? Thanking you in advance for the favor.—G. R. D., Flushing, Mich.

It is neither wise nor practical for us to tell you what you want us to. Our readers have all noticed that the bean market has shown more life during the past sixty days than it has for many months. They have probably also noticed that the market is off just now, with prices about 20 cents per hundred lower. The former strength in the market may have been caused by manipulation, but it is our opinion that is was caused by a scarcity of supplies. The increase of better than $1 per cwt. in the price naturally encouraged some selling and it looks as if the market had about all the supplies it can conveniently absorb in the near future. We need not be surprised if there is a still further decline, but we anticipate as we have many times before stated that this market will be much better before another crop is harvested. Farmers who need the money tied up in their beans might do well to sell a portion of their holdings now before the price goes any lower. Those who can afford to hold the balance, will, we believe, realize higher prices.

NEW POTATOES DECLINE

SPUDS PER CWT., JUNE 15, 1920		
	Sacked	Bulk
Detroit	9.33	
Chicago	8.35	
Pittsburg	6.13	
New York	8.35	
PRICES ONE YEAR AGO		
Detroit	2.40	2.33
Chicago	2.05	2.00
Pittsburg		
New York		

There was a small decline in new potato prices the past week but there is little consolation in the news as quotations are still high enough to hold up consumption. The demand is inactive, and there is nothing doing in old potatoes owing to the inferior supply on the market. Dealers here in the States have been caught profiteering on potatoes but we don't think dealers in England will have any such charges made against them as England has established a maximum legal price of $2.38 per 100 pounds. This is the price the farmers receive from the wholesaler, who in turn is allowed to add a profit of $3.65 per ton to the purchasing price when he sells to consumers or retailers. This looks like the profits were being distributed so that the farmer got his share.

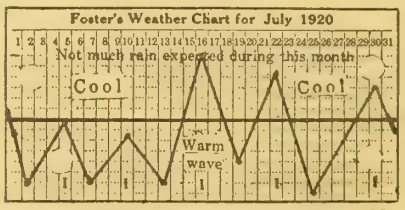
BOSTON WOOL MARKET

The Commercial Bulletin says: "The wool market has passed through another week of deadly dullness, with the trade drifting uncertainly. The prices are merely nominal for all classes of wool. The government sale Thursday did not help to fix values.

"Buying in the West is practically at a standstill while at the other end of the trade the manufacturers are quite at sea as regards the future and curtailing the present schedule

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., June 19, 1920.—The heavy horizontal line represents the normal of temperature. The zig zag line is the predicted movement of temperatures up and down. Dates at the top are for their time at meridian 90. If you are east of that line these weather features should reach you one or two days later; if west of it one to three days earlier. The I makes date of warm wave's arrival at meridian 90.

Warm waves will reach Vancauver, B. C., about June 21, 26, July 2, 7 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by cose of 22, 27 and July 3, 8; plains sections 23, 28 and July 4, 9; meridian 90, opper great lakes, Ohio-Tennessee and lower Mississippi valleys 24, 29 and July 5, 10; lower great lakes and eastern sections 25, 30 and July 6, 11, reaching vicinity of Newfoundland about June 26 and July 1, 7 12. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control the cropweather from near June 21 to near July 12. Temperatures are expected to average as much above normal as they have averaged below during the earlier parts of the crop season. Rainfall will average less than for some time past but it will be more evenly distributed. Sections where too much rain has fallen will get less and where a deficiency has occurred will get more.

Most severe storms and most rain is expected during the week centering on June 24 and that is expected to be a mild storm; not much rain but well distributed. These indications lead to expectations, that, as a general average cropweather and crop prospects will be favorable up to near July 12.

Indications for cropweather of July are that temperatures will average from about to above normal in Canada and in the northern tier of states. The crop outlook for this continent is encouraging. Recently too much rain fell along a line extending from New Orleans to New York. July will bring better cropweather for that extensive and important section.

W. T. Foster

of operations to three or four days, as a general thing."

Territory—Fine staple, $1.75@1.80; 1-2 blood combing, $1.60@1.65; 3-8 blood combing, $1.15@1.20; fine combing, $1.20; fine medium clothing, $1.45@1.50.

Pulled delaine, $1.75@1.80; AA, $1.65; A supers, $1.45@1.50.

LONDON WOOL AUCTION

The wool auction sales at London closed June 11 with merinos 25 to 30 per cent lower and medium cross breds 10 per cent down. Other grades showed declines ranging from 10 to 20 per cent. During the series the home trade bought 45,000 bales and the continent 13,000 while 42,000 were withdrawn.

DETROIT PRODUCE MARKET

The general supply of green stuff is small, but offerings of lettuce and spinach have increased and lower prices are quoted. Receipts of poultry are ample and lower prices are quoted for broilers. Demand is slow. Dressed hogs are steady and in fair demand, but there is a great deal of trouble in the dressed calf market owing to damaged supplies. The shipments that are packed in ice are arriving in good shape, but all other receipts are more or less injured by the hot weather and a great deal of condemning is being done. The market is weak. Apples are not moving. Offerings of strawberries are small and the market remains too high for activity. Eggs are in liberal supply and steady, but there is an easier tone in the butter deal.

Apples—Western, $5.50@6 box.

Butter—Extra creamery, 51c bid, 53c asked; creamery prints, 52c bid, 53c asked per lb.

Celery—Florida, $6@6.56 per case, $1.35@1.65 per dozen bunches.

Dressed hogs—Choice country dressed under 150 lbs., 19@20c; over 150 lbs. 17@18c per lb.

Dressed calves—Best, 18@20c; No. 2, 16@17c per lb.

Eggs—No. 1 fresh, 40 1-2c bid, 41 1-2c asked; storage packed, 42@42 1-4 c per doz.

Lettuce—Imperial Valley Iceberg, $4.50@5 per crate; hot house, 10@20c per lb.

Live poultry—Broilers, 45@50c; best hens, 33@34c; No. 2 hens, 32@33c; roosters, 20@22c; geese, 25c; ducks, 38@40c; turkeys, 44@45c per lb.

Maple sugar—45@48c per lb.; syrup $3.50@3.75 per gal.

Popcorn—Shelled, 10c per lb.

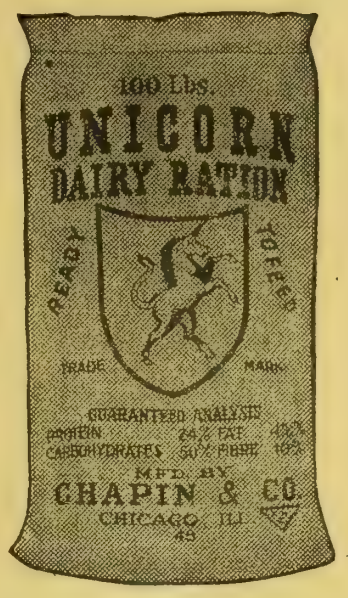
Strawberries—Kentucky, $8.50@ per 24-quart case.

LIVESTOCK MARKETS

EAST BUFFALO—Cattle; strong. Calves—50c lower; $6@17.50. Hogs —25@35c higher. Heavy, $15@16.25; mixed and yorkers, $16.25@16.35; light do $14.50@16.25; pigs, $13.50@14; roughs, $12.50@12.75; stags, $7@9. Sheep and lambs—slow; lambs, $14@19; yearlings, $8@17; wethers, $10@10.50; ewes, $3@9; mixed sheep, $9@9.50.

CHICAGO—Cattle; compared with a week ago, common and medium and warmed up steers and she stock 50c to $1.25 higher; others $1.25 to $2 higher. Hogs—10c to 35c higher; bulk light and lightweight, $15@15.25; bulk 250 lbs. and over, $14.30@14.95. Sheep—bulk direct to packers. Sales mostly steady.

Lower Your Milk Production Cost



Our booklets show you how to feed Unicorn the right way—how to cut the cost by feeding less.

Right now, more than ever before, you are forced to hold down the cost of milk production, or work without profit.

A quality feed, Unicorn Dairy Ration, will help you do this.

Quality in Unicorn means two things:

1. Using only the best feeds obtainable.
2. Putting them together the right way.

Everywhere, the "high men" in cow testing associations, who make the largest net profit, are Unicorn feeders.

Dairymen have cut their grain bills ten per cent and more by feeding Unicorn.

You cannot say that your production cost has touched bottom until you have fed Unicorn.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

WHEREAT Torres bestowed upon Francis a look of malignant anger.

"Stand on your haughty pride," Francis instructed him. "Decline the drink. Show them the inside of your helmet."

"I will not drink!" Torres cried, half in panic as the priest turned to him.

"You shall drink. If you are Da Vasco, the divine capitan from the sun, we will then know it and we will fall down and worship yoyu."

Torres looked appeal at Francis, which the priest's narrow eyes did not fail to catch.

"Looks as though you'll have to drink it," Francis said dryly. "Anyway, do it for the lady's sake and die like a hero."

With a sudden violent strain at the cords that bound him, Torres jerked one hand free, pulled off his helmet, and held it so that the priest could gaze inside.

"Behold what is graven therein," Torres commanded.

Such was the priest's startlement at sight of the inscription DA VASCO, that the pitcher fell from his hand. The molten gold, spilling forth, set the dry debris on the earth afire, while one of the spearmen, spattered on the foot, danced away with wild yells of pain. But the Sun Priest quickly recovered himself. Seizing the fire pot, he was about to set fire to the faggots heaped about his three victims, when the little maid intervened.

"The Sun God would not let the great captain drink the drink," she said. "The Sun God spilled it from your hand."

And while all the Lost Souls began to murmur that there was more in the matter than appeared to their priest, the latter was compelled to hold his hand. Nevertheless was he resolved on the destruction of the three intruders. So, craftily, he addressed his people.

"We shall wait for a sign—bring oil. We will give the Sun God time for a sign—bring a candle."

Pouring the jar of oil over the faggots to make them more inflammable, he set the lighted stub of a candle in the midst of the saturated fuel, and said:

"The life of the candle will be the duration of the time for the sign. Is it well, O People?"

And all the Lost Souls murmured, "It is well."

Torres looked appeal to Francis, who replied:

"The old brute certainly pinched on the length of the candle. It won't last five minutes at best, and, maybe, inside three minutes we'll be going up in smoke."

"What can we do?" Torres demanded frantically, while Leoncia looked bravely, with a sad brave smile of love, into Francis' eyes.

"Pray for rain," Francis answered. "And the sky is as clear as a bell. After that, die game. Don't squeal too loud."

And his eyes turned to Leoncia's and expressed what he had never dared express to her before—his full heart of love. Apart, by virtue of the posts to which they were tied and which separated them, they had never been so close together, and the bond that drew them and united them was their eyes.

First of all, the little maid, gazing into the sky for the sign, saw it. Torres, who had eyes only for the candle stub, nearly burned to its base, heard the maid's cry and looked up. And at the same time he heard, as all of them heard, the droning flight as of some monstrous insect in the sky.

"An aeroplane," Francis muttered. "Torres, claim it for the sign."

But no need to claim was necessary. Above them not more than a hundred feet, it swooped and circled, the first aeroplane the Lost Souls had ever seen, while from it like a benediction from heaven, descended the familiar:

"Back to back against the mainmast,
Held at bay the entire crew."

Completing the circle and rising to an elevation of nearly a thousand feet, they saw an object detach itself directly overhead, fall like a plummet for three hundred feet, then expand into a spreaded parachute, with beneath it, like a spider suspended on a web, the form of a man, which last, as it neared the ground, again began to sing:

"Back to back against the mainmast,
Held at bay the entire crew."

And then event crowded on event with supremest rapidity. The stub of the candle fell apart, the flaming wick fell into the tiny lake of molten fat, the lake flamed, and the oil-saturated faggots about it flamed. And Henry, landing in the thick of the Lost Souls, blanketing a goodly portion of them under his parachute, in a couple of leaps was beside his friends and kicking the blazing faggots right and left. Only for a second did he desist. This was when the Sun Priest interefered. A right hook to the paw put that aged confidant of God down on his back, and, while he slowly recuperated and crawled to his feet, Henry slashed clear the lashing that bound Leoncia, Francis and Torres. His arms were out to embrace Leoncia, when she thrust him away with:

"Quick!" There is no time for explanation. Down on your knees to Torres and pretend you are his slave—and don't talk Spanish, talk English."

Henry could not comprehend, and, while Leoncia reassured him with her eyes, he saw Francis prostrate himself at the feet of their common enemy.

"Gee!" muttered Henry, as he joined Francis. "Here goes. But it's worse than rat poison."

Leoncia followed him, and all the Lost Souls went down prone before the Capitan Da Vasco who received in their midst celestial messengers direct from the sun. All went down except the priest, who, mightily shaken, was meditating doing it, when the mocking devil of melodrama in Torres' soul prompted him to overdo his part.

As haughtily as Francis had coached him, he lifted his right foot and placed it down on Henry's neck, incidentally covering and pinching most of his ear.

And Henry literally went up in the air.

"You can't step on my ear Torres!" he shouted, at the same time dropping him, as he had dropped the priest with his right hook.

"And now the beans are spilled," Francis commented in dry and spiritless disgust. "The Sun God stuff is finished right here and now."

The Sun Priest, exultantly signaling his spearmen grasped the situation. But Henry dropped the muzzle of his automatic pistol to the old priest's midrif; and the priest, remembering the legends of deadly missles propelled by the mysterious substance called "gunpowder" smiled appeasingly and waved back his spearmen.

"This is beyond my powers of wisdom and judgment," he addressed his tribespeople, while ever his wavering glance returned to the muzzle of Henry's pistol. "I shall appeal to the last resort. Let the messenger be sent to wake the Lady Who Dreams. Tell her that strangers from the sky and mayhap the sun, are here in our valley. And that only the wisdom of her far dreams will make clear to us what we do not understand, and what even I do not understand."

CHAPTER XVIII.

CONVOYED by the spearmen, the party of Leoncia, the two Morgans and Torres, was led through the pleasant fields, all under a high state of primitive cultivation, and on across running streams and through woodland stretches and knee-deep pastures where grazed cows of so minature a breed that, full grown, they were no larger than young calves.

"They're milch cows without mistake," Henry commented. "And they're perfect beauties. But did you ever see such dwarfs. A strong man could lift up the biggest specimen and walf off with it."

"Don't you fool yourself," Francis spoke up. "Take that one over there the black one, I'll wager it's not an ounce under three hundredweight."

"How much will you wager?" Henry challenged.

"Name the bet," was the reply.

"Then a hundred even," Henry stated, "that I can lift it up and walk away with it."

"Done."

But the bet was never to be decided, for the instant Henry left the path he was poked back by the spearmen, who scowled and made signs that they were to proceed straight ahead.

Where the way came to lead past the foot of a very rugged cliff they saw above them many goats.

"Domesticated," said Francis. "Look at the herd boys."

"I was sure it was goat-meat in that stew," Henry nodded. "I always did like goats. If the Lady Who Dreams, whoever she may be, vetoes the priest and lets us live, and if we have to stay with the Lost Souls for the rest of our days, I'm going to petition to be made master goat-herd of the realm, and I'll build you a nice little cottage. Leoncia, and you can become the Exalted Cheese-maker to the Queen."

But he did not whimsically wander farther, for, at that moment, they emerged upon a lake so beautiful as to bring a long whistle from Francis, a hand-clap from Leoncia, and a muttered ejaculation of appreciation from Torres. Fully a mile in length it stretched, with more than half the same in width, and was a perfect oval. With one exception, no habitation broke the fringe of trees, bamboo thickets, and rushes that circled its shore, even along the foot of the cliff where the bamboo was exceptionally luxuriant. On the placid surface was so vividly mirrored the surrounding mountains that the eye could scarcely discern where reality ended and reflection began.

In the midst of her rapture over the perfect reflection, Leoncia broke off to exclaim her disappointment in that the water was not crystal clear:

"What a pity it is so muddy!"

"That's because of the wash of the rich soil of the valley floor," Henry elucidated. "It's hundreds of feet deep, that soil."

"The whole valley must have been a lake at some time." Francis concurred. "Run your eye along the cliff and see the old water lines. I wonder what made it shrink."

"Earthquake most likely, opened up some substerranean exit and drained it off to its present level—and keeps on draining it, too. Its rich chocolate color shows the amount of water that flows in all the time, and that it doesn't have much chance to settle. It's the catch basin for the entire circling of the valley."

"Well, there's one house at least," Leoncia was saying five minutes later, as they rounded an angle of the cliff and saw, tucked against the cliff and extending out over the water, a low-roofed bungalow-like dwelling.

The piles were massive tree-trunks, but the walls of the house were of bamboo, and the roof was thatched with grass straw. So isolated was it, that the only access, except by boat, was a twenty-foot bridge so narrow that two could not walk on it abreast. At either end of the bridge, evidently armed guards or sentries, stood two young men of the tribe. They moved aside, at a gesture of command from the Sun Priest, and let the party pass, although the two Morgans did not fail to notice that the spearmen who had accompanied them from the Long House remained beyond the bridge.

Across the bridge and entered into the bungalow-like dwelling on stilts, they found themselves in a large room better furnished, crude as the furnishings were, than they would have expected in the Valley of Lost Souls. The grass mats on the floor were of fine and careful weave, and the shades of split bamboo that covered the window openings were of patient workmanship. At the far end against the wall, was a huge golden emblem of the rising sun similar to the one before the altar by the Long House. But by far most striking were the two living creatures who strangely inhabited the place and who scarcely moved. Beneath the rising sun, raised above the floor on a sort of dais, was a many-pillowed divan that was half-throne. And on the divan, among the pillows, clad in a softly-shimmering robe of some material no one of them had seen before, reclined a sleeping woman. Only her breast softly rose and softly fell to her breathing. No Lost Soul was she, of the inbred and degenerate mixture of Carib and Spaniard. On her head was a tiara of beaten gold and sparkling gems so large that almost it seemed a crown.

Before her, on the floor, were two tripods of gold—the one containing smouldering fire, the other, vastly larger, a golden bowl fully a fathom in diameter. Between the tripods, resting with outstretched paws like the Sphinx, with unblinking eyes and without a quiver, a great dog, snow white of coat and resembling a Russian wolf-hound, steadfastly regarded the intruders.

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! (ONE YEAR.....$1) (THREE YEARS...$2) (FIVE YEARS.....$3) No Premiums, No free-list, but worth more than we ask.

"She looks like a lady, and seems like a queen and certainly dreams to the queen's taste." Henry whispered, and earned a scowl from the Sun Priest.

Leoncia was breathless, but Torres shuddered and crossed himself and said:

"This I have never heard of the Valley of Lost Souls. This woman who sleeps is a Spanish lady. She is of the pure Spanish blood. She is Castilian. I am as certain as that I stand here, that her eyes are blue. And yet that pallor!" Again he shuddered. "It is an unearthly sleep. It is as if she tampered with drugs, and had long tampered with drugs—"

"The very thing!" Francis broke in with excited whispers "The Lady Who Dreams drug dreams. They must keep her here doped up as a sort of super-priestess or super-oracle.—That's all right old priest," he broke off to say in Spanish. "If we wake her up, what of it? We have been brought here to meet her, and, I hope, awake."

The Lady stirred, as if the whispering had penetrated her profound of sleep, and, for the first time, the dog moved, turning his head toward her so that her down-dropping hand rested on his neck caressingly. The priest was imperative now, in his scowls and gestured commands for silence. And in absolute silence they stood and watched the awakening of the oracle.

Slowly she drew herself half upright, paused, and recaressed the happy wolf hound, whose cruel fangs were exposed in a formidable ,long-awed laugh of joy. Awesome the situation was to them, yet more awesome it became to them when she turned her eyes full upon them for the first time. Never had they seen such eyes, in which smouldered the world and all the worlds. Half way did Leoncia cross herself, while Torres swept away by his own moving lips of silence enunciated his favorite prayer to the Virgin. Even Francis and Henry looked, and could not take their gaze away from the twin wells of blue that seemed almost dark in the shade of the long black eyelashes.

"A blue-eyed brunette," Francis managed to whisper.

But such eyes! Round they were, rather than long. And yet they were not round. Square they might have been, had they not been more round than square. Such shape had they that they were as if blocked off in the artist's swift and sketchy way of establishing circles out of the sums of angles. The long, dark lashes veiled them and perpetuated the illusion of their darkness. Yet was there no surprise or startlement in them at first sight of her visitors. Dreamily incurious were they, yet were they languidly certain of comprehension of what they beheld. Still further, to awe those who so beheld, her eyes betrayed a complicated totality of paradoxical alivenesses. Pain trembled its quivering anguish perpetually impending. Sensitiveness moistily hinted of itself like a spring rain shower on the distant sea horizon or a dew fall of a mountain morning. Pain—ever pain—resided in the midst of langorous slumberousness. The fire of immeasurable courage threatened to glint into the electric spark of action and fortitude. Deep slumber, like a palpitant tapestried background, seemed ever ready to obliterate all in sleep. And over all, through all, permeating all, brooded ageless wisdom. This was accentuated by cheeks slightly hollowed, hinting of asceticism. Upon them wits a flush, either hectic or of the paint box.

When she stood up she showed herself to be slender and fragile as a fairy. Tiny were her bones, not too generously flesh covered; yet the lines of her were not thin. Had either Henry or Francis registered his impression, he would have proclaimed her the roundest thin woman he had ever seen.

The Sun Priest prostrated his aged frame till he lay stretched flat out on the floor, his old forehead burrowing into the grass mat. The rest remained upright, although Torres evidenced by a crumpling at the knees that he would have followed the priest's action had his companions shown signs of accompanying him. As it was, his knees did partly crumple(but straightened again and stiffened under the controlled example of Leoncia and the Morgans.

At first the Lady who had no eyes for aught but Leoncia; and, after a careful looking over of her, with a curt upward lift of head she commanded her to approach. Too imperative by far was it, in Leoncia's thought, to proceed from so etherially beautiful a creature, and she sensed with immediacy an antagonism that must exist between them. So she did not move, until the Sun Priest muttered harshly that she must obey. She approached, regardless of the huge, long-haired hound, threading between the tripods and past the beast, nor would stop until commanded by a second nod as curt as the first. For a long minute the two women gazed steadily into each other's eyes, at the end of which, with a flicker of triumph, Leoncia observed the other's eyes droop. But the flicker was temporary for Leoncia saw that the Lady was studying her dress with haughty curiosity. She even reached out her slender, pallid hand and felt the texture of the cloth and caressed it as only a woman can.

"Priest!" she summoned sharply. "This is the third day of the Sun in the House of Manco. Long ago I told you something concerning this day. Speak."

Writhing in excess of servility, the Sun Priest quavered: "That on this day strange events were to occur. They have occurred, O Queen."

Already had the Queen forgotten. Still caressing the cloth of Leoncia's dress, her eyes were bent upon it in curious examination.

"You are very fortunate," the Queen said, at the same time motioning her back to rejoin the others. "You are well loved of men. All is not clear, yet does it seem that you are too well loved of men."

Her voice, mellow and low, tranquil as silver, modulated in exquisite rhythms of sound, was almost as a distant temple bell calling believers to worship or sad souls to quiet judgment. But to Leoncia it was not given to appreciate the wonderful voice. Instead, only was she aware of anger flaming up to her cheeks and burning in her pulse.

"I have seen you before, and often," the Queen went on.

"Never!" Leoncia cried out.

"Hush!" the Sun Priest hissed at her.

"There," the Queen said, pointing at the great golden bowl. "Before, and often have I seen you there.

"You——also, there," she addressed Henry.

"And you," she confirmed to Francis, although her great blue eyes opened wider and she gazed at him long—too long to suit Leoncia, who knew the stab of jealousy that only a woman can thrust into a woman's heart.

The Queen's eyes glinted when they had moved on to rest on Torres.

"And who are you, stranger, so strangely appareled, the helmet of a knight upon your head, upon your feet the sandals of a slave?"

"I am Da Vasco," he answered stoutly.

"The name has an ancient ring," she smiled.

"I am the ancient Da Vasco," he pursued, advancing unsummoned. She smiled at his temerity but did not stay him. "This is the helmet I wore four hundred years ago when I led the ancestors of the Lost Souls into this valley."

The Queen smiled quiet unbelief, as she quietly asked:

"Then you were born four hundred years ago?"

"Yes and never. I was never born. I am Da Vasco. I have always been. My home is in the sun."

Her delicately stenciled brows drew quizzically to interrogation, though she said nothing. From a gold-wrought box beside her on the divan she pinched what seemed a powder between a fragile and almost transparent thumb and forefinger, and her thin beautiful lips curved to gentle mockery as she casually tossed the powder into the great tripod. A sheen of smoke arose and in a moent was lost to sight.

"Look!" she commanded.

And Torres, approaching the great bowl, gazed into it. What he saw, the rest of his party never learned.

Make Every Minute Pay Dividends

DURING these days of short working hours, high wages and unsettled labor conditions, every hour saved for essential work is money in your pocket. Every hour you spend on the road between your farm and town represents unproductive time. During your busy season someone is getting high wages for this time, or you personally are spending valuable time. Make every minute pay dividends. Reduce the number of hours spent on the road and increase the hours of productive farm work.

You can haul your farm products to town with an *International Motor Truck* and haul supplies back to the farm in about one-fourth of the time that would be required with a team and wagon—a road saving of 300%. Thereby you save, during the year, many hours for necessary farm work—hours and minutes that total into days. You save money in wages, or at least make the high wages that you are paying someone pay you greater returns.

International Motor Trucks are made in nine sizes, from ¾ ton to 3½ ton—a size and style for every hauling requirement. A letter or post-card to the address below will bring complete information descriptive of these low-cost hauling units that make every minute pay dividends.

The Business Farmer

THE ILLUSTRATION on our front cover this week is the Canadian Grain Growers' Guide's conception of what the business farmer looks like. We'll have to admit that it's a fair depiction of the average successful farmer as he sits at his desk, going over his accounts, figuring up his costs and his profits and losses on his several crops.

The character of the men who farm and the motive for farming has been changing in recent years. It wasn't many years ago that men farmed solely as a means of livelihood. In these days virtually all the food consumed and all the clothing worn by the farm family was produced on the farm. There were few great industrial plants which paid wages high enough to attract the men from the soil and enable him to buy his food outright. Men tilled the soil through necessity rather than choice. No books were kept. No cost systems were in vogue. No information on the markets was sought or desired. Those who were fortunate enough to raise more than their own requirements bartered it with their neighbors or the people in town for products not of the soil.

But today it is different. The majority of farmers till the soil now as a business. The mere making of a living is no longer the great incentive. A greater incentive is the producing of surplus of goods which can be sold at a profit which may be spent for other necessities and luxuries that will make farm life easier, more enjoyable and efficient. Indeed, this changing motive for farming which has put the farmer in a position to buy improved machinery and conveniences for the household, has been one of the big factors in the unparalleled industrial stimulation of our modern times. The world in general has been better off because farmers are striving to earn profits and invest them in goods produced in the towns and cities.

The right name for the farmer of the twentieth century is the "business" farmer, and he is referred to as much in nearly all modern literature. For the farmer who succeeds must apply acknowledged business methods in the conduct of his farm. He must keep records. He must know on what field or what crop he makes a profit or suffers a loss and why. He must follow his methods of farming closely, scrapping the inefficient and taking on the efficient. If his neighbor can produce crops at less cost he must find out why this is so, and if possible adopt his neighbor's methods. He must keep books, and ascertain at the end of each year by a trial balance whether he has lost or made money for the year. Some farmers will refer to their bank book for this information, but it is not there, for the bank-book tells nothing about the binder that was bought, the fertility that was added to a certain field or the balance of crops on hand. Nor will it tell anything about the shed that blew down, the horse that was killed, or any of the other losses of the year which have not been replaced. It requires a carefully kept inventory of every article on the farm to tell the farmer whether he is making or losing money. Some farmers lose money for years and don't know it. Their bank book may tell them that they are a few dollars ahead over the previous year, and yet they may actually be many dollars poorer, as they may discover when they come to paint their buildings, buy new fencing or replace their worn-out tools.

The successful farmer who is the business farmer must have a desk and a simple set of books. He must keep his correspondence on file. He must have one or more good market and farm papers. He must be acquainted with the world's production and the world's needs of the crops which he produces. He must watch the business barometer. Good business in industrial centers generally means good business to him. Poor business conditions usually though not always work to his disadvantage. He must belong to a good farm organization, for all that farmers have gained in recent years has come through organization, and organization will continue to be the leaven which will work out the problems of agriculture.

The farmers of today have only scratched the surface of the possibilities of farming. Too many are still farming "by guess and by gosh." Too many are still working too much with their hands and too little with their brains. For some there is no help for this. But the average farmer who has got the upper hand of his mortgage and a little money in the bank can revise his whole system of farming and profit by it.

Government by Bosses

LINCOLN once told us that this was a government, "of, for and by the people," and because Lincoln said so the great majority of people have come to believe it notwithstanding a good deal of evidence to the contrary. But the beautiful theory of government by the people has been so often crucified in recent years by the ugly reality of government by bosses that we ought not to cherish any longer the delusion that pure self-government still lives. For it does not.

Consider the National Republican Convention. Chairmanships, appointments to important committees, resolutions, nominations, —the whole show from soup to nuts,—were bossed by the bosses. The news dispatches told us that Boise Penrose, the notorious political boss of Pennsylvania and a dominant and sinister figure in many congresses, was ill in bed in his home city but was nevertheless in constant communication with the convention by telephone and telegraph and that his influence upon the convention was great.

The delegates to the convention were elected by the people but upon their arrival in the political arena at Chicago they were promptly taken in tow by the Republican bosses and led around by their noses during the entire convention. The people ruled up to the time when their delegates got off the train at Chicago. Then they abdicated in favor of the bosses who ruled the convention, who will rule the election, and if a Republican president is elected, will rule the government of the United States for the next four years. The same thing will happen when the Democratic convention takes place, so no matter which party wins the election, the boss politicians will be in the saddle.

The Republican National Convention has shown us again that the presidency of the United States is not within the gift of the people but of the politicians. No matter what the people may desire, nor how strongly they may express their desire, the political bosses all will do as they please, while the people sit back and watch the show. To aspire to the presidency of the United States with some hope of securing it one must be parboiled in politics. His fitness may be entirely satisfactory to the electorate but if he has not played in the game of politics and become favorably known to the political bosses who also play the game, and learned how to stack the cards in his favor, he is dead sure to lose the pot.

Liberty Bonds

THE GOVERNMENT has come in for some criticism for its failure to stabilize the value of Liberty bonds at par. People who purchased these bonds in response to pressure or for patriotic reasons feel that the government should now protect them when necessity forces them to dispose of their bonds. The suggestion that the government guarantee the face value of the bonds prior to their maturity is natural but hardly practical.

This the government could not do. The only reason there is any sale for Liberty bonds is because the holder is willing to sell them for less than par. If the government ordered that no bonds be sold for less than par there would be no demand for them. Therefore, the holder of bonds who actually needed the money tied up in them would be in a worse position than before. And the government certainly could not redeem at face value all the bonds which are or may be for sale prior to the date of maturity. Any such proposal would bring out several billion dollars worth of bonds, to redeem which would break the U. S. Treasury and then some.

The government has, we believe, lived up to its full responsibilities toward the investor in its bonds. The date on which the bonds will be redeemed by the Treasury is clearly printed on each bond, and there is no guaranty, expressed or implied, that the bonds can be sold for their face value or any sum whatever for that matter before the date of maturity. But the government guarantees that no matter what the market value of a bond may be today or up to within one day of the date of redemption, upon the day of maturity it will be worth one hundred cents on its face value payable in coin of the United States realm.

That is enough. The Liberty bond is a good investment. It is absolutely safe. It pays a fair rate of interest. It is saleable today for nearly ninety per cent of its face value, and considering the enormous quantity of the bonds issued its current commercial value is surprisingly high. It will be a wise investor who not only holds on to his present bonds, but purchases as many more as he can at current quotations.

Sugar Prices

ANY MAN who believes the statement that the sugar companies of Michigan sold all their interest in the 1919 crop of sugar during the winter months at less than 12 1-2 cents a pound needs to have his head examined. The sugar companies don't do business that way. The consumer who pays 30 cents a pound for sugar today will probably not be far out of the way to figure that at least two-thirds of it goes to the manufacturers.

Seems funny, doesn't it, that there should be a sugar shortage and 30-cent sugar in a state which last year produced millions of pounds in excess of its own requirements. Looks like there was something wrong, somewhere, doesn't it? But it is kind of hard to put your finger on the trouble. Just the same it seems as if there ought to be a way provided so that the people of a state which produces such an enormous crop of sugar as Michigan should be able to buy what they need at reasonable prices. Of course, come to think of it, it would be socialism for the state to protect its people like that, so please excuse us for the thought.

Following immediately upon an announcement that Michigan crops were doing fine came another declaration that they were suffering greatly from the drouth which has been prevalent in some sections for over a month. Reports of crop damage are likely to be exaggerated, especially in cases of early droughts. We do not believe there is any cause for alarm. We have had no exceptional hot weather or high winds up to the last ten days to dry out the soil. No doubt the crops could have stood a good deal more moisture, but considering the nice start they have made they should be able to withstand quite a severe drought.

What the Neighbors Say

COUNTY PAPERS THAT CO-OPERATE WITH FARMERS

I have just read your editorial entitled "The Farmer and the County Newspaper," appearing in your last issue and regret to say that what you state is in some instances true. But we cannot believe that the majority of country newspapers are so blind to their own and the community's welfare to take the narrow stand which we must admit that some take. We are personally interested in the *Independent* at Standish, Mich., the *Herald-Times* at West Branch and the *Lapeer Press* at Lapeer and all of these three papers have at every opportunity done everything they could to co-operate with the farmers.

Well indeed do we realize that 80 per cent of the subscribers to each of these papers are farmers and our interests are naturally with them. Not by this do we mean that we would take an unfair stand just to be with them but we always try and size the situation up on its merits and act accordingly. In each town we work in hearty co-operation with the county farm agent and give the activities of the various farm organizations much free publicity. True, we charge for meeting notices of their lodges such as the Gleaners, Grange, etc., but so do we charge for notices of meetings of all lodges. We believe this to be fair. Only as our papers, of course, always giving strong enough to wield an influence that will bring strength to the farmers in the manner in which we serve them.

We oft times feel that the farmer and the country newspaper are about in the same boat in these times of high cost of living and operation. Neither the farmer or the country newspaper has been able to pass the high cost of manufacture on to the ultimate consumer the same as the merchant or manufacturer.

Frequently we presume upon your good nature to re-produce articles in THE MICHIGAN BUSINESS FARMER in our papers, of course, always giving your paper due credit.

We feel that your statement that the average country newspaper was not being published in the interests of the farmer is too broad. At least most assuredly we do not wish to be included in that class. In fairness to us and many other country papers in Michigan we believe you should modify the statement made in your recent editorial.—*H. W. Myers, Publisher.*

We are pleased to have this denial from one country publisher that he is fair to the farmers and realizes his dependence upon them. We are acquainted with Mr. Myer's paper and can vouch for what he says in that connection. Unfortunately no distinguishing line can be drawn between the papers which help the farmer and those which hinder him. But it is not necessary. Most of our readers are also readers of their local weekly and they know well enough whether their local editor is for them or against them. Every farmer ought to subscribe for a good county paper as well as a good farm paper, for all can be of mutual help to each other.—Editor.

COST OF RAISING BEETS

Just a few words in regards to sugar beet question. If you remember me I shook hands with Mr. Lord at Ithaca at the last sugar beet meeting and was the man that joined that night and fired his contract in Here is a column that came in the Alma Record today so am sending it to you. It would look as though either he or the Sugar Co. had a lot of money to throw away if they charged him according to what they charged the association for that little notice they put in a while back.

I would like Mr. Ackerman to read this. There are not many beets being planted around here. Here is what one man said it would cost him if he grew beets this year. He has no team or tools so would have to hire it all done. He rented 13 acres of land one half mile from here but it is so wet I guess he will not get it in at all. He paid $15.00 an acre for 13 acres, $195; $4 an acre for plowing 13 acres, $52; $3 an acre for dragging, fitting and plowing 13 acres, $39; 1300 lbs. fertilizer at $2.50 cwt., $32.50; counting labor $35 an acres, for 13 acres, $455. Drawing beets to town, $2 a ton and we counted 6 1-2 tons to an acres, that what this land produced last year 85 tons at $2 per tons, $170; total, $943.50. 85 tons of beets at $10.50, $892.00. In the hole, $51. I have left out seed, 15 pounds and acre, for 13 acres, 195 pounds seed.

I would like to have Mr. W. E. Bartley look at these figures and see what he thinks of course if he had good clay sugar beet land he would get more tons but that would not help us on this sandy land. Beets on this farm last year made about 6 1-2 tons to the acre. But we plant no beets this year.—*F. E. N., Gratiot County.*

The opponents of the organized sugar beet growers claim that beets can be raised on heavier soils at a profit under the old contract, and they advance this argument as a reason why the demands of the growers should not be granted. But we challenge the sugar factories of Michigan to advocate the growing of beets only on heavier soils. They dare not do it, for there are not enough heavy soils in the beet growing section to produce but a fraction of the total tonnage required. Factories must take contracts for beets on lighter ground if they are to run their plants. Consequently, the interests of the sand-land grower must be taken into consideration.—Editor.

ANOTHER SPIKE IN OUR COFFIN

My time is up and I wish you to stop the paper. I do not care to take a paper which interferes with the freedom of this country and pulls with the prohibition gang. Otherwise your paper is O. K. You can publish this letter or throw it in the waste basket as that is where I think it will go. I am in the same boat with August Baerwolf.—*Joseph Trojanek, East Jordan, Mich.*

Joseph, you remind me of the man who was hungry and went into a restaurant to get something to eat. They placed before him many choice foods. Some of them he liked; some of them he did not like, but instead of eating the things that appealed to his palate he pushed it all aside and went outside and starved to death. And it didn't put the restaurant out of business either.—Editor.

SUGAR FOR THE FARMERS

I have always read your editorials. They are interesting but that doesn't help us much, does it? Farmers must get together or we will starve on the farms. But we can only do one thing at a time and now we are working 15 hours a day putting the crops in. I have a family of five and we all work that many hours. I wouldn't grumble about the work, but not having enough to eat makes work twice as hard. Farmers cannot raise enough pork for their own use and no sugar for the fruit we have canned. We were told two years ago to can a lot of fruit and that they would get sugar for us. Why not help the farmers to get sugar so we can use our fruit. We are worse off than before the war. Why cannot something be done now. Why wait two years longer. We are alive now but may not be then. Our government can help the people across, why cannot it help us. We need sugar now.—*A Farmer's Wife, Kingsley, Mich.*

My dear Madam, as a consumer, I join in your eloquent appeal. Do you suppose that if we knew how to get sugar for ourselves and the farmers who read our paper that we would need any prompting from you to get it? The entire world is suffering a sugar shortage. There are many places in Europe where people cannot get sugar for love nor money. The people of the United States are on sugar rations. Everywhere you go, it's the same old story, "two pounds at a time," and often none at all. I will be in Washington when you read this and I will not leave there until I learn something more about the sugar situation. But I do not see what the Business Farmer can do to increase the present supply of sugar or help its readers to fill their wants. This can only be done by increased production, which may or may not take place this year.—Editor.

RE—MR. FORDNEY

Please allow me a few lines to express my most hearty approval of your stand in regards to Mr. Fordney and the bean tariff. What the people of the eighth congressional district should do is to have a union or independent candidate as long as one power has a big majority. They have little to fear and the people may expect very little from these men. The same would work very well in North Star Township.—*Independent Voter, Gratiot County.*

Your name sounds good to me, Mr. Independent Voter. The tendency of the hour is toward political independence and non-partisanship. If we will but act independently as we think independently, then some good may come out of our independence. But otherwise not.—Editor.

WALLACE DENIES STATEMENT

The following letter has been received from Mr. W. H. Wallace, general manager of the Michigan Sugar Co., by the editor of THE BUSINESS FARMER:

"I noticed in this week's issue that the statement had been made somewhere by me, and you quote the *Detroit Journal*, that if the suggested growers contract was complied with, sugar would sell at 60 cents per ponud. I notice in the *Journal* of March 26th an article under the heading of "Wallace Refutes Charge by Editor of Farm Journal, etc." It would appear from this that the *Journal* had in mind that the article came from you. Be this as it may, I never made any such damn-fool statement to anybody on the face of the earth or I never made any statement which could be misconstrued as covering this particular matter. It is just a case of somebody lying."

We don't believe we have seen a newspaper article of recent months containing alleged statements by men interested in sugar factories which was not a mess of lies. In the majority of cases these misleading statements go uncorrected. We are therefore glad to have Mr. Wallace's letter advising us that he did not make the statement credited to him in the Detroit Journal and copied in the May 29th issue of The Business Farmer.—Editor.

"GET FAIR PROFIT OR QUIT," SAYS DAIRYMAN

"I am a reader of your paper and notice an article in regard to the milk question.

Now I would like to ask you this. If the fellows in the Detroit area are not receiving enough money for their milk what do you think of us poor devils over here in Allegan County. Do not think for one minute that we have not got just as much money invested as they have. Don't our feed cost just as much and isn't the hired help question just as bad here as there. If it costs the M. A. C. $8.40 to produce 100 quarts of milk do you think I can do it for less? I am selling my milk today for the huge sum of $2.65 per 100 lbs., 3.5 per cent test less 29c 10 gallon can express charges.

"What I am trying to get at is this. I am a member of the Michigan Milk Producers' Association and have been for one year and I would be very much pleased to have you or some one show me where I or anyone in this county has derived any benefit from same. It may be that I am narrow minded and selfish. Will leave that for you to decide. I also notice in your article that you think the commission ought to go to some of the biggest creamery companies and make them an offer. Now tell me why they should. Can't the Milk Producers furnish as much money as would be necessary to build their own plant and it is a cinch they could furnish the produce to keep it running. I am not so much interested in the Detroit affairs as I am in my own. What I would like to have some one figure out for me and the rest of the producers in this locality is some way that we can get a fair price, fair test, and fair weight for our milk. It is a positive fact that it is the farmer that produces this milk, not the distributor, and why shouldn't the farmer have some voice in regard to the price he shall receive.

"Take for instance the grocery man. If he had said to you one year ago that you must pay 22c per lb. for sugar you would have died of a broken heart. But he was cute, he merely informed you that you could only buy 2 pounds. Then when you had got used to paying 9c you could get a hundred pounds. Then he started in again on the 2 pound stuff at 15c and so on until now you are paying 22c. Now do you think that any of our merchants are so generous that they are selling below cost. If it is fair for them to sell on a 50 to 75 per cent basis why shouldn't we, the farmers and producers of all foodstuff have the right to get cost of production at least.

"Two or three years ago when the average laboring man received from $2.50 to $3.00 per day he did not complain about paying 12c per quart, but now if the same man cannot get $5 or $6 for same work he strikes, and he sobs like he was going to his own funeral if he is asked to pay 65 cents for butter and 15 or 16 cents for milk. And the same fellow will swell up like a warty toad and tell us farmers that we have got a soft snap; we must be getting rich; that never in the history of the world did the farmer get such awful prices for everything they raise for instance just look at the price of potatoes and look at the price of wheat and in fact everything. They don't stop to think that 95 per cent of all products except milk are in the hands of jobbers, poor fellows, and they must have a profit or quit business.

"I think it would be just and fair to the farmer to let a commission fix the price of milk and this commission be composed of such able-minded men as come out in the country at chore time and stand around in the way with their mouths wide open and ask such fool questions as how do you stop it when you get the pail full.

"Now brother farmer and dairyman for the love of all that is great and good and holy, why don't we get together and get our just rights

(*Continued on page* 19)

The Week's Editorial

MARKET MANIPULATION

If in business you are in a position to keep your selling price constant and at a point to guarantee profits over the highest possible buying price, you have eliminated the element of uncertainty. Henceforth you can let the other fellow do your worrying. The farmers have not been able to achieve that peace of mind. Many of them are seeking it by going out of business. The professional uplifters of mankind who are perpetually publishing what they are going to do to improve the condition of the farming population will do well to give attention to this little detail.

An incident illustrating this need is found in the recent live stock market in Chicago. "Hogs suffered a relapse, values dropping off 15@25 cents at the opening. The major packers slowly filled orders but they forced values off another notch before they took the bulk of their droves," said a market report.

What depressed this market? The fact that by chance or deliberate manipulation, an unusually large supply of animals was brought to this one market one day. The fact bore no relation to the supply of live stock in the country. It could possibly have no influence on the amount which will be received by the packers and wholesalers and retailers for the meat which those animals will furnish. But it constitutes a loss of great magnitude to the men who have reared those animals and have incurred the expense and trouble of placing them upon this glutted market.

It is this ability to buy or not to buy, to "force values off a notch" at will and to maintain the selling prices of products, that is bringing the methods of the packers under criticism, ans is discouraging the farmers and tending to curtail production.—*Detroit News.*

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

MORE DOMESTIC SCIENCE

OF THE total number who enter school, only a very small percentage are able or have the desire to go to college, which means that only a few need the courses in foreign languages, and the higher sciences, while every girl who enters school does need to know something of sewing—enough at least so that she may do her own plain sewing if necessary. She also should know how to choose and cook meats and vegetables and prepare an appetizing meal.

This is a vital question which should receive attention with the coming of the consolidated schools—for they surely are coming, and it is the tax payers who should take the stand that these very useful and necessary sciences should be taught in the schools.

One of the biggest factors in solving the question of Americanization of the foreign born, which is a question receiving so much attention right now is that of teaching the children how to live as Americans live. We cannot reach their homes to any extent except through the children. But if the children are taught how to cook and sew they will in turn insist upon these up-to-date methods being installed in their homes as far as possible and certainly they will bring them to their own homes. Never again will a child be satisfied to live in unsanitary quarters after he or she has learned in school the value of sanitation.

And right along this line is the subject of home nursing. If every child as soon as he was big enough to understand could be taught more physiology—the care of the human body—the law of compensation which nature meets out for us when we treat this human house as it should be treated, it could not help but have an effect upon the health of the human race. And then every girl should be taught at least as much of home nursing as is incorporated in the Red Cross First Aid Course. Which simply means that unaided, she could treat all the minor accidents. The boys are taught this in their Boy Scout course—but every boy is not a Scout, and if this course were installed in the curriculum of every school, the number of accidents would be reduced to a considerable extent, and the results from those accidents which do occur would be less fatal.

Right now there is an agitation on foot to interest more young men in taking a course in medicine, for it has been brought to light that every year less numbers take this course in college. The course is necessarily longer than that needed to qualify for other professions, and when they have finished, the hours of work are longer for the general practitioner and the number of physicians who have attained any degree of wealth is very small indeed, so that the inducements to an ambitious young man are not what they once were. However perhaps this is not altogether to be regretted as there will be less numbers of people who will "enjoy poor health" in the future, and more will learn how to care for all except the more serious illnesses and accidents right at home without the aid of a physician.

A good education is what is most to be desired for every child, but it hardly seems fair to call an education a good one unless it is a well-rounded education embracing the home-making arts and sciences. There are those children who will receive instruction in these arts at home but what of our duty to our fellow citizen—the foreigner.

HOW TO TREAT CASES OF IVY AND SUMAC POISONING

THE BEST ways to avoid ivy and sumac poisoning, the most practical means of eradicating these noxious plants, and the most approved method of treating cases of such poisoning have been the subjects of an investigation conducted jointly by the United States Department of Agriculture and the Public Health Service of the United States Treasury Department. Despite general belief there is good reason for believing that absolute immunity from ivy and sumac poisoning does not exist, investigators state. They also found that many common methods of treatment are not to be commended. Poison ivy is sometimes called poison oak. Poison sumac is also known in various localities as poison dogwood, poison elder, poison ash, thunderwood, and poisonwood. These poisonous plants are widely distributed. While no accurate estimates can be made as to the economic losses resulting from poisoning, the total is very great, and there is urgent need for widespread campaigns to eradicate the very noxious plants.

HARVEST TIME
On the farm of Mr. and Mrs. John L. Stark, of Fountain, Mich.

If one must handle these poisonous plants ,gloves, preferably of rubber, should be born. After the gloves have been removed they should be thoroughly washed with soap and water and rinsed several times. Inasmuch as the clothing which comes in contact with the leaves may be a source of infection for a considerable period, care should be taken in changing the garments, and also the shoes. Many cases of poisoning have resulted merely from contact with exposed clothing.

One of the surest and best methods of minimizing or preventing infection after the hands, face or other parts of the body have been exposed, is to wash and rinse them repeatedly with an abundance of good kitchen soap and hot water. The poison after being deposited on the skin, requires some time to penetrate, and if this penetration can be prevented by thorough washing, eruption and irritation will not result. While exposed parts should be cleansed in this manner as soon after exposure as possible, it is worth while to make the attempt even 12 or 20 hours afterwards in the hope that at least a portion of the poison may be removed. A heavy lather should be produced and the washing should be continued several minutes. Severe scrubbing with a brush is not advisable, but several swabs or small compresses of gauze may be used, discarding each in turn, so that the poison may not be distributed by the cloth.

Bathing with alcohol diluted with an equal amount of water is also an effective preventive. Where exposure has been general, a bath for the entire body, followed by change of clothing is a preventive measure. The hair should not be neglected. Bathing, if not accompanied by sufficient changing of water or rinsing, may result in spreading the rash to skin that had not been infected. In cases that are at all serious a physician should be consulted.

Sugar of Lead Not Recommended

The investigators call attention to the fact that scores of remedies and prescriptions are more or less in popular favor, but in spite of the claims they assert that no specific treatment for poisoning from ivy and sumac is yet available. Ointments should not be used in the acute stage of the disease. In the later stages, however, soothing and astringent ointments may be of value in allaying irritation and hastening cure. The extent to which it is desirable to use solutions of permangante of potash, hyposulphite of soda, sulphate of magnesium (epsom salts) and other remedies, is also discussed. Sugar of lead, formerly much used, often proves disappointing if applied after inflammation has developed, and the user runs the risk of lead poisoning if this substance is applied extensively.

The names "poison oak" and "poison ivy" are used interchangeably in many localities. The plant generally known as poison oak throughout the Pacific Coast occurs as a bush and is sometimes four or five feet high, and has leaflets resembling the leaves of the western oak, but it is also found as a vine, and is sometimes called poison ivy.

How to Recognize Poison Sumac

Poison sumac grows in moist ground, usually in swamps or along low, miry banks of streams and ponds. It occurs from New England to Florida, and westward to Minnesota, Arkansas and Louisana. The poison sumac leaves are readily distinguished from the harmless sumac and species of ash, elder, and other shrubs and trees having a somewhat similar foliage, and the character, appearance, and color of the fruits furnishes other simple means of identifications. Furthermore, the poison sumac occurs on moist or swampy land, and in drier locations is found only along the borders of swamps or bogs. The number of leaflets into which the leaves of the harmless sumac are divided range from 9 to 21 and 31, while the poison sumac leaves divide into 7 to 13 leaflets.

While many persons are of the opinion that contact with these plants is not necessary to produce poisoning, it is probable that many cases supposed to have originated in this way have actually been due to direct or indirect contact. There are cases on record showing that the smoke from burning plants will give rise to irritation, and in some cases severe poisoning has resulted from this form of exposure. Regarding the popular belief that some persons are wholly immune, the investigators state that there is good reason to believe absolute immunity does not exist, although it is recognized that some persons are much less susceptible than others.

How to Eradicate Poisonous Plants

Eradication of these plants should be widely undertaken and followed up systematically. Every landowner should feel a measure of responsibility in this matter. The simplest method is by grubbing, in which care should be taken to cover the hands properly, and also to prevent infection by means of the clothing. The plants in fields may be destroyed by plowing them up and putting in cultivated crops. Often repeated mowing is also effective. The use of kerosene is recommended where injury to other plants or trees is not to be feared. It may be applied with a sprinkler or a spraying pump, and in many cases one application is sufficient. Arsenate of soda has been used very successfully to kill poison ivy on trees six to ten inches in diameter without injury to the trees, as well as on stone walls, buildings, and along fences.

Weekly Cheer

There's a better day a-coming; help it on!
And you'll never do it with a sigh or frown;
Strip your heart of gloomy things,
Build yourself a pair of wings
And rise up if heaven's slow in coming down.

His Real Picture
By Edgar A. Guest

We've had his picture taken a dozen times or more
We've got him as a baby in the dresses that he wore;
We've got him with his mother, and we've pictured him with me,
But the camera's only seen him in the way he ought to be,
And I'd like to have his photo as he really is today.
With the glorious dirt upon him that he's gathered in his play.

We've had his pictures taken when his garments all were trim,
And his face was fixed and solemn, but they don't resemble him,
For they do not show the twinkle in those roguish eyes of his
And they don't portray the rascal as he mostly always is.
He is slick and solemn sometimes in his white and starchy shirt
But his natural condition is to grin through grime and dirt.

I wish I were a painter, I would canvas him today
In those soiled and tattered garments which he wears when he's at play.
I would paint him in the knickers which have sagged unto his shins,
And the shirt waist clinging to them by the grace of safety pins
And I'd try to catch the glory of that smile from ear to ear
When the dirt is thick upon him and his face is just a smear.

His mother says we musn't but I still insist and say
That we ought to have him pictured as he really is today,
For I know no sight that's finer for a man to look upon
Than a happy grinning youngster when his two front teeth are gone,
And when I come home at evening and he answers to my call
I just grab him up and kiss him, for I love him—dirt and all.

SEEN IN CITY SHOPS

DON'T AGAIN say "There's nothing new under the sun," for just about as soon as you have said it, some one evolves something distinctly new. First came hats of straw, then hats of felt. Silk lace and similar materials followed to offer variety. Then came that novelty, horse hair braid which has had such a fad because of its wearing qualities. Now comes the latest from Paris—the hat of wood—yes it really is here and pretty too, for it is made of the thinnest of shavings,

which are dipped to the desired color, and the ends extend out at one side and are curled, so they are jaunty as a feather. Of course being a fad and entirely new, they are expensive, none having been displayed so far at less than $18.00.

The best bargain I have seen in the shops this season was in the "House Dress" section and it was a white dotted mull dress, made with a round neck but not very low and with three quarter sleeves, and finished at the waist line with the ever popular ties. And what is nicer for the house than white. Any light color will show the soil almost as soon as the pure white and certainly won't look nice as long. It was a dress one could slip into afternoons and be cool, look fresh and would not be unsuited for picnics or almost any occasion, while the price was only $10.

The favorite purse for summer is the silk bag, and the shops are showing a full line of moire with handles of silk or metal and with or without the tassel as a finish. They can be bought at almost any price depending of course on the quality and workmanship. Many of the shops have been having sales on the medium priced bags and a very good one can be secured for $5.

A new name for an umbrella is "rain-shine." It's simply a silk umbrella which is good enough looking to use for a sun shade and still will withstand the rain should a shower catch you. They are made with short handles so that they can be packed in a suit case and are especially desirable for a vacation trip as they will serve the double purpose And they are priced from $5 up and come in the different colors.

"HEARTS OF THREE"

(*Continued from page* 11)

But the Queen herself leaned forward and gazing down from above, saw with him, her face a beautiful advertisement of gentle and pitying mockery. And what Torres himself saw was a bedroom and a birth in the second story of the Bocas del Toro house he had inherited. Pitiful it was, with its last secrecy exposed, as was the gently smiling pity in the Queen's face. And, in that flashing glimpse of magic vision. Torres saw confirmed about himself what he had always guessed and suspected.

"Would you see more," the Queen softly mocked. "I have shown you the beginning of you. Look now, and behold your ending."

But Torres, too deeply impressed by what he had already seen, shuddered away in recoil.

"Forgive me, Beautiful Woman," he pleaded. "And let me pass. Forget, as I shall hope ever to forget."

"It is gone," she said, with a careless wave of her hand over the bowl. "But I cannot forget. The record will persist always in my mind. But you, O Man, so young of life, so ancient of helmet, have I beheld before this day, there in my Mirror of the World. You have vexed me much of late with your portending. Yet not with the helmet." She smiled with quiet wisdom. "Always it seems to me, I saw a chamber of the dead, of the long dead, upright on their unmoving legs and guarding through eternity mysteries alien to their faith and race. And in that dolorous company did it seem that I saw one who wore your ancient helmet . . . Shall I speak further?"

"No, no," Torres implored.

She bowed and nodded him back. Next, her scrutiny centered on Francis, whom she nodded forward. She stood up upon the dais as if to greet him, and if troubled by the fact that she must gaze down on him, stepped from the dais to the floor so that she might gaze up into his face as she extended her hand. Hesitatingly he took her hand in his, then knew not what to do next. Almost did it appear that she read his thought, for she said:

"Do it. I have never had it done to me before. I have never seen it done, save in my dreams and in the visions shown me in my Mirror of the World."

And Francis bent and kissed her hand. And, because she did not signify to withdraw it, he continued to hold it, while, against his palm he felt the faint but steady pulse of her pink finger tips. And so they stood in pose, neither speaking. Francis embarrassed, the Queen sighing faintly, while the sex anger of woman tore at Leoncia's heart, until Henry blurted out in gleeful English:

"Do it again, Francis! She likes it!"

The Sun Pries hissed silencing command at him. But the Quten, half redrawing her hand with a startle like a maiden's returned it as deeply as before into Francis' clasp, and addressed herself to Henry.

"I, too, know the language you speak," she admonished. "Yet am I ashamed, I, who have never known a man, do admit that I like it. It is the first kiss that I have ever had. Francis—for such your friend calls you—obey your friend. I like it. I do like it. Once again kiss my hand."

Francis obeyed, waited while her hand still lingered in his, and while she, oblivious to all else, as if toying with some beautiful thought, gazed lingeringly up into his eyes. By a visible effort she pulled herself together, released his hand abruptly, gestured him back to the others, and addressed the Sun Priest.

"Well, priest," she said, with a return of the sharpness in her voice. "You have brought these captives here for a reason which I already know. Yet would I hear you state it yourself."

"O Lady Who Dreams, shall we not kill these intruders as has ever been our custom? The people are mystified and in doubt of my judgment, and demand decision from you."

"And you would kill?"

"Such is my judgment. I seek now your judgment that yours and mine may be one."

She glanced over the faces of the four captives. For Torres, her brooding expression portrayed only pity. To Leoncia she extended a frown; to Henry, doubt. And upon Francis she gazed a full minute, her face growing tender, at least to Leoncia's angry observation.

"Are any of you unmarried?" the Queen asked suddenly. "Nay," she anticipated them. "It is given me to know that you are all unmarried." She turned quickly to Leoncia. "Is it well," she demanded, "that a woman should have two husbands?"

Both Henry and Francis could not refrain from smiling their amusement at so absurdly irrelevant a question. But to Leoncia it was neither absurd nor irrelevant, and in her cheeks arose the flush of anger again. This was a woman, she knew with whom she had to deal, and who was dealing with her like a woman.

"It is not well," Leoncia answered with clear, ringing voice.

"It is very strange," the Queen pondered aloud. "It is very strange. Yet is it not fair. Since there are equal numbers of men and women in the world, it cannot be fair for one woman to have two husbands, for, if so, it means that another woman shall have no husband."

Another pinch of dust she tossed into the great bowl of gold. The sheen of smoke arose and vanished as before.

"The Mirror of the World will tell me, priest, what disposition shall be made of our captives."

Just ere she leaned over to gaze into the bowl, a fresh thought deflected her. With an embracing wave of arm she invited them all up to the bowl.

"We may all look," she said. "I do not promise you we will see the same vision of our dreams. Nor shall I know what you will have seen. Each for himself will see and know. —You, too, priest."

They found the bowl, six feet in diameter that it was, half-full of some unknown metal liquid.

"It might be quicksilver, but it isn't," Henry whispered to Francis. "Ihave never seen the like of any similar metal. It strikes me as hatly molten."

"It is very cold," the Queen corrected him in English. "Yet it is fire —You, Francis, feel the bowl outside."

He obeyed, laying his full palm unhesitatingly to the yellow outside surface.

"Colder than the atmosphere of the room," he adjudged.

"But look!" the Queen cried, tossing more powder upon the contents. "It is fire that remains cold."

There's Just One 100% Efficient
CREAM SEPARATOR
And That's The
DE LAVAL
For Forty Years
The World's Standard

There may be a half-dozen plows, wagons, tractors, autos or other farm equipment to choose between, but no would-be imitator or utilizer of expired De Laval patents has yet produced a cream separator comparable with the De Laval.

First in the beginning, De Laval machines have led in every step of cream separator improvement and development. Every year has presented some new feature or betterment, and the 1920 machines are still better than they have ever been before.

If you haven't seen or tried a new 1920 De Laval machine, any local agent will be glad to afford you the opportunity to do so.

If you don't know the nearest De Laval local agent simply address the nearest main office, as below.

The Children's Hour

DEAR CHILDREN: I want to tell you about a boy I met last night who is working his way through the University of Michigan. A great big chap he is, strong and clean-cut. His mother and I are great friends, so of course I was very anxious to learn how he expected to earn his money this summer, and last night he told me, and because I think it may do you good, I am going to repeat it for your benefit.

Said he, "Last summer I came into Detroit and worked in an automobile factory, but all the people with whom I had gone to school with were there—there were boat rides to be taken at night—the drug store and its soda fountain were so temptingly near on a hot summer night—car fare ate up a few dollars every week, and when college opened last fall I found I hadn't nearly enough to pay my expenses so I resolved that this coming summer I would get right out into the country, where I didn't need to wear good clothes, and where the moving picture shows and ice cream parlors weren't quite so handy. And the opportunity came when I learned through my roommate of an opportunity to go way up beyond Duluth and clear some jack pines from some land which they are going to convert into a sheep ranch. There are six of us boys going and we are to have a cook—live in tents and as it isn't far from a river we will be able to find our pleasure there mostly and it will be just a regular camp—of course there are to be others, but do you know I think I can work my way on a boat, and if so, the summer's money will be just clear gain and this fall I won't be so much in debt as I was last year.

Here's the idea—the girls and boys from the country yearn to come to the city, while the children who are in the cities long for the country air during the stifling hot days of summer. But if you will just get a few facts and figures, if you wish to make your way in the world later in life you will find that you will build a better physique and will also save more money right in the country than you can possibly do if you enter the city—for it isn't what you earn that counts, you know, it's what you save. And I do hope that all of my little friends are planning even as early as this for something definite in their lives when school days shall be over. Affectionately yours. —AUNT CLARE.

A Man Hunt—*By Francis Rolt-Wheeler*

IF HUNTING a bear or a deer is exciting, how about hunting a man? Fellows, with good wind, lots of grit and a love of sport will find the Man-Hunt a great improvement on the old paper chase, or hare and hounds, as it is sometimes called.

As in the regular paper chase, let the two fellows who are to be hunted start out a quarter of an hour before the hunters. Each can carry a bag of confetti, or if that is hard to get, pieces of paper cut small. A five cent pad (not roll) of toilet paper is enough. Maybe a local printer will let you use his cutting machine for five minutes, and the job's done.

Now, instead of strewing paper all along, to show a trail, drop the paper once every hundred yards or hundred paces. That gives a chance to drop some "sign" and shoot off through the woods or fields to right and left. The hunters will have to run scattered, like hounds, to pick up the trail. If the hunters are bunched, the hunted could drop a bunch of paper and hide for the hunters to go by, then take the back track. It is forbidden to drop a second lot of paper at the same spot as the first, for the hunters must have a chance to quest back.

Let the hunted carry a watch. At the end of two hours if not caught, they are "safe." One of the big advantages of this is that the hunted need not be the fastest runners. The fun lies in the dodging rather than the running. Often a small boy can outwit a gang of big fellows.

In thick woods, the dropping paper space should be reduced to 20 paces. There is nothing to stop the hunters from posting sentinels to prevent the back-track movement. Every chap who acts hunted will have a different idea; some will take the straight away, like a deer; others will dodge like a fox. Therefore, every hunt is different. If the hunted is quickly caught, another boy takes the paper-bags, is given a start, and the hunt is on again.

OUR BOYS AND GIRLS

Dear Aunt Clare—This is the first time I have written to you. I am a girl 11 years old. My father takes the M. B. F. and likes it fine. I live on a farm of 40 acres. We have 3 horses, 5 cows, 8 calves and 44 head of sheep. My school was out the 12th of May. My teacher's name was Miss Gertrude Neuman. I am in the sixth grade next year. For pets I have a cat and a lamb and a colt. I have a mile and a half to go to school. There were 40 pupils in our school. I am going to write a story about going flowering.

One nice day I and my friend went flowering down by a large creek. When we got there it was noon and we took out a tablecloth and spread it for a table. Then we took our lunch out of the basket and laid it on the table cloth. Then we got some water and put it in a glass. On the way to our table we got some large violets and put them in a glass. After we ate we packed the rest of our lunch in a basket. Then we started hunting flowers. We got a bunch of lady slippers and hearts and violets. After we got all the flowers we could carry we started for home. When we got home it was pitch dark. I will close. Norma Palmater, Alger, Mich.

Dear Aunt Clare—I read the letters in the Michigan Business Farmer and I think they are all very interesting. I live on a 80 acre farm and we have a 60 acre farm of our own. We rent the 80 acres because there is no house on the 60 acre farm. We have 13 milk cows and 25 head in all. I milk two cows and my sister milks three every night and morning. We have three little calves. I have one and my sister Hazel has one. The other is my fathers. I raised four chickens last year. My sister raised 13 ducks she sold them and received $26 for them. For pets I have a dog and 5 big cats and 3 little ones. We have 13 pigs. We get four cans of milk every day. I am a girl 10 years of age and will be 11 in July. I am in the fifth grade. My teacher's name is Miss Irving and I like her very much. There are 50 pupils in my school. I have four sisters and one brother, their names are Hazel, Dorothy, Belle, Gertrude and Fred. Fred is 4 years old. My oldest sister's name is Hazel, she is 12 years old and in the seventh grade. Laura Wagar, Trenton, Mich., R 1.

Dear Aunt Clare—May another farmer girl join your merry circle? I have read the letters and enjoyed them very much, so I thought I would write. My father takes the M. B. F. and likes it fine. I live on a 120 acre farm. I have 2 miles to go to school. I go to the Lee school. My teacher's name is Mrs. Mylo Flynn. I am in the eighth grade and will write on final exam, on the 13th and 14th of May. I have 7 sisters and brothers. We have a car. I also have an organ. I love to tat and crochet and I also like to read very much. I like the farm best to live on but I like to visit in the city for a while but I would not like to live there. I would like to hear from boys and girls of my age and would answer all the letters I could. Hoping to see this in print I will close, wishing everybody goodby. Pauline Sevenski. Blanchard, Mich. R 2.

Dear Aunt Clare—This is the first I have written to you. My father takes the M. B. F. and likes it very well. I like to read the letters from the other boys and girls. I am a girl 13 years old and in the seventh grade. Our school was out the fifth of May. The teacher's name is Lillian Gotham. I liked her very well. I live on a farm of 84 acres. We have 6 cows and 4 horses, 4 pigs and 70 chickens. I have 4 sisters and 2 brothers. I am the youngest in the family. I have light hair, blue eyes and am 5 feet and 3 inches high. Two of my sisters are visiting in Cumberland, Maryland and won't come back until the end of this month and my other two sisters are married. One of my brothers is at home helping my father and the other one is married. Well my letter is getting long I will close for this time, hoping to see my letter in print. Alice Draves, R 6, Midland, Mich.

Dear Aunt Clare—My father takes the M. B. F. and likes it very much. We live on an 80 acre farm. We have 16 head of cattle, 3 horses, 4 large hogs and 10 litle ones. About 35 chickens. We have no little chicks yet, but are expecting some in a few days. I have 3 pets. I am 10 years of age my birthday is the 26th of this month. I am in the 5th grade at school. I think that I will pass as I have never failed a term and hope I will not this term. I am sending a picture of a litte fawn and I hope I will see it in the M. B. F. the next time.—Maxine Thomas, Evart, Mich.

Each letter or group of letters is separated, as you will see. Rearrange the words and letters by writing them down in proper sequence to form a well known proverb in verse.

Dear Aunt Clare—My father takes the M. B. F. and we like it very much, especially we children because we like the Children's Hour. I am fourteen years old. You wanted us to write about what flowers we found to the wood. Our school went one day and we took our dinner and ate it at the woods and stayed the noon hour. The flowers we found were the lily, spring beauty, violets, addertongues, hepatica and the dutchman's breeches. We have gone three or four times to the woods this spring. We children are not going to school now because we have the measles. Had them first and was in bed four days and a half. My letter is getting long. I will close, hoping to see my letter in print. This is a riddle: Why does a cat sleep longer in summer than in winter? Answer: Because the summer brings the cat-a-pillar. Isabel Stevens, Kalamazoo, R 11, Mich.

Dear Aunt Clare—As this is the first time I have written to you. I am a girl 14 years old and in the 7th grade at school. Our school is out the 21st of May and I'll be glad then. My father takes the M. B. F. and likes it very much. I enjoy reading the Children's Hour and stories. I live on a farm of 40 acres. We have 6 cows, 6 calves and 7 sheep and one of them is mine, her name is Fannie and she is a great pet. Well I will close, hope my letter escapes the waste basket and I will send you a riddle: A frog and a duck and a skunk all went to a show and they let the frog and duck in and why didn't they let the skunk in? Answer. Well the duck had a bill and he got in all right and the frog had a green back and he was all right, but the skunk only had a cent and it was a bad one and they wouldn't let him in. Mary Middleton, Yale, Mich., R 6.

Dear Aunt Clare—I am a farmer girl 11 years old. I have light hair, brown eyes, am 4 feet 10 1-2 inches tall and weigh 80 lbs. Our school closed today. My teacher was Miss Sherburn. I will be in the 7th grade next year. I have one brother, Harold, and one sister, Lois. We live on a farm of 160 acres. Papa and my uncle run the place. Together we have 5 horses, 4 cows, 2 calves, pigs and chickens. For pets we have one cat. Both papa and my uncle take the M. B. F. I saw a letter from a girl I know, so thought I would write. I will close now, hoping to see my letter in print. Leona Hill, Scottville, Mich.

Dear Aunt Clare—I will write you a letter as I have never written before. I am a girl 12 years old and in the 8th grade. My teacher's name is Miss Mary M. Campbell. I like her very much. We live on a 120 acre farm. We have 4 working horses and 1 colt, 6 cows, 8 calves and over 100 chickens and 4 ducks. We also have 40 chickens. My father takes the M. B. F. and we all enjoy it very much. I love to read the Children's Hour. Hoping to see my letter in print, I will close as ever. Ada Boesch, Sebewaing, Mich.

Dear Aunt Clare—This the first time I have ever written to you so I thought I would join your merry hour. I like to read the letters from the boys and girls. Papa takes the M. B. F. and likes to read the stories too. I have two brothers, Floyd and Arthur. I am nine years old and will be ten the 25th of October. For pets I have two cats. School is out at last and the 22nt we had a picnic. Oh, dear me, we had so much I could not begin to tell all we had. My letter is getting so long. So will close, hoping to see my letter in print. Alice Hawks, Watervliet, Mich.

Dear Aunt Clare—I am writing you to find out how many subscribers it takes to get a camera as I would like one. My father takes the M. B. F. and likes it very well. I go to the Duncan school. I have not noticed any letters from Millington yet. There is a woods on our place where we go flowering. We have twenty-seven little chicks and four hens setting. I will close, hoping to see this in print. Myrtle Siver, Millington, Mich.

We will be glad to send you a camera for ten new subscribers at $1.00 each.

Dear Aunt Clare—I have not written you in a long time. I like to go to school very well. I like to be out doors now that the grass is so green and everything is so pretty. Our schools lets out the 4th of June. I like the M. B. F. very much in fact I like most everything that belongs to nature. My age is between 11 and 14 and my middle name begins with G and ends with E if any of you can guess then I will send them a stick of candy. Ila Dezree, Greenville, Michigan.

Dear Aunt Clare—This is the first I have written to you. I am a girl seven years old and in the 3rd grade at school. My father takes the M. B. F. and likes it very much. I live on a 230 acre farm. My teacher's name is Miss Minnie Healy. We have seven horses. I have four sisters, Vera, Ila, Ruth and Mary. I have a brother William. We have a Ford car. I like the complete story best. I hope to see my letter in print.—Ida Carter, Harrisville, Mich.

Dear Aunt Clare:—I am a girl ten years old. I live on a farm of 110 acres. We have about 50 chickens and ten little chickens. For pets I have a cat; his name is Tommy. We have four horses and two cows. I have found a ground sparrow's nest with four little eggs in it.—Eva Hall Midland, Mich.

County Crop Reports

SANILAC (C)—Have had some dry and cool weather. The oats and grass has not made much growth up to this week as there should of been for this time of year. There was a local rain on Tuesday, and quite a lot of water fell for the time it rained. It made the crops look better in the locality that it rained in. There is a general rain needed all over the country. We are having it rather cool at this time. The farmers have got their corn all in and are getting their bean ground ready at the present time. Some have their beans sowed. There are some sugar beets being sowed and quite a lot chicory put in. The price of chicory is good. There looks as if there might be quite a lot of fruit. Everything seems to be moving along as usual. The following prices were offered at Sandusky: Wheat, $2.75; oats, $1.04; rye, $2; barley, $3; beans C. H. P. Pea, $7.25; potatoes, $4; butterfat, 54c; eggs, 36c.—A. B.

ST. CLAIR—Farmers cultivating corn and planting potatoes. The weather is very dry, have had no rain since May 15th, that would wet the ground one inch deep. There has been some local showers but no general rain. The soil is dry and in some places it is cracked to a great depth. Hay will be short and a light crop. Oats are in need of moisture and will soon be in the same condition as the hay crop. Wheat is heading but the straw will be short. Rye is thin and not very promising. As a whole the hay and grain crops do not look very good for St. Clair county. The following prices were offered at Smiths Creek: Wheat, $2.68@2.70; corn, $1.85; oats $1.15; rye, $2.10; No. 1 timothy, $28@30; No. 1 light mixed, $27@29; beans, C. H. P. $7; potatoes, $4 bu.; butter, 50@60c; butterfat, 50c; eggs, 40c; sheep, 8@9; lambs, 10@14; beef steers 8@12; beef cows, 6@9; veal calves, 20;—I. J.

JACKSON (S)—A good heavy rain is needed to boom hay and wheat. Some localities were blessed with a downpour Saturday afternoon, but a light shower in this vicinity and south was the extent of the much needed rain. Farmers have finished corn planting. Rye is looking good, wheat fair, hay in need of rain and a small crop predicted. Early plums and cherries damaged by the frost. Strawberries looking good. Apples have a good crop of fruit set. Butter is on the downward grade also eggs, butterfat 54c, eggs 38c. It looks as if the farmer would pay $5 a day and board for extra help in haying and harvest if he got any.—G. S.

CALHOUN—Farmers are very busy with their corn and there is some to plant yet. The weather has been very dry here of late and the crops are beginning to feel the drouth. The ground is so dry it is hard work to plow unless we get a rain soon there will not be many late potatoes put in. The following prices were offered at Battle Creek: Wheat, $2.88@2.90; oats, $1.20; rye, $2; No. 1 timothy, $30; hens, 35c; butter, 55c; eggs, 40c; lambs, $10.17; hogs, $13.50; beef steers, $8.10; veal calves $10.13.—C. E. B.

CHEBOYGAN (W)—Weather very dry. Not much rain all spring. Prospect of poor hay crop this year. Corn nearly planted with larger acreage than usual. A good crop of oats planted but not many potatoes or beans. Winter wheat and rye looking good but needs rain. Looks like we would have an average fruit crop this year. Spring pigs very scarce. Wheat, $2.50; oats, $1.25; potatoes, $5 to $ 8per bushel; butter, 50c; butterfat, 53c; eggs, 33c.—D. P.

MONTCALM (N. W.)—Most of the farmers are finishing up planting for the season. Corn is up. It has been rather hot and dry. Ground is very dry for the need of rain. Several tractors are being used around this community. The following prices were offered at Lakeview on June 10: Potatoes, none sold. Beans, $7 per cwt.; onions, 8c a lb.; cabbage, 10c lb.; cucumbers, $3 per cwt.; butter, 55c.; butterfat, 54c; eggs 32c.—G. B. W.

MIDLAND—The following prices were offered at Midland: Wheat, $2.80; corn, $1.80; oats, $1.05; rye, $1.80; buckwheat, $3; beans (C. H. P.) $6.75; barley, $3.15; peas, $3.25.—O. B. G. C.

Gov't Securities for Youthful Investors

An interesting story of 100 per cent efforts on the part of a large number of Virginia boys and girls for financial betterment is told in the May issue of the Journal of the American Bankers' Association. The story concerns the Registered Holstein Calf Club inaugurated by the Richmond Chamber of Commerce and financed by the American National Bank of Richmond.

Through this club, boys and girls were enabled not only to finance the purchase of a valuable pure bred calf destined to the ultimate improvement of the state's livestock, but were also in line for cash prizes offered from various sources. Says the Journal:

"Every member was loaned enough money to purchase his calf, at a very low rate of interest; the notes ran for a year with the privilege of renewing this obligation provided the boy or girl did not make enough money to meet this obligation. What makes the story more interesting is that every member of the club paid his note in full when it was due.

"Forest Hedrick, the winner of the blue ribbon, grew an acre of corn and paid for his calf from the proceeds. Claude Beck had been a Pig Club member and sold enough pigs to pay his debt. Earl Axsell worked for his father in the dairy and paid his."

Prizes including an aggregate of $189 cash and two bull calves were won by the contestants.

While the several score members of the Calf Club, however, have been giving this remarkable exhibition of thrift, hundreds of thousand of other boys and girls have been equally active and successful in money saving and capital accumulation endeavors.

These are the members of the War Savings Societies of school rooms throughout the country, many of them located in cities and not able to save to take advantage of agricultural profits, while still others, in rural districts, have combined the two methods, saving money through the purchase of War Savings Stamps to be used later in the financing of the purchase of a pig or a calf or the planting of corn or other produce.

This latter process has been pronounced of particular value by educators and economists, since it acquaints the rising generation with the certainty and safety which accompanies investment in government savings securities, and encourages savings by the ease with which purchases are made. Holdings of War Savings Stamps by school children amount to many millions of dollars, and not a few boys and girls in every state have converted a $100 worth or more into the more convenient form of Treasury Savings Certificates.

The government savings securities, always worth more than was paid for them, have no market fluctuations to concern the holders, and may be converted into cash to take advantage of opportunity. The custom of investment in so sound and conservative securities as those of the government will train the young men and women of tomorrow to be wary of the offerings of the fake stock salesman, and thus accomplish another great national good.

HINTS ON SOYBEAN CULTURE

The depth of planting soybeans is an important point, says W. C. Etheridge of the University of Missouri College of Agriculture. The seed must be planted shallow or poor stands will result, for the soybean seedling has not the power to push itself through a deep covering of soil. Experiments have proved that two inches is the most favorable depth. Planting much deeper than this will greatly reduce the stand. If a hard crust forms on the surface before the seed has come through, it should be broken with a smoothing harrow or a weeder, otherwise the crust will tend to reduce the stand.

A crop planted in rows three feet a part will require fifteen to twenty pounds of seed to the acre, while a broadcasted or drilled crop will require sixty to ninety pounds to the acre. Soybean seed weighs sixty pounds to the bushel, but they vary greatly in size. Thus, 2,100 seed of the Mammoth variety and 6,400 of the Peking variety are contained in a pound. For economy in the use of seed an adjustment of the rate of planting according to the size of the seed is therefore necessary; the larger quantities, just mentioned, should be used of large seed, and the smaller quantities of small seed.

ROUGH AND READY KNOCK-ABOUT SHOE

$3.25

You can't beat the price and quality of the knock-about shoe. It's a genuine bargain. Just the thing for hard and long wear—has leather inner sole, oak welt, leather upper; extended and reinforced edge all around; Tan Oak. Others are retailing $5.00 and more for same shoe. You get this for the low price of $3.25. When buying through RAMBLER you pay the present day reduced prices plus exceptionally small mailing costs. Not continuous high prices but constant low prices—We take advantage of market opportunities—these are your opportunities and save you DOLLARS. Send No Money; mail coupon and then pay the postman $3.25. If the shoes are not satisfactory return them at our expense. We guarantee prompt shipment, perfect fit and take all the risk. This is a special offer so mail the coupon today.

Our Catalogue G-36 sent free on request, will show many ways to big shoe savings. Wonderful selections for men, women and boys, latest styles.

SEND NO MONEY

RAMBLER SHOE CO
Dept. G-36, New York City.

Send my pair of Rambler worth-while work shoes. I will pay postman $2.95 on arrival. If shoes are not entirely satisfactory I can return them and you will refund money, including return postage.

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farmer, Adv. Dep't, Mt. Clemens, Michigan.

FARMS & LANDS

RIVERSIDE DAIRY FARM, 160 ACRES $4,600 with 3 horses, 2 cows, 3 calves, 4 pigs, poultry, wagons, machinery, tools, hay, corn, fodder; biggest midwest bargain; near RR town; machine-worked fields, 30-cow spring-watered pasture, 1,500 cords wood, 120 apple trees, 300 sugar maples; 2 good houses, spring water, overlooking river; barn, garage, other buildings; city owner throws in everything, very easy terms. Details page 69 Strout's Big Illustrated Catalog Farm Bargains 33 States. Copy free. STROUT FARM AGENCY, 814 BE, Ford Bldg., Detroit.

STRIPPED HARDWOOD LAND, RICH clay loam—easy terms, $12.50 to $15.00 an acre. Neighbors, roads, schools. Four to five miles from Millersburg. Never failing clover seed will make your payments. JOHN G. KRAUTH, Millersburg, Mich.

150 ACRE FARM FOR SALE—90 ACRES under cultivation, 90 acres pasture and small timber. Equipped with all farming tools and good stock. For full information write ALBERT DIETZ, Hawks, Mich., R. F. D. No. 1.

FOR SALE—80 ACRE FARM, EXCELLENT soil, all under cultivation, good house, fair barn, plenty water. Will sell entire equipment including 8 high grade Holstein females. 4 miles from town. Inquire LYLE SHARP, Clifford, Mich.

FOR SALE—EAST HALF OF SEC. 5, Center Twp., Co. of Emmet. Correspond with owner. JESSE E. WEBSTER, Pellston, Mich.

FARM FOR SALE—76 ACRES, CLAY LOAM well drained. Best of soil. No county ditch. Good buildings, newly painted. Acetylene lights, will sell with or without stock, tools and crops. 60 rods to school, 2 miles to good market on main road. A. R. ZIMMERMAN, Newaygo, Mich.

FOR SALE—120 ACRES. GOOD BUILDings, 80 acres improved; flowing well, water in house and barn. Also stream through pasture. Will sell part or all. Price $60 per acre. For further information write Wm. VANDEPOL, Marion, Mich., R No. 4.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

FURNISHING THIRD HORSE

A rents B a hundred-acre farm for three years. A and B each to furnish 1-2 livestock, seed and feed and each to get 1-2 of proceeds. B is to furnish horses tools and do all labor. A leaves 2 old horses which he hates to sell or kill on the place, one working as a third horse the other being only a buggy horse. B is to have use of these for care and feed. The second season both horses are unable to work. B takes care of them for 8 months without being able to get any use out of them. A at last consents to have them killed, nothing being said in the agreement about the number of horses B is to keep. He buys one making him 3. Does he have to pay A for 1-2 feed for third horse? After fall work was done B worked team on road for about 14 days. How much of the earnings can A claim? Has A any right to shut windmill or engine off thus depriving B of water for house and stock? Has A any right to fix toolshed into a garage and use it for self without B's consent?—W. W., Van Buren County.

The third horse is to be treated the same as the team, each furnishing one half of the feed. Unless there is something in the contract I am of the opinion that working on the road is not farm work and A would not be entitled to any portion of it. If B. neglects his work on the farm to do the work he might be liable for any damage such neglect causes. If the farm was supplied with windmill and engine as part of the farm property A would have no control of them unless reserved in the lease and would be liable for any damage caused by his unauthorized conduct. A wouldn't have a right to any buildings or parts of buildings on the farm that he did not reserve in the lease—*W. E. Brown, legal editor.*

KELLASTONE STUCCO

We wish to remodel our house this summer and would like to know if Kellastone Stucco put on with wood lath is durable and will not crack.—A Subscriber, Albion, Mich.

Kellastone Stucco has not been on the market very many years and I believe has proved very satisfactory when properly applied. You must first have a foundation that will not settle or else you are bound to have cracks. You must next have material that is dry enough to not shrink seriously.

It has proven up about as good on wood lath as on steel lath because it is water proof thus preventing the dampness from getting to the lath. The lath need not necessarily be kiln-dried but if you wish good success you should at least have the lath properly season dried, otherwise little fine checks is bound to appear. This finish makes a very beautiful job, fire proof, durable and exceptionally warm. Have it properly mixed and these reasonable precautions taken, and it will not crack.—*G. A. Bugbee, Architect.*

INHERITANCE TAX LAW

Will you please publish in M. B. F. a synopsis of the Inheritance Tax. What is the least one can inherit without paying a tax and what per cent does one have to pay.—Mrs. C. F., Lapeer, Mich.

The last inheritance tax law for the state is Act 148 of the Public Acts of 1919, page 272. On page 273 provides that property should not be taxable under this act unless it was personal property of clear market value of $2,000 or more; and when the transfer was to the wife such transfer of property would not be taxable unless it is personal property of clear market value of $5,000 or more and in that case the entire transfer would be taxable at 1 per cent of the clear market value. There are a number of other provisions and a different rate to all other classes than named in the statute so that a person should read the whole statute to ascertain its application to their own case.—*W. E. Brown, legal editor.*

REMOVING QUACK GRASS

Is there any way that quack grass can be killed or run out?—L. W. H., Tuscola County.

Thorough cultivation and good rotation will effectively check and eventually kill out quack grass. We would suggest the following method as being most effective where quack grass has taken a firm hold:

Plow ground to a shallow depth of 4 inches in spring or summer previous to August 1st. Disc and cross disc to cut sod in pieces. Harrow with spring tooth or disc whenever green growth appears and soon after each rain. When roots and runners are dry, rake into heaps and burn. Continue thorough cultivation until winter. During the following spring plow deep, 8 inches or more, and follow with cultivated crop such as corn or beans, giving crop usual careful cultivation.

I have seen land bound in quack grass sod almost thoroughly freed from the pest by this method. During the following period all possible growth of quack grass leaves is prevented, thus starving the portion of the plant below ground. The roots are further weakened by winter action and when plowed deep the next spring, fail to send shoots to the surface with few exceptions.

Small patches of quack grass can be killed by frequent hoeing, or if noticed when it first appears in the field, can be smothered out by weighting down tar paper with stone.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

WHAT STATES HAVE CONSOLIDATED SCHOOLS

Will you please tell me if Illinois and Indiana have consolidated schools. Also as many other states that you know of. —Reader, Copemish, Mich.

The following states have made the greatest progress in establishing consolidated schools: Massachusetts (one of the first to consolidate,) Indiana, Ohio, North Dakota, Louisiana, Mississippi, Minnesota, Iowa, New Jersey, Washington, Oklahoma and Arkansas. Nebraska, Texas, Kansas, Tennessee and Kentucky have also made great progress. Idaho, Wyoming, Nevada, New Mexico and Arizona have made a good beginning. P. O. Claxton, commissioner of education, stated in February, 1917, that there were 7,500 consolidated schools in the country one-half of which had been established during the last three years. He predicted that by the end of the year 1920 would be 10,000.—*T. E. Johnson, Superintendent of Public Instruction, Lansing, Mich.*

THE COLLECTION BOX

REFUND FROM CHICAGO FIRM

"Last June we lived at Sanford, Michigan, and we ordered two rugs from the ————Company, Chicago. The latter part of June we returned the two rugs as they were not what we wanted. We waited a month and did not hear from them, so we wrote and waited some time again and did not hear, so I wrote again and had my letter registered, so in several days I got a letter and asked me to send the express receipts which I did. In September we got a check for the cheapest rug which was around eleven dollars, leaving a balance of sixteen dollars. We wrote back at once and they asked for another express receipt which we got from the agent and sent it in to them. We have never hear from them since. Can you help us out on it?—*R. G., White Cloud, Mich.*

Our subscribers complaint was taken up with this firm on June 1st, with the result that our subscriber received the balance due him on June 5th, according to the following letter:

"We are enclosing in this letter our check No. 16715 for $16.25. Through a clerical error you were not credited for both rugs and we apologize to you for having delayed you so long. We are sending you one of our new catalogs under separate cover and if at any time you feel that you would like to order any goods from us, we assure you that your account will be most welcome."

STATE HEALTH LAWS

I am very anxious to know if there is a law in Michigan to prevent anyone from dumping fish entrails on the ground uncovered for days at a time a breeding place for flies and a menace to health.—Mrs. L. C., Charlevoix, Mich.

"I am enclosing herewith copy of the Nuisance Law under which the local board of health can improve sanitary conditions by the abatement of nuisances. You should apply to your local health officer who is empowered to order nuisances removed."—*Edward D. Rich, State Sanitary Engineer.*

The law pertaining to the burial of dead animals or any part thereof under which undoubtedly would come the nuisance of which you complain, reads as follows:

"Sec. 11432. If any person or persons shall put any dead animal or part of the carcass of any dead animal, into any lake, river, creek, pond, road, street, alley, lane, lot field, meadow or common, or in any place within one mile of the residence of any person or persons, except the same and every part thereof be buried at least two feet under the ground, and if the owner or owners thereof shall knowingly permit the same to remain in any of the aforesaid places, to the injury of the health , or to the annoyance of the citizens of this State, or any of them, every person so offending shall be deemed guilty of a misdeameanor, and upon conviction thereof shall forfeit and pay a sum of not less than five dollars nor more than ten dollars, together with the costs of prosecution, and in default in the payment thereof, shall be imprisoned in the county jail of the county in which such conviction may be had, not exceeding ten days, to be imposed by any court of competent jurisdiction; and every twenty-four hours said owner may permit the same to remain after such conviction, shall be deemed an additional offense and pay a further sum of not less than ten dollars and not more than thirty dollars, together with the costs of prosecution, to be recovered as aforesaid, and in default in the payment thereof, be imprisoned as aforesaid not more than thirty days, or be punished by both such fine and imprisonment, in the discretion of the court."

BIDDING FOR STATE PROPERTY

Last year through a mistake we paid taxes on another man's lots and in looking it up in hopes of getting our money back we find out that this man has not paid any taxes for six years and that it is state property and that if we bid those lots in at the tax sale how long will it be before we will have to pay the state the taxes that are back for other years and whether we could get a good title to it or not and how long it would be before we could take possession of it. I would like to know how to go at it to get this property or get our money back. I don't think anyone else has any claim on it. The property lays next to us. I like your paper very much. Please answer through your columns.—Mrs. E., Gladwin County, Mich.

You do not give a full description of the tax situation but from what is said I am of the opinion that you would have to bid the whole of the back taxes held by the state. After the bid you would have to serve the notice required by law and six months after return of the sheriff of service of the notice title would become complete as a tax title. The law provides that after 5 years possession by the purchaser the deed shall not be set aside. Possession immediately after the expiration of the six months.—*W. E. Brown, legal editor.*

FORMULA FOR WHITE WASH

I would like to get a formula for a white wash to use in a sprayer. Would you give me one?—A Subscriber.

One bushel of quick lime slaked with 12 gallons of hot water and mixed thoroughly. In a separate container dissolve 3 lbs. of common salt and one pound of zinc sulphate in two gallons of water. When dissolved add this solution to the slaked lime. Finally add 2 gallons of skimmed milk and mix thoroughly. —*A. J. Clark, Professor of Chemistry, M. A. C.*

HOW FARMERS MAY RELIEVE SUGAR SHORTAGE

(*Continued from page* 4)

ghum stalks are passed to press out the juice. It may be operated by a gasoline engine or by a sweep drawn by horses.

The usual type of evaporator consists of a rectangular, flat bottomed pan of galvanized iron or copper. Evaporation may be produced by direct contact with fire or with steam. In the former case the pan is mounted on a specially constructed fire box. If steam evaporation is employed the pan is provided with steam coils which lie in the bottom of the pan. In some cases a double-bottomed pan is used, the space so provided being employed to carry the steam.

"Other articles needed are barrels or tubs for catching the juice, pipes for conducting it to the pan, skimmers for removing the scum, apparatus for testing the syrup's consistency and barrels or cans for holding the finished product.

"In making a syrup the blades of the plants are stripped off, the sorghum cut at about six inches from the ground, the seed heads removed. The sorghum is passed through the mill with as little delay as possible. When the weather is cool or there is danger of frost, the sorghum may be cut considerably in advance of pressing for when properly piled, it will keep for several days. The juice extracted by the mill is strained and then run into the evaporating pan. As it passes through the pan, it quickly comes to a boiling point and a scum rises to the surface. This should be constantly and carefully removed.

"Syrup should be evaporated to a point where it contains not less than 70 per cent solids; that is, has a weight of not less than 11 1-4 lbs. to the gallon. If placed in containers while boiling hot and properly sealed, it will keep indefinitely.

"The average yield of syrup an acre is from 75 to 200 gallons, although in some cases it has been as high as 400 gallons. The estimates on the yield of seed an acre vary from 600 to 1,600 pounds."

Those desiring additional information on that subject should write the Department of Agriculture for a copy of Farmers' Bulletin No. 477.

Syrup From Sugar Beets

The Department of Agriculture has also issued a very complete circular on the growing of sugar beets for syrup and the extracting of the syrup from the ripe beet. We are advised that one bushel of beets will yield between three and five quarts of syrup, depending upon the sugar content of the beets, so that a very small patch of beets should yield sufficient syrup to last the average family thru the season. Sugar beet seed may be obtained from any seed house and can be planted as late as July 1st. Farmers who are not familiar with the method of planting, cultivating and harvesting beets should write at once to the Department of Agriculture for a copy of Farmers' Bulletin No. 823 which gives such information in detail.

Extracting the Syrup

Beet syrup may be used for all purposes for which other syrups or molasses would be employed, especially for table use; for example, on buckwheat cakes, in making a dark colored cake, or in preparing certain kinds of home made candy. If the evaporation is carried far enough and the syrup is allowed to stand, a dark sugar will settle out. This sugar will be found very satisfactory for home uses in cases where refined sugar is not necessary such as in making pies and other pastry.

Improved Process for Use in the Preparation of Sugar Beet Syrup

The directions given in Farmers' Bulletin 823 for the production of table syrup from sugar beets on a small scale, as in the home, are briefly as follows:

"The tops are removed, cutting them at the line of demarcation between the green and the white skin; the beets are thoroughly scrubbed and washed and cut in very thin slices. The sugar is extracted from these slices by placing them in a receptacle, covering with hot water, and allowing to stand for about one hour. The water extract is drawn off, strained through cheesecloth and evaporated to syrup. It is important that evaporation be carried on slowly, the length of time between commencement of boiling and removal of the finished syrup covering several hours, and that the considerable amount of scum forming upon the surface be constantly and carefully removed.

"Recent investigations relative to this subject have shown that the exposure of the cut slices to the air results in oxidation and consequent darkening of the surfaces, and that this, together with the presence of the skin of the beet, has a marked effect upon the color and flavor of the syrup. The long-continued boiling also has a tendency to darken the color of the syrup, but results in an improvement of flavor through the elimination of much of the characteristic and more or less objectionable beetlike flavor.

"The following modification of process is recommended:

"The beets after having been topped, thoroughly scrubbed, and washed are peeled and immediately (without allowing time for them to become darkened through exposure to the air) sliced allowing the slices to fall into a receptacle containing sufficient water to cover them. Sufficient water should be added from time to time so that when the receptacle is full the slices will be covered by about one inch of water. The mass is then heated to 70 degree to 80 degree C. (158 degree to 176 degrees F.) the receptacle covered and allowed to stand for about one hour. A wash boiler will be found satisfactory, and it is recommended that a thin wooden rack be placed in the bottom in order to avoid scorching the bottom layer of slices. The water extract is then drawn off, strained through cheesecloth, and evaporated directly to syrup. While the amount of scum formed will not be as great as in the original method, nevertheless it should be constantly and carefully removed. In the case of a considerable number of syrups made by this process, a very marked improvement in color, flavor and palatability has been apparent. The water extracts are clear and practically colorless, while the finished syrups are of a light amber color and possess little or none of the more or less objectionable flavor and unpleasant taste is sometimes noted in syrups made according to the other method. Iron vessels should not be used either in preparing the water extract or in evaporating the extract to a syrup. It is essential that the beets used in the preparation of the syrup should be thoroughly ripe."

"GET FAIR PROFITS OR QUIT," SAYS DAIRYMAN

(*Continued from page* 13)

or quit. When the world war was raging we farmers were asked to eat what our hogs would not and now we will have to, if things are allowed to go much further. I think it is high time we struck, not for less hours and more pay but the right to just exist and pay taxes. Wake up and do something if it is no more than just to agitate the question.—*R. G. H., Allegan County.*

Our sympathies are with you fellows outside of the Detroit area because we cannot see how you are receiving much benefit from the State Association. Of course, it helps all the dairy business in Michigan in a slight degree to have a high milk price in Detroit and encourage the marketing of as much milk as possible in that city, but it certainly seems as if there ought to be other ways in which the producers outside the Detroit area can receive more direct benefits from organization. We advocate the establishment of a producers' milk plant in Detroit because that seems to provide an immediate solution to the marketing problems of the members of the Detroit area. The solution to the problems of those outside the area has not yet appeared, but having solved the Detroit conundrum the State Association would be left entirely free to devote its energies to its less fortunate members in other parts of the state.—Editor.

Liars

An evangelist who was conducting nightly services announced that on the following evening he would speak on the subject of liars. He advised his hearers to read in advance the seventeenth chapter of Mark.

The next night he arose and said: "I am going to preach on 'liars' tonight, and I would like to know how many read the chapter suggested?"

A hundred hands were upraised.

"Now," he said, "you are the very persons I want to talk to—there isn't any seventeenth chapter of Mark."

Hardened to Hardships of Travel
The sturdy trapper can stand the hardships of the frozen North —he is hardened to them.
Gillette Non-Skid Tires stand the grind of travel — because they are hardened to the hardships of road and climate and possess the proper non-skid principle.
Bite deep into dirt roads— hold fast to smooth, slippery pavements.
Wear down slowly—evenly. Due to the improved Gillette Chilled Rubber Process. It reduces sand blisters —eliminates all tread separation with its resultant blow-outs. Second year sale of Gillette Tires was greater than the second year sale of any other tire.
If there is no Gillette dealer in your town, write our general sales office.

Oats and Peas Profitable for Silage

IN the Northern States and high altitudes where early frosts make corn uncertain, oats and peas can be grown profitably for silage. Along the northern border of our country, especially in those sections where frost often prevents the maturing of corn, Canadian field peas with a good variety of oats make a most excellent crop for silage. Oats and peas withstand light frosts and make an excellent crop for silage. Oats and peas withstand light frosts and make an excellent growth even with low temperatures. Many of the clay soils in northern Wisconsin and Minnesota are especially adapted to the growth of this crop; and it can be planted very early in the spring, which will enable the grower to mature a crop ready for the silo at about the time of the first cutting of clover. When unfavorable weather for harvesting clover sets in such as a long rainy spell, the clover can first be put in the silo after which the oats and peas can be harvested. In sections where corn will not do well on account of a lack of heat, oats and peas, as a rule, will produce more tonnage and the silage will be much better, being nearer a balanced ration. A dressing of barn yard manure will increase the yield, especially on new lands which have not been inoculated by clovers. We have found here in northern Wisconsin the growing of oats and peas the most satisfactory way of getting rid of quack grass; especially when the crop is sowed thickly it will smother out the quack grass. Oats and peas contain more than twice as much protein as corn and therefore make a ration which is practically balanced in itself. As a food for dairy cows it is most excellent, and will substitute the best of pasture.

In the fall of 1918 I had an occasion to test the worth of oat and pea silage compared with corn silage. I had been feeding corn silage to a number of dairy cows, and on the 21st of January came to the place in the silo where oats and peas had been put in. We noticed at once an increase in the production of milk from our herd. One cow which was nearly dry, giving about fourteen pounds per day, rose quickly to 20 pounds per day; another increased from fifteen pounds to 24 pounds, and similar increases were noted by other animals of the herd . This was sufficient evidence for us to prove that oats and pea silage was superior to corn silage, especially when given as we were feeding.

Our method of sowing is to work the ground as early in the spring as it can be plowed and harrowed, then sowing one and one-half bushels of peas to one and one-half bushels of oats per acre. The oats and peas will germinate even when the ground is cold and wet, and late spring frosts will not destroy the plants. The crop will come on in mid-summer and when the peas are well podded and most of the pods filled, the crop is ready for the silo. It should be cut and put in the silo while still green. Do not allow the forage to become dry and then be obliged to add water; the natural juice of the plants is the best and cannot be replaced by adding water.

Oats and peas can be handled much the same as hay when made into silage. It is better to cut, however, when the dew is on to prevent peas and oats from shelling. The land is cleared in ample time to prepare the ground for winter rye or wheat. This is a special advantage when considerable land is being farmed and labor scarce and hard to get. Oats and peas are much easier to raise than corn as they can be planted fully a month earlier and will not be damaged by frosts. More than that, no cultivation is needed, and when quack grass is bothersome, a heavy yield will choke out and destroy the quack grass.

Farmers who live in the northern states can well afford to test out this valuable crop, especially if they are finding it difficult to mature good corn for the silo. Oats and pea silage will come as near duplicating June pastures as any feed I know of, and it is well worth the trial, especially by those farmers who are conducting dairies in the northern states.—*Y. M. Johnson, Ashland, Wis.*

Wheat Exports Make High Mill Feeds

(Submitted by the Millers' National Federation)

ON May 29, 1920, wheat millfeeds were quoted, basis Chicago, carload lots, packed in 100 lb. sacks, as follows:

Spring bran, $55@56 per ton; hard winter bran, $55.25@55.75 per ton; soft winter bran, $55@56 per ton; standard middlings (brown shorts) $61@62 per ton; flour middlings (gray shorts) $62@63 per ton; red dog, $69@70 per ton.

The price of wheat millfeeds is regulated by supply and demand; if the supply were more nearly equal to the demand the prices would be lower. The supply of wheat millfeeds can be materially increased by the adoption of a national policy favoring the exportation of flour instead of wheat, retaining in the United States the millfeed resulting from such increased operation of the flour mills.

Few farmers appreciate what a loss is entailed to the farming community by allowing wheat to be exported. Based on the report of the United States Grain Corporation for the crop year ending June 30, 1919, (the latest authentic figures available) the wheat millfeed production of the mills of the United States for that crop year was 4,383,000 tons. Of this amount, 1,032,340 tons resulted from grinding flour that was exported.

If all the wheat that was exported during that crop year had been ground into flour by American mills there would have remained in this country 1,451,360 tons more feed than the figures given above.

These calculations are based upon an estimated production of 71 lbs. of millfeed from each barrel of flour manufactured; this basis was correct during the period that flour mills were operating under government regulations which forced mills to a high percentage of flour extraction; at present the amount of feed resulting from the manufacture of a barrel of flour is between 75 and 80 pounds, depending upon the character of the wheat being ground. The above figures may therefore be accepted as conservative.

In round figures, millfeed constitutes one-third of the product of wheat flour milling. In other words, in every car of wheat containing 60,000 pounds that is exported, 20,000 pounds of valuable wheat millfeeds is lost to the farmers of the United States.

At present flour export trade is practically at a standstill, while wheat is being exported as rapidly as ships can be secured to load it. This is largely the result of the policy adopted by the United States Shipping Board, which has, for several months, indicated a rate for ocean transportation on flour 25 cents per 100 pounds higher than the rate on wheat. In doing so the Shipping Board is endorsing the action of the British Admiralty, which established the rate in order to discourage importation of flour and to encourage the constant operation of British flour mills; one of the principal factors in adopting this policy is the securing to British farmers the desirable millfeeds resulting from the milling of wheat in British mills. The resulting situation is that a branch of the United States Government, the Shipping Board, is lending its influence to the support of a policy which deprives American mills of the rightful privilege of grinding the wheat and exporting the flour, and at the same time deprives the farmers and dairymen of the United States each month of thousands of tons of much needed millfeed, and the effect of larger supplies of millfeed as a factor in establishing the prices of all other feeding stuffs.

Farmers, dairymen and feeders can do much to increase the supply of wheat millfeeds by writing to their Congressmen and Senators, requesting them to use their influence with the United States Shipping Board to establish equal rates on flour and wheat for ocean transportation, and thus use the fleet built by American taxation to encourage increased operation of flour mills with resulting increased supplies of millfeed, much needed at this time.

RATIONS FOR BABY CHICKS

The first feed given the baby chicks should be something easy to digest. Many successful poultry keepers start the chicks on rolled oats. Others use dry bread crumbs or finely cracked grain. The first requirement is that the chicks should not be fed too soon and the second essential is that chicks should not be fed too much. No feed should be given the chicks until they are at least 48 hours old and not then unless they show a good appetite.

Whatever is given for the first feed should be fed in small amounts or the chicks should be watched and what feed is left at the end of about ten minutes should be removed. Chicks should be fed four or five times a day during the first week so that they may secure plenty of nourishment without overheating at one time.

During the first few weeks of its life the chick grows very rapidly and it is very important that the ration contain the proper elements for making muscle and bone. Protein from an animal source is the material which insures a good rate of development in the chicks. Wherever possible the chicks should be given unlimited quantities of buttermilk or sour milk to drink from the time they are placed in the brooders. If milk is not available, then the protein should be supplied during the first week or ten days by the addition of hard boiled eggs to the ration. One egg daily for each fifty or sixty chicks will supply the protein needed for growth. After the chicks are about a week old, the ration should gradually be changed from the oatmeal or other starting feeds to a more substantial ration of cracked grain and dry mash. During the second, third and fourth weeks of the feeding period a good grade of commercial chick feed is very satisfactory for furnishing the grain for the ration, or finely cricked corn can be used.

The mash for baby chicks should consist of equal parts of wheat bran and shorts;or wheat bran, shorts, and corn meal in equal proportions. If protein is not being supplied thru milk, either commercial meat scrap or a good grade of feeding tankage should be added to the dry mash at the rate of one pound of meat scrap or tankage to each three pounds of bran, shorts and corn meal. As soon as the chicks begin to run outside and secure plenty of exercise, the feed may be given in unlimited quantities. The best way to insure rapid growth is to keep the dry mash constantly before the chicks in self-feeding hoppers and to feed as much cracked grain as they will clean up at each feed. To insure plenty of bone buildings material for growing chicks it is advisable that fine granulated bone be put out in self-feeding hoppers where the chicks will have access to it. Hoppers filled with fine charcoal is also a good thing to keep before the chicks as charcoal helps to correct digestive troubles. Green feed should form an important part of the chick ration. If the chicks are running at large on green grass, nature will take care of the green food supply. If they must be confined, then green food should be provided in such forms as lettuce, onions, sprouted oats, or other tender greens.

DEMAND FOR DRAFT HORSES

Frank H. Sweet of Sweet & Piper, at the Kansas City Horse Market, reports that the demand for heavy draft horses and mules has been greater, and the prices paid, higher, during the last two months, than any time in history.

Mr. Sweet, in commenting on this says, "For two or three years past we haven't had much demand from the eastern states for draft horses but in the last two weeks they have been coming in strong. The preference is given to horses sixteen hands and over, weighing upward of

1,700 pounds, sound, mature, and of good draft type.

"Boston has taken a good many of these horses; other cities of the northeast have bought liberally. This is reported to be due to the heavy storms of the past winter in that section, which forced the transportation users to realize that the horse and mule were the only motive units wholly reliable.

Prospects for continued demand and unusual prices are excellent.

VALUE OF A TON OF MANURE

Trials made on the various experiment fields throughout the state by the University of Missouri College of Agriculture have shown that an average application of eight tons of manure to the acre once in four years has increased the yield of corn 10.5 bushels, oats 5.17 bushels, wheat 5.24 bushels and clover hay, 937 tons. At prices which prevailed the first of the year this increase would be worth $4.83 at pre-war prices $2.34 for each ton of manure applied. It will cost the farmer not more than one dollar a ton to collect the manure and haul it to the field. This would leave a net profit of $3.83 at present prices, or $1.34 at pre-war prices for each ton manure applied. The full value of the manure is usually not obtained during the first four years, for it leaves the soil in better condition and its effect upon later crops is often quite significant. This becomes more noticeable after the first two or three applications, since a liberal application of manure every four years will result in permanent improvement to the land.

By very careful handling of manure a live stock farmer, on average soil, should be able to return annually, about two tons of manure per acre to his cultivated fields. It is not easy to save this amount except by very careful methods and persistent efforts. It is necessary that all straw and other suitable materials be worked through the barns as bedding. This not only adds to the comfort of the animals, but serves as an absorbent for the liquid manure. If straw piles are sold, burned or left to rot it is, of course impossible to return this amount of manure.

Keep the manure together, don't let it get scattered about the barn or lots. Hogs and chickens may waste much of it. Where possible haul it to the field as soon as produced. If this is not possible, store it in shallow concrete lined pits to prevent leaching. Use plenty of bedding in the stable or on the feeding floor to absorb the liquid. Straw, old hay, grass and leaves may be used for this purpose.

Keep the manure together; don't let it get scattered about the barn or lots. Hogs and chickens may waste much of it. Where possible haul it to the field as soon as produced. If this is not possible, store it in shallow concrete lined pits to prevent leaching. Use plenty of bedding in the stable or on the feeding floor to absorb the liquid. Straw, old hay, grass and leaves may be used for this purpose.

About 35 per cent of the nitrogen and 55 per cent of the potassium is to be found in the liquid material. There is, however, practically no phosphorus in this part. The plant foods in the liquid are all in soluble form and are very easily lost thru leaching. Furthermore, the nitrogen in this liquid portion readily passes off as ammonia when the manure is allowed to ferment, hence the necessity for preventing ferment ation as far as possible.

The total solid and liquid manure produced in a year by a well fed, mature horse is about eight tons, with a plant food value of more than $30. In the case of a well-fed steer weighing from 1,000 to 1,200 pounds the production is nine to eleven tons, with a slightly greater total value than the manure from a horse.

Three to five months exposure to the weather in an open lot may cause manure to lose approximately one-third of its plant food. If manure must be exposed to the weather it should be in a pit with a water tight bottom.

ORDER YOUR FALL FERTILIZER

'Transportation difficulties may become more acute during the summer and since the manufacture and transportation of acid phosphate is of a seasonal nature, the orders should be placed early.

"It may be necessary to use considerable fertilizer next fall to combat the Hessian fly, which has been quite destructive during this season. In some cases it is necessary to plant the wheat late and fertilize heavily, depending on the fertilizer to give the wheat a start equal to that of early sowing."

This is a very important matter to all wheat growers and one which should have their immediate attention. It is unfair to the railroads to ask them to move all the immense tonnage of fertilizer in a few weeks. Not only is it unfair but it is decidedly unsafe, if one wants the fertilizer to arrive on time. It takes no more time to put in an order in June than it does in August and there is a lot of difference in the surety of delivery for the June order.

This is no time to cuss the railroads. We need their service and we in return should do our part that they may give us service.

There is another item which must be considered by wheat growers, and that is the effect of delayed shipments of fertilizer on this year's crop of wheat. August and September shipments of fertilizer will get in the way of the wheat movement and vica versa. Here are two big freight movements which vitally effect the farm business and they should not be allowed to interfere with each other as they inevitably will if shipments of fertilizer are not made early. So order today what fertilizer you will need this next fall.

DELCO OFFERS CHEAPER PLANT

Those who have been waiting for a less expensive electric lighting and power plant to come on the market will be interested in the full page annuoncement of the Delco-Light Company, which appears on page ? of this issue. Such an outfit, producing 1-2 kilowatt from a silent, air-cooled, kerosene-burning plant would be of little interest, if it were not brought out by such well-known and responsible manufacturers. The capacity, we believe, is large enough to take care of the average Michigan farm and it means not only ample and safe light in all buildings, at any time day or night, but power for running water, which is as great a help to mother and convenience to the boys. Of course, a washer, electric ironer, fans and other conveniences come with electricity, which is as Thomas Edison has said "the modern Genii," a humble slave to do your bidding. THE BUSINESS FARMER hopes that every reader who has ever thought of a lighting plant for their farm will send the coupon for full particulars which are gladly sent without any further obligation, if addressed to the company at Dept. Z, Dayton, Ohio.

Pabst Korndyke Cornflower

FARM LIGHTING SYSTEMS

One of the most important farm home convenience is a good lighting system, a system which will do away with the dirty, ill-smelling kerosene lamp, which is a constant source of danger, is inconvenient, inefficient, and a care to the busy housewife, says E. W. Lehmann of the University of Missouri College of Agriculture.

Conditions change from year to year and what were considered luxuries a few years ago are now considered necessities. This is particularly true with reference to conditions on the farm. Things are no longer "all right because our fathers got along with them." The up-to-date farmer must have his home equipped with all modern conveniences not only because they add to the pleasure of living but also because they make him more efficient in his farm work.

"I think your paper one of the best weekly farm papers published. I would also like to buy one of those Jersey cows pictured on front page of your paper."—*A Subscriber.*

Veterinary Dep't

LAME SHOULDER

I have a horse that slipped and hurt his shoulder March 28th. I was leading him out to water in the morning and noticed it at noon. By that time he could hardly get out of the barn. He drags that foot and leg. Have had two doctors and neither seems to help him. Blistered it the first thing and then put bran poultice on for 24 hours. I am not giving him any exercise now, except once in a while lead him to water. His soreness is in behind and under the humerus in those muscles called extensor of elbow. That large muscle on the outside is shrunk away. He can stand on that leg but he tips his knee forward a good deal unless it is held back with a harness.—E. D. C., Sanilac County.

This shoulder should have been packed in ice or cold applications applied continuously for the first twenty-four hours; your blister simply added to the inflammation you already had. at the present time the animal should have absolute rest. should not be taken out of the stall for at least two weeks; this will accomplish much more than any local treatment. Hot water applied and massaging of the muscles will be found somewhat beneficial. Should the muscles remain shrunk away have your veterinarian injest equal parts of Tr. Iodine and chloroform deep into the muscle; inject about eight or ten drops of this solution in a place and place the injections about two inches apart. This should be repeated every four weeks until the shoulder is normal.—*W. A. Ewalt, Veterinary editor.*

REMOVING COLLAR BOILS

In answer to W. H. S., Newaygo County, would say that I had a collar boil removed by operation in 1912, from a horse four years old, and it has never bothered since. You can see the scar, but it has never been sore; of course you must use a perfect fitting collar. It took about six weeks to heal up.—*J. M., Saginaw County.*

FEEDING TOO MUCH

I have some hogs that don't eat what they ought to. I am feeding ground corn meal, and corn on the ear. Eighteen of them will only clean up one half bush- of ear corn and about six quarts of meal to the feed. They grow but do not put on fat. They are last October pigs. What can I give them?—E. V. M., Genesee County.

You are feeding them too much corn, change the food to a more easily digested nature. After a short course on some other feed you will be able to put them back on the corn and they will take on fat. This should be done gradually thoug h. Feed them a little charcoal in the feed morning and night. *W. A. Ewalt, Veterinary editor.*

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

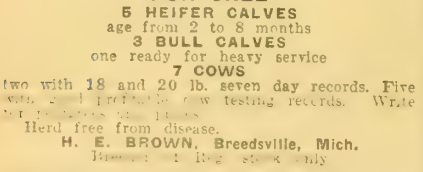
CATTLE

HOLSTEIN-FRIESIAN



Convert Roughage into Dairy Products with Purebred Holstein Cattle

Cows that convert the roughage of your farm into the best of milk, butter, veal and beef are worth more to you than cows that are particular about their food. If you sell your milk for direct consumption, to a cheese factory or condensary, of course, you won't consider any other breed. When it comes to butter, bear in mind that the separator shows that the Holstein cow still leads. If you have any young stock you need all that extra skim milk.

Send for Free Illustrated Booklets. They contain valuable information to any Dairyman.

THE HOLSTEIN-FRIESIAN ASSOCIATION
295 Hudson Street
Brattleboro, Vermont

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

BUTTER BOY ROSINA PRINCE

257572, herd sire, son of King Ona. His sire is from a 30 lb. cow that made 1,345 lbs. in one year and dam, Butter Boy Rosina 2nd 200, 540, made 29 lbs. and almost 800 lb. in ten months she has a 33 and 34 lb. sister. Have some fine young bulls and heifers and some heifers bred to him for sale from A. R. O. cows with records from 22 to 30 lbs. Write for prices.

Hampshire hogs, fall boars, ready for service and sows. Bred sows, others for spring pigs.

Belgian and Percheron Stallions and mares. Imported and American bred.

BIG BOB MASTODON

Sire was champion of the world, his Dam's sire was grand champion at Iowa State Fair. Get a grand champion while the getting is good. Booking orders now. Bred gilts are all sold, but have 10 choice fall pigs sired by a Grandson of Disher's Giant. 3 boars and 7 sows. Will sell open or bred for Sept. farrow, to BIG BOB.

C. E. GARNANT, Eaton Rapids, Mich.

WONDERLAND HERD

LARGE TYPE P. C.

A few choice bred gilts for sale. Also fall gilts and boars, some very good prospects of excellent breeding. Gilts bred to ORPHAN'S SUPERIOR by BIG ORPHAN'S EQUAL by BIG BONE ORPHAN by the BIG ORPHAN. Dam, BEAUTY'S CHOICE by ORANGE BUD, by BIG ORANGE A.

Free livery to visitors.

Wm. J. CLARKE,
Eaton Rapids, Mich.

WALNUT ALLEY BIG TYPE POland Chinas. Gilts all sold. My 1920 crops will be sired by Giant Clansman No. 324731, sired by Giant Clansman and Art's Progress No. 377041.

A. D. GREGORY, Ionia, Mich.

LIVE STOCK FIELD MEN

E. N. BALL, ... Cattle and Sheep
FELIX WITT ..... Horses and Swine

One or the other of the above well-known experts will visit all live-stock sales of importance in Michigan, northern Ohio and Indiana, as the exclusive Field Men of The Michigan Business Farmer.

They are both honest and competent men of standing in their lines in Michigan and they will represent any reader of this weekly at any sale, make bids and purchases. Write them in care of this paper. Their service is free to you. They will also help you arrange your sale, etc. They work exclusively in the interests of Michigan's OWN live-stock weekly!

—every breeder—

Can use M. B. F.'s Breeders' Directory to good advantage

The World's Market at Michigan's Door!

A Glimpse at What the Proposed Great Lakes to Ocean Route Will Mean to the Business Farmers of Michigan

IF PLANS which are being rushed to completion are not blocked by selfish and short-sighted easterners, the beginning of a project which is destined to link the Great Lakes with the Atlantic ocean will soon be under way.

Who has not wondered as he stood on the deck of the great ships which plow our great fresh-water inland seas, why it was that he was cut off from the seas by only a narrow stretch of rapids, or the limitations of a Welland canal?

Why should the farm and factory products of the great central west be loaded aboard freight cars in tiny quantities, carried miles over mountains and through valleys, unloaded at New York, Philadelphia or Boston and lightered to ocean going ships, most of which are smaller than the great barges which carry the freight of the great lakes?

Compared with the advantages of the Panama canal to the people of the United States, this link in our transportation system should have been built first; had it been, the great war might have ended many months before it did.

Advantages to Michigan

We hope we are no more than humanly selfish, but we cannot help but point out to the farmers of Michigan and the states which have ports on the Great Lakes, the tremendous advantages which will accrue from this saving in carrying charges. From Liverpool to Hong Kong the ports of the world will be at Michigan's door, at least for nine months out of every year, and wheat, beans, potatoes or apples loaded at South Haven, Bay City or Detroit, can go direct without a transfer to compete with the products of every land.

AT DETROIT, July 22d, 23rd and 24th will be held the Great Lakes-St. Lawrence Tidewater Congress, at which it is hoped to bring to a head the many years of conscientious endeavor on the part of those who have been advocating a direct ocean outlet to the Atlantic.

Certain Eastern states because of their important ocean ports have begun an active opposition to this great forward step, selfishly they are taking the position of the dog-in-the-manger and seeking to stop progress.

With the railway situation as it is today the gross error of trying to force the great agricultural and manufactured products of the central west through the small end of the Atlantic port funnels has been only aggravated.

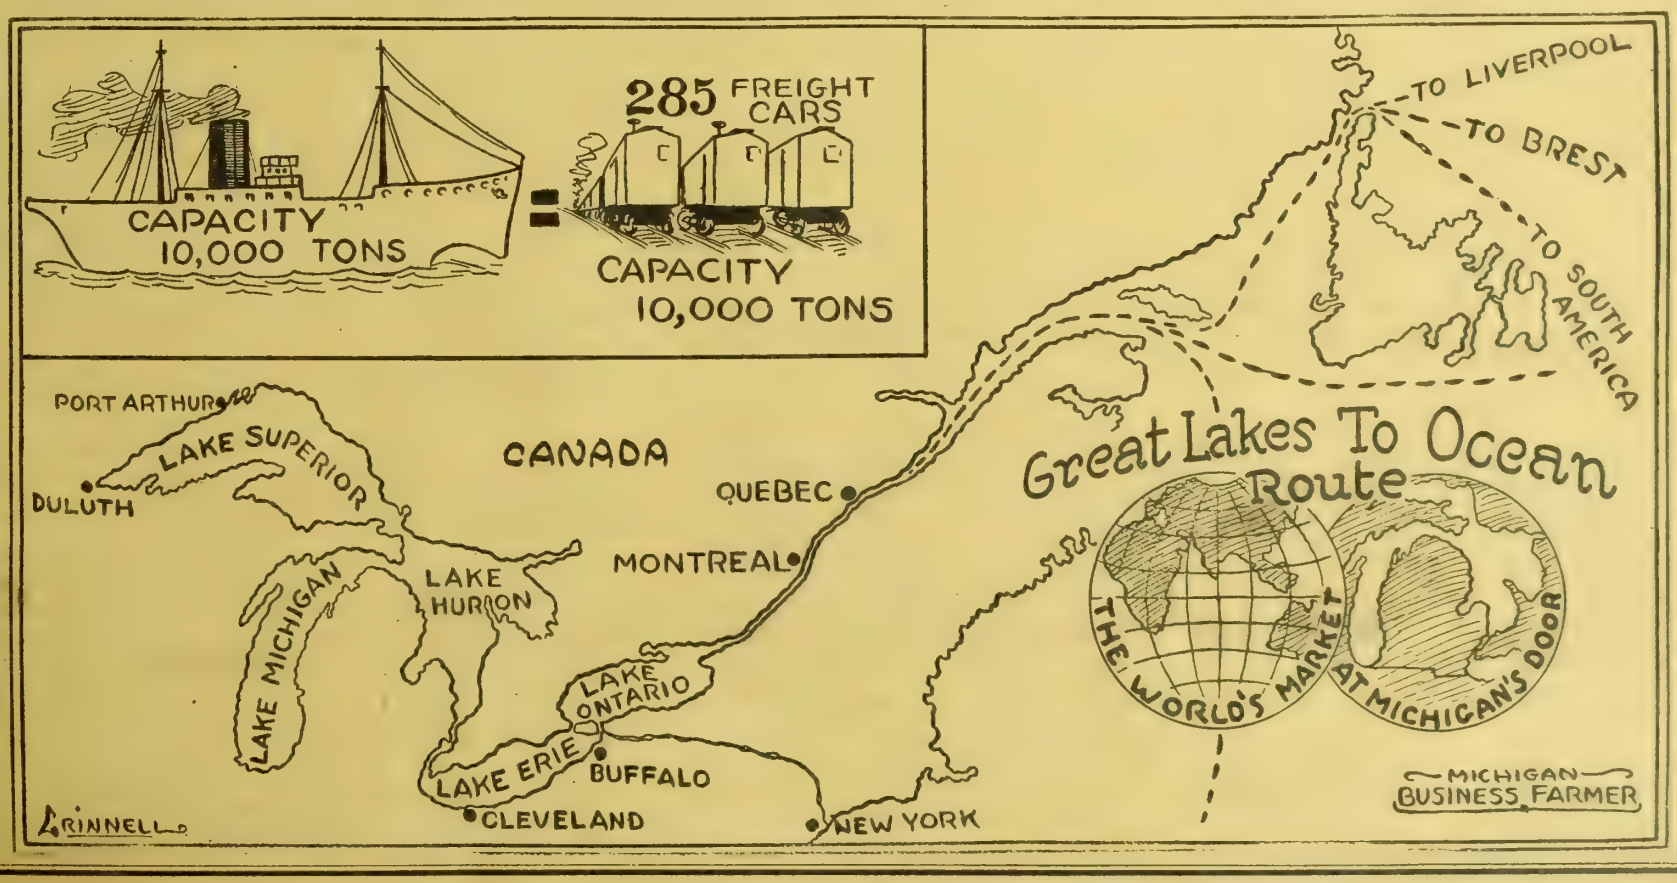
We are happy to voice, we believe, the earnest prayer of every business farmer in Michigan and the central west for the early completion of this great project.

At the present time, says Hugh J. Hughes in the Review of Reviews, when a bushel of wheat starts forward on its journey to Europe its ordinary route from the plains of North Dakota or Saskatchewan is to one of the great wheat-receiving terminals on Lake Superior, and thence by boat down the Lakes to Buffalo. At Buffalo it is lifted out of the boat into an elevator, and transferred to cars that carry it to the Jersey City waterfront in New York harbor. There it is lightered to a tramp steamer bound for Liverpool.

"Now this is the all-important fact to consider: That the cost of unloading the bushel of wheat at Buffalo, plus the cost of rail haul to Jersey City, plus cost of reloading onto the ocean-going steamer, is fully one-half of the entire cost of transportation from Duluth to Liverpool. Another curious fact in this connection is that when the wheat arrives at Jersey City it is farther away from Liverpool than when it left the elevator at Buffalo! Half the incurred freight bill is spent in moving the wheat backward instead of forward to its port of destination.

"Since this cost is, in normal times, from ten to twelve cents, it follows that about five cents per bushel could be saved if we could do away with the land haul, and proceed direct on our journey by boat. And since the demand in Europe sets the price at which our wheat sells in competition with the export wheat of the rest of the world, this five cents saved would be saved to the wheat-grower.

"When wheat is selling around $2.50 a bushel, five cents on the bushel may not appear as a matter of importance; but there have been times, and they may readily come again, when this margin of five cents net would determine (*Continued on page* 11)



CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL'S

STATE DAIRYMENS' PICNIC

July 13th and 14th are the dates chosen for a State Dairymens' picnic at Ottawa Beach and Jenisen Park, a short distance from Holland on the shores of Lake Michigan and Black Lake, under the auspices of the Michigan Allied Dairy Association, an organization embracing all phases of production, manufacture and distribution of milk and milk products in Michigan. The dates are especially timed to suit best the season and also when dairymen and others engaged in the dairy industry in Michigan will be the least busy.

It is planned to make this a two-day vacation affair and elaborate preparations are in progress designed for the amusement, comfort and instruction of those attending. Unique contests between the several units of the organization will be staged. Plans are also in progress to obtain the presence of several prominent speakers for both days among whom will be Mr. N. P. Hull, of Lansing, President of the Michigan Milk Producers' Association and Mr. Milo D. Campbell, of Coldwater, President of the National Milk Producers' Association, and a candidate for governor on Republican ticket.

The picnic will be unique in that it embraces both producers and manufacturers of dairy products. Michigan is fast developing into one of the foremost diversified dairy states of the Union. Practically every known variety of dairy products are now manufactured within her borders, and the industry is fast forging ahead as a state known for its numerous herds of pure bred animals. The industry is regarded as the backbone of Michigan agriculture and already from the standpoint of dollars and cents is exceeded only by a few other farm products in value, and one purpose of the Association under whose auspices the picnic is to be held, is to make it second to none through the principle of co-operative effort between everybody interested in the dairy industry, and which from the standpoint of the essential food elements in the products of the cow, would include everybody.

MULE MARKET STAPLE

Compact, blocky mules of good proportions, with good life and quality, are selling quickly and profitably, no matter what their size. The top prices go for mules standing 15.3 hands and weighing 1,200 to 1,250 pounds. The market for them is as staple as for wheat and corn.

Farmer producers are selling ordinary mule colts at weaning time at prices ranging from $65 to $125, before incurring any appreciable expense for feed. At three years, the mule standing 15.3 hands, weighing 1,250 pounds, easily brings from two to three hundred dollars, and at five, a big sugar mule commands five hundred dollars or sometimes more.

Nor does there seem to be any risk to raising them. Mule colts are hardy and are not subject to blindness, sidebones, or other unsoundnesses common to horses. They are also capable of self protection from the time they stand on four legs until they retire from active service via burial.

D. E. Van Pelt, a farmer near Glenwood, Iowa, makes good use of their marketability. He says: "I take advantage of the fact that the heaviest demand for mules comes at a time when I can spare them. I buy eight big mining mules in winter, out of season, for about $450 a pair, to do my spring work. When the busy season is over, I sell them at $500 to $550 a pair. Then a little before I sell these mine mules, I buy eight big mare mules for the sugar trade. I buy them thin at about $450 or $475. About January first, I sell them. Last spring (1919) I bought two pair at $500 and $550 and sold them in January (1920) for a total of $1,700. They did summer and fall work and made me a profit of $550 besides."

Your paper is a good one, fearless and progressive when the farmers buy or build their milk canning and distributing factory and also the beet sugar factory they will be making a great jump in progress.—*Albert Spencer, Alcona County.*

FRENCH DRAINAGE IN MICHIGAN
By WHITNEY PALMER

A novel test of vertical drainage was tried last October on the farm of Henry Palmer, Manchester, Mich.

There was an oval pond in one of his fields which could not be drained by ditching because the slope of the land offered no outlet. We decided to try an experiment we had read about in one of the farm papers.

The bottom of the pond was silt underlaid with hardpan and blue clay. Beneath the clay was gravel.

With an 8 ft. earth auger, we put down a bore hole eight feet deep at the point where the water was deepest, and two holes at each end five feet deep. It was the aim to get the eight foot hole down to within about three inches of the bottom of the layer of clay, or in other words to within three inches of the pervious gravel stratum. This was accomplished by making a test boring, noting the character of the soil on the auger spirals.

In each of the three holes five pounds of 40 per cent ammonia dynamite were loaded. The three charges were connected together in series and fired simultaneously with a blasting machines. No tamping of the charges was necessary as the water filled the bore holes.

The sink holes made by the blasts have been carefully watched to see whether they would keep the pond clear of water. With the exception of the time that frost prevented the water from percolating to the holes the result has been a complete success.

The job cost all told $9 and was done in three hours time.

If the holes clog we shall blast them out again and fill them with gravel, cinders or some coarse material than cannot run together.

CLINTON COUNTY FARMERS SUPPORT CAMPBELL

Enclosed please find copy of resolutions adopted by Bath Union Farmers' Club—*H. B. P., Clinton County.*

"Whereas, Milo D. Campbell who is actually engaged in agriculture and has declared himself a candidate for governor and having been endorsed by the Michigan State Grange; the Ancient Order of Gleaners and the State Association of Farmers' Clubs, is our choice for governor.

"Be it resolved that in the present period of under production and industrial unrest, that business, agriculture, labor and all classes of good citizens should be represented by a man who is not for class legislation alone but who is willing to give all interests an equal showing and believing Milo D. Campbell is such a man.

Be it further resolved that as Milo D. Campbell has pledged himself to look after all these various interests of our great state and that he is a brother farmer with us and having all other interests equally at heart We believe he would execute his promises if elected and that we should give him our best support at the primaries and if he receives the nomination, also support him at the fall election.

"Resolved that a copy of these resolution be spread upon the records of this organization and a copy be printed in one of our local papers. *Roscoe J. Carl, John Youry, Howard B. Pierce.*

MACOMB COUNTY CONSIGNMENT SALE OF HOLSTEINS

The first consignment sale ever held in Macomb county will take place June 30th at the Fairchild Farms at Chesterfield. At one o'clock sharp bids will be called for on the first Holstein. Sixty-one more registered purebred Black and Whites will be offered in turn. There will be three auctioneers, Col. R. E. Haeger, Harry Robinson and B. V. Kelley, while R. Austin Backus will preside in the box.

The Fairchild Farms are located on the Gratiot Road, 25 miles from Detroit.

Silo Prices Smashed

Startling Reductions in Saginaw Redwood Silo Prices Made Possible by Purchase of Redwood from Government—Saves $100 to $300 per Silo

This is without question the biggest silo offer we have ever been able to make. This Redwood was purchased by the Government for war purposes. It was not used and due to our big purchasing power we were able to buy the whole lot at an astonishingly low price—much lower than present market prices. We are passing these savings along to you.

75 Ton Silo Only $377

Think of it, a 73 ton Saginaw Redwood Silo for $377.00. It is almost unbelievable.

And the same reductions apply on all sizes. It's your chance

It's Beautiful Redwood

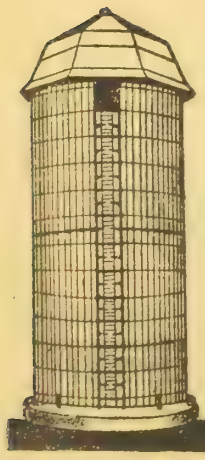
We have bought millions of feet of Redwood and never have we seen any finer silo stock—clean, clear staves that will make beautiful, lasting silos. You know that Redwood is nature's own silo material.

Every Silo a Saginaw

Every one of these silos is a bona-fide Saginaw—the same type of silo that has made good for years on thousands of farms all over the country.

This Offer Appears Only Once

Once this announcement is made, these silos are going like hot cakes and these prices hold good only so long as our supply of this wonderful Redwood lasts. If you are lucky enough to get one of these silos you must act quickly.



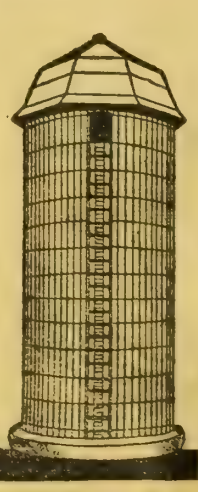
You will never have an opportunity like this again. This offer will be made only once. It's up to you to act immediately.

Write Us Now For Particulars and Complete Price List. Address Department No. 12

Saginaw, Mich. **THE McCLURE COMPANY** Cairo, Ill.

No More Than Two Silos to Each Bona-fide User

These silos positively will not be sold to speculators. Not more than two to each purchaser and he must be a bona-fide user.



DETROIT IN 1820 —Courtesy Detroit Journal.

Detroit Fourth Largest City in United States

Michigan's Metropolis Shows Largest Growth Numerically of any City Except New York; Passes Boston, St. Louis, Cleveland, Pittsburg, Baltimore in Ten Years. Important to Farmers of Michigan

THAT DETROIT'S slogan, "A Million by 1920," which the city adopted 10 years ago, came near being realized was made known June 18th when the census board at Washington sent out a public statement giving the population of several of the largest cities in the United States. The population of the Michigan metropolis was given at 993,739 which means an advance of 113.4 per cent during the past 10 years as Detroit's population in 1910 was 465,766. This rate of increase has had only one equal in census records. Chicago being the only city to show nearly as rapid an advance. The Illinois city went from 503,000 in 1880 to 1,099,850 in 1890. Its percentage was 118.5, just a shade above the one now made by Detroit.

The statement by the census board places the "Auto City" as fourth largest city in the United States, and, according to the latest available census figures and authorative estimates of foreign countries, seventeenth largest city in the world. In winning these two honors Detroit distinguished herself by being the only city of 100,000 or over that has more than doubled in population during the last 10 years.

In the last 20 years, or since the beginning of the twentieth century, Detroit has quadrupled in population," says the *Detroit News*. And the *News* goes on to describe the history of Michigan's metropolis as follows:

"From a hinterland trading post in the early days of the eighteenth century (Detroit was founded by Cadillac in 1701,) the city has grown to be one of the half dozen leading cities of the United States in point of population, as well as the chief industrial and manufacturing community in the North American continent.

"There were 600 souls in Detroit in the first year of its foundation, including Indians. There were no white women. This population was not maintained, however, and in fact was not equalled until 150 years later. Montreal opposed Detroit's growth by all the means within its power, fearing that the new Northwest trading post would become an important rival.

"The year 1796 found the city with 500 people. About this time there was an emigration to Amherstburg, the Canadian city opposite the excusion island, Bob-lo, which reduced the city's scanty population. In 1805 the city was practically wiped out by fire. It had 600 people at the time. In 1805 Gov. Hull and Judge Woodward went to Washington to foster a bill authorizing the rulers of the territory to lay out in lots the new town and 10,000 acres of land on the north.

Just a Few Squares

"In 1810 Detroit's population numbered 770. In 1812 when Detroit had 800 men, women and children within its confines, the city extended along the river front between what is now Brush and Wayne streets.

"There were 900 in the city in 1817. In 1818 the Walk-in-the-Water, the first steamer to ply the Detroit River, opened up a new era of transportation.

"The growth of the city was steady, the figures being, 1,110 for 1819; 1,442 for 1820; 1,517 for 1828, and 2,222 for 1830. Between the years 1824 and 1826 the area of the city was enlarged by the addition thereto of the military reserve. The opening of the Erie Canal in 1825 served to enhance the city's numbers. About a third of Detroit's population was slave at this time.

"Although cholera epidemics in 1832-34 brought about deaths of several hundred, the city's population in the 10 years from 1830 to 1840 increased nearly 400 per cent. In 1834 the city had 4,968; in 1840 it had 9,192; in 1845 this increased to 13,065. In 1850 the figure stood at 21,019. In the next four years the city nearly doubled in population, 1854 finding Detroit was 40,127. The growth the next six years was not so rapid, but the figure had increased to 45,619 in 1860.

"Despite the Civil War, or perhaps because of it, the city in 1864 numbered 53,170. In 1868 the population was 68,827, and in 1870 it was 79,577. In 1874 Detroit passed the 100,000 mark with the new figure at 101,225. The years 1880 and 1884 credited Detroit with 116,342 and 134,834 inhabitants respectively.

"In 1890 Detroit passed the 200,000 mark with 205,876 people. In the next ten years this increased to 285,704, the population in 1900. In 1904 this was 317,591. In 1910 Detroit attracted national attention by being the city with the third largest increase in population for the decade, its new population being 465,766. Of this number, 156,565 were foreign-born, the German and Canadian elements being the greater. There were only 5,741 negroes in Detroit in 1910. The number of negroes is now estimated at 70,000, or an increase of more than 1,000 per cent.

Four Acres in Area

"Cadillac's village and Ft. Lerault, which was then outside the town were only four acres in area. The Savoyard River, which flowed across Cadillac Square near the County Building, turned west, came down Congress street and then eventually emptied into the Detroit River near the Wayne Hotel long hindered the expansion of the city. In 1801 the town was enlarged to extend two miles back from the river and in 1815 the limits were again extended. By 1884 the boundaries of the city were extended seven times and curtailed four times. In 1890 the area of the city was 22.19 square miles, in 1900 28.35 square miles, 40.79 square miles in 1910 and at the present time 78.61 square miles."

Detroit Census Sensational

Detroit has accomplished in the last half-score of years what it took New York and Philadelphia a score and a half to do and Eastern papers say "Detroit's growth is nothing short of sensational, but what it would have been if it hadn't become the auto industry center is only a matter of conjecture."

The Board of Water Commissioners of the "Auto City" estimate "Greater Detroit" has a population of 1,200,000. By "Greater Detroit" they mean including all territory inside the city limits, as Highland Park, Grosse Point, Hamtramck, River Rouge, Oakland, Ecorse and some small scattered settlements, all of which are independent cities, town and villages within the limits of Detroit.

"The unprecedented growth of Detroit and environs during the last decade primarily is due to the amazing growth of the motor car industry, in which the city has been called upon to furnish the world with 70 per cent of the motor vehicles produced," says the *Detroit Journal*.

Another factor that attracts the people is the high wages. Detroit workmen receive higher wages than is paid in any other industrial center in the country thus making contented workmen, and their wages are so high that the largest majority of them own their own homes, but the population is increasing so fast at present that houses cannot be built fast enough. The housing problem is the only thing that will hinder the city's growth.

Banks have played a big part in the growth of the city as they financed the automobile industry when it was in its infancy.

The Next 10 Years

What will Detroit's census be at the end of the next decade? Some men predict it will again double. Several plans under headway already should work wonders in that direction.

One of these is the "Great Lakes to Ocean Route."

Another project, of which private financing is already in sight would be the building of a $28,000,000 bridge over the Detroit river. This would make Detroit the leading export gateway from this country to Canada.

Another factor would be the completion of the Pennsylvania railroad's improvement which will open a road for traffic from the South and East.

Also several big concerns are planning large plant expansions in the next few years.

There is no question as to whether Detroit's growth means much to the farmers of Michigan. It means thousands of dollars in their pockets because it provides an immediate market for all of Michigan's farm produce, thus assuring the producers a higher price than if the products were sold to dealers who must ship most of it outside of the state. While the growth of the Michigan metropolis hurts the farming industry of the state some by inducing the boys and girls to go to the city there is a time coming, especially if the "Detroit to Canada" bridge is built and the "Great Lakes to Ocean Route" is established, when farming will be profitable enough to not only keep the young people at home but many city cousins will turn farmward.

South Dakota Bankers Endorse Rural Credits

Ninety-five Per Cent of "Sunshine State" Bankers Say Rural Credits Law is Needed in Every Agricultural State in the Union

By H. S., in PRAIRIE FARMER

SOUTH DAKOTA bankers are practically a unit in endorsing the state rural credits system which has been in operation in that state since 1917. During a week recently spent in South Dakota, every banker with whom I came in contact with spoke freely in favor of the plan under which the state loans money on farm land.

"I have watched the operation of the law in our county very closely, and am convinced that every state where agriculture is an important industry should have a similar law," said R. A. Bielski, head of the Bielski Farm Loan Company of Philip, South Dakota. That statement in substance was repeated over and over again by bankers all the way from Pierre to the Minnesota line. In addition, I have a score or more of letters from bankers in the part of South Dakota west of the Missouri River, all of them enthusiastic for the state loan system.

I want to emphasize the banker support of the South Dakota rural credits system, because bankers have always opposed to state loan systems. Bankers in states where state loan systems are under consideration are protesting vigorously against their establishment. Back in 1915, 1916, and 1917, the bankers of South Dakota were protesting also. They said that it would be an unwarranted interference with the business of loaning money for the state to loan money on the land. Some of them even said that it would compel them to shut up shop. Ninety-five per cent of the bankers of South Dakota, I am convinced, believe that the state rural credits law is one of the most forward looking pieces of legislation on the statute books.

Here and there in South Dakota I was told by Claude M. Henry, rural credits commissioner, are bankers who do not yet see the desirability of the state loan system. "I do not see how it is possible for us to operate of $24,000,000 business, as we have done, without tramping upon somebody's toes," Henry says. "The bankers who are opposed to the system now are largely those whose business is that of loan brokers rather than commercial bankers. A few perhaps do not like us because we may not have loaned as much on land for their clients as they thought we should; the amount we loan is of course determined by our examiners, and if they report that land is not worth the loan wanted, we turn it down. A very few may be opposed to us for political reasons."

Bankers to Handle State Loans

To make the evidence stronger that South Dakota bankers are behind the state loan system, let it be known that more than 90 per cent of the loans are handled through the banks. The usual procedure when a South Dakota farmer wants a state loan is for him to ask his banker to get it for him. The bank makes the application, gets the abstract of title, and attends to practically all of the details; some banks charge $10 for this, some $25, and others lesser amounts, but it is much less than they used to get as commission for placing loans.

One banker at Redfield, S. D., told me that he actually lost $3,000 in commissions last year because farmers had borrowed money from the state instead of borrowing it from his bank. He added cheerfully that he thought he was making money by losing that commission, because of the greater chance for better farming and farm prosperity under the long-time state loans.

"That $3,000 is our investment in the future prosperity of this community," he said. "Don't think for a minute that we're losing permanently. We'll get it all back, with a good rate of interest added, in the increased prosperity which will result from farms handled by men who own them." That man has the reputation of being a long-headed banker, but there must be a good many more like him in South Dakota, judging from the opinions expressed in agreement with him.

"The state loan system on the whole has proved very satisfactory," said W. H. McMaster of Gayville, near Yankton, cashier of the Security State bank. "Over $20,000,000 has been loaned direct to farmers at a cheaper rate than could have been obtained from eastern loan companies, and the loans on the average are larger than could have been procured from other sources. Farmers are able to get their money with little delay and without the payment of any additional commission. In my judgment, it works the greatest benefit by stabilizing the rate of interest and compelling outside parties to do away with arbitrary rules. The eastern loan companies, for example, drew a line across the state and would not loan more than a small amount west of this line, though land values were constantly increasing."

The testimony of F. E. Swartout of Gann Valley, cashier of the Bank of Buffalo county, is similar. "The system is good for the farmers and for the state as a whole," he says. "It has worked a wonderful help to our farmers in the reconstruction period, when assistance was needed so much. The system has worked very successfully. I think, however, that there should be a limit to the extent that the state will issue bonds and I think that it is the intention of our board to discontinue the sale of bonds when the amount outstanding is sufficiently large."

Lower Interest Rates

The rural credits plan, according to M. G. Carlisle of the Roberts Investment Company of Brookings, has been successful beyond the highest hopes of those who promoted and established it. "It opened a line of credit not hitherto available for the farmers and stockmen at a low rate and on long time," he says. "This is especially true of the region West of the Missouri River. There the loan rates was eight to 10 per cent in most cases, and on five years' time. The state loans were at 5 1-2 per cent for 30 years with amortized payments. The saving in rate was substantial, but the great benefit was in the long terms. Farmers now make their plans well into the future with a note coming due staring them in the face. Many men just starting in were enabled to buy land. I am satisfied that it is safe to loan a reliable man the limit (70 per cent of the value of the land.) Parties selling land are willing to take second mortgages if necessary, for the amortization payments are constantly reducing the principal of the loans and increasing the security of the second mortgage."

From Wessington Springs, S. W. Wright of the Farmers' Savings Bank writes: "The bankers of South Dakota are almost unanimous in their opinion that it is one of the best laws ever put into operation. There is no commission for the borrower to pay, and the long time in which to repay the loans gives land owners freedom from worry about renewals. We are finding(however, that the maximum limit ($10,000) is too small for the high-priced land. Many real estate owners have been forced to go elsewhere to get larger loans and pay large commissions to get the money. The legislature will probably raise the limit so as to allow larger loans. Even as it is, we like it exceedingly well, and so do the farmers."

Advantage Over Federal Loans

The South Dakota system is much to be preferred to the federal loan system, say many South Dakota bankers. L. E. Ausman of Wessington Springs sums up these advantages thus:

1. There is no subscription for stock.

2. There is no local organization to be maintained.

3. There is no expense in securing bond for the secretary-treasurer.

4. The money is secured with less delay.

"The appraisements have been conservative," said Ausman. "The loans are conservative and reliable and the state is fully protected."

Helps Tenant Farmers

The state system has helped tenant farmers to buy land, according to J. D. Fargo, vice-president of the Redfield National Bank. "It has done more than anything I know of to place tenant farmers on land of their own," he says. "Tenants who had accumulated some funds to make a reasonable payment were enabled to buy land by borrowing the rest of the necessary funds.

"The state loan system benefits the farmers and the state as a whole. It has put the real estate loan brokers out of commission here. We are very much pleased with the plan as it has worked out."

Poultry Infested With Tuberculosis

We have a flock of Plymouth Rock hens that began ailing last winter. One would act dumpish a few days but eat all right, then suddenly die, making a great fuss and noise. One or two a month would go like that but before acting dumpish they seem perfectly well, laying good, red combs and singing happily. Yesterday one died and we opened her, found white spots, the size of a pea on liver and heart, literally covered with them. We caught and killed one who was acting dumpish and her liver was of a peculiar green color and covered with white spots the size of a pin head. She was a laying hen, having egg nuecla in her body. What we would like to know is the nature of the disease. If tuberculosis, would it infect the other farm animals, such as cattle, sheep, hogs and horses? Please write full particulars mals, such as cattle, sheep, hogs and horses?—L. S., Montmorency County.

THIS is tuberculosis and is a disease of great importance to the poultryman or farmer, not only on account of its destructiveness to his flock, but also on account of its relation to the health of himself and family. There are four principle types of this organism. The one most commonly affecting man is designated as the human type. The one peculiar to cattle is designated as the bovine type, and the one peculiar to fowls the avian type, and there is still another type of the tubercule bacillus which affects fish and other cold-blooded animals. While there are some differences in the shape of the organisms grown for a considerable time in the various animals and some differences when grown in artificial media after separation, yet the type peculiar to any of the warm blooded animals, will grow in any other warm blooded animal, that is, the types are interchangeable, which means that the avian type, (the type affecting fowls) may cause tuberculosis in man and the human type may cause tuberculosis in birds. It has been found that a large percentage of hogs fed swill from houses where tubercular persons have expectorated into it, became tubercular, and when slaughtered, there is a considerable loss from condemnation of those badly affected. Tuberculosis among chickens is rare in some portions, and is very common in other localities in the United States. It was first reported in this country in 1900 and received but slight attention until 1903. It also occurs in turkeys, pigeons, and pheasants and I believe two cases have been reported in wild geese. The loss from this disease seems to be increasing.

Mode of Spread

In the progress of tuberculosis of chickens at times there is noted a diarrhoea. In these cases there are [illegible] with ulcers of the mucous lining of the intestines and when thus affected the disease spreads very rapidly through the flock, as birds are continually picking feed from the ground and floors where contamination is sure to have taken place. They may also contract the disease by the introduction of a tubercular bird in the flock. Tuberculosis among wild birds has been mentioned as a possible fact. There is also danger of spread from eggs from a tubercular hen when the eggs are purchased for hatching. There is also a possibility that birds, by following tubercular cattle, may become infected, as do hogs.

Treatment

Treatment of the affected birds is not to be thought of, as the germs of the disease are so often spread thru the droppings that the only sure means of eradicating the disease from a flock is to kill all the birds in the flock and if possible move the henhouse to a new location and have new runs. If this is not practicable, thoroughly disinfect with five per cent carbolic acid or five per cent creolin, all fences, feed troughs, watering tanks and buildings should be thoroughly disinfected. A contaminated poultry yard may remain infected for a long time, many months and possibly years. The action of disinfectants on this germ is very slow; direct sunlight will kill the germ in a few hours.

Birds from an infected flock should not be sold for breeding purposes, and the birds from such a flock that are killed for food should be inspected by a competent veterinarian, so that none may be used for food purposes that are diseased to such an extent as to render the food unfit for use. All birds in a flock infected with tuberculosis that die should be burned to prevent further spread of the disease from that source. All droppings and cleanings from the henhouse and runs should be disinfected with calcium chloride, a five per cent solution of carbolic acid, or other reliable disinfectants.

QUESTIONS THAT WILL INTEREST FARMERS AND CONSUMERS

Representative Baer, Non-Partisan leaguer of North Dakota, in a recent speech in the House suggested these pregnant and pertinent "whys?"

In the last quarter of 1919 the price paid to farmers by the packers for hog products fell 43 per cent, while the price of pork in eastern markets rose 15 per cent. Why?

Texas farmers are now getting 2 1-2 cents a quart for beans. Freight to Boston is 1 1-8 cents. In Boston these beans retail at 18 cents a quart. Why?

It costs 1 cent a pound to ship butter from an Australian dairy farm by a state owned railroad and a government owned merchant marine to London. But in Wisconsin, eighteen miles from a cheese factory, the retail price of cheese is double the production cost at the factory and as high as for the same brand in New York City. Why?

The southern planter gets only a little more than twice as much for his cotton as in 1914, whereas to the consumer cotton has advanced from 20 per pound, and cotton goods have advanced 600 per cent. Why?

Perhaps one answer has been found by the railway brotherhoods. They recently bought a number of overall factories. These are producing garments of market quality 30 to 40 per cent below the market price.

Exhibiting Your Poultry at the State Fair

Birds to be Exhibited Should be Carefully Selected, Groomed and Trained

By PROF. C. H. BURGESS, *Professor Poultry Husbandry, M. A. C.*

George W. Dickinson, Secretary-Manager of the Michigan State Fair, announces that the poultry show at this year's exhibition will be by far the largest in the fair's history. Prof. C. H. Burgess, Professor of Poultry Husbandry at the Michigan Agricultural College, has been put in full charge, and no restrictions are being placed on his enthusiasm. He has written the accompanying article on how to prepare poultry for a fair especially for THE MICHIGAN BUSINESS FARMER.

THE MANY advantages which a poultryman or farmer derives from exhibiting his poultry and products cannot be overestimated. To show birds that are well bred and well fitted is not only a pleasure but, when shown in connection with large classes of the same variety and breeds, a considerable profit is derived therefrom, not only from selling eggs for hatching but birds for breeding purposes as well. There are many men and women who keep a few well bred birds in their back yards for the pleasure they derive in mating and breeding of high class stock. These small breeders are usually greatest in number at poultry exhibitions.

The Michigan State Fair has done and is doing all in its power to provide a suitable building and cooping in which to exhibit. Hundreds of thousands of people pass through the poultry building every year. The cost of fitting and entry is very nominal and the advertising power is very great. The exhibit has doubled every year for a number of years. Liberal prizes are paid to the winning birds but the pleasure in winning cannot be measured by dollars and cents. Many a good bird goes down to defeat. No matter how well bred it may be it loses it place by being ill fitted for the show room.

Hatch chickens early for the fall fairs. Select the birds for the breeding pens that comply most nearly to the standard, if possible. From the day the chicks are hatched keep them in a healthy condition and keep them growing. Provide plenty of shade and good, wholesome food, provide them with clean runs and roosting quarters. Keep the birds free from vermin. Wherever it is possible it is advisable to ask advice from experienced and successful exhibitors before starting out to prepare the birds for exhibition.

Secretary-Manager Dickinson getting set for a busy day at his office in the Bowles Building, Detroit.

Training of Birds

In order to show the birds to best advantage after they have been well fed and reared and matured, next comes the training. Provide coops about the same size as those used at the place of exhibition. The training coops should be placed about three feet from the floor. This will accustom the birds to being elevated from the floor and also during the training they are not frightened by persons passing or by the operator handling them. The birds should be thoroughly tame and petted in such a way that they gain confidence in the attendant so that a judge in approaching the cage will not frighten them. This is a very important step in the preparation of birds for exhibition.

Place only one bird at a time in the training cage. Allow no caging with more than one in order to prevent fighting. The success of the show will depend largely upon the behavior of the birds in the pen. Out of two birds equally bred, well fed, in full plumage and standard color, the one that is most easily handled will be the one that will receive the prize. Birds selected for exhibition shoud be free from blemish and they must conform to shape and color with the Standard of Perfection. The inexperienced exhibitor should get the advice of an experienced exhibitor. The Poultry Department of the Michigan Agricultural College will undertake to give this advice free of charge, should it be called upon to do so.

Special attention should be given to head points because that is the first thing that attracts the attention of the judge. A single comb should not be too high, it should be of good texture and should not lop except in the case of females in the Mediterranean class. The surface and the under color should be taken into consideration and should conform to the Standard. Brass or creamy birds should not be selected if possible as it is a serious defect. The exhibitors should send the birds into the show room in perfect condition of cleanliness. This means the washing of the comb, wattles, ear lobes and toes in warm water and a brush to remove dirt from between the toes and under the scales. After the legs and toes are once clean a drop of olive oil on a woolen cloth should be used to rub the shanks and toes to bring out the best lustre.

White birds should be washed. Select three tubs of water. Birds should not be washed in rooms that are colder than 70 degrees Fahrenheit. In number one the birds should be thoroughly emerged and scrubbed with ivory soap suds. The soap suds should be rubbed clear down into the base of the feathers. The water should be at about 110 degrees Fahrenheit. In the second tub the water should be just slightly warm. Emerge the bird and thoroughly wash out every trace of soap. In the third tub the water should be at about 50 degrees and in this water bluing should be added the same as for the linens on wash day. Emerge the bird in this bluing water or rinsing water. Place the bird in a warm room that has a temperature of about 70 degrees and that is free from draft. The bird will take care of the rest.

Turning the Devastated Battlefields of France Back Into Fertile Farms

What the American Red Cross has Done to Assist French Farmers Rehabilitate Agriculture in the Stricken Area

AMERICAN modern farming machinery and scientific agricultural methods are being introduced into France by agricultural experts and it is expected that French farming will soon be upon its feet again, enabling France to feed her own population.

A thirty per cent increase in the wheat yield is expected from Cambrai's spring planting this year as the result of the use of Barbieri's new seed inoculation process. This new process, which is quite different from nitrogenous inoculations previously invented, has been thoroughly tested on every vegetable product grown in France and its colonies, including tobacco and sugar cane. The Rothschild estates experimented and found a thirty per cent increase yield for wheat and potatoes. Similar results from tests covering forty acres of assorted vegetables prove conclusively that the process is practical.

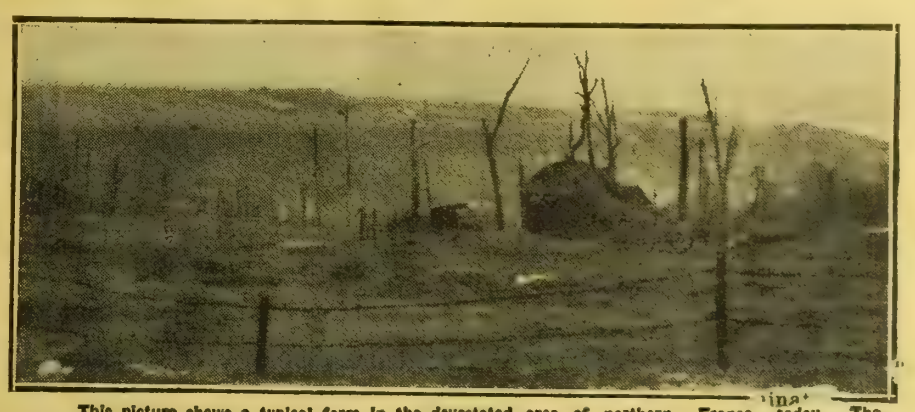
This seed inoculation process was made available to the farmers of Cambrai by the American Red Cross, who distributed in that district the samples received from Dr. Barbieri.

Dr. Barbieri's researches covered twenty years, the last three of which were spent in the chemical laboratory of the Sorbonne. His patents cover all civilized countries and a company is now being formed to exploit the invention. Owing to several processes known only to himself, the inventor can control the manufacture of the inoculus; thus he was able to allow the Red Cross the benefit of his researches for its agricultural work without risk of damage to his own interests.

The organized farmers are anxious to place larger seed orders for the fall sowing than those of last year. An adequate supply of wheat and barley seeds for the fall sowing, motor tractors, plenty of them, and farming implements and machinery of all kinds are needed by the farmers of France.

According to reports submitted at recent meetings of French farmers' syndicates, tractors supplied by the American Red Cross to these farmers' associations in the devastated regions of the north of France have in a large measure been responsible for the cheering crop prospects for the summer. As farming picks up, it is hoped, the syndicates formed last year will be in a position to buy tractors instead of merely borrowing them from the American Red Cross. In the meantime, they are almost entirely dependent on the tractors brought to the country by relief organizations.

French farmers are particularly careful that hay once cured by sunshine shall remain dry. This picture shows the canvas covering that is used to protect a wagon load of hay while it is being hauled to the barns. When farmers first came back to the devastated areas and began mowing the hay they appealed to the American Red Cross to furnish canvas and some was purchased for them from funds accumulated through the sale of Red Cross supplies, at below cost prices, to the refugees.



This picture shows a typical farm in the devastated area of northern France today. The pasture in the foreground is filled with shell craters and the trees are burned beyond all hope of life. Only through the help given by the American Red Cross have farmers such as this been able to live through the winter and be ready for the summer's planting and reaping.

French farm workers are crowding to the towns and cities for employment, migrating especially to industrial centers such as Lille and Lens, where wages are higher than those ordinarily paid on the farms, thus fast reducing the agricultural population of the country. Among the distinct advantages of the tractor French farmers have found, is that it counters this growing shortage of farm hands. Each tractor that comes to France replaces several of these city going laborers.

Farm schools are being organized in France, and through these it is expected to interest the younger generations in agricultural pursuits. The Junior Red Cross of America has pledged 200,000 francs for the establishment of apprenticeships for these schools, and 50,000 francs for the purchase of modern farm machinery, and sums to be given from these amounts, at intervals, will be equal to these granted by the Ministry of Agriculture, A committee of nine Frenchmen, including a former Minister of Agriculture, agricultural experts, engineers and practical farmers, was appointed to supervise with the Junior Red Cross, the distribution of funds for these farm schools. The appointment was made by the Auxiliary Committee of the Apprenticeship Farms of the Ministry of Agriculture.

The one condition stipulated by the Ministry of Agriculture in launching the work was that the committee be charged to make known the fact that it has been made possible by the generosity of American school children. The Junior Red Cross will be given all possible facilities to investigate the functioning of the farms that receive aid.

Calamity Howling

SORGHUM SMITH ate a bit too heartily one evening of strawberry short-cake and the next morning he came in from the fields with half a dozen pains racing back and forth between his stomach and liver. He told Ma Smith that he guessed he'd have to lie down a spell on the parlor sofa. By and by the mail carrier came. Ma Smith hurried out to get the mail and in the little pleasantries that followed she imparted the information that Sorghum wasn't feeling well that morning. "You know," said she to the mailman, "Sorghum's been a hard worker all his life and he isn't as young as he used to be." The pastman went his way and Calamity Ed, whose farm adjoined the Smith's on the south, was soon hearing about Sorghum Smith's "attack." In the next day or two all the neighbors within a radius of ten miles of Skimmilk Corners had heard of Sorghum Smith being stricken while at work in the fields, "a great strong man like Sorghum, just think of it," and were speculating on whether Widow Sorghum would have to sell the farm and go to the city in order to support herself and the fatherless Sorghum children.

Some folks are natural born calamity howlers. They magnify their own troubles and the troubles of their neighbors. It requires no great stretch of their imagination to change a harmless stomach-ache into a deadly cancer. If the doctor diagnoses a rash as scarletina they are sure he must be mistaken because anyone with half an eye can see that the child has scarlet fever or diptheria. Chicken pox means small pox to them, and a scratch on the finger is a positive forerunner of blood poisoning.

If the sun doesn't shine it's going to be a cold summer. If the rain doesn't fall at regular periods there's going to be a drought. If there is a wet spell the seed is sure to rot in the ground. And if the sun shines just right and the rain falls just right it's a sure sign that there's going to be an early frost. A few grasshoppers in the back meadow are a plague and crops will be ruined and farms will be abandoned.

Now drought and wet weather and early frosts and grasshoppers are bad enough without exaggerating their extent or affect upon the crops. Some of the stories that have come out of northwestern Michigan about the drought and the grasshopper plague are nothing short of ridiculous. Of course, the weather has been dry. Tell us a season in the last ten years that hasn't had its dry spell and its prediction of ruined crops. Tell us a season in recent years that hasn't been cursed with grasshoppers and given rise to the widely published statement that the pests would destroy all the crops of the infested regions, and cause farmers to desert their farms.

We do not believe that the situation with reference to the drought and the grasshoppers is anywhere nearly as bad as has been pictured. We do not believe that Michigan farms stand in danger of being deserted by the wholesale because of the dry weather or the damage to crops by grasshoppers. And we do not sanction the publishing of stories in the daily press to this effect. For such stories not only work great harm to the state as a whole, but to individual farmers as well for who wants to buy a farm that is set down in the midst of a Sahara desert or is the breeding place of a billion grasshoppers.

Crippling the Department of Agriculture

E. T. MEREDITH, Secretary of the Department of Agriculture, has published a list of forty-nine projects which the Department will either have to entirely abandon or curtail greatly as a result of Congress cutting out something like six million dollars from the Department's estimates as to its needs. The Secretary calls attention to the fact that the decreased purchasing power of the dollar makes the cut all the more serious and handicaps the work of the Department in a large measure. But Congress suffered a lapse in its economy mood and failed to cut out an appropriation of $239,000 for that old political pap of free seed distribution, although its elimination was recommended by the Secretary.

While the public will hardly approve of Congress' niggardliness toward the Department of Agriculture at a time when the farmer needs all the assistance he can get, we would hardly claim that the agricultural interests will be jeopardized because of the Department's temporary inability to render its usual services. Moreover, we expect that the Department will find a way of carrying out its most necessary projects even under the handicap of enforced economy.

Congress is not to be entirely excused for the peculiar inconsistencies in its economy program. After a much-heralded examination of the pork barrel and the removal of a few rinds and cheap cuts, the choicest pork still remains and will be distributed as usual where best serves the political future of the pork-barrel politician. Nevertheless, we have long since learned that Congress is not a perfect machine and consequently we do not expect perfection in its economy program or any other program it might undertake. We rather feel like complimenting Congress for even thinking in terms of economy and if that thought has moved it to action against the farmer's department of agriculture, we suppose we ought to accept what is handed us and show that we can take our economy medicine with good grace. It is all very well to cry loudly for lower taxes but unless we are willing to accept our share of the consequences of reductions in appropriations our complaints will carry little weight.

Trucks and Highways

THE USE of the truck for long distance hauling has brought up an entirely new and withal a very serious problem in highway construction. It was long ago demonstrated that gravel, macadam or asphalt construction could notwithstand the pounding of heavily loaded trucks, but it was believed that concrete would give reasonable service. Hence, hundreds of miles of concrete roads have been built with the expectation that they would stand up for a period of years under the heaviest traffic which the law would permit to be hauled over them. But they have not done so. Concrete roads built in 1918 and subjected to heavy traffic have gone to pieces already and are in well nigh total ruin. This is not the fault of the concrete, which like every other building material has limits of strength and endurance. For ordinary road traffic, the concrete road as we know it will continue to be the popular and most economical type. But it must be reinforced many times over the usual extent, and laid to a much greater depth than customary in order to withstand the most exacting conditions to which it may be subjected in highway construction.

Another question that arises in this connection is who is to pay the cost of roads that are torn to pieces by foreign trucks. A bill was submitted at the last session of the legislature to put trucks and other commercial vehicles in the class of common carriers, fix their carrying charges and force them to pay a high tax into the state for the use of the highways. It has more recently been proposed that commercial vehicles be required to provide their own trackage. The taxpayer's first and natural impulse is to approve of this suggestion, but a careful study of it will show that it is not well taken. The truck has found a most essential place in the nation's transportation and it should not be surrounded with insurmountable handicaps. The use of the truck should on the contrary be encouraged and the best road conditions possible provided for it. But the present method of building and maintaining roads over which it plys its way should be entirely changed.

Certain highways of the state between the larger cities have become the accustomed routes of travel for trucks. These are principally trunk line highways. Under the state law the state bears a certain large percentage of the cost of these highways and the county through which they are built the balance. Now when it is certain that the people of the average county in southern Michigan who bear a percentage of the cost of these roads do not require the use of the roads in proportion to their share of building them. A main highway is used much more by transient than by resident taxpayers. It is a well-known fact that the principal damage to the main highways has been done by the trucks of concerns located in the cities who pay no share of the local cost of maintaining the roads. Hence, it is clearly unfair to charge those who are unfortunate enough to reside in the locality of these roads with the cost of keeping them in repair.

There is a better and certainly a more equitable way of distributing the cost of maintaining principal highways. The State Highway Department should be empowered with the duty of declaring certain highways of the state as truck routes, and prevent trucks except by special permission to travel any other route. These roads should be specially constructed and the counties through which they pass should be expected to pay such proportion of the construction as they would normally require for their own purposes. But there their responsibility should end, and the state or federal government should come in and pay all the additional expense of the special construction and all the cost of upkeep.

It is bad enough to have to live on a main traveled highway nowadays without being obliged to stand for the damage done to the roads by people living fifty or a hundred miles away.

The Final Word

"WE HAVE lost our fight; there is no hope for the liquor people." So said Levi Mayer, Chicago attorney for the liquor forces, when the Supreme Court's decision was rendered that the federal prohibition laws are constitutional.

The decision of the Supreme Court of the United States is final. The constitutionality of the various acts passed by Congress, amending the constitution and providing enforcement machinery, have been held in question by various state authorities. Some states, like New Jersey, for instance, openly flaunted its defiance to the federal statutes and passed their own laws fixing the alcholic percentage of beers and wines. They claimed that this was a state's right, the same old gag that was worked by the southern states in the slavery days and that precipated the Civil War. But the Supreme Court holds differently and the decision of that body will stand.

The last battle in America's war against booze has been fought and the victory is at last secure.

Governor Edwards still pipes his little tune about the "personal liberty" of those who want to get drunk. Too bad, the Governor doesn't use his efforts in a better cause.

What the Neighbors Say

FARMER TURNED DAY LABORER

I am going to try and express myself on a few issues of the days especially H. C. of L. I am at present working for Henry Ford & Son in Dearborn. I am here owing to ill luck and the exorbitant rate of interest one has to pay for the use of money where I live. I am trying to pay off debts accumulated while trying to farm. If any one thinks farming is a get rich scheme and wishes to try their hand I will say that I have 160 acres partly improved land in the northern part of the state and that I will sell the same very reasonable. I would be very glad if I had the money out of it that I have in it. I guess I have run about all the risk I care to at present. I have run the risk of frost, drought, grasshoppers, losing stock and last but not least of all, I have had to take market prices for whatever it might be that I produced.

Some people seem to think it is a sure way to get rich but if they had to pay for farm products according to prices asked for other commodities you would hear a greater howl about H. C. of L. than we do. From the present outlook wages will be higher next summer than now. Even now $6 is minimum wages in Detroit for common labor. Some concerns have offered $6.50 for labor a day and the end is not in sight.

Very nearly every day one can hear men talking of having farms that are working in the shops. Unless a man has a farm and a good one at that and has it paid for and free of debt he will find it uphill business. He will find then that he puts in more hours for the money than if he were working in a shop. I will say this, that I was born and raised on a farm and if I had a good farm and out of debt, with stock and tools to work with, I would be there today. As it is my sympathy is with the farmer, for I know what he is up against.

If I can save enough to buy a small place and have it free of debt, I expect to go back to the land, but I do not like to be a slave to keep things going and make ends meet.

I am thinking the farmers will have to work out their own salvation with fear and trembling. If they cannot see alike and do not hang together they will have to hang separately.

The nearest to a solution that I can offer is that the people get back to the original state of things as created in the beginning. I believe all things were created for man and I do not think it was intended for one man to have a monopoly on the necessities of life.

The way of the transgressor is hard. In the beginning man didn't even need clothes and the earth brought forth in profusion. All man needed to do was to plant and prune and work a little perhaps, but because Adam ate the apple and followed his wife's advice rather than the creator, he has now to pay the bill. There is a way that seemeth good unto a man but the way thereof is death. He has to pay for everything he puts in his face and everything he puts on his back and a good deal has to go through too many hands and they all want too big a rake-off.

The only thing will be for the working classes to own the factories and run them for the benefit of themselves. A reasonable profit could be returned to those working and a percentage go to the government. What is capital but profit on labor when we sum it all down. And why could not this be put to work for those who do the work? In my opinion if we expect to cut the cost of living we will have to cut out the middle man as far as possible and sell direct. I would like to see the day when every article would be labelled; showing what hands it went through and just how much every one got for their labor, service, work or whatever they should choose to call it. It looks like to me just now as if it would be a good idea if the farmers would build a sugar refinery of their own and sell direct to the consumer through their own agencies or warehouses.

Now I cannot give much light on the hired man question on the farms for I do not see how a man can hire unless he gets a better price than he does for his crops in proportion to what he has to buy, so I think I will pass it up to some one else who is more able to solve the mystery.—*J. M. M., Wayne County.*

You ought to go back to the land. Things will not always be as they have been and are now. This question of capital and credit for the farmer will some day be solved and solved right. And then it will not be so hard for men who love the soil to make the soil earn them their bread and butter and a little besides for a rainy day.—Editor.

MR. FORDNEY AGAIN

While I am not a subscriber to your paper, one of the men I am working with has been kind enough to let me have his and I want to commend you for position you have taken on many positions, especially on Mr. Fordney's stand on the bean tariff. It seems to me as if there was ever a flagrant case of "passing the buck" that is the biggest in the bunch. If we ever needed more sense and business and less politics in our government, than we do now, it must have been long before our generation. Hoping you'll have the nerve to say what you think in the future as plainly as the past. I wish you a very successful future.—*P. J., Munith, Mich.*

It doesn't take any nerve to say what you ought to say when the crowd is with you. But when you have to fight the battle alone, that takes courage.—Editor.

SCHOOL AMENDMENT

Enclosed please find $1 for renewal of my subscription to your valuable paper. I just read what S. B. Horton said on the proposed parochial school amendment and it certainly is kind of you to print his article. I think only narrow-minded people who have no religion at all are to blame for it. You will certainly gain a lot of friends especially Catholics for your kindness in giving some of these people a little more light.—*Reader, Saginaw County.*

Yes, and we will gain friends among the right-thinking Protestants who love religious liberty. We Protestants are not so religiously narrow-minded as some of our Catholic friends think. Every religious faith has its bigots, and nearly every generation is cursed with a few fanaties who want to revive old doctrines of hate, in the name of God! This publication concedes the right of people to worship and educate their children as they please so long as they remain true to the laws and the traditions of the United States of America.—Editor.

MIND OVER BODY

In the April 3rd edition of your valuable paper I saw an editorial referring to the great advance medical men have made in counteracting diseases. Whatever is done to increase the efficiency and ease of the people will have to be done through their minds—for it is obviously true that the mind OUGHT to rule the body. Or people ought to have self control. It is true that food gluttony will cause auto-intoxication of the intestinal tract and poison the blood, but it is also true that excessive and foolish food consumption creates nests of worms for some people. The medical profession might tell us, if they have our interest at heart, that the blood is made up of 12 basic chemical salts which are extracted from our food and that this chemicalized material is turned into blood by being crossed with inbreathed air at the lungs. Then the mind ought to be trained to select proper foods to furnish these salts and also to breathe pure air so as to make pure blood.

Then the mind again needs to be freed from anger, strife, malice, unforgiveness, selfishness, greed, etc., for they all tend to poison the blood. But it would interfere with the business of drug stores and doctors to put this information clearly and persistently before the people.

As the life is controlled by the mind, or ought to be, so the physical life is in the blood. But what do you think of a doctor injecting vaccine from a sick unto death cow, into the blood of a man or woman? Strong recruits keeled over dead from serums in our late war.

Our poxes, and measles and pests are the results of eating and drinking and breathing contrary to the requirements of the blood.

We hibernate in the winter, eat plenty of meat and grease and also breathe stale, devitalized air. So of course, as a natural consequence when the temperature moderates the body throws those poisons OUT of the system in fevers and sores.

But that is not all by any means. The Bible is a book of allegories and parables dealing largely with the wonders of the human body and its proper use and purpose.

But the generally accepted theory of modern civilization is that licensed or matrimonial prostitution or the self abuse of those not so licensed or married, is essential and necessary and as a consequence people have no vitality. The old saying, "People are growing weaker and wiser" is a tremendous lie for if we were wiser we should be stronger for we should have learned self control.

Unless the medical profession go to the foundation of our troubles—the proper use of the mind in controlling the body—the selection of proper foods to furnish the mineral salts needed to make blood and the necessary pure air to breathe, and freedom from anger, malice, etc., we shall continue to swell the high cost of living by frequent visits from doctors and surgeons and add to the drug trust profits, but we shall also help the undertaker and the grave digger in their respective avocations.

The people do not want the truth yet. They do not care for the task of thinking for themselves. They are accustomed to be led and led astray. They seem to like it. Barnum made a success with his circus because he was able to see their natures in its true light. But some of us who know better dislike immensely that this age of medical experts are fastening upon us through legislation and printed propaganda. —*E. R. A., Kent County.*

You are right, "the people do not want the truth." It is as hard for them to follow right modes of living as right modes of thinking. It is easy for men and women to go astray morally and mentally. And it is equally as easy for them to disregard what their common sense tells them is the right way to eat, sleep, and care for the body. Perhaps the medical profession is to blame for this but we can scarcely believe, intentionally so.—Editor.

The Week's Editorial

THE CANDIDATE

Ohio appreciates the honor conferred upon it by the Chicago convention. Without regard to their own partisan affiliations, citizens of this state are pleased that one of Ohio's sons has been found worthy of the highest prize that a great political party can give to anyone. The "Mother of Presidents" wears a new smile—a smile of pride mixed with no small portion of surprise.

His native state knows Warren G. Harding as a genial, warm hearted citizen, much beloved by those who know him best. As a campaign orator he won his spurs early and has never lost them. Yet his political career before he went to the United States senate was without distinction. He has been a popular senator, tho not a leader among his colleagues.

Senator Harding is the Republican nominee by virtue of his rivals' mistakes, rather than by his own strength. His nomination came thru the strategy of the "senatorial caucus" at Chicago. The "caucus" was spokesman for the Old Guard, and its triumph was an Old Guard triumph. Mr. Harding carries into the campaign the label of Old Guard.

The Harding nomination is the fruition of a program which had its beginning in the minds of party leaders months before the convention assembled. It was this—the selection of a nominee acceptable to the conservative wing of the party—that led to the insistent demand that the convention majority be made up of uninstructed delegates. The bosses knew that they could handle such a majority as they wished when the convention crisis should come. They deliberately nullified the presidential primary in enough states to give them this strangle hold on the convention.

Gov. Lowden was obviously the first choice of the Old Guard. He was to be nominated if the temper of the convention made it appear safe thing to do. Except for the facts brought out by the senate inquiry into primary expenditures he would be head of the ticket today. Even after this exposure and after the convention had begun balloting Lowden was the Old Guard's real choice. He would have been named had Penrose and the other managers not been fearful of what the country would say.

With Penrose and his spokesmen at Chicago it was a case of anything to beat Wood and Johnson. When Lowden became impossible, the switch to Harding was inevitable. Not for a moment was the Old Guard control of the convention in any real peril.

* * * *

There is, of course, not a trace of progressive blood in Senator Harding's veins. He is of the old school through and through. The bi-partisan political insurgency that has made its impress on the country since then, that has brought a new spirit into the counsels of all parties, that has written volumes of progressive legislation into state and federal statues and awakened the consciousness of the American people to their rights and their opportunities made no impression on the mind of Mr. Harding.

To the senator, William H. Taft in 1912 was the greatest progressive of the age. Theodore Roosevelt he likened to Aaron Burr of malodorous memory. His famous "deference and devotion" speech in which he eulogized Boss Cox of Cincinnati, is part of the annals of Ohio politics. In 1916 Mr. Harding pleaded for forgetfulness of the animosities of four years before. Between now and November he will have many an occasion to wish that the dead Republican past may be permitted to bury its dead.

As a member of the United States senate, Mr. Harding has been a regular of the regulars; a follower and not a leader. He has always been ready and eloquent with his denunciations of the president. No better viewer with alarm could be found anywhere. His attitude on the treaty has never wavered in its regularity. The Old Guard always knew where to find him; always knew he would do precisely as party discipline required him to do.

So the Old Guard's happiness over Harding's nomination has no mystery about it. When the time came to assert its control of affairs, the Old Guard turned its support to one who had carried not a single primary except that of his own state—and this by nine less than a solid delegation. So far as the result at Chicago is concerned, there may as well have been no presidential primaries.

* * * *

The Chicago convention has adopted a platform evasive as to one of the chief issues and silent as to another. It has named a presidential candidate guaranteed to do nothing not laid down in the book of rules. Thus functions the system sometimes called the popular nomination of presidents.—*Cleveland Plain Dealer.*

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

FOR MANY, school days are over and they must now turn their thoughts to the more serious business of making a living. What vocation they shall take up depends entirely upon themselves for we can do in this day of possibilities, anything we WILL do. And wise indeed is the girl who chooses to do the kind of work she enjoys.

For the girl who loves children, there is the very commendable occupation of teaching, and with the present rating given teachers, it is now possible for a girl to fit herself for this occupation, knowing that she will be as well paid as others who engage in different lines of work. But a girl who has no patience with children should never engage in this work in the wide, wide world, for, no matter how much she knows, she will never be a successful teacher. A successful teacher not only knows, but knows how to impart to others with sympathy and understanding.

There are the business courses, for which a girl can fit herself with only a few months of concentrated work, and which bring financial rewards to those who make a specialty of their line of work. To those who just use a vocation as a money making institution, it will never mean much—not even much money, for in order to make a success of any kind of work, one must love it—love it well enough to work overtime when necessary, in fact to work for others in your chosen line as if the work which you were doing really were your own, and upon you depended the success of the undertaking. Recognition will surely come through this method of work—if not financially, then you will acquire the habit of doing so well the thing you have set yourself to do that you will become an expert, and you can branch out for yourself or others will seek you out.

Just now the State of Michigan is trying hard to recruit 1,000 student nurses. The classes open in September and for those who enjoy being able to relieve suffering, who have good health, a fair amount of strength, and an unlimited amount of patience, there is no field which offers better opportunities. But the school in which the nurse trains has such an infinite lot to do with her success afterwards, that it behooves every girl who thinks of taking up this work to take time to thoroughly satisfy herself as to the requirements of the school and the advantages offered. Michigan has as good nursing schools as will be found anywhere, then why go to the eastern schools, where you can't spend the time and money to go and personally interview the head nurse and be shown through the dormitories and have a personal interview before signing up for three years? It's too big a gamble when you consider that after entering training school it is almost impossible to get into another school. One training school does not, except in rare occasions, accept pupils who have trained or partly trained elsewhere, except as post graduate nurses. For instance, after having trained for a definite length of time, there are Women's hospitals which will accept student nurses from other schools and give them the special training in obstetrics.

Weekly Cheer

"'Tis well our hands must still
keep toiling on for others' sake.
For strength to bear is found in
duty done,
And he is blest, indeed, who learns
to make
The joys of others cure his own
heart ache."

But do not accept a school because it promises to train you in a short course, because unless you are a college graduate, and have been given credit on the regular course because of this advanced preparatory work, you will find that the school is not up to par, and more often than not, the doctors treat the nurses from these schools the same as a legitimate doctor treats a quack doctor. There is no quick and easy way—it is through patient practice that one becomes efficient at this work. But it is a work which one can engage in, and later in life a woman can accept cases which are easier—cases with invalids, where the work is not too exacting, while many other occupations call for the assistance of only the younger women, and as soon as one begins to get old, they are shelved for the younger women. This is not so with a nurse. Once a nurse, always a nurse, with always plenty to do.

There are at present 41 accredited Nurse Training schools in the state of Michigan. Of these 34 require three years' training and seven two and one half years. Young women 18 years of age are admitted in 32 schools and nine places the age of entrance is 19 years. All of the 41 schools except six, make a cash allowance to pupil nurses which varies from $5 to $10 per month. Entrance requirements in 20 schools call for an eighth grade education. Four schools demand complete high school education, nine admit with two years of high school, and eight require but one year of high school work.

As further qualifications for admission to the training school the applicant must be a woman of good moral character; she must be of average height, weight and physique, in good physical condition, and free from physical defects.

The course of instruction while in training includes a prescribed number of hours in the subjects of anatomy, bacteriology, hygiene, medical nursing, surgical nursing, obstetric nursing, and a certain number of hours in the laboratory, in the operating room and the diet kitchen. The time spent in training is divided as to duty between the different departments of the hospital so that the student may acquire bedside experience in the handling of medical, surgical, obstetrical and children's diseases as well as operating room and diet kitchen technique. Some of the hospitals furnish public health, social service and laboratory experience.

"GET MORE OUT OF YOUR HOME," SAYS UNCLE SAM

THE GOVERNMENT, in this work has wisely pointed out the fact that thrift may mean not only the actual saving of money but also the wise spending of money, spending that brings returns in comfort, happiness or efficiency. Below we quote the advice of the Department to farm women on the subject of getting more out of the home:

"By making the house and its surroundings healthful, convenient, comfortable, and attractive.

"By securing a sanitary water supply; by using running water wherever possible—a simple piped system for water may cost only a few dollars.

"By providing for proper disposal of sewage.

"By thorough screening against flies and mosquitoes.

"By adequate ventilating, lighting and heating and well arranged storage places.

"By equipping the kitchen and other workrooms as conveniently as the farm buildings—get the man to study this problem with the woman.

"By machine equipment—pump; power washer and wringer; milk separator; churn; but don't buy a $3,000 car and carry water because we can't afford a water system.

"By cutting out waste space and useless belongings.

"By choosing furnishings that are comfortable, easy to care for, and pleasing to look at.

"By providing simple, well-cooked, palatable meals.

"By choosing clothes which are comfortable, suitable and becoming.

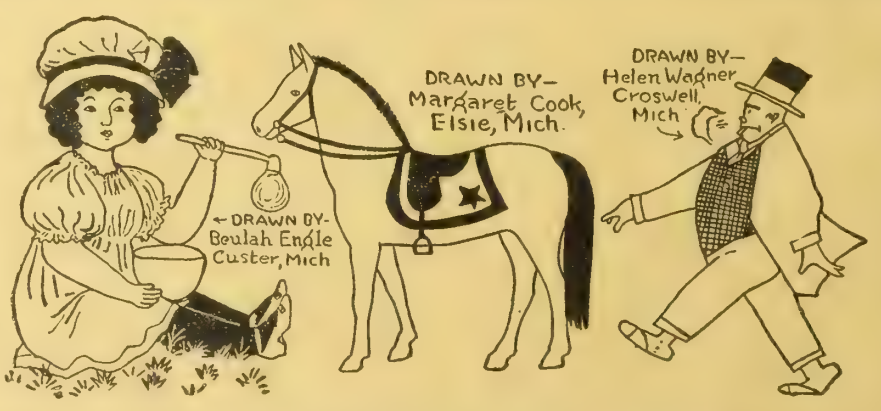
"By having a simple, practicable plan for the housework and following it.

The above advice offers a very desirable program which should be carried out to the fullest possible extent.

The Children's Hour

DEAR CHILDREN: I am very proud of all of my little nephews and nieces, and of what you can do, and this week I am especially happy to be able to award three more prizes for drawing, which appear on this page. It is so near the Fourth of July and I know every little boy and girl will just love to own a flag that I am sending a flag to the three winners, Beulah Engle, Margaret Cook and Helen Wagner, and next week there will appear the prize essay on "The Days We Display the Flag" and the winners will also receive flags as prizes. Their names will be published next week. So you see there are always plenty of opportunities for prize winning. If you can't draw, you can perhaps write.

How I wish more of the boys would write to me—all the girls keep wondering why the boys don't write more letters. I am sure they read our page, but boys never seem to enjoy writing letters as do girls. But boys like prizes just as well as girls, so come on and get busy boys; if you can't do anything else to win a prize, secure some subscriptions to OUR paper and send them direct to me, with $1 for each new subscription and I will be glad to award a prize. And you can market choic of a pocket knife t and or a ..g, while if you ca... ...



new subscribers, I can give you some very wonderful prizes, such as a larger pencil box, containing three pencils, pens, erasers, etc., or a flash light. You have plenty of time during vacation season, let's see who the winners will be. Affectionately yours.—AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare—I am a girl 10 years old and am in the 6th grade. I have no ... brothers Howard and ... an 80 acre farm. We ... 4 cows and 4 calves ... chickens. We take the ... like it very much. Mabel ... DeWitt, Mich.

These disturbances storm waves. cropweather from

Dear Aunt Clare—I have never wrote to you before. My father takes the M. B. F. and likes it fine. I live on a farm five miles from town. I have for pets a cat, a rabbit and two little ones. Will have to stop as it is time for dinner.—Harold Hall, Leslie, Mich.

Dear Aunt Clare—I am a girl 11 years old and in the 5th grade at school. Our school was out the 11th of May. I have one sister, Helen, she is 13 years old and one brother, Leonard, four years old. We live on an 80 acre farm. We have 4 calves, 4 horses and about 75 chickens. For pets I have a dog and a cat. My father takes the M... F. and likes it very much. I like ... Children's Hour ... We li... haf miles we... Will close, hoping to ... er in print.—Doris Wilkins, R... Mt. Pleasant.

Dear Aunt Clare—I am a girl 10 years old and I am in the 6th grade. My teacher's name is Miss Covert. I live on an 80 acre farm. We have four horses, 10 cows, 11 pigs and two cats. I have one dog for a pet. I thought I would send a picture of a pig to you. I drew it myself. Letha Rizer, Calhoun County.

Dear Aunt Clare—I am 12 years old and in the 5th grade next year. I go to the Eagle school. This is the first time I have written the M. B. F. We live on a sixty acre farm. My father takes the M. B. F. and likes it very well. I have a cat and dog for pets. I have two brothers. I hope to see my letter in print. Ora Rutter, Clare Mich., R 1.

Dear Aunt Clare—I read the letters in the M. B. F. and like them fine. I am 9 years old and in the fifth grade. We moved from Illinois about three months ago. I like it fine up here. We live on an 80 acre farm. We have 4 horses and 2 cows. I have two sisters and two brothers older than myself. Genevieve Mulvany, Breckenridge, Mich.

Dear Aunt Clare—I am a girl 10 years old and in the 4th grade. My school is out the 30th of April. The other day Ma let me make a cake the first one I ever made. It was fine. I live in Highland township, 8 miles straight west of Marion. I can hardly wait until we get our M. B. F. For the last day of school we had a program. I will close, hoping to see my letter in print. I wish some of the little girls would write to me.—Edna M. Eaby, Tustin, Mich., R 2.

Answer to Last Week's Puzzle

Early to bed and early to rise,
Makes a man healthy and wealthy and wise.

"IT IS the powder that smokes with the heat of its own containment," said Torres, at the same time feeling into the bottom of his coat pocket. He drew forth a pinch of crumbs of tobacco, match, splinters, and cloth-fluff. "This will not burn," he challenged, inviting invitation by extending the pinch of rubbish over the bowl as if to drop it in.

The Queen nodded consent, and all saw the rubbish fall upon the liquid metal surface. The particles made no indentation on that surface. Only did they transform into smoke that sheened upward and was gone. No remnant of ash remained.

"Still is it cold," said Torres, imitating Francis and feeling the outside of the bowl.

"Thrust your finger into the contents," the Queen suggested to Torres.

"No," he said.

"You are right," she confirmed. "Had you done so, you would now be with one finger less than the number with which you were born." She tossed in more powder. "Now shall each behold what he alone will behold."

And it was so.

To Leoncia was it given to see an ocean separate her and Francis. To Henry was it given to see the Queen and Francis married by so strange a ceremony, that scarcely did he realize, until at the close, that it was a wedding taking place. The Queen from a flying gallery in a great house, looked down into a magnificient drawing-room that Francis would have recognized as builded by his father had her vision been his. And, beside her, his arm about her, she saw Francis. Francis saw but one thing, vastly perturbing, the face of Leoncia, immobile as death, with thrust into it, squarely between the eyes, a slender-bladed dagger. Yet he did not see any blood flowing from the wound of the dagger. Torres glimpsed the beginning of what he knew must be his end, crossed himself, and alone of all of them shrank back, refusing to see further. While the Sun Priest saw the vision of his secret sin, the face and form of the woman for whom he had betrayed the Worship of the Sun, and the face and form of the maid of the Village of the Long House.

As all drew back by common consent when the visions faded, Leoncia turned like a tigress, with flashing eyes, upon the Queen, crying:

"Your mirror lies! Your Mirror of the World lies!"

Francis and Henry, still under the heavy spell of what they had themselves beheld, were startled and surprised by Leoncia's outburst. But the Queen speaking softly, replied:

"My Mirror of the World has never lied. I know not what you saw. But I do know, whatever it was, that it is truth."

"You are a monster!" Leoncia cried out. "You are a vile witch that lies!"

"You and I are women," the Queen chided with sweet gentleness, "and may not know of ourselves, being women. Men will decide whether or not I am a witch that lies or a woman with a woman's heart of love. In the meanwhile, being women and therefore weak, let us be kind to each other."

"—And now, Priest of the Sun, to judgment. You, as priest under the Sun God, know more of the ancient rule and procedure than do I. You know more than do I about myself and how I came to be here. You know that always, mother and daughter, and by mother and daughter has the tribe maintained a Queen of Mystery, a Lady of Dreams. The time has come when we must consider the future generations. The strangers have come, and they are unmarried. This must be the wedding day decreed, if the generations to come after of the tribe are to possess a Queen to dream for them. It is well, and time and need and place are met. I have dreamed to judgment. And the judgment is that I shall marry, of these strangers, the stranger alloted to me before the foundations of the world were laid. The test is this: If no one of these will marry, then shall they die and their warm blood be offered up by you before the altar [illegible] the Sun. If one will marry me, [illegible] all shall live, and Time hereafter will register our futures."

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

The Sun Priest, trembling with his anger, strove to protest but she commanded:

"Silence, priest! By me only do you rule the people. At a word from me to the people—well, you know. It is not an easy way to die."

She turned to the three men saying:

"And who will marry me"

They looked embarrassment and consternation at one another, but none spoke.

"I am a woman," the Queen went on teasingly. "And therefore, am I not desirable to men? Is it that I am not young? Is it, as women go, that I am not beautiful? Is it that men's tastes are so strange that no man cares to clasp the sweet of me in his arms and press his lips on mine as good Francis there did on my hand?"

She turned her eyes on Leoncia.

"You be judge. You are a woman well loved of men. Am I not such a woman as you, and shall I not be loved?"

"You will be ever kinder to men than to women," Leoncia answered—cryptically as regarded the three men who heard, but clearly to the woman's brain of the Queen. "And as a woman," Leoncia continued, "you are strangely beautiful and luring; and there are men in this world, many men, who could be made mad to clasp you in their arms. But I warn you, Queen, that in this world are men, and men, and men."

Having heard and debated this, the Queen turned abruptly to the priest.

"You have heard priest. This day a man shall marry me. If no man marries me, these three men shall be offered up on your altar. So shall be offered up this woman, who, it would seem, would put shame upon me by having me less than she."

Still she addressed the priest, although her message was for the others.

"There are three men of them, one of whom, long cycles before he was born, was destined to marry me. So, priest, I say, take the captives away into some other apartment, and let them decide among themselves which is the man."

"Since it has been so long destined," Leoncia flamed forth, "then why put it to the chance of their decision? You know the man. Why put it to the risk? Name the man, Queen, and name him now."

"The man shall be selected in the way I have indicated," the Queen replied, as, at the same time, absently she tossed a pinch of powder into the great bowl and absently glanced therein. "So now depart and let the inevitable choice be made."

They were already moving away out of the room, when a cry from the Queen stopped them.

"Wait!" she ordered. "Come, Francis. I have seen something that concerns you. Come, gaze with me upon the Mirror of the World."

And while the others paused, Francis gazed with her upon the strange liquid metal surface. He saw himself in the library of his New York house, and he saw beside him the Lady Who Dreams, his arm around her. Next, he saw her curiosity at sight of the stock-ticker. As he tried to explain it to her, he glanced at the tape and read such disturbing information thercone that he sprang to the nearest telephone and, as the vision faded, saw himself calling up his broker.

"What was it you saw?" Leoncia questioned, as they passed out.

And Francis lied. He did not mention seeing the Lady Who Dreams in his New York library. Instead he replied:

"It was a stock ticker, and it showed a bear market on Wall Street somersaulting into a panic. Now how did she know I was interested in Wall street and stock tickers?"

(Continued next week)

BLACKING HARNESS

From time to time formulas are given in articles appearing in farm papers for making a good harness blacking. The formula calls for the purchase of four or five different ingredients and involves considerable work and time in compounding them.

It is not necessary to further burden the housewife by asking her to make a homemade harness blacking, for at any leather store and at most drug stores, it is possible to buy a small can of leather renewer, all ready for use and costing little if any more than the separate ingredients used in the home compound. This is merely a labor saving suggestion, and who is more deserving of being saved from unnecessary work than the overworked farm housewife.

THE SIGN OF ROWENA QUALITY

The Brawn That Made America Great Came from Flour

The pioneer men and women whose strength and stamina laid the rock-like foundations of America's greatness were bread eaters. In wholesome bread made from good flour they obtained the nutrition that gave them strength to work and achieve.

For nearly sixty years the particular women of Michigan have used

Lily White

"The Flour the Best Cooks Use"

Look for the ROWENA trade-mark on the sack

In this flour they found the means to give their families the good main-stay. Save for milk, bread is the food of greatest nutrition. LILY WHITE is scientifically milled to retain all the nutrition values of the wheat. Only the best wheat obtainable is used. It is cleaned four times, scoured three times and actually washed before going through the processes of breaking and milling. Every atom of dirt and undesirable material are eliminated.

This is why three generations have found bread made from LILY WHITE FLOUR delicious, palatable, wholesome and healthful. Looks good, bakes to a perfection that makes "homey" women proud. The same with biscuits and pastry. LILY WHITE is guaranteed to give perfect satisfaction.

MARKET FLASHES

WHEAT FIRM

WHEAT PRICES PER BU., JUNE 22, 19			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.97		3.00
No. 2 White	2.95		3.00
No. 2 Mixed	2.95		3.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.44		
No. 2 White	2.42		
No. 2 Mixed	2.42		

Wheat has moved only moderately the past week. The overseas demand is continuous at Chicago but movement is light at present. Of course if cars could be secured a little more readily there is not much doubt but that the demand would pick up briskly. Higher prices may prevail in the near future owing to the reports coming from the growing sections showing the crop to be in rather poor condition. We are unable to prove the sincerity of these reports but the crop is far enough along to seriously affect the trend of prices if dealers believe them to be true. The 1920 wheat crop of Argentina is estimated at 214,140,000 bushels. The estimated acreage and yield in Australia are 6,570,402 acres planted and the yield 46,210,380 bushels. France and England are buying all of their imported grain from this country now owing to the export duty that Argentina has placed on her wheat. This duty makes the wheat a higher price than is asked here.

CORN STRONG

CORN PRICES PER BU., JUNE 22, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.90	2.09½
No. 3 Yellow	2.00		
No. 4 Yellow	1.95		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.82		1.93¾
No. 3 Yellow		1.82	
No. 4 Yellow	1.84		

Great strength has been shown in the corn market owing to the unfavorable condition of crops in general. Some news has come from the districts where corn was planted early and many of the growers report damage from the cutworms.

Another worm that promises to raise havoc with America's corn later in the season is the corn-borer.

Secreted in a cargo of broom corn imported from Austria, the unbidden guest has invaded 2,750 square miles in four states—Massachusetts, New York, New Hampshire and one county in Pennsylvania.

The so-called corn borer, named by reason of its tunneling operations through the stalks and ears of corn, is the worst of pests, destroying from one-fourth to one-half of the infested crops of corn, millet, hops and hemp in its native lands of Europe and Asia. Its depredations in the cornfields of this country have been such as to deprive the worm of none of its unsavory reputation as the arch enemy of plant life yet introduced into the United States.

OATS ADVANCE

OAT PRICES PER BU., JUNE 22, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.28	1.21½	1.33
No. 3 White	1.27	1.17	
No. 4 White	1.26		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.75		
No. 3 White	.74½	.71⅜	
No. 4 White	.70¾		

Rain is needed badly in many sections where oats were mudded in and then hot and dry weather came on baking the ground. Some sections report oats to be heading with straw very short. Large orders for oats to be shipped East have had to be cancelled because it is impossible to get the grain. Threshing has started on a large scale in Texas but very little of the Texas crop will be available for shipment East as most of the surplus has been promised to the southern trade.

RYE HIGHER

Rye has advanced again and is quiet and easy on the Detroit market at $2.28 for No. 2. The market is very congested at present and more advances are looked for if the situation does not clear up within a few days. There is considerable export busines going on and clearances are holding up well. Actual exports for the week of June 12th amounted to 2,287,000 bushels. It is estimated that there is around 8,000,000 bushels yet of the visible supply.

LAST MINUTE WIRES

DETROIT—Wheat not active. Oats firm and in good local demand. Corn higher. All live stock markets strong.

CHICAGO—Corn sets new high price mark. Favorable crop reports keep oats easy. Wheat active. Hogs lower.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

DEMAND for money does not relax, and restrictions on borrowing are forcing liquidation and more careful buying. Such luxury dealers as those selling automobiles and jewelry are having a dull season. There is a distinct but reluctant decline in the prices of these luxuries. The West is finding it hard to secure money for cattle operations. The Southwest has its money tied up in considerable of last year's wheat which they still have on their hands owing to the inability to get cars, and the new crop is ready to harvest.

The future trend of commodity prices is still a question. It will take the next six months to find out whether the unwillingness of the public to buy at present prices will be counteracted by the curtailment of production. Late mercantile reviews appear to forecast lower prices but conditions in the money market will have much to do with future prices. If money remains tight prices will be lower as the merchant will need his money to purchase new stock but if the money market loosens up so the merchant can secure credit again watch out for higher prices.

Grain markets in general are enjoying a feeling of strength owing to unfavorable reports of the growing crops coming from the country.

BEANS DECLINE

BEAN PRICES PER CWT., JUNE 22, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	8.50	8.25
Red Kidneys		15.00	16.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.		8.25	
Prime			
Red Kidneys		11.50	

The bean market at Detroit has made two declines during the last week; one of 25c and another of 15c. Chicago and New York markets are firm.

Professor Cox, head of the farm crops department at the M. A. C. thinks Michigan ought to plant more red kidney beans.

"The Japanese have not competed heavily with red kidney beans," says Professor Cox. "These are in great demand, and it would appear that a considerably larger acreage of red kidneys could be planted on the better soils of Michigan. As for white beans, Michigan's product is so well known for quality that it can stand very strong competition.

"All indications are that Michigan bean growers will find a better market next winter, (particularly late in the winter) for Michigan grown beans than the pessimistic forecast of the past fall and winter indicated."

NEW POTATOES EASY

SPUDS PER CWT., JUNE 22, 1920		
	Sacked	Bulk
Detroit	7.78	
Chicago	6.50	
Pittsburg	6.67	
New York	6.75	
PRICES ONE YEAR AGO		
Detroit	2.40	2.33
Chicago	2.05	2.00
Pittsburg		
New York		

New spuds are lower on nearly all markets. There is no such a thing as old potatoes on the Detroit market. Prices for potatoes of the 1919 crop are all shot to pieces at Chicago. One drop of $4.50 was made in one day but advances followed and $9 per cwt., potatoes sold for $6.50 at the close.

The weekly crop report of the American Steel & Wire Co., gives the condition of the 1920 crop in several of the leading potato states as follows: Michigan, good to fair; Maine, good; Minnesota, fair to 100 per cent; Ohio, good; Illinois, poor to fair.

BOSTON WOOL MARKET

The Commercial Bulletin says, "The wool market is still waiting developments. Very little business has been done here or in the West and quotations are largely nominal still. Some consignments are reported from the West.

"The manufacturing situation, also is very uncertain and mills are running generally on three to four days schedule a week, sometimes less.

"The foreign markets have steadied somewhat on the lower London basis."

Michigan and New York fleeces.—Fine unwashed, 60; delaine unwashed, 70@73; 1-2 blood unwashed, 68@70; 3-8 blood unwashed, 59@60.

DETROIT PRODUCE MARKET

Buyers are paying more attention to hens and chickens and a firmer tone is quoted. The market is not troubled so much as it was with hold-over supplies. Dressed calves are doing a little better and there is a steady market for hogs. Dairy products are in liberal supply and active. The feeling in eggs is easy, but there is active buying of butter and the market holds steady.

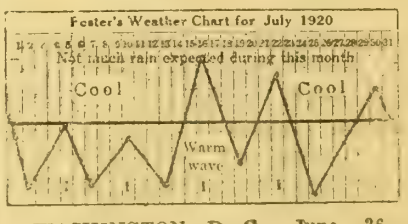
LIVESTOCK MARKETS

DETROIT—Cattle; dry fed strong, grassers dull; canners 50 to 75c lower; best heavy steers, $14.50@15; best handy weight butcher steers, $14@14.75; mixed steers and heifers, $11@11.50; handy light butchers, $10@10.25; light butchers, $9@9.50; best cows, $8.50@9; butcher cows, $6.50@7.50; cutters, $5.50@5.75; canners, $4.50@6; best heavy bulls,, $8.75@9; bologna bulls $7.60@8; stock bulls, $7@7.50; feeders, $9@10.25; stockers, $8@8.75; milkers and springers, $85@110. Veal calves: opened strong, $1 higher, closing dul with advance lost best, $15@15.50; others, $9@14. Sheep and lambs: market steady; best lambs, $17@18; fair lambs, $13@14; light to common lambs, $10@12; yearlings, $13@14; fair to good sheep, $4@8; culls and common, $2@3. Hogs: Market strong; pigs, $14; mixed hogs, $15.50@15.60; heavy, $15.25.

CHICAGO—Cattle: Bulk beef steers steady to 25c lower; top heavy, $16.90; yearlings, $16; other grades 25c to 40c lower; few choice cows and heifers steady, other she-stock mostly 25c to 40c lower; bulls steady stockers and feeders weak, unevenly 25c to 40c lower; calves 25c lower. Hogs: Market active, opened 10c to 25c lower, closed strong to 10c to 15c higher than early; top, $15.75; bulk light and light butchers, $15.40@15.70; bulk 250 pounds and over, $14.35@14.40; pigs, 25c lower, with bulk at $12.25@13. Sheep: Over half direct to packers; very good Idaho lambs, $16.25; best native, $16; bulk, $14@16; California lambs, $15.50; best yearlings, $12; choice ewes, $6.50@7; few, $7.50; California ewes, $7; best feeder lambs, $13.65@13.90.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., June 26, 1920.—Warm waves will reach Vancouver, B. C., near June 26, July 2, 7, and 13 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of 27 and July 3, 8, 14; plains section 28 and July 4, 9, 15; meridian 90, upper great lakes, Ohio-Tennessee and lower Missippi valleys 29 and July 5, 10, 16; lower great lakes and eastern sections 30 and July 6, 11, 17, reaching vicinity of Newfoundland about July 1, 7, 12, 18. Storm waves will follow about one day behind warm waves, cool waves about one day behind the storm waves.

These disturbances will control the cropweather from near June 26 to July 18. Moderate temperatures are expected up to near July 13 and warmer following. Frequent thunder storms are expected and a general average of less rain than usual but well distributed moisture, bringing rather favorable cropweather for all sections. Southern parts of plains sections are in doubt and may be sufficient short on rain to threaten a raid by grasshoppers. Showers in Ohio and other middle latitudes are expected to check the Hessian fly. Middle to northern latitudes are expected to get fairly good weather for harvesting but may have to dodge the showers which are not expected to be heavy enough to do much damage.

General results of July cropweather will check the hopes of big crops but no serious extensive drouth is expected. Crop prospects are expected to be better at the end of June than they were at the end of May. Some hail is expected before the season ends. July and August are the most dangerous hail months.

W. T. Foster

THE WORLD'S MARKET AT MICHIGAN'S DOOR

(*Continued from page* 1)

whether or not the American wheat-grower could remain in business. And since the plains of the Dakotas and the Canadian Northwest are capable of feeding bread to a large part of the bread-eating world, the question of rates and profits assumes world-wide importance.

"Take your map of North America, and put your finger on Duluth, in Minnesota, or Port Arthur in Canada. Then follow down Lake Superior to the "Soo" Canal at Sault Ste. Marie, where the waters of Superior drop twenty feet to the level of Lake Huron. Here there are locks deep enough, long enough, and wide enough to let through the gigantic 10,000 ton Great Lakes freighters—locks large enough to handle all but about 5 per cent of the ocean-going freight-carrying shipping of the world.

"Passing on through Huron we come to the St. Clair and Detroit rivers, and these likewise can carry any ocean-going ship except such vessels as the Mauretania and Leviathan.

"The next stop on our all-water route from the Middle West to Europe is at the new Welland Canal. Canada is building this to meet the capacity of the "Soo" locks, and when completed any of the great freighters of the Upper Lakes can comfortably drop down through it onto Lake Ontario.

"Below Montreal, all the way to the sea, the St. Lawrence affords a broad, deep, safe ship highway that would bring Europe one thousand miles closer to our Middle West were it not for less than fifty miles of tumbling rapids in the upper St. Lawrence. The improvement of this fifty miles, by the creation of two great dams to hold back the waters of the river, is now becoming a matter of international concern.

"Engineers are agreed that this work can be done at a cost approximating $110,000,000, and that the four million horse-power of electrical energy that will be released by creating these artificial lakes will more than pay the entire carrying charges of the undertaking. So that from a financial standpoint the proposition appears entirely feasible. With these dams built, and their locks in operation, a steamer of 5,000 tons capacity could enter the St. Lawrence, carrying a cargo from Europe, lay down that cargo at any one of the Great Lakes parts, and then proceed to the head of the lakes to re-load with wheat or flax or livestock for the return journey. The effect would be to thrust an arm of the ocean midway into the heart of the American continent, and bring the prairie region west of Chicago and Duluth into overnight contact with the sea.

"This would place all the central region of the United States and Canada in a much more favorable situation in the coming competition for world commerce.

"But this is by no means all that the canalizing of the St. Lawrence would mean.

"It would help to solve in a very large measure, the pressing transportation problem, because it would shorten the rail haul of products west of the Alleganies destined for overseas consumption; and by so doing it would in effect add materially to the carrying capacity of the present rail equipment.

"It is a well-established fact that car congestion and car shortage, the twin bugaboos of the rail men and shipping public, are largely due to the long overland haul of shipments originating at, or bound for, points west of Chicago. The vast network of railways draws the streams of cars into the already locally congested area east of Pittsburg and Washington; and when the wheat shipments of early fall begin, the congestion become a jam, and the jam becomes a tie-up.

"This situation, bad enough when the all-rail shipments alone are considered, is made materially worse when the stream of lake-and-rail traffic comes pouring down the Great Lakes and debarks at Buffalo and Cleveland, demanding cars and right of way and side-track space that is needed by the traffic already on the ground.

"The opening of the St. Lawrence route would cause this stream of lake-and-rail traffic bound for overseas ports to move along the easier and cheaper and quicker all-water route, and a fair part of the all-rail that now reaches the Atlantic parts would find its natural route to Europe through its most convenient lake port and thence by ocean-going shipping direct to Europe.

"It has been estimated that four billions of dollars are necessary for the development of the American railways to the point where they can properly take care of the growing volume of transportation. If the expenditure of less than 5 per cent of this amount will provide an all-water route from the heart of the American continent to the sea, if this expenditure will bring the Mississippi Valley and the plains of Canada a thousand miles nearer to Europe, and if, finally, it will divert from the Eastern states a volume of through traffic that serves no other purpose than to congest roads already breaking down under local traffic and continental traffic originating within the manufacturing area along the Atlantic coast—then it would seem that immediate steps should be taken to add the St. Lawrence all-water route in order to relieve our overloaded and crumbling system of continental transportation."

TEXAS FARMERS GET $2.50 FOR THEIR WHEAT

New wheat was selling for $2.25 to $2.50 a bushel from farmer to dealer in and around Fort Worth, Texas on June 21st. This was declared to be the highest price paid there in several years.

Crop Reports

ARENAC (E)—Well the rain reached us at last and has been sending down the moisture every day, so much that farmers cannot get on their fields to cultivate or finish getting in their beans etc. It looks like another one of those high-priced years. On clay ground it is utterly impossible to do a thing, and will at least be a week before farmers can, provided it does not rain any more. Good old Democrat times is here and as the M. B. F. stated a few days ago, the banks are very careful who they let out loans to—more tight here every week. Prices on farm commodities are lowering. Wool is nearly a dead issue and unless you wish to take a small price, better hold on some time. The storms were ferocious and did enormous damage, tearing down silos, blowing fruit trees down and the hail was responsible for some damage. Poultry took some drop last week and looks like lower price in the face of high priced feed.—M. B. R.

TUSCOLA—Farmers are still planting potatoes and beans, sowing buckwheat and millet, cultivating corn and early potatoes. Corn looks very yellow and not a good stand. Cutworms and crows took a lot of it. Hay is going to be a light crop by the looks of it now. Weather has been very dry and hot until Monday when it started to rain and it has rained hard for two days. Tuesday night we had the worst storm of the season, lightning, rain, hail and wind, doing a lot of harm to trees and beans. One man had a nice horse killed by lightning. The following prices were offered at Caro: Wheat $2.90; corn, $1.75; oats, $1.05; rye, $1.90; buckwheat, $3.50 cwt.; beans, C. H. P.) $7 cwt.; hay, $24; potatoes, $3 @4 per bu.; hens, 25@28c; broilers, 50c; butter, 45c; butterfat, 55c; eggs, 36c; beef steers, beef cows, 6@9c; veal calves, 10@14c; sheep, 5@8c; lambs, 13@14c; hogs, 13 1-2c—R. B. C.

SHIAWASSEE—The drought of the past month or more has been a severe handicap to the bean growers, as many who have their fields fitted decline to plant while the ground is so very hot and dry, especially where the ground is of a sandy nature. Wheat as a rule is not doing as well as it was before the drought came on. Oats and corn seem to be practically at a standstill. Early potatoes are up enough to cultivate but the late crop as a rule are just being planted. Potato bugs have not made their appearance as yet, at least none have been reported. The following prices were offered at Durand: Wheat, $2.80; oats $1.08; rye, $3.10; beans (C. H. P.) $6.75@7.05; hay, $24@28; potatoes, $4; butter, 56c; butterfat, 65c; eggs, 38c; veal calves, $10@18.—D. H. M.

MONTCALM (N. W.)—We have had plenty of rain fall the last few days. Helping crops considerably, especially wheat and rye which is just beginning to head. Quite a lot of live stock is being sold. Silos are being built this year throughout the country. The following prices were offered at Lakeview: Wheat, $3.25; corn, $1.80; oats, $1.50; rye, $2.25; No. 1 timothy $30; No. 1 light mixed, $30; potatoes, $3; onions, 8c lb.; cabbage, 10c lb.; cucumbers, $3 cwt.; hens, 25c; butter, 50c; butterfat, 55c; eggs, 34c; strawberries, 30c.—G. B. W.

MIDLAND—The following prices were offered at Midland: Wheat, $2.80; corn $1.80; oats, $1.05; rye, $1.80; buckwheat $3; beans (C. H. P.) $6.75; peas, $3.25; barley, $3.15.—O. B. & G. C.

REQUIREMENTS OF ASSESSOR

In taking an assessment is the supervisor obliged to have his tax roll with him? Does he have to write with pen and ink? Also will he have to give the owner a receipt showing his assessed valuation or hasn't the owner any right to this information.—A Reader, Arenac County.

The law requires the supervisor or assessor to ascertain the taxable property of his district and for this purpose SHALL require each person having taxable property to make a statement of his property under oath. It is made a criminal offense to refuse to make it or to make a false one. He does not need his roll with him when he requires such statements. He is not obliged to fix the values when he visits the taxpayers and owners. Such action should be after he has viewed all of the property. The copying in the names and descriptions of property is clerical and should be done in ink and may be done by a clerk but the fixing of the values is an act that the officer must fix for himself and can not thus allow a clerk to merely copy a roll of former years. He is not required to give the owner the amount of the assessment but must furnish the information if requested.—*W. E. Brown, legal editor.*

GREEN LEG PLYMOUTH ROCKS

Are there any pure bred Barred Plymouth Rocks having dark colored feet and legs?—Mrs. I. N. M., Standish Mich.

Barred Rock pullets often show a dark green or slatey green leg, owing to, I think, the fact of exhibition breeding to increase the number of bars on the feather that the yellow pigment has about left the beak and the leg in the modern bred Barred Plymouth Rock. The cockerels show yellow legs and are very apt to have green in the beak. The cause of this is the breeding more black into the fowl, which of course is moving towards the Black Java blood that was originally crossed to produce the Barred Rock.

By the standard of perfection you will notice that the Black Java shanks and toes are black or nearly black with a tendency towards willow but black preferred. This would give ample chance for the dark colored shank. For a good many years there were green spots on the shanks of the Barred Rock female but later on of course we find the greenish slate leg on most all of them.—*C. H. Burgess, Professor of Poultry Husbandry, M. A. C.*

WORDING OF CONTRACT SHOWS

Last August I listed my farm for sale with our local agent, gave him the exclusive sale of it for 12 months, but he did not bring any one around for eight months (I had signed a contract with him for a five per cent commission.) Last February I saw an ad in the Chicago Daily News which I answered. The Chicago broker came out with the owner of Chicago property and we made a deal here to trade equity for equity, I agreeing to pay the Chicago agent $450 commission. Now our local agent after hearing that I had traded, comes along with a proposition for a trade, after I had signed a contract with the Chicago man. Can our local agent hold me for commission?—A Subscriber Van Buren County.

Your question is a complicated one and may be controlled by the wording of the contract you made with the first broker. Unless that contract would control I am of the opinion you would still be able to make a deal yourself and not be liable to him for any commission. Such a matter should be submitted to your attorney with all of the facts to assist in construing the question of liability.—*W. E. Brown, legal editor.*

HOMES FOR THE AGED

Is there an old peoples' home in Michigan, if so, where is it located and what are the terms and conditions under which a person of nearly 70 years old can gain a home there?—A Reader.

There are several homes of this kind in the state; some are maintained by lodges for their members, some by churches for their members; a few are for women only and several are for aged people of any faith of sect. Of the last named there are three: "Home for the Aged," located at Grand Rapids; "Old People's Home," located at Muskegon; "Old People's Home," located at South Haven. These homes are open to aged people of 60 years or more and are maintained by individuals, charities and contributions by inmates.—*Editor.*

WIFE NOT LIABLE FOR HUSBAND'S DEBTS

I would like to have you print in your paper what you know in regards to the paying of notes signed for men going to the war and not returning. Now these widows refuse to pay same after they have signed their name on the renewal note for the first one signed by her husband. I have a note that I paid a year ago that I signed with a young man that was working for me when he was drafted. His wife renewed this note and signed her own name to the renewal now she receives her insurance from her husband who was killed in France and refuses to do anything with it at all. Please print your advice on this as there are perhaps others who would like to know this same thing.—E. M. G., Osceola County.

A married woman is not liable for her husband's debts even though she signed the note. It would not make any difference how much money she had. If the deceased left no estate of his own from which the amount of the indebtedness could be collected you would be without a remedy in law.—*W. E. Brown, legal editor.*

SHEEP HUSBANDRY BOOK

Where can I get a book describing the different kinds of sheep?—O. P., Vestaburg Mich.

We are offering for sale a book that treats this subject very thoroughly. If you will look on page 19 of your June 5th issue of THE BUSINESS FARMER you will find an ad describing this book and the price of it.—*Editor.*

RAISING WATER ON LAKE

Have individuals owning lake frontage which embraces an outlet to several lakes the right to raise the water level of these lakes by daming the outlet? What procedure would be necessary, on the part of parties wishing to raise the level, to make the daming legal. The raising of the level would be detrimental in several instances to parties owning frontage on the lakes to be raised. Have the parties who would be seriously affected any powers to prohibit the raising of the water level?—A Livingston County Subscriber.

The parties who desire to raise the water on the lakes must have the right of flowage of all of the bordering land to legally raise the water. They can acquire this right of flowage only by purchase. The persons likely to be injured by threatened flowage would be entitled to an injunction upon a proper bill in chancery paying for such injunction.—*W. E. Brown, legal editor.*

THE COLLECTION BOX

NEW YORK COMPANY RETURNS SUBSCRIBER'S MONEY

I have noticed an article in the last issue which corresponds somewhat with the predicament I am in. On Nov. 11, 1919, I sent an order amounting to $30.21 to the B—— H —— Co., of New York City and have never heard a word from them, although I wrote many times. Will you please see what you can do, and I, like the other reader you helped would be willing to pay you amply.—*Miss M. A. K., Huron County.*

We took the matter up with the B—— H—— Company and received a reply from them stating that they were mailing a check to our subscriber covering the entire amount due and on June 12th we received the following letter from Miss M. A. K.:

Your letter received in regard to my trouble with the B—— H—— Co. and after seven months I have received my money. Many thanks to you. Very truly yours.—*Miss M. A. K., Huron County.*

(We do not make any charges to our subscribers for making collections.)

CREAM BUYER LIABLE FOR CAN

Last summer a cream buyer bought cream in this neighborhood. He would call once a week, take a can of cream and bring back an empty and pay for the one he took away the week before. Now the last trip was Dec. 16 and he has not returned the empty can nor paid for it or the cream. Is there any way I can collect? He lives in the next county.—W. J. Y., Roscommon County.

The purchaser of cream is liable in a personal action for the price of the cream, and for the can, if he refuses to return it. I would be of the opinion that a demand would have to be made upon him for the can before an action for the price would lay, unless you have an agreement with him as to the time of its return. Unless the goods were obtained by what in law would amount to false pretenses there would be no criminal action. You having trusted him there would be only an action for the amount he owes you. You can sue him in the other county or in your own county if you can have summons served on him in your county.—*W. E. Brown, legal editor.*

VALUE OF ENSILAGE

What is a fair price per ton for a good grade of silage? How many tons per foot will two year old silage weigh in the bottom six feet of a 12 x 42 silo that has been filled both years?—A Huron County Reader.

The value of ensilage will depend upon the class of livestock to which it is to be fed, the maturity of the corn, and the distance necessary to haul the ensilage. At the present price of hay, from $12 to $14 per ton is a fair estimate. The weight per cubic foot of ensilage varies greatly at different depths. In a 12 x 42 ft. silo, the ensilage will weigh from 30 to 35 pounds per cubic foot, 10 feet from the top, while the bottom 6 ft. will weigh from 60 to 70 pounds per cubic foot. Assuming that the weight per cubic food is 65 pounds, each foot of silage will weigh approximately 3.6 tons at the depth mentioned.—*C. R. Megee, Ass't Professor of Farm Crops, M. A. C.*

TENANT FURNISHES ALL

When a man rents his farm on shares, getting one third of grain and one-half of hay, should he furnish seed and fertilizer?—Subscriber, Sanilac County.

It is usual to provide in the lease what each shall furnish but if there was no such agreement and the tenant was to have two-thirds and the landlord one-third I would be of the opinion that the tenant furnished all.—*W. E. Brown, legal editor.*

NEW ERA ASSOCIATION

I would like to learn everything possible about the New Era Association of Grand Rapids, Michigan. It doesn't look very solid to me, appears to be too much of a speculation. How about its financial standing? Is it growing? Won't the rates soon be boosted way up? What is its future? Several around here are carrying insurance in the association, some that are not financially able to lose their protection.—Anxious Kent County.

In accordance with your request of May 19th, we are giving you below a statement of the financial condition of the New Era Association, Grand Rapids, Michigan, as of December 31, 1919, as shown by its annual report filed with this Department: Admitted assets, $82,433.36; liabilities, $88,883.73.—*Frank H. Ellsworth, State Insurance Commissioner, Lansing.*

DEED WITHOUT RESERVATION

C and F bought a 40 acre farm together (joint deed) of W, a single man. According to contract they were to pay W $100 per year and he make it his home with them for 20 years. Last September F signed off fair and square of his own accord to C with C's consent, F making no reservations whatever, it being recorded at the time. What I want to know is F entitled to any share of the new seeding that was made before he signed off?—A Subscriber, Genesee County.

A deed without reservation would convey all seeding that he had any interest in at the time of the execution of the deed.—*W. E. Brown, legal editor.*

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farmer, Adv. Dep't, Mt. Clemens, Michigan.

April 6, 1920

Michigan Business Farmer,
Mt. Clemens, Mich.

Gentlemen: — Enclosed please find check for $14.60, the sum due for 13 weeks' chicken ad and one week strawberry ad. If we need any more ads we will let you know later.

Your ads surely bring business. We're all sold out for April and May. Yours is the best paper for Michigan farmers that there is in the state. Continue in the same good way and you will have the support of every bona fide farmer.

Cordially yours,
C. W. HEIMBACH,
Route 5, Big Rapids, Mich.

M. B. F. brings them

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

Veterinary Dep't

GRUBS IN CATTLE

My cattle have big grubs in their backs, some of them have about a hundred and others not so many. Can you inform me how to get rid of them and what causes them to get there?—H. F., Sanilac County.

The grubs to which you refer appertain to the life history of the Botfly. This grub, or the larvae of this fly, when grown, is smooth, white, and transparent, as it enlarges it becomes browner, and about the time of its full growth it is of a deep brown color. The larvae having attained its full growth and size, effects its escape from the abscess of the back of the affected animal and drops to the ground, it is then of a dark brown color, narrower at one end than at the other, flat on one side and very round and convex on the other. They remain in this state for about six weeks, and the fly appears. The grubs usually escape during the months of May or June. Sometimes these grubs are very numerous and cause a great deal of pain and uneasiness in the animal, which becomes thin in flesh, hidebound and feverish, more frequently, however, they do no harm except to the hides. Treatment: Whenever cattle have these tumors along the back ,it is advisable to press out the grub, and apply either alcohol or Tr. Iodine.—*W. A. Ewalt, Veterinary editor.*

TUBERCULOSIS IN CATTLE

How is tuberculosis in pure bred cattle found to be present, and what is the method of cure. Can an outsider when coming to a strange barn detect that tuberculosis is present in a herd? I have heard the remark that calves standing by their mother is a good advertisement for no tuberculosis. How much linseed meal is safe for a horse when used as a tonic.—Subscriber, Mason County.

Tuberculosis in pure bred cattle is identically the same as tuberculosis in grades; the only positive method of diagnosing the disease is by means of the tuberculin test, however, the symptoms in some cases are very pronounced, for where the lungs are affected the animal usually presents a chronic cough. When the mesenteric glands are involved there is apt to be a persistent or periodical diarrhoea. One familiar with the disease may be able to detect its presence by a casual examination. There is no cure and the barbering of this or any other contagious disease will sooner or later mean a great loss. Calves standing beside their mother is no indication the disease is not present. One or two tablespoonfuls of linseed meal morning and night is sufficient to feed a horse.—*W. A. Ewalt, Veterinary editor.*

RAISING COLT BY HAND

I would like to ask through your valuable paper if any of your readers have had any experience raising a colt by hand. Mare died. Am feeding cows milk diluted a little. Have been told to feed an egg a day. Veterinary prescribed Cascara Sagradac at first. Would you advise giving a little now and then. Colt is 12 days old. About how much milk would be enough. Its my first experience and don't want to overfeed.—W. M. H., Shiawassee County.

When raising a colt by hand the following is recommended. Dilute cows milk with an equal amount of water and to one quart of this mixture add five drahms of sugar. The amount that is required depends on the size and breed of the colt. It would be advisable to feed the colt about six times a day, warming a fresh supply of milk each time.—*F. O. A. Taylor, Division of Veterinary Science, M. A. C.*

LET BULL ENDORSE YOUR NOTE

The Better Sires campaign conducted by various states in co-operation with the Bureau of Animal Industry, United States Department of Agriculture, is developing the fact that bank credit is available to the progressive live stock farmer as to the progressive business man of the city.

A letter received by the Bureau of Animal Industry reports the following announcement published by a Wisconsin bank to its farmer patrons:

"Why not keep some of those pure bred Holsteins home? Many fine animals will be sold at the first annual sale of the Brown County Holstein Breeders' Association to be held in the Brown County fair grounds, West De Pere, Wis., on Monday, May 10. The ——— Bank is ready to stand back of any of its customers who wish to purchase some of the stock to be offered for sale and who do not feel able at present to carry the investment. Call at the bank and the accommodation can be easily arranged."

THE ONLY DIFFERENCE

The busy millionaire climbed into his beautiful and purring automobile. A ragged newsboy rushed alongside and offered the sale of a paper. The successful business man had already read that particular edition and to the lad's insistent demands that he "Please buy a paper, mister," finally replied rather tartly, "No, I said no." The unabashed newsboy came back with, "Aw, don't get grouchy, governor, the only difference between you and me is that you're making your second million and I'm still working on my first."—*Co-operative World.*

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

BLACK FLAG

15c 40c 75c Except West of Rockies

Milk in Comfort

Kills flies in closed milking shed. Fold piece of paper; put in it two teaspoonfuls of Black Flag; blow into air in milking shed ten minutes before letting in cows. Will kill almost every fly. Kills insects by inhalation. **Bugs don't eat it—they breathe it, and die.** Destroys ants, flies, fleas, bedbugs, roaches, mosquitoes, some moths, and lice on animals, birds and plants. Harmless to people and animals. Look for BLACK FLAG trademark and red-and-yellow wrapper. At grocery, drug, department and hardware stores, or direct by mail on receipt of price.

I.P.

U. S. Gov't (Bulletin 771, Agri. Dept.) shows that glass containers keep insect powder strongest. Buy Black Flag in the SEALED GLASS BOTTLE instead of "insect powder" in paper bags or boxes.

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.
A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.
Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.
He is one of the greatest long distance sires. His daughters and sons will prove it.
Write us for pedigree and prices on his sons.
Prices right and not too high for the average dairy farmer.
Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

BUTTER BOY ROSINA PRINCE

257572, herd sire, son of King Ona. His sire is from a 30 lb. cow that made 1,345 lbs. in one year and dam, Butter Boy Rosina 2nd 200, 540, made 29 lbs. and almost 800 lb. in ten months, she has a 33 and 34 lb. sister. Have some fine young bulls and heifers and some heifers bred to him, all from A. R. O. cows with records from 22 to 30 lbs. Write for prices.
Hampshire hogs, fall boars, ready for service and gilts. Booking orders for spring pigs.
Belgian and Percheron Stallions and mares. Imported and American bred.
SAGINAW VALLEY STOCK FARM
Eli Sprunger & Son, Props., Saginaw W. S., Mich

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

NEW YORK FOLLOWS MICHIGAN'S EXAMPLE

Roused by the definite and constructive commercial programs of the state farm bureau organizations in Michigan and Illinois, New York state farmers have adopted the "organized for business" slogan of the two states and have gone to work.

A new statewide Farmers' Co-operative Association is being launched this week in New York state. Undoubtedly it will be a commercial institution that the Michigan State Farm Bureau can co-operate with easily, effectually, and to a good purpose. It is called the Co-operative Grange League Federation Exchange Inc. It was made possible through a federation of commercial activities of the New York State Grange, the Dairymen's League, and the various farm bureau units. It is incorporated for $1,000,000, which is divided into 200,000 five dollar shares. Holdings are limited to $5,000 and voting is to be on a basis of membership and not stockholdings. Dividends are restricted to 6 per cent on stock, with surplus earnings to be disbursed in the form of patronage dividends. It will be located in Syracuse, where the New York State Grange Exchange has had its headquarters.

The stock is being floated through the medium and efforts of the county farm bureau units. Twenty-five hundred solicitors are at work. The sale commenced this week and preliminary pledges seem to guarantee expectations that the entire block of 200,000 shares will go. The actual purchase by this organization of the Grange Exchange, which will be the nucleus of the new organization, is merely a formality, all arrangements having been made. Business at the start will be principally in seeds, feeds and fertilizer. Business with individuals will be discouraged and an attempt made to transact all business through the mediums of local granges and dairy league locals, and local co-operative associations.

Seeds will be the first commodity handled extensively. This New York organization will soon be ready and eager to work with the Michigan Farm Bureau Seed Department in effecting large purchases of clover seed and alfalfa. Prof. John Baron of Cornell University, will be in charge of the Seed Department, and either himself or someone else will be starting westward in quest of clover and alfalfa very soon.

No serious attempt will be made to handle much fertilizer for fall delivery, efforts in this connection being directed toward next spring, when a large volume of business, especially in acid phosphate, is expected to be done.

Efforts will be made immediately to get in position to handle feeds for this winter.

"LISTEN, FOLKS!"

Do you know what The Michigan Business Farmer, your friend, needs more than anything else in the world?

Well, I'll tell you!

It needs just ten thousand more subscribers on the farms of Michigan and must have them if it is to do for you and for the farming business in our home state what it has set out to accomplish this year, 1920.

We could hire salaried agents, but their salaries, rig hire, eating and sleeping expense, would cost more than they could collect from old and new subscribers combined.

So, we must come to you, the friends of the Business Farmer, who know what we are doing, what the paper has accomplished and what it is striving to accomplish and we must ask you to help us get these ten thousand new subscribers that will make this paper stand head and shoulders above any single farming institution in the state.

So, here are our co-operative summer subscription prices, made at a loss, for only one reason: to get the ten thousand new subscribers that your weekly must have.

Right down in the corner of this announcement is a coupon---it has room for ten names---it ought to be mailed in from every family who believes in our paper, with every line filled---

---if each would do his or her share---think what it would mean!

You can offer during this drive to new subscribers only, The Michigan Business Farmer, every week to any address anywhere in the United States for the following special prices, subject to withdrawal at any time:

NEW TRIAL SUBSCRIPTIONS:

(TEN WEEKS FOR 10c)

(BALANCE OF 1920 FOR TWENTY-FIVE CENTS)

Surely, there is not a man or woman engaged in farming or interested in the farming business in Michigan who will not dig down and hand you a dime or quarter to try out and prove to themselves the merits of this weekly. Think of it, you can add ten names for a dollar!

GET 'EM ON THE TELEPHONE, call them up, tell them you are making up a list of new subscribers at ridiculously low prices and that you'll send in their names and get the dime or quarter when you see them the first time ---you can make up a list of ten names in ten minutes!

HERE'S TEN NEW TRIAL SUBSCRIBERS!

The Michigan Business Farmer, Mt. Clemens, Mich.
Dear folks: Here's my boost!

Enclosed find $_____to cover trial subscriptions below, as shown by amount set opposite each name. Your friend,

Name _____P. O._____R. F. D. No.____Mich.

FARM POOLS IS AIMED ONLY AT THE MIDDLEMAN

To allay the fears of some business men that their interests may be jeopardized by the increasing activities of the Michigan State Farm Bureau, headquarters of the bureau here issued a statement asserting that "the only interests affected are the middlemen, superflous handlers doing business largely in a speculative way."

The statement follows in part:

"The State Farm Bureau is strictly a co-operative institution, doing a selling and purchasing business for its more than 60,000 members on a cost basis.

"Business men engaging in activities which do not make for unnecessary handling of farm products or farm supplies, and not inflating the values of such products or supplies, have no reason to be apprehensive of competition with the farm bureau. The organization is not attempting any activities of a commercial nature which would conflict with any businesses now satisfactorily serving the thousands of farmers in the state or any groups of these thousands.

"The purpose of the bureau is to see that products of the farms of its members are sold and distributed as economically as possible and that the purchases of supplies for these farms are made as economically and as efficiently as possible. Obviously, it is more economical to do business in large volume than in small; hence, pooling of commodities for sale and orders for purchase by farm bureau members must be the program of the organization."

RECORD HARVEST FOR WESTERN CANADA SEEN

Western Canada's prospects for a record crop are extremely bright this season, although spring operations have been much delayed owing to heavy rains during April. Ideal seeding weather has prevailed this month and work has progressed rapidly with warm weather. The soil is thoroughly saturated with moisture. Germination is reported extraordinarily rapid. Considerable wheat is already above the ground and is growing strongly. Earlier sown grain is already eight inches high.

In many fields as a result of late beginning the area sown to wheat is slightly reduced compared with last season, but total crop area is reported greater, more oats, barley and flax being sown. Many farmers are working day and night to seed every possible acre under the most favorable conditions of many years. A strong feeling of optimism prevails throughout the country.

Better Service From Department of Agriculture

Conference Between Farm Paper Editors and Sec'y Meredith Promises to Bear Fruit for Agriculture

WHAT ONE enthusiastic farm paper editor declared was "one of the most important events in agricultural history," took place at Washington June 17, 18 and 19th when the editors of thirty-five of the biggest farm papers in the country met at Washington, D. C., in conference with Secretary Meredith and formulated plans for better cooperation between the Department of Agriculture and the American farmer.

It is a well known fact that there have never been the most cordial and helpful relations between the farmer and the Department. The various activities of the Department have flourished as much in spite of the farmer as because of him. The early tendencies of the Department to confine itself to the scientific and productive end of farming in almost total disregard of the economic end has been the cause of much misunderstanding of the functions of the Department and the feeling among the farmers that it was not of the greatest possible service to them. Moreover, the appointment of secretaries entirely unfamiliar with the needs of the farmer, and the charges that the department under the regime of Secretary Meredith's predecessor was under the control of unfriendly interests, have all but destroyed the farmers faith in the institution.

The first big job that confronted E. T. Meredith when he became Secretary of Agriculture was to acquaint the farmers and the city people with the great value of the work being done by the farmer. His second big job was to make the Department of greater service to the farmer. The first one Mr. Meredith is successfully carrying out, although he is somewhat disappointed that his efforts along that line were not sufficient to prevent the cut in appropriations which will handicap the work of the Department to some extent this year. The second job takes more time and requires the counsel and co-operation of the farmers and the farm press.

It was to help make the Department of Agriculture a more useful instrument for the farmers that the farm paper editors went to Washington. Secretary Meredith openly solicited their advice and help. The advice was freely given. The practical help is to come later.

It might be stated that nearly all the editors went to Washington in a more or less skeptical frame of mind as to the value of the work now being done by the Department. They felt as do most of the farmers that the Department was frittering away its time and funds with inconsequential matters to the exclusion of more important affairs. They felt that the Department was long on theory but short on practice. So they were prepared to tear the Department all to pieces and rebuild it along more modern and practical lines. But they had a surprise in store for them. Almost without exception they discovered that they really did not know what the Department of Agriculture had been doing. They discovered that they had not appreciated the great value of the scientific investigations, the innumerable experiments, and the score or other activities conducted by the Department. But when they talked with the heads of the Bureaus, listened to the reports of the various projects and of the plans under consideration, they gave their unqualified approval of the work that was being done and urged that it be greatly extended.

The editors were divided into groups of eight, each group constituting a committee to visit each one of the several bureaus of the Department. The Business Farmer was represented on the Bureau of Markets Committee with Wallace's Farmer of Iowa, the American Agriculturist of Chicago, the Oklahoma Stockman and Farmer and the Progressive Farmer. The work of the Bureau of Markets was of especial interest to all weekly farm paper editors, and the editor of the Business Farmer feels that it was a privilege to inspect the work of that Bureau and take part in the suggestions for improving the service it is rendering.

Work of Bureau of Markets

There are sixteen different divisions in the Bureau of Markets all having to do with the economic end of farming. The activities of these divisions include the compilation of market informaton, both domestic and foreign, its publication, standardization and inspection of grains, fruits, vegetables, meats, cotton and wool, standardization of containers, investigation of co-operative marketing practices and costs, transportation of farm products, enforcement of warehouse act, and conclusion of the work of the Wool Industries Board. Each of these divisions is doing a valuable work for the farmer. Each is handicapped this year because of lack of funds, and each has plans for extending its work as soon as more money becomes available. The committee endorsed the work of the Bureau of Markets as handled under the competent supervision of Chief George Livingston.

Getting Acquainted With Department of Agriculture

THE BUSINESS Farmer will shortly begin the publication of a series of articles describing what the Department of Agriculture is doing. These articles have been prepared by special writers and will be accompanied with illustrations. The Department is doing great and valuable service for the farmer, and it is proper that he should know in detail of its accomplishments. The Department can be of much greater service to the farmers and it is hoped that from publication of these articles will arise an understanding of what is left to be done and how it can be accomplished.

Inasumch as a series of articles is to be publishing the work of each Bureau of the Department of Agriculture, we will con fine the balance of this article to the recommenda tions made by the Commit tee on Bureau of Markets for making the Bureau of greater usefulness to the farmer.

Each member of the committee had some grievance to cite from his state over the manner in which the grades applying to several farm products are enforced. In the potato states there is still more or less dissatisfaction over the fact that potatoes are not universally graded. In the west there is bitter complaint over the enforcement of the grain standards act because it applies only to inter-state shipments and cannot be enforced in transactions between the farmer and the local shipper. It was the recommendation of the committee that if any grading was to be enforced it should begin when the crops left the farmers' hands and continue until they reached the consumer. In other words, it was the sense of the committee that standardization to be the greatest possible benefit to farmers should be universal and compulsory.

Market Information

Perhaps the most important recommendation made by the Committee on Bureau of Markets was that the Bureau should greatly extend its machinery for compiling and publishing information on world acreages, crop conditions, yields, prices, demand, trend of markets, etc. The committee specifically recommended that the Bureau provide all farm papers which desired it with a special market report service, giving the farmers intelligent and up-to-the-minute price quotations, condition of the markets, factors affecting the market, etc. The committee was pleased to learn that the Bureau had already in contemplation some such plan as that, and although the division under whose charge that work would come is short of funds, a definite promise was obtained that such a service would be inaugurated as soon as possible.

The reader can readily calculate the immense value of such a service. The Business Farmer an other farm papers have been trying to compile such information and to make such interpretation of the market conditions as will instruct the farmer to more intelligently market his crops at the greatest possible financial return. But it is plain to be seen that no matter how intelligently the farmers of Michigan, for instance, might market their potatoes, if the farmers of other potato states not having dependable information on the markets, rushed their crop to market without any regard for the factors that make the price, the farmers of Michigan would receive no benefit from their more judicious methods. It is, therefore, of the highest importance that all the farmers of the United States and eventually of the world be in constant touch with the markets through their farm papers.

The Spread Between Producer and Consumer

Another suggestion that came from this committee was that the Bureau investgiate the reasons for the great spread between the price received by the farmer and the price paid by the consumer, and to publish its findings, the belief being that there would be less profiteering in foodstuffs if the full facts as to the farmer's share of the consumer's dollar were made known. The Bureau has already been doing some work along this line and promised to hasten its completion as rapidly as possible.

Farmers in Favor of Distributing Own Milk

Dairymen in Detroit Area Declare They Will Back Farmer-Owned Plant in Detroit

THE QUESTIONNAIRE that was submitted to the readers of the BUSINESS FARMER continue to bring proof that the rank and file of the milk producers of the Detroit area favor some plan whereby they can control the marketing and price of their product. Several hundred farmers, milking anywhere from six to fifty cows have reported their willingness to stand behind a movement looking to this end. Only one who returned a coupon was not in favor of the plan.

Dairymen in the vicinity of other cities have tried the distributing plan with success. Some have failed. But the reasons of their failure are clearly seen and can therefore be avoided. Experience has demonstrated that benefits accrue both to the producer and consumer through farmer owner distributing plants. It is perfectly natural that this should be so.

Such returns as have been received by the BUSINESS FARMER have shown so conclusively the desire of the Michigan Milk Producers that we do not intend to let the matter drop with a little agitation. Rumor has it that certain Detroit parties interested in the distribution of milk is willing to become affiliated with the farmers in such a project, and in good season a definite plan for the financing of this project and carrying it to a successful conclusion will be launched.

What the Readers Say

Below are the voluntary expressions of opinions upon this subject by prominent dairymen. Let us have more of them:

St. Clair County Farmers Favor Farmer Plant

Enclosed find coupon, dealing with the milk question. I cannot see how the farmers are going to keep cows and sell milk for less money than it takes to feed and not say anything about the care and equipment and other things that go to produce clean milk. I for one am strong for getting our own plant in the city of Detroit, for as long as the commission is made up of men who don't even know how to milk a cow, we will have to sell for less than cost. Of course the men are not all to blame, The way that the creameries distribute this milk is where the most of our money goes. I have seen two to three different milk bottles go up one stairway. I think this is to blame for high cost of distributing, where if we had our own plant we could do away with this or in other words, one man could do the work of these three. The farmers around here have talked this over and all seem to be greatly in favor of a plant.—*A. R., St. Clair County.*

Farmers Will Back Association

While reading my paper of your last issue I noticed a coupon on page four which was there for the use of farmers whom are interested in the milk business. As we are somewhat interested in the producers' side of the milk question I have filled out the coupon just as I think best for us. My opposition to common plan of fixing prices is this: there are not enough farmers who are milk producers sitting on the commission and therefore we do not get a fair share. The distributors are the only ones that are making any money out of the present situation. I am heartily in favor of the Milk Producers' Association acting as distributors of our own product. And I think if all the producers will give their energy and earnest support we will soon be able to market our own milk. I hope it is a go.—*C. G., Genesee County.*

Milk Producers Poor Business Men

As a reader of your paper will say I enjoy it very much and greatly appreciate your effort to help us farmers get what is justly ours. As regards the selling of our milk will try to express my views. The fact that milk producers have sold for this long time and continue to sell their product at a loss shows they're worse than poor business men. Poor business men are quite apt to have poor representatives and such men are sure to lose out in competition with such men as are already in the business. I've watched them all my life of forty years and as a class the city dealers both big and little are both sharp and tricky. However I'm ready for any plan whereby we can sell our milk at a profit. I believe the time is ripe to start something and when we have made a start "all there be to it" is to hang together or we must hang singly.—*S. D. E., Wayne County.*

Would Lower Cost

I think if we distributed our own milk we will get nearer to the consumer than if we had a central station and we could more readily give the benefit of the economies to the consumer. By distributing it ourselves we can do so at the lowest possible cost all the way through. Hope something will be done right away as I think the time is ripe. Your paper is a dandy and it keeps getting better all the time.—*H. C., Oak Grove, Mich.*

Lost $50 Per Cow

In regards to the milk situation, we are in favor of having a distributing station in Detroit, as we are only receiving 3.1 per cent and 3.3 per cent butterfat test and samples out of the same cans of milk when sent to Lansing show a test of 3.6 per cent butterfat which makes us $16 to $25 short on every months' milk check. We have lost about $50 on each cow that we have kept this last winter owing to the high cost of feed and the low prices received for our Milk. Hoping that you make a success of this venture.—*F. E. K. & Son, Shiawassee County.*

Money Wasted Getting the Farmers Milk to the Consumer

I am firm in the opinion that the proper thing for the dairy farmers around Detroit is to own their own distributing plant and have it built so there will never be a surplus of milk, this can be done by turning all surplus to the consumer into butter, cheese or condensed milk. One big plant for all of Detroit. A centralized station. One big mind to control the whole business and cut out all waste from the milking of the cow to placing the milk on the doorstep of the consumer; by increasing the revenue to the milk association for that purpose. The thing would have a start. I have been in the dairy business for more than 25 years and from what I can see and hear I am satisfied there is thousands of dollars being wasted right now in getting the farmers' milk out to the consumer. The M. B. F. is doing more for the farmers of Michigan in sounding out the farmers, not only on the milk question, but other big questions to get their ideas and attitude toward doing business along economic lines than any other paper in Michigan.—*A. B. G.*

Not Satisfied With the Way the Commission Fixes the Price

In answer to your query as to the milk situation in the Detroit area I will frankly say that I am not satisfied with the way the commission fixes the price. For instance, for April we were to get $3.40 for 80 per cent and $3.70 for 20 per cent. Instead of getting that for us we only got $3.37 per hundred which made a difference of $18 for the month of April for me. Do you wonder why I am not satisfied.

I surely think the farmers should own and operate their milk plants and also distribute the milk in the city of Detroit. I see by the scale of prices of the different cities which appeared in the M. B. F. the Detroit distributors get the most of any. That must convince any one that it would pay the farmers to own their own plants and distribute their own milk. Wishing you all the success possible.—*F. M., Macomb County.*

Salem Producers Speak

The undersigned, members of the "Michigan Milk Producers' Ass'n" milking fifty-five cows, are losing more than $1 on each one hundred pounds of milk sold at present prices, and are not satisfied with the Commission fixing milk prices for the reason, that said Commission is always willing to allow a very fair percentage of profit to distributors and a very serious loss to producers. The undersigned favor the distributing of milk by the "Milk Producers' Ass'n" and say that time is more than ripe to do it now.

(Signed)—John J. Smith, A. M. Lopez, Chas. Beardslee, R. H. Cdysler, Mr. Springer, all of Salem, Mich.

Gratiot Farmer Sees Farmer-Owned Plants as Beet Sugar Solution

Cites European Plan of Local Slicing Plants and Central Refinery as an Example for Michigan Beet Growers

By CHAS. KERR
Gratiot County Farmer

EDITOR, M. B. F.: An article on page 2, June 12th issue, headed "Farm Bureau Favors Co-operative Sugar Plants," is along the lines of a solution to the sugar beet controversy. Then have been a great many articles in our papers—agricultural and others, regarding the sugar beet business. I have watched them very closely, although I have taken no part. There is not much chance for the growers to force the manufacturer to come to their terms. It is not the nature of the class of men who run and own the factories to divide profits with producers. It is too good a melon to cut that way and knowing as the manufacturers do, there are a great many farmers depending on their beet crop to pay their interest, taxes and payments on their farms. I know that is the case here in southern Gratiot.

There are eight loading stations here in Elba township. There are beets enough grown in this township to run one good sized sugar factory, and people have gotten so used to raising beets and to depend on them for their cash crop which they must have in order to exist. The other crops such as beans and others are too uncertain. The land has increased in value on account of the sugar beet industry, so if a poor man wants a good piece of land he has to pay $200 and upwards per acre. A great number of farmers around here have been sold to the beet workers on contracts and they seem to be making good, athough they are not getting a square deal and they never will get what belongs to them unless some plan as referred to is adopted and if that plan is worked out on a strictly honest principle. The industry will be saved.

European Plan Investigated

IT HAPPENS that one of the things that our editor plans to do while in Washington, is to secure such information as he can upon the very subject mentioned by Mr. Kerr. The Business Farmer has been advised from several sources that the principal European method is to have several slicing stations and a central refinery in the respective sugar beet sections, and it is hoped that more definite information can be obtained to be of value to the Michigan beet growers in settling their problem.—Associate Editor.

First it should be planned to save as much overhead and other useless expense. In my travel in Schleswig in Europe some years ago, I noticed they had slicing stations where the beets were manufactured into raw sugar and that was shipped to Copenhagen to the refinery which was running the entire year. One company of four had organized some years ago. The first thing they did when they found that sugar beets woud grow in that locality, they went to the farmers and contracted with them to put sugar beets in a certain number of acres on their farms for 10 years and to pay them for their beets the same as the German factories were paying for beets in Germany and Austria-Hungary. These contracts were recorded and were binding, by heirs, assigns, etc., providing a sufficient acreage could be secured. These parties inside of a week from the time they started had 3,000 acres and a slicing station under construction. Up to the time I was there, they had never had any trouble with any of the land owners. In fact it increased the value of the land so that a farm that didn't have a beet contract on it was not considered worth as much as those under contract. There were a great many other savings such as testing and taring, which was simplified.

For instance, there was a test taken every day of the beets and that was equalized over the entire season's run, so that everybody was paid alike for their beets. The taring was done by an expert in the yard. He would load and if the farmer was disatisfied he would weigh him out a sample and the farmer then would clean them, but he wouldn't do that, any more than once as a rule, consequently in that way a great deal of expense was eliminated.

It is possible that we here in this country could not work on just those plans but it wouldn't be a very difficult matter to plan out a workable scheme both as to organizing and to manner of operation and the saving of a good deal of unnecessary expense. I am just throwing this out as a feeler and for something to figure on.

There are plenty of good localities in Michigan where small slicing stations could be operated. The refinery could be located most anywhere. Work out some plan—somebody, who is able and interested. The Holland sugar factory was started by 100 farmers that took $1,000 (one thousand dollars) stock each. If it is commenced I can see nothing to hinder. Bigger things than this, with much less prospects of success have been accomplished.

4 COUNTIES BAND FOR WAR ON GRASSHOPPER

Four northern Michigan counties, Grand Traverse, Leelanau, Antrim and Wexford—are banded together in a war to the death on the grasshopper pest which threatened to ruin all crops in this section. The Michigan State Farm Bureau has flooded the district with arsenic shipments. The arsenic is mixed with sawdust, molasses and salt and scattered over the fields at the rate of a bushel to two acres.

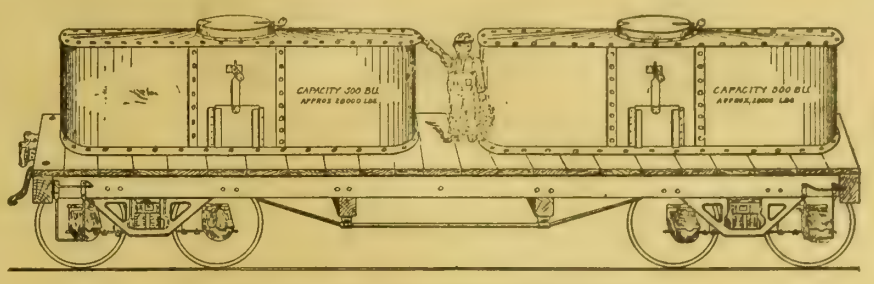
Propose Use of Steel Tanks to Transport Grain

Believes Car Shortage in the Grain Districts Can be Relieved by Shipping Grain in Huge Steel Containers on Flat Cars

By A. A. KRAMER, *Columbian Steel Tank Co.*

IT HAS come to our attention that the Interstate Commerce Commission at Washington has been urged by the coal men to place all open top cars in coal service exclusively, informing the Commission that it is not necessary that any more open top cars be built. Now possibly the connection between this move and the articles appearing in the press daily bearing on different phases of the car shortage and the difficult problems that has confronted the farmer and the business interests of the United States in past years, and more in particular the present time in the moving of grain crops, yet all of these things have a vital bearing on the car shortage and the lack of facilities for moving grain, which we all realize has reached a serious crisis and that we will soon be facing a condition portending a situation of grave concern to the farmer, manufacturer, banker and business man alike. In fact, it is said the financial difficulty that we are facing today is due to the prospect that the farmer cannot move his grain on account of car shortage.

When the "trade trippers" recently traveled throughout a large section of the wheat country under the auspices of the Kansas City Chamber of Commerce, they were surprised to see thousands and thousands of bushels of wheat stored out in the open on account of lack of cars to move same. This was termed by many an unusual sight, but to those who are in touch with the situation in respect to the transportation of grain they know that this is not an unusual sight, but a common occurrence year after year resulting in the loss of millions of bushels of wheat annually to the farmers of this country. This loss being estimated by some at ten per cent of the crop and by others even higher through lack of adequate transportation facilities or suitable grain storage.



The type of steel tanks suggested by Mr. Kramer

Manufacturers who use steel in any of its various forms in their business know today that without gondola cars available for the mills to ship their steel that it would be impossible for many, in fact the greater majority, to remain in business on account of the shortage of other types of cars for the transportation of steel.

The farmers as a whole all agree that the most suitable way, the safest way and the only economical way to store this grain while awaiting cars in which to move same, is in one of the various types of rat proof, moisture proof and fire proof steel grain bins now marketed by various manufacturers. Thus you will readily see the connection between the car shortage for the transportation of steel with the problem of moving the grain crop. If the steel cannot be moved from the mills to the manufacturer, the manufacturer cannot furnish the farmer with facilities for storing and handling the wheat. In that case the farmer is "double crossed" or struck twice in the same place. In other words, if he is compelled to pile his grain out in the open his loss is multiplied through lack of proper storage facilities while awaiting the transportation of his crop.

I believe that my readers will agree with me that in view of these facts proper pressure should be brought to bear upon the Interstate Commerce Commission to release cars for the shipment of steel and in turn the Interstate Commerce Commission should then bring pressure to bear on the steel mills of the country to supply steel to the manufacturer for the construction of grain containers at this season of the year. If cars suitable for the transportation of steel are released to the mills, in turn it will release box cars for the transportation of other materials so that all classes of business will profit thereby.

Now, with this situation, what about cars for moving crops? There has been a great deal of talk back and forth from the financial interests to the farmer that grows the grain, and much has been written, yet no one has offered a solution that would overcome this difficulty or even offered any relief for the situation. Now the purpose of this article is not to sell anybody anything, but is actuated solely from a sincere desire to offer a suggestion for the immediate and practical relief of this great problem of moving the grain when the farmer harvests his crops.

Herewith is an illustration of what I offer for the ultimate solution of this problem, which becomes of such vital interest to all of us about this time. The tanks in this illustration can be made to hold the maximum capacity of any car. I recommend that they be made in two or more units so that they can be easily removed from the cars and used at the mill or elevator or even on the farm for storage when not in use, for transporting grain. The tanks illustrated are especially constructed for this purpose. They are of the bolted type and made tight by means of special packing. They can be arranged with large openings for conveniently loading sacked commodities, such as flour, seeds or other merchandise. For the return to the point of origin they are easily transported in knocked down form and can thus be boxed and crated for export, if desired. One of the special features of these tanks is that it does not require a mechanic to erect them, ordinary help is employed. The particular value of the tank being constructed so it can be removed from the flat car taken down and shipped back in knocked down form is that it would thus release that flat car for hauling back other freight if not released for grain, etc., and save the back haul of an empty car. It is also well to note here that these tanks can also be used for water and oil storage. A car can be thusly equipped for less than $1,000.00 which is certainly reasonable when you stop to think of the many uses to which a car of this construction can be put when not in use in transportation service. It is easily set upon the car and easily removed and is held in place and secured against slipping or shifting by wooden blocks and screws.

As mentioned in the foregoing part of this article it is my great desire to obtain the widest possible publicity for this, my suggestion, as a practical relief and possible eventual solution of a grave problem. If the proper minds are brought to an earnest consideration of this suggestion the results to be obtained for the good of the country as a whole and the farming industry in particular cannot be overlooked.

Farmer Wants City to Send Back Boys and Girls Who Know "How" of Farm Life

By H. H. MACK, in The Detroit Times

THE AMERICAN farmer is, just now, coming in for more attention at the hands of his city brethern than ever before in the history of this country; there is a well-defined suspicion, however that it is not interest in the farmer's welfare that has caused so many city dwellers to become so vitally concerned about the agricultural prosperity of the country at large. Much is being spoken and written about the scarcity of farm labor and the hardships which the farmer and his hard-worked family must endure in order to make a living from their humble occupation.

What is the occasion for this sudden change of front, on the part of our cousins in the city? Why this show of tender solicitude for the farmer's welfare? The answer is not far to seek. The inhabitants of our big cities are beginning to realize what they should have seen long ago, namely, that the farmer's problem is their problem and the interests of city and country are so closely interwoven in our modern American life that neither can suffer without the other feeling the pang.

If it should eventually happen that the inhabitants of our big cities shall hunger for the food produced upon the farm, in the opinion of the writer of this article, they will have themselves partly to blame for the plight that they are in. During the past ten years staple farm products have been gradually increasing in price and during all that time, city consumers have been whining and complaining because of the imposition that the farmer was putting upon them when he was really selling for less than production cost.

Ridiculing the Farmer

Oft times in the past, the farmer has been made the subject of ridicule by people in our cities whose culture and refinement should have taught them better. The farmer, his sons and daughters, have been called jays, reubens, hayseeds, mossbacks and the like until hundreds of our country boys and girls became ashamed to have it known that they were the children of farmers and at the earliest opportunity bid goodbye to the country to engage in city pursuits. The disease that the farming business of this country is suffering with, is organic, rather than functional and it will not respond to ordinary methods of local treatment.

We hear much, of late, about city people coming out during the vacation season and helping the farmer with his work. It has been frequently suggested of late that city employers of labor shut down their factories and other enterprises, thus freeing their employes for service on the farm. All such talk is the rankest piffle in the world. The farmer needs help and not hinderance at this season of the year and the only labor that the city can send him to his advantage is experienced farm labor. What the farmer wants most is that the city send back to him the boys and girls who were born and brought up in the country and know the "how" of farm life.

"To the Manner Born"

Many men and women, who have made a success of life, have been able to do so because they were to the manner born; they were born and brought up amid certain surroundings which made it easy and natural for them to follow certain chosen occupations. The children who are born in the country should in the main, stay in the country. Children born in the city should, as far as possible seek employment along lines with which they are familiar. The habit so prevalent in our country of late, of coaxing and bribing laboring men to shift their allegiance from one employer to another, is one of the leading crimes in our modern times; and the captains of industry in this great country of ours, who coax country boys and girls to leave the farm and adopt urban pursuits for their life work, are helping to undermine one of the bulwarks of this great republic.

Much is being said, just now, about the "farm labor problem," but some there be among us who will not agree that there is any such thing as a farm labor problem. If not a farm labor problem, what then? Simply one of the phases of the great national labor problem in its relation to farm products. The American farmer will never be able to hold his own in the labor market until he is assured prices for his products which will enable him to enter the list in competition with industrial demand for labor. When the above showing is taken into consideration, the futility of attempting to reduce the cost of living by lowering the price of farm products, must be apparent to the most casual observer. There is absolutely no hope that farm products will ever be any cheaper than they are now; on the contrary, it may be regarded as a foregone conclusion that nearly everything raised on the farm must bring more in the future than it has in the past or the supply will fall far short of the demand.

The sum total of the two whole matters is included in two basic conditions which have heretofore ruled in our social life as a nation. First: The consuming public in this country have never been willing to permit the farmer to derive a living profit from his labor and his investment. Second: In spite of the notable fact that the farm has produced some of the greatest men that have ever graced American public life, the vocation of farming has never been accredited with the dignity and importance which it deserves. In the opinion of the writer, the conditions mentioned above must be changed before we can hope to keep the country bred boys and girls on the farm.

BOYS FROM CITY TO FARM

"A back to the farm" movement to persuade the schoolboys of the state to spend their vacations on the farms and thus relieve the acute labor shortage has been under way for the last month under the direction of Horatio S. Earle, state director of this work.

Mr. Earl has circulated through the state lists of responsible farmers who need help this year and it is said that the plan has succeeded in bringing to a close arrangements between many of these farmers and city boys who are willing to spend the summer on the farm.

"The farm labor shortage is so acute that unless some relief is afforded, there will be an acute shortage of foodstuffs throughout the country," Mr. Earle said.

Greater Production, Better Marketing, Publicity Dairy Industry's Needs

So Says D. D. Aitken, President Holstein-Friesian Ass'n, Before Annual Meeting of Ass'n at St. Paul, on June 2nd

IN ATTEMPTING to argue a proposition, or if we are in court in the trial of a case, the first and oftimes the most difficult is to state your premises, that is, state your case, and with us now it is to state the present condition. We are we, and what is the present status that we aim to improve upon? Let me see if I can state the situation. Today those of us who are here are engaged in the dairy industry either as dairymen pure and simple, dairy farmers, or as breeders of pure bred dairy stock, while over in Minneapolis and St. Paul those people are engaged in hundreds of occupations and industries, the great bulk of whom we in some manner patronize. In other plains and other valleys in the country people are doing diversified farming, they raise grain of which the dairyman is the best customer; in the coal fields of Pensylvania, Ohio, Virginia and elsewhere, thousands of people are employed in digging coal, hundreds of operators are interested in the product. They buy our product in the form of condensed milk, butter and cheese; we use the product of their labor to keep warm and to generate gas and electricity. Between these coal fields and ourselves are employed millions of men and women in all the various industries who use our products and who manufacture all sorts of necessities and luxuries of life that we purchase and wear. Connecting up our dairy farms, wheat and potato fields with the coal mines is a railway system, inefficient, not equipped to perform the service required of it, and this railroad company has hundreds of thousands of employees who eat our products and who keep warm from the labor of the miners. Thus we have not only all kinds of persons but under all the varied conditions known under the sun. Miners in the coal and iron mines, in the lead, zinc and copper mines, railway employees, builders and middlemen, mechanics of all kinds, professional men, merchants, and laborers, all striving to work out the problem of life and happiness, and we are but a part of that mighty multitude.

The men on the railroads have organized for their benefit, the coal miners have organized for their benefit, the carpenters and builders have organized for their benefit, the electricians have organized for their benefit, the plumbers have organized for their benefit, the dockmen, longshoremen and engineers on the lakes have organized for their benefit, and you have internal organizations of ever character under the sun each trying to work out the problem in a way most beneficial to themselves. These workmen are interested largely, and to their minds solely in getting a high wage. They feel that the only article they have for sale is their labor and they want the highest price possible for it.

* * * *

The difference between us and these workmen is that while they only have to sell their labor we have to market the product of our labor, we have to provide for return on capital and for depreciation of tools used in our industry. In this respect we are in a class with the manufacturers, while in receiving pay for our labor we are simply acting in conjunction with the workman.

* * * *

All these citizens at whatever engaged, are practically the same as we are. We have not got it in for anbody, nor have these citizens who are engaged in other industries got it in for any one, now we can settle these problems of ours from any political or legislative viewpoint. We must work out our problems in a sensible, orderly way. As dairymen we must consider two propositions, one the production of our product and the other the marketing of our product. That same conditions practically applies to every other industry in the land. You raise your potatoes, you must market them; you raise your potatoes, you must market them; you raise your wheat, flax and corn and you must market them.

I want to consider first this problem of the production of the dairy products, whether or not we are really up to the minute as producers of the dairy products. Great changes have taken place in the manufacture of all kinds of products and the question is whether or not we have kept up with the pace set, or if we manufacturing our product now as economically as it can be manufactured or produced under the high scale of wages, because there is no excuse on earth, and dairymen and farmers belittle themselves when they attempt to raise the products of the farm and figure at a less wage than they attempt to raise the products of the farm and figure at a less wage than they can employ others to do it. Let us then start out with this problem that the farmer is entitled to as good a wage per hour as any man who lives who is not a trained expert or professional man. Now are we producing our product in the most economical and efficient way? Are we using the machines that reduce the cost by increasing the production to the very limit? In my boyhood days we used to use the scythe and the cradle for cutting our hay and grain, now we use the mower and the self-binder. We thought we had made a great stride when we had the sulky rake and pitched on hay from the windrows while now we load the wagons with a self loader, having brought the hay together with a side delivery rake. Those were tremendous strides, those were great improvements that were made necessary.

* * * *

Now what about the machine that has been utilized to work over this hay, straw and grain into the finished product of the dairyman—the milking machine? How about using the most improved milking machine? There are dairies in the state of Minnesota where the milking machines averaged to produce more than 12,000 lbs. of milk in a year—that is a good average. There are other dairy herds in the state of Minnesota that do not average to produce 6,000 lbs. of milk in a year—that is a poor herd, and still that is beyond the average production of the cows of Minnesota, and the same farmer who uses the improved machinery for handling his hay and his grain uses the scrub, inefficient, extravagant machine for the next operation of transferring the raw material into the finished product of the dairy. It would be exactly like a creamery having the finest kind of machinery to start out in its product of manufacture and then wind up by something that was so wasteful and inefficient that it would make reasonable cost impossible, and then complain because the factory did not pay.

The public has a right to expect that we are going to produce our product in a reasonably orderly, efficient manner, and at a reasonable cost, and we ought to have pride enough to want to do it. If we are going to produce milk we ought to take pride enough in our business to want to do it in the most efficient and profitable way.

Then the question of marketing it comes up. In my judgment there is no sense in these strikes like they have had about Chicago and New York. To me that simply indicates a want of mental strength on the part of those charged with the responsibility of working out the problems. They start out with the theory that the people in the city are against them; they seem to become imbued with the idea that the people of the city are spending a lot of time trying to do up the farmer, that they have it in for the farmer, while the truth of the matter is, my friends, the city people never think anything about the farmer any more than you think about the city people—that is among the grown-ups.

* * * *

How are we going to create such a demand for our product as will make it a profitable business to produce the dairy products? For years I have been attempting to satisfy the dairyman that the only way to do it is by education. It is want of education that makes the citizens of Mexico but little elevated from beasts of burden, and it is a want of education in these matters that has made unremunerated toil necessary on the farm. The whole problem is one of education.

The people who manufacture dairy products are not entitled to receive any more than their product is worth in comparison with other foods that are used for the same purposes for which ours are used, but we are entitled to receive what our product is worth in comparison with other food products of like characterization and value. The problem is one of education and it is up to the dairyman to realize that he cannot work out these problems by legislative action, nor can he work out these problems by calling names or making faces. He has got to go at the problem in a reasonably sensible way. He has got to solve in his own mind the problem of how to reach the minds of the people in the congested cities, how he can first attract their attention, then how he can satisfy their pudgment about the things that Prof. McCollum has said about milk and its necessity for children. He has got to satisfy the laborers that butter and cheese containing vitamines are not only necessary and essential to maintain health but are more economical as food than is oleomargarine and substitutes so called. He has got to be able to bring to the attention of persons in far off lands that condensed milk has all the essentil vitamines, that heat has not destroyed its value as a food, and that powdered milk is the most economical food in existence at the present time; that ice cream is not only one of the most luxurious and palatable of foods but it is healthful and one of the most nourishing. The above is necessary because our product goes into the manufacture of all these different dairy products. People have taken up and made popular thousands of articles in which there was no particular merit, simply by publicity and education, while the dairymen have all virtues that are possible in their product, and it is simply a question of telling the truth and advising people of the necessity of the use.

* * * *

Suppose the railroads of Minnesota were charging an excessive rate on wheat and potatoes, and you had an organization of farmers who were looking after the marketing, looking after the interests of the potato growers and the wheat growers, how long do you think it would take that association to explode the railroads and every one in connection with that excess charge by putting it up to the public of the country. The public would realize at once that added freight had to be paid by the consumer and an outraged public opinion would crush the railroads or any other institution that assumes an injustice, if you will only make it known.

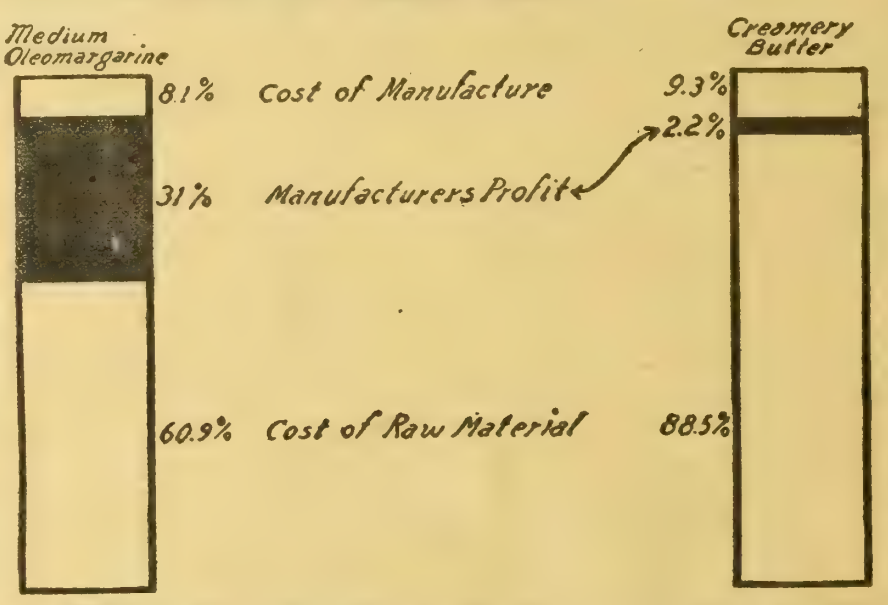
A man down in New York asked me if the great bulk of the Holstein-Friesian cattle was not going westward because he had been reading the papers and he thought most of them were in Minnesota. Why? Because the Minnesota breeders had been using publicity and education about Holstein-Friesian cattle, they had created a viewpoint and a condition of mind in Minnesota that valued them higher than any place else. They are able to get twice as much for Holstein-Friesian cattle as they can get in Wisconsin, Ohio, or Michigan, simply because they have been creating a condition of mind that values them higher.

That is what we have got to do with our product, and that is what you men of the northwest must do to correct any ills that are manifest; whether it is on the part of the rail-

(*Continued on page 19*)

Butter or Oleo, Which Helps Michigan Most?

This chart shows the comparative cost of manufacturing of butter and oleomargarine. This chart is of interest to dairymen and consumer alike, as it shows what becomes of the consumers' dollars.



ASIDE from their vastly different nutritive values, butter and oleomargarine have to Iowans an economic significance not generally appreciated says the Iowa Yearbook.

During the last 10 years Iowa has produced an average of 95,735,702 pounds of creamery butter, of which about 15 per cent was consumed in the state and 85 per cent shipped to eastern markets. These figures are exclusive of the farm dairy butter, almost all of which is consumed locally.

Butter is an Iowa product. The raw material, butterfat, is a continuous cash "crop" from nearly every Iowa farm. Butter is made by Iowa labor, in Iowa factories, which are made of Iowa building materials and equipped with Iowa owned and Iowa made machinery operated by Iowa coal. Most of the manufacturer's profit remains in Iowa, where it is spent with Iowa merchants.

Last year there was made in Iowa 83,349,309 pounds of creamery butter, which the creameries sold for $38,806,989. What became of this money may be seen from the accompanying cut. Eighty-eight and one-half per cent or $34,344,185 was paid to Iowa farmers for the cream and milk containing the butterfat; 9.3 or $3,609,049 was spent by the creameries for Iowa labor and power and most of the remaining $853,755 was distributed among Iowa farmers in the form of dividends from their creameries.

Oleomargarine is not an Iowa product nor does Iowa business derive any benefit from its manufacture. Some hog and beef fat is used as raw material, but by far the larger part of the raw material is either cottonseed oil, from the southern states or corocanut oil from the islands of the Pacific. Most of the oleo reaching Iowa is made in factories located in Illinois, Ohio and Missouri. The stock in these factories is owned there, labor employed there and the laborer's salary and the stockholder's dividends spent there.

Copyright 1920, by The Goodyear Tire & Rubber Co

"Even slight jars bruise peaches—pneumatics protect them. My trucks on Goodyear Cord Tires help all my farming, which is largely motorized. These trucks go through the sandy loam of the fields to feed the machines and haul from them—solid-tired trucks cannot do this."
—W. W. Lowe, Farmer, Fruit Grower and Stock Raiser, Byron, Georgia

BETWEEN the lines of statements like this, one reads the narrative of a significant advance in farming methods effected with power machinery and trucks on Goodyear Cord Tires.

The labor shortage is being met on many farms by these pneumatic-tired trucks working with motorized pumping, shelling, grinding, cutting and threshing machines.

Since it usually is not practical to follow the field activities by moving such outfits along, their operation, to be fully efficient, must depend on quick cartage over soft ground. The solid tire is not fitted for this hauling, because it stalls in loose soil, whereas the big Goodyear Cord Tires supply the traction necessary in off-the-road hauling.

Their immense strength proceeds from that manufacturing care which, in protecting our good name, has developed the sinewy toughness of their Goodyear Cord construction.

Farmers' reports, showing how pneumatics on trucks help increase farm incomes, can be obtained by writing to The Goodyear Tire & Rubber Company, Akron, Ohio.

MARKET FLASHES

WHEAT LOWER

WHEAT PRICES PER BU., JUNE 29, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.92		2.95
No. 2 White	2.90	2.73	2.95
No. 2 Mixed	2.90		2.95
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.40	2.50	2.34½
No. 2 White	2.38		
No. 2 Mixed	2.38		

Owing to increased receipts wheat has sought lower prices. Reports from the country showing the crop in good condition also helped to bring the price down. Harvesting of winter wheat is progressing rapidly, and is on nearly to the Nebraska line. Kansas has gotten along in good shape athough labor shortage has caused more wheat to be stacked in that state this year than ever known before. Reports suggest that Kansas will produce around 100,000,000 bushels. Oklahoma has practically finished harvesting. Hessian fly damage continues to be reported from the soft wheat states. It is too early to get a very close estimate of the new crops of Australia or Argentine as their harvest is six months away.

The Rosenbaum Review gives the present supply and future outlook for wheat throughout the world as follows:

"Australia has sold all its surplus wheat; now seeding next crop under only fair average conditions. That country probably out of world market until 1922; Russia shipping out some wheat now and recent trade agreements indicate more will be shipped this fall. Sufficient wheat will be exported to exercise a bearish influence upon the word market. Argentine, seeding now and need rain. Surplus until next crop (Dec., Jan.) sold or shipped out. The world needs and hopes for big yield there; South Africa, buying now in the U. S. and do not harvest again until Dec., Jan. Europe, prospects for growing crops good, but Europe will need 600,000,000 bushels from August 1, 1920 to August 1, 1921, and where is Europe going to get it? Only the weatherman knows; India has theoretical surplus of 48,000,000 bushels, but it doesn't move out and there seems some doubt about getting much of it. The Indians seem to have switched from rice to wheat eating, a notable change in the Orient; Canada and the United States are in the lap of the gods. Weather conditions within the next three or four weeks will tell the story. The U. S. will have an exportable surplus of 250,000,000 bushels. We will carry over 150,000,000, so all we need to export that much from the new crop is 100,000,000, or what Kansas raises, and we will have in spite of most any kind of a calamity."

Government field agents report winter wheat in Michigan, for the week ending June 24th, condition fair except in southern and southwestern districts, where it is mostly poor. The greater part is headed.

CORN HIGHER

CORN PRICES PER BU., JUNE 29, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.96¾
No. 3 Yellow	1.92		
No. 4 Yellow	1.87		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.96
No. 3 Yellow	1.85	1.77	
No. 4 Yellow	1.83	1.73	

Receipts of corn have increased during the past week but unlike that of other grains the market has not weakened. Dealers know that if the railroad employes in the east strike it will hinder transportation all over the country and they are willing to pay a good price for corn now so they can get a surplus on hand to tide them over. It is said that corn consuming industries have bought corn enough to keep themselves supplied for a time should prices advance beyond their likings or the strike situation become serious. Many recent shipments coming to markets have been in a hot and heated condition due to cars standing on sidetracks for several days after being loaded. White and yellow corn are demanded by millers while mixed is sold mostly to the industries. The weather last week was cold for corn but late crop reports say the crop in general is in very good condition and growing fine.

OATS DROP

OAT PRICES PER BU., JUNE 29, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.25	1.15½	1.30
No. 3 White	1.24		
No. 4 White	1.23		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard			.80
No. 3 White	.72½	.68½	
No. 4 White	.71½		

The new crop of oats from the Southwest has commenced to make its appearance on the markets. There is no surplus of the 1919 crop left and the country needs all of the new crop at present so exporters are getting their supplies from Argentine. Crop damage in the various states, up to date, has not been of a serious enough nature to effect the market to any great extent. Oats heading short has been the main complaint which usually means a small yield, but there is no reason to believe that the United States will need as large a crop of oats as last year. The export demand taking millions of bushels from this country is one of the reasons why our large 1919 crop disappeared so quickly, and, according to press dispatches, the foreign demand this year is not likely to be so heavy.

RYE SLUMPS

Last week rye was traveling at a great rate as eastern dealers were buying heavily and it was believed that export demand was increasing but the eastern demand dropped off and rye took a drop. Exporters are expected to be in the market again soon however and prices may go even higher than they have up to the present time. There are reports around that recently 5,000 bushels of No. 2 rye sold for $2.36 a bushel. Detroit quotes No. 2 rye at $2.22.

LAST MINUTE WIRES

DETROIT—Wheat steady. Corn makes small advance. Oats remain firm. Beans are dull and steady. Hay receipts increase.

CHICAGO—Oats advance sharply. Corn firm and receipts large. Hogs higher. Potatoes weak.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

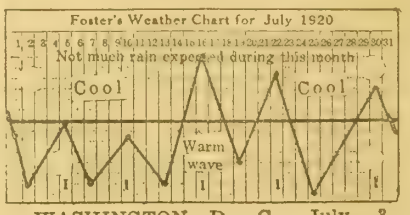
A RAILROAD strike again threatens to hamper transportation and seriously interfere with the lowering of the cost of living. The recent outlaw strike of the switchmen has not been entirely settled in some sections of the country yet and now employees in the big terminals in New York, Pennsylvania, Maryland and New England are again going on a strike. If they carry out their intentions there is no doubt but that trasportation will be nearly at a standstill because only about 60 per cent of the men who walked out in the previous tie-up have gone back to work and the railroads have had to work their employes day and night seven days a week in order to get transportation back to normal.

Supplies of grains have been quite liberal the last few days and prices were going lower. A tie-up of transportation facilities at the present time would be a serious problem to the farmer. He is anxious to get his last year's crop off of his hands so that he may be able to finance the harvesting of the 1920 crop and if he cannot sell the old crop or secure credit at the banks what is he going to do? Harvest what he can and let the rest go to waste, is my guess. However, bankers say they will have sufficient funds to assist the farmers to harvest and market their grain.

A report was sent over the country last week saying that the Federal Reserve Board had called a meeting of the wool growers with the view of financing the marketing of their wool. Investigations show this report to be false. There was such a meeting called but it was called by several senators. The Federal Reserve Board is anxious to assist the growers but they cannot take the initiative with the regard to aiding this or any other industry.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., July 3, 1920.—Warm waves will reach Vancouver, B. C., near July 2, 7, 13, 19 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of July 3, 8 14, 20; plains sections 4, 9, 15, 21; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys 5, 10, 16, 22; lower great lakes and eastern section 6, 11 17, 23, reaching vicinity of Newfoundland about 7, 12, 18, 24. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

Low temperatures are expected to be general east of Rockies, July 1 to 13 and above normal west of Rockies. Less rain, generally, is expected in July than in June. A great warm wave will cross continent during the week centering on July 16 and hot winds are feared. Unusually low temperature wave during week centering on July 25. That hot wave is expected to damage corn and northern oats.

July will not be a good cropweather month. corn will be damaged by dry weather. Damaging hail storms are expected later. This July drouth was developing bad effects last part of June and is expected to grow worse.

The shortage of rain in July will probably not hurt northern Winter grain. These are disagreeable forebodings and will cause regrets. Some will say that I should have warned them earlier. It is not my fault. The people should have all these weather conditions a year or two in advance and could have them if the government would put its big force to work on these problems. Men of good brains will not say that weather events are accidental. They come from natural causes that can be known, but they can not be given to all the people in good time to make them useful to every one unless the government officials are put to work on the job in somewhat the same manner that the Department of Agriculture is working out agricultural problems for the farmers.

W. T. Foster

BEANS INACTIVE

BEAN PRICES PER CWT., JUNE 29, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25		
Red Kidneys		15.00	16.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.		9.25	
Prime			
Red Kidneys		11.50	

The bean market is inclined to be dull and easy. Local demand is not very strong. Europe is trying to purchase some with bonds but hasn't met with much success so far. California and imported beans are plentiful and help to depress the market for Michigan beans. As to future prices, a prominent grain authority says, "Look for considerable advance between now and October, when the next crop is available."

POTATOES EASY

SPUDS PER CWT., JUNE 29, 1920		
	Sacked	Bulk
Detroit	7.78	
Chicago	7.00	
Pittsburg	5.58	
New York	6.12	
PRICES ONE YEAR AGO		
Detroit	1.00	1.15
Chicago	1.10	1.40
Pittsburg		
New York		

New potatoes on the Detroit market are steady and consumers are active buyers. Supplies are not increasing. The Chicago market is higher than last week but in a weak condition owing to large receipts. Government field agents throughout the country report planting nearly all done and crop coming up in fine shape.

Pittsburg	30.00 @ 31	20.00 @ 25	

A shortage of hay is the complaint from nearly all markets. The greater part of Detroit's supply is coming from Canada. Demand is good and the market rules firm.

BOSTON WOOL MARKET

The Commercial Bulletin says: "More resistance has developed to the decline in wool prices, with a little more actual business, but prices are lower and still erratic. Little buying is reported in the west.

English government wools held here for private sale have been reduced in price 7 1-2 to 10 per cent. The goods market is dull and unchanged, with further curtailment of mill schedules imminent.

Quotations more or less nominal.

Ohio and Pennsylvania fleeces.—Delaine unwashed, 70@72c; fine unwashed, 60 @62c; half blood combing, 68@70c; 3-8 blood combing, 53 @55c.

Michigan and New York fleeces —Fine unwashed, 58@60c; delaine, unwashed, 68c; 1-2 blood, unwashed, 67@68c; 3-8 blood, unwashed, 53@54c.

Wisconsin, Missouri and average New England.—1-2 blood, 60@63c; 3-8 blood, 50@52c; 1-4 blood, 45@47c.

Virginia and similar.—1-2 blood, unwashed, 70c; 1-4 blood, unwashed, 50@52c.

Scoured basis.—Texas, fine 12 months, $1.60@1.65; fine 8 months, $1.45.

California.—Northern, $1.65; middle county, $1.55; southern, $1.30@1.35.

Oregon.—Eastern No. 1, staple, $1.65@1.70; eastern clothing, $1.50; valley, No. 1, $1.55@1.60.

Territory.—Fine staple, $1.70; 1-2 blood combing, $1.50; 3-8 blood combing, $1@1.05; fine clothing, $1.50; fine medium clothing, $1.40@1.45.

Pulled.—Delaine, $1.70; AA, $1.55; A supers, $1.45@1.50.

Mohairs.—Best combing, 60@65c; best carding, 55@60c.

LIVESTOCK MARKETS

DETROIT—Cattle: Dry fed are strong and active to trifle higher, all grades of grassers dull; best heavy grades, $15@17; best handy weight butcher steers, $14@14.75; mixed steers and heifers, $11@12.75; handy light butchers, $10@10.50; light butchers, $9@9.50; best cows, $8.50@9.25; butcher cows, $6.50@8; cutters, $5.50@5.75; canners, $4.50@5; best heavy bulls, $8.75@9.25; bologna bulls, $7.50@8.25; stock bulls, $7@7.25; feeders, $9@10.50; stockers, $8@8.75; milkers and springers, $85@110. Veal calves: Market strong, $1 higher, than last week's close; best $16@17; others, $10@15; bulk, $16. Sheep and lambs: Market is steady, best lambs $19, fair lambs, $13@14; light to common lambs, $10@12; yearlings, $7@13; fair to good sheep, $4@7; culls and common, $2@3. Hogs: Market fairly active; pigs, $15; mixed hogs, $16@16.10; a few choice yorkers, $16.25.

Note—These yards will be open and market held as usual Monday next, July 5.

BUFFALO—Dunning & Stevens' report. Cattle: Best dry fed grades, steady; others, low, $17.50; prime shipping steers, $16.50; best shipping steers, $15@16.50; medium shipping steers, $15@15.50; best native yearlings, 950 to 1,000 pounds $15.50@16.50; light native yearlings, good quality, $14.50@15; best hand steers, $13.50@14; fair to good kind, $11.50@12.50; handy steers and heifers, mixed, $12.50@13; western heifers, $13@13.25; state heifers, $10.50@11.50; fat cows, $10@11; butchering cows, $10@10.50; cutters, $7.50@8; canners, $4@5; fancy bulls, $10.50@11; butchering bulls, $9@10; fancy bulls, $10.50@11.25; common bulls, $7.50@8.50; best feeders, 900 to 1,000 lbs. $9.50@10; medium feeders, $8@8.50; stockers, $7.50@8.25; light to common, $7@7.50; best milkers and springers, $135@140; mediums, $50@75. Hogs: steady, heavy, $16.50@16.75; yorkers, $17@17.25; pigs, $15.50@16. Sheep: Steady, top lambs, $16@17; yearlings, $12@13; wethers, $8@9; lives, $7.50@7.55. Calves steady; tops, $17; fair to good, $15.50@16.50; grassers, $6@8.

CHICAGO—Cattle: Beef steers are steady to 25c lower; late sales 15 to 25c lower, closing dull, quality good; top, $17; bulk, $14.25@16.75; corn fed cows and heifers steady to strong other steady; handyweight fat bulls steady to strong. Hogs: steady to 25c higher; best grades advancing top, $16.30; bulk light and light butchers, $15.30@16.25; bulk 250 pounds and over, $14.35@15.90; pigs, 25c higher; bulk, $13@14.25. Sheep. Best lambs steady; others are lower; yearlings and sheep steady to 50c higher; best native lambs, $17; bulk, $16.50@17; fairly good Idaho lambs, $16; California lambs, $14 choice handyweight ewes, $9; feeding lambs mostly $10.50@13.

DETROIT PRODUCE MARKET

The condition of scarcity that has been affecting nearly all departments is still in evidence and firmness in the leading lines is the result. A brisk trade is passing in butter, which is in good supply and active demand. Consumers are well satisfied with the quality of present offerings and are buying liberally, while storage men are taking everything they can secure and adding to stocks, which are still rather light all over the country. Eggs are in liberal supply and theer is plenty of demand to take care of everything offered. Some cheese is going into store and there is some export business. Poultry is wanted and receipts are not large. Consumers are in the market all the time for broilers and hens. Other poultry is not active. Dressed hogs and calves are easy. Vegetables are scarce in nearly all lines. Fruits are scarce and firm. The market is not getting enough strawberries and other fruits are all scarce.

Popcorn—Shelled, 10c per lb.

Strawberries—Home grown, $10@11 per bu.

Apples—New, $5.25@5.50 per bu.; western boxes, $5.50@5.

Celery—Michigan, 40@50c doz.

Dressed hogs—Light, 19@20c; heavy, 17@18c per lb.

Dressed calves—Best, 21@22c; ordinary, 17@20c per lb.

Live poultry—Broilers, 65@70c; per lb.; hens, 36@36c; small hens, 35@36; roosters, 22c; geese, 20@22c; ducks, 32@35c; turkeys, 38@40c per lb.

Maple Sugar—Maple sugar, 45@48c per lb.; maple syrup, $3.50@3.75 per gallon.

Hides—No. 1 cured calf, 28c; No. 1 green calf, 25c; No. 1 cured kip, 20c; No. 1 green kip, 18c; No. 1 cured hides, 16c; No. 1 green hides, 13c, No. 1 green bulls, 10c; No. 1 cured bulls, 13c; No. 1 horsehides, $7; No. 2 horsehides, $6. Tallow: No. 1, 8c; No. 2, 6c. Sheep pelts, 25c@2.50; No. 2 hides 1c and No. 2 kip and calf 1 1-2c off.

THE BEAN INDUSTRY

Michigan for years was the leading bean state of the country. The last several years, however, California, stimulated by the big demand during the war, took the lead away from Michigan in total production, all varieties, though Michigan continued to hold the lead in the small white bean, commonly known as the navy or pea bean. Last year she raised 59 per cent of this variety.

There is much speculation as to who will be the leader this year. Michigan will plant a nearly normal acreage. California will see a decline in acreage, to what extent is not definitely known.

California leads the country in lima beans, producing almost all of those grown commercially. She also grows many blackeyes, pinks, red kidneys, garvanzas, etc.

Colorado and New Mexico specialize mostly in pinto beans, a variety which is growing rapidly in public favor. Acreage will decline somewhat in these states this year, though strenuous efforts are being made to insure as large acreage as possible.

Idaho and Montana are beginning to raise beans in large numbers, and the quality is high.

New York state is the oldest bean producing state, having grown them for years. There is a fine little growers' association there, and the industry is in flourishing condition.

Down in the Carolinas and other southern states there are immense acreages of velvet and soy beans, used largely as cattle feed and silage. Bean oil is also produced from these beans.

During the last few years the United States has been importing many beans from the orient. The principal variety imported is the Kotenashi, similar to the navy bean, but sold in most markets at a considerable reduction. There is an organized effort being made to impose a duty on oriental beans, the adherents claiming there is such a difference in labor conditions and land values a duty is imperative if the domestic industry is to be saved from destruction.

Madagascar also is becoming a competitor sending increasingly large shipments of lima beans here.

The war brought on large exports of the domestic beans, but this demand is now a thing of the past. Cuba absorbs large numbers, however, and the export angle has interesting possibilities.—*The Bean Bag.*

LIVE STOCK SITUATION

A crisis confronts the live stock industry of the United States. Cattle loan companies are notifying borrowers to meet obligations at maturity, eastern banks which take the bulk of their paper requiring funds to care for local needs. Western banks are in similar straits. One

OUR GUARANTEED ADVERTISERS

We respectfully ask our readers to favor our advertisers when possible. Their catalogs and prices are cheerfully sent free, and we guarantee you against loss providing you say when writing or ordering from them, "I saw your ad. in my Michigan Business Farmer."

Entered as second-class matter, at post-office, Mt. Clemens, Mich.

Politics and Religion

WE MIGHT as well take this opportunity to set aright the policy and position of The Business Farmer on these subjects, Politics and Religion. As the old colored minister said of something similar "they ain't nothin' under heaven, less its a female wildcat with kittens, that's got more teeth and claws!"

I want to reiterate what we have so often said in these columns; that The Business Farmer, as a public institution for the benefit of all, has only selfish interest to serve and that is the interest of the men and women who till the fertile soil of our home state.

It is neither Republican, nor Democrat, Socialist, Bolshevist or any other ist or ism.

It is not Catholic, Protestant, Mohammedan or Buddist and yet it represents the good in all religious faiths which have for their foundation the satisfying of the natural thirst of man for better things.

I hope The Business Farmer can always maintain in the hearts of its readers the conviction that here, at least, is a publication which is not the tool of an individual, clique, party or creed!

That here the farmers of Michigan and the nearby states can come to find the problems which confront them, not only of an agricultural, but a social and moral nature, impartially discussed, always remembering in the architecture of the world it was ordained that there be two sides to every question and that only he is ignorant who will not listen to the argument of those with whom he differs.

We would not have The Business Farmer a spineless, nanby-panby, straddler, which dared not take a position in the vital issues which confront the farming business. We would not have it afraid to disclose graft or corruption, nor face the most powerful opposition even though it laid within their power to fairly crush out its life-blood, we have enough faith in the eternal triumph of right to know that it would rise from its ashes, strengthened and revitalized!

Right now in our own state, Michigan, we are approaching a political campaign, which concerns every sovereign voter in the state and this year our mothers and daughters, too, will register their position as they see it. Personal opinions of candidates and platforms must be formed by every man and woman who takes his or her privilege seriously. Naturally because all men cannot think alike there will be arguments and arguments sometimes lead to unfriendliness.

Let it then be clearly understood by every reader and every friend of The Business Farmer that this publication will hold itself absolutely above a position of other than strict neutrality from any connection with any party, candidate for office or platform.

Because the columns of a publication such as this are in reality a "common carrier," we will accept for publication in paid space, the announcements or arguments of any candidate, party or platform, but in every case our readers will be advised of the relation and position we hold toward the statements made by the simple type-line "paid advertisement."

THE PUBLISHER.

Does the Farm Bureau Mean Business?

A DAILY PAPER, published in the home of Michigan's largest sugar manufacturers, in discussing the threat of the Farm Bureau to build sugar factories, points out the expense and risk of such a venture and questions the sincerity of the Bureau's declaration.

It unsympathetically says:

"Before the farm bureau undertakes the building of a sugar factory, and before its members put their hands into their jeans for funds with which to start its erection, it will pay them to make an investigagtion to determine the feasibility of erecting a factory at this time. It is an easy matter to sit in a swivel chair in Lansing and build sugar factories on paper but quite a difference to get into the real business. If the farm bureau had undertaken the task of building a factory this season it would have found that a thousand ton mill would have cost not one million dollars as formerly, but more than a million and a half, and if it were undertaken now, that it could not be built for less than two million dollars. Now if the farmers of Michigan have two million dollars to invest in a co-operative factory, they would show wisdom by getting right to work on its erection and not waiting for next season to roll around.

"If the farm bureau means business and is talking business, and not for the purpose of throwing sand into the eyes of the sugar makers of Michigan, it will lose no time getting a site and making contracts for machinery and the building."

Of course, the manufacturers do not want the farmers to engage in the business of making sugar, and will throw all kinds of discouragements and obstacles in their way. The farmers do not need to be reminded by those who are making great profits out of Michigan's sugar industry that the making of sugar is a risky and expensive business. They already know it. But great as these risks may be they are far less formidable than the risks to which the farmer has become accustomed in growing and marketing his crops. The business of farming is the greatest gamble on earth, for no amount of intelligent figuring and careful management can make it pay if the elements decree otherwise. So the possibility of risk in the operation of sugar plants or other enterprise for finishing the farmers' products will hold no terrors to the farmer.

But the manufacturers have raised a very pertinent question as to the intention and ability of the farm bureau to make good on the treat the farmers right we'll just build our own Farm Bureau mean business or is it just bluffing?" And the manufacturers are not the only ones who have given thought to that question.

It is some times easy to dispose of a matter by promises and generalities. The Farm Bureau has glibly answered the manufacturers' defi by saying, "Oh, well, if you don't want to treat the farmers right we'll just build our own sugar plants." The Business Farmer applauds that declaration if it represents a carefully thought-out decision. Does the Farm Bureau mean what it says? Hasn't it formulated plans for organizing co-operative companies? Has it carefully investigated the expense of such factories? Has it considered and solved the problem of management? Until these things are done it would be well not to discuss the matter too publicly because certain things might transpire which would prevent the carrying out of such a project, and the farmers ought not to attempt anything of that kind which they cannot accomplish.

As stated before in these columns, The Business Farmer believes the proposal of farmers owning and operating sugar factories to be thoroughly feasible, and if properly carried out should prove a highly profitable investment for farmers. It is our belief that the farmers are willing to back the Farm Bureau or any other organization in such an enterprise as soon as they are convinced that the organization means business.

Political Pussyfooting

BOTH OF the two leading parties have set a fine example of dodging the issue. The Republicans pussyfooted for two weeks at Chicago and the Democrats are following suit at San Francisco. Both have shown that they care not a tinker's dam for real reform and progress.

Watch the maneuvers of political leaders at conventions. If there is any issue over which the public's imagination has been excited and is likely to attract some attention in the election the leaders will bust their suspender buttons trying to line up the party on the side that appears to be the most popular. It matters not that the issue may be of no consequence to the great majority or to the welfare of the country. If it will serve as a campaign plank there are pretty good chances that it will go into the platform. The prohibition issue is of this type.

On the other hand take the question of taxes, special privilege, profits, and a score of other economic questions that closely touch the welfare of every individual. Upon these there is no well-defined public opinion, and the political leaders must pursue their way blindly. Instead of coming out boldly, defining these issues and declaring for a concerted course of action with respect to them, the leaders pussyfoot and either leave them alone entirely or else so camoflauge their views with fine language that the people are left in bewilderment as to what they actually mean. A platform must at all times appear to represent the interests of the few.

It would be refreshing to behold a political convention and platform in which the views of the party were expressed in plain American language that would leave no room for doubt as to their meaning and the intentions back of them. A political platform cannot be written that will suit everybody and mean anything.

To equalize the tax burden for instance, would mean taking away from some for the benefit of others, and it is not to be supposed that those upon which the extra burden may be shifted will take kindly to any such action. Hence, political parties pussyfoot and the problems of the nation remain unsolved.

* * * * *

Sydney Smith, the English wit, made Mrs. Partington immortal. He was warning the British House of Lords, always opposed to reform and political improvement of any sort, that they would find the demand for reform as much of a problem for their little brains as the Atlantic Ocean was for the mop of Mrs. Partington.

This is the original story:

"I do not mean to be disrespectful, but the attempt of the lords to stop the progress of reform reminds me very forcibly of the great storm of Sidmouth and of the conduct of the excellent Mrs. Partington on that occasion.

"In the winter of 1824 there set in a great flood upon that town—the tide rose to an incredible height—the waves rushed in upon the houses—and everything was threatened with destruction.

"In the midst of this sublime storm, Dame Partington who lived upon the beach, was seen at the door of her house with mop and pattens, trundling her mop and squeezing out the sea water, and vigorously pushing away the Atlantic.

"The Atlantic was roused. Mrs. Partington's spirit was up, but I need not tell you that the contest was unequal. The Atlantic Ocean beat Mrs. Partington. She was excellent at a slop or a puddle, but she should not have meddled with a tempest.

"BE PATIENT, GENTLEMEN! REST IN CONFIDENCE; YOU WILL BEAT MRS. PARTINGTON."

American citizens that are excited about the Republican nomination for the Presidency and worried about another reactionary nomination that they think is coming in California may find some comfort in the Mrs. Partington story. Reform really is a rising tide. But, unlike the ocean, it does not rise just so far and go back. It is always rising higher.

The "vain Partington" lady lives in Wall Street and the neighborhood, and her American name is Mrs. "Big Corporation." This old financial lady thinks that she can easily mop up and squeeze out the rising tide of public discontent. But she is mistaken. And if the independent and dissatisfied voters will stick together, it is safe to say to them, as Sidney Smith said to the reformer in his day, "Be patient, gentlemen! Rest in confidence; you will beat Mrs. Partington."

The independent vote, in spite of the power of private politics, can control the United States any day it chooses. Next election day ought to be the day chosen.—*Washington Post.*

What the Neighbors Say

ABOLISH PAROCHIAL SCHOOLS

Kindly permit me a little space in the best farm paper published to reply to Mr. Horton on the parochial school amendment. Now having been for 8 years past director of our public school I wish to give my view on this important question. We have in our vicinity a school maintained by the Christian Dutch Reformed church. Now when our school opens in September we have quite a few absent scholars which our teacher would report, then all that is necessary is to send the children to the Reformed school a few days and the job is done. I have asked some of the parents as to why they preferred to send their children to the Reformed school. Some say to learn manners and others to learn religion.

Now I think manners can and should be taught in the home and as for religion, if that needs teaching, why good night.

We have a good public school system as good as can be found anywhere and if sectarian schools are any better let us improve our public schools. We pay our thousands of dollars to send away Bolshevists to Russia and how do you know what is being taught in parochial schools behind closed doors. They say give me the child between 12 and up to 14 and I care not who instructs them afterwards. Now what does this mean? I say if there is anything in our public school system objectionable remove it but close these parochial schools. We have our compulsory education law. How are you going to enforce it while you have these parochial schools to contend with it. We get after a child to compel him or her to go to school and they take their books and away they go to parochial school. How do we know if they are in regular attendance or not.

As for schools maintained by other denominations their purpose and aims are too well known to need any discussion here. Now I believe it behooves every voter at the coming election to vote upon this question as he sees it but here is one to vote on—the school question.

We have our Sabbath school and our churches for religious instruction and our public schools to educate our children and it is every parents duty to see that his children attend church and Sunday school and we have competent instructors to take care of the education end and I for one can't see where these parochial schools are any improvement and therefore should be closed.—*J. B., Kent County, Mich.*

The objections you raise to the parochial schools are predicated on a great big "if," and yet as a school director you should be in a position to talk with authority on this matter. If the parochial schools are teaching under the cover of their privacy doctrines that are harmful to American ideals, would it not be wiser both from the standpoint of economy and religious broad-mindedness to have the state supervise these schools rather than destroy them altogether. We must not permit ourselves to be guided in this matter by our religious prejudices, for we all have them. We should consider the practical aspects of the proposal and whether or not the things to be gained by such drastic action will make up for the financial loss that will be incurred. We want our readers to express themselves on this matter, but we insist that religious bias shall not be brought into the discussion.—Editor.

A FAIR DEAL

I see some folks are much afraid of the Red element. I hope that they will be afraid enough to put a check on "predatory wealth." Give common folks fair show with the wealthy and the Red question will not be hard to settle. However, I do not believe in letting anyone advocate the commission of crime and the overthrowing of government by force is crime.

But every citizen has the right to advocate any change by vote that he sees fit. Non citizens have no right to interfere with our business and show bad manners if they try and should be made to realize it, even deporting regular agitators, just as we would show a man the door who tried to stir up dissatisfaction in our homes. I like Campbell and hope he gets the governorship. My wife is for Campbell, too. I like the way that the M. B. F. fights for what it thinks is right. A coward does not amount to much in this world.—*F. G. S., Isabella County.*

The wave of agitation against the red element has passed and the folks who talked themselves hoarse about the "menace" feel a little silly over their fears. A speaker at a farmers' meeting a few weeks ago said that he had come to the conclusion that a Bolshevist was any man who objected being imposed upon. There's a lot of good sound sense and love for fair dealing left yet in this country and if the farmers and the rest of the common people just perform their duties as American citizens we'll have less of special privilege and more of "each for all and all for each spirit."—Editor.

DAYLIGHT SAVING TIME

You seem to have such good success getting some things righted, can't you get this crazy time before the voters and let the people in general decide whether we are to allow the city people to put it over us without even allowing the farmers to vote. This spring the city of Kalamazoo took a vote without recognizing the farmers and carried, deciding on 40 minutes faster than sun time, which ninety per cent of the farmers do not like. The city folks say it makes no difference with the farmer but it certainly does. If a farmer does a reasonable days work then goes for an errand to the city and finds the doors shut in his face, it has a tendency to make him patronize the mail order houses more than ever. Farmers who use this fast time lose from 1-2 to one hour per day because the most of them will not arise any earlier than they did before, but quit earlier at night. If this time question could be voted on this fall by the state and settled it would be a grand thing, as it is now we have standard time, sun time also crazy time. It lets the city people out one hour earlier to burn extra gasoline and spend that much more money, and then talk about the high cost of living. I have read a good many farm papers and want to say to you, you are publishing a farm paper that is second to none, A real farm paper. Find $2 enclosed to pay for 3 years from the time of the expiration of my subscription.—*S. H., Kalamazoo.*

Every word you say is true, but it is clearly within the rights of municipalities to fix their own kind of time without consulting the farmers if they wish to be that arrogant. If it could be shown the merchants of the smaller cities and towns that they were losing trade to the mail order houses by making it hard for the farmer to deal with his home merchant, they would change their minds about the new time in short order. If the farmers will get busy and elect farmers to the legislature this fall it is possible that a state law could be enacted covering this matter, and yet we are not sure that that would prevent municipalities from running on 'daylight saving" time if they wished. The matter will be kept in mind and brought before the next session of the legislature.—Editor.

APPROVES STAND TAKEN ON SUGAR BEET QUESTION

The Business Farmer is the best fram paper I know of. It is like Webster's dictionary which holds the English language together. The M. B. F. holds us farmers together. You know in union there is strength. The stand it took on the beet question was exactly my choice. Will show my paper to my neighbors. With best wishes—D. L., Caseville, Mich.

ARE PEOPLE GROWING OLDER OR YOUNGER?

I was 74 years old, Jan. 25th, 1920. I served two years and two months in Co. J, 10th Michigan cavalry in the Civil War. On May 29th, 1920, I drove 3 miles and planted 98 rows of corn, 144 rows long, and back home and still had time to read the M. B. F. I had to do this because it is not in this year's game to hire help. I was the marshal of the day for Memorial Day, May 31st. Yours for success.—*I. G., Reed City, Mich.*

Well, I swan, you make us young fellers feel ashamed of ourselves. Instead of you Civil War vets sitting in nice easy chairs and taking your later years in comfort, some of you insist on tramping out into the field and doing a day's work that would be a credit to veterans of the World War. What's this world coming to, anyway. It used to be that when a man got around sixty or seventy years of age he was ready for taps but nowadays he just begins to live and enjoy life. Some day I want to tell you about another old friend of mine who lives up in Saginaw County and though close to the fourscore mark is also getting younger every day. And a little bit later I want my readers to help me in an interesting investigation I have in mind to determine whether people live to a greater age of usefulness now than they used to.—Editor.

GOING SOME, WE'D SAY

My son is in the irrigated district, Calgary, Canada. He says that he and another man ploughed 220 acres in fifteen days running steady in eight hour shifts, with an old Galloway, 3-plow tractor, lost time included. That's going some.—*M. F., Dryden, Mich.*

LESS BOOK LEARING AND MORE ACTUAL EXPERIENCE

I have read the article of Mr. Cressey's in the March 13th issue, "How to Keep the Boys and Girls on the Farm." I was raised on the farm and would like to tell a few of the things that I have observed.

I notice that most of the farmers who make farming their only occupation have only about an eighth grade education in books. Why?

We will suppose that a child starts to school at the age of 7, they would at least be 14 years old before getting through the eighth grade. This education is gotten in the country school and if the child wishes to stay at home and be a farmer then is the time he leaves the school of books and takes the rest of his schooling in actual farming.

Let us take the child again of 14 and an eighth grade education and send him to school until he graduates from the twelfth grade at the age of 18. What influence does this have on the child's life? First this education can only be got in a town or city where he or she gets a taste of the city life; second, the education that he or she has received does not fit them for farming. If a farmer were to choose between a boy who had a twelfth grade education and one who had had four years experience on the farm for his help he would take the latter. Those who have a twelfth grade education feel that they cannot use their education in doing house work or following a team of horses. They must either go into some office or store, where they can use their education rather than their hands and head. If for any reason we find these twelfth grade scholars on the farm they are no better farmers if as good as the farmers with an eighth grade education. If a man goes to college we find such more often taking up such work as a county agent instead of actual farming. If the farmer wishes his children to become farmers he must be the one to educate them in it. Can a boy learn to drive a team or tell whether a plow is working right or not by reading such things in a book? He must have experience.

It would not be safe to let a boy take a team alone to learn how to drive them. He must be shown how. Also he must be shown how to adjust the tools to do good work. The farmer himself did not learn these things from books but that it not all there is to farming.

How about feeding the different animals and fertilizing the soil. Is the farmer capable of explaining these things or shall we let the boy learn these things for himself? Where did the farmer get his knowledge? Let us glance into his library and we find from one to six weekly and monthly farm papers, a few government bulletins and perhaps a doctor book treating on diseases of farm animals. The rest of his books consist of other things than treating on farming. Now the boy does not wish to sit down and read these farm papers. He would rather read some story book, unless he had a calf in the barn that was not doing well or a piece of corn that was not growing right. Why not get some good reference books on feeding of live stock also books on soils. The farmer himself will find such books as useful as the doctor book. No doubt our public schools develop the child's mind but we cannot expect miracles of having a teacher who understands but little about farming.

Make a farmer out of the boy now. Can the farmer expect, after he has given his boy a good business education that the boy will come back and take up farming which he knows ery little about?—*F. D., Portland, Mich.*

Yes it is true that many of the farm boys who pass through high school never return, but not all of them, and you must admit a farmer has to have a business education along with his farming experience to make a real success of farming these days. The farmer is a business man you know, as well as the grocer or butcher. Other business men have business educations so why not the farmer?—Editor

The Week's Editorial

SOLVING THE FARM PROBLEM

One enterprising Arlington township farmer, whose fertile acres have usually contributed their full quota to the filling of the country's storehouses but who is now wrestling without success with the problem of adequate farm labor, has evolved a plan which he believes will keep his farm in the productive and profitable class—with the profit continuing to accrue to himself.

Talking to the Day Spring the other day he outlined his plan, which for originality and ingenuity surpasses all of the advice that is being showered in abundance upon a perplexed farming fraternity. So far as we know the scheme is not copyrighted, and no confidence is violated in passing it on for the benefit of the other farmers who may be able to see a ray of hope on the agricultural horizon.

He said:

"I have decided to rent my farm, share rent, to a likely tenant. Then I propose to hire out to my tenant as his farm hand at the wages and under the conditions generally expected. In the fall I will have my share of the crops as the owner of the farm. As the hired man on the place I will have the equivalent of my tenant's share of the crops in the wages he will pay me during the season. That will give me all of the crops. As the hired man I will put in regular hours and take the easy end of the season's work, while my tenant being the boss will put in the extra hours morning and night and do the worrying. In this way the labor problem is solved and the productivity of the farm maintained. Farming under present conditions is not so difficult, if you lay your plans aright."

The agricultural wizard who has evolved this solution of a difficult problem is none other than Supervisor Frank Cleveland of Arlington. It is really simple when you understand it, and comes as a timely deliverance for the American farmer after many master minds had groped in the dark for a more complex economic solution. The only obstacle to its general adoption may lie in the availability of "likely tenants." Nevertheless we doff our hat to Mr. Cleveland as the preservator of the tuber patch and the wheat field just as the world is beginning to assume a hungry aspect.—*The Hartford Day Spring.*

A subscriber sent us the above with the remark "Can you suggest a better solution?"

Farming the Fordson way

Over 100,000 farmers in every section of the country are successfully farming the Fordson way.

They find that greater efficiency in operation and increased production result from using these specially designed power farming implements.

There is a specially built power farming implement for every farm operation with your Fordson tractor.

See the Fordson Dealer in your town.

Distributors Fordson Implements

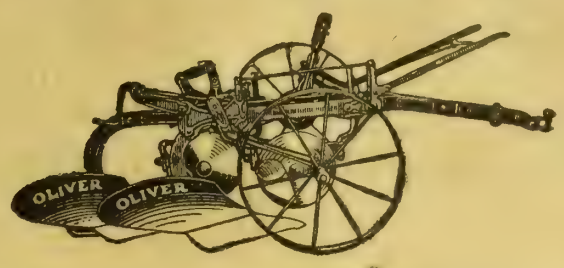
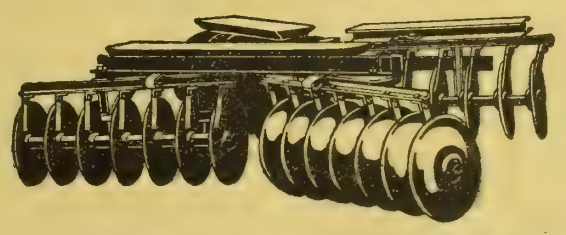
OLIVER
No. 7 PLOW



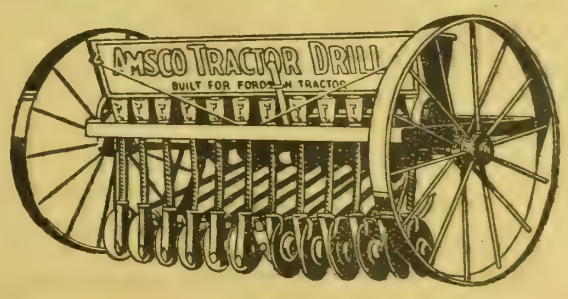
The Oliver No. 7 plow represents the most advanced design in plow construction. It is the plow that more than 100,000 farmers now are successfully using with their Fordson. It is the plow you should demand for yours.

Roderick Lean
DISC HARROWS



No seed-bed is properly prepared without the use of a disc harrow. This Roderick Lean Automatic Disc Harrow was developed exclusively for Fordson farmers. It has the unqualified endorsement of thousands of users everywhere. There are also specially built for use with the Fordson, a Roderick Lean orchard disc harrow, a spike tooth harrow, and a spring tooth harrow.

AMSCO
TRACTOR DRILL



The best prepared seed-bed produces maximum crops only when properly seeded. The Amsco Tractor Drill represents seventy-five years of drill-manufacturing experience, and is the choice of Fordson users everywhere. When you buy a drill you'll want the Amsco.

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

"He serves his country best
Who lives pure life and doeth righteous deed,
And walks straight paths, however others stray;
And leaves his sons an uttermost bequest,
A stainless record, which all men may read:
This is the better way."

TOO LATE, Emma Goldman has come to recognize that in order to live in "the land of the free" she must abide by its rules. Today an exile from America, she is chafing under the unfair rule of her own home land and realizing that she has forfeited the right to return. It is said that she has placed on display in her home the American flag which at last she has come to realize stands for the country where she and her countrymen would have been able to live and prosper.

We can learn our lesson from her bitter experience—that of charity for the foreign born. They need us and we need them. The country which declared its independence so long ago is the only country to which these people can look, but we cannot force them—they must be led. It will take an infinite amount of patience with the older immigrants, but the solution of the whole problem lies with their children who will be educated in our public schools and there taught the ideals for which our nation stands.

A striking example of the foregner who had come to love this country without realizing it—who had come here to make his "pile" and then return to his homeland to live in peace and plenty with his family, was brought to light recently when a man came to the public library to secure books on our government. He wanted a copy of our constitution and also asked the assistant at the library to assist him in selecting a list of books which he might use in his reading course to fit him for citizenship. She became interested, questioned him and then, little by little, the story was told, in broken English with a strong Polish accent.

He had left his family in Poland and came to America to earn money with which to buy land. He had expected to return and live in comparative comfort. But while here he had been induced to enter night school conducted by the Americanization and Welfare workers in the factory where he worked. In order that he might more quickly learn our language, and become more efficient in his work, the faster to earn money, he entered these classes. He had no thought of becoming an American citizen. His family were thousands of miles away—there was nothing to distract his thoughts and so he applied himself and learned quickly. The war broke out and return was impossible, but wages increased. Overtime was put in and his pile grew amazingly.

Then came peace and as soon as possible he secured transportation and returned to his family—the land of his dreams. But somehow the picture in his mind had been rosier than the reality. Conditions there were worse than he had imagined—he did not realize it but his idea of living had undergone such a change that he found that he could not possibly be happy there, and so back again he came—this time bringing with him his whole family. As soon as he was settled and again at work, he entered school, this time with the resolve to learn how to become a good American citizen.

Of course this is an exceptional case—but te fact that we can reach the foreign born and make good American citizens of them only through some sort of schooling is apparent to all thinking people. Many cannot be reached direct but their children will attend our schools, will be trained as we have been trained and they in turn will enter their homes and to a greater or less degree will revolutionize living conditions.

And the foreigner who now has no respect for our flag and for what it stands is not entirely to blame—for we are the people who represent the flag, and it is by our treatment of him and his family that he judges the country. Obviously then, our first duty to our country as American citizens, and especially now that we women stand sholuder to shoulder with the men in making our laws, is to "walk a straight path," to be very sure that our treatment of our fellow man is such as to be fair to our country which we are a part of.

IF YOU WANT TO BE LOVED

DON'T contradict people, even if you are sure you're right.

Don't be inquisitive about the affairs of even your most intimate friend.

Don't underrate anything because you don't possess it.

Don't believe everybody else is happier than you.

Don't conclude that you have never had any opportunities in life.

Don't believe all the evil you hear.

Don't repeat gossip, even if it does interest a crowd.

Don't jeer at anybody's religious belief.

Learn to hide your aches and pains under a pleasant smile. Few care whether you have the earache, headache, or rheumatism.

Learn to attend to your own business—a very important point.

Do not try to be anything else but a gentleman or gentlewoman, and that means one who has consideration for the whole world, and whose life is governed by the Golden Rule, "Do unto others as you would be done by."

THE LIBERTY BELL

HERE ARE some things about the bell it would be well to cut out and paste in your scrapbook:

July 4, 1776, the bell was rung for the Proclamation of the Declaration of Independence.

October 24, 1781, the bell rang out for the surrender of Cornwallis.

April 16, 1793, it rang out for the proclamation of peace.

September 29, 1823, it rang to welcome Lafayette to the Hall of Independence.

July 4, 1826, it ushered in the year of jubilee, the fiftieth anniversary of the Republic.

July 24, 1826, it tolled for the death of Thomas Jefferson.

July 4, 1831, is the last recorded ringing of this famous bell to commemorate the Day of Independence.

February 22, 1832, is its last recorded ringing to commemorate the birth of Washington.

In the same year it tolled the death of the last survivor of the Declaration, Charles Carroll, of Carrollton.

July 2, 1834, it tolled once more. Lafayette was dead.

July 8, 1835, while being tolled for the death of Chief Justice John Marshall, a crack was developed, starting from the rim and inclining in a right hand direction toward the crown.

Another attempt was made to ring it on Washington's birthday, February 22, 1843, but the fracture was so much increased that no attempt has since been made and it is now silent and yet it will ring in the hearts of all patriotic people so long as the name of Liberty shall exist.

Visitin'

Ma's away and the world's awry!
I've lost my interest in everything.
What do I care if the sun be high?
What do I care if the robins sing?
I don't give a cuss if it is spring,
I won't feel right till Ma is nigh.

Ma's away, and at first, by Gee,
I thot I'd hike off with the boys,
I thot I'd go on a sort of spree,
And bring back some of them bygone joys.
So I went and I made a lot of noise,—
But I was so blue I could scarcely see.

Ma's away, and the world's awry!
Home is not home so bleak, and still,
But just a house, that seem to sigh,
And wait till the old wife climbs the hill.
Oh, I can hardly wait until
Ma puts the sun back in the sky!

—Anne Campbell Stark

EACH ONE BROUGHT GIFT

AMERICA is a land of but one people, gathered from many countries. Some came for love of money and some for love of freedom. No matter what brought us, each has his gift. Irish, Scot, Englishman and Dutch, Italian, Greek and French, Spaniard, Slav, Teuton, Norse, Negro—all have come bearing gifts and have laid them on the Altar of America.

All brought their music—dirge and dance and wassail song, proud march and religious chant. All brought music and their instruments for the making of music, those many children of the harp and lute.

All brought their poetry, winged tales of man's many passions, folk song and psalm, ballads of heroes and tunes of the sea, lilting scraps caught from sky and field, or mighty dramas that tell of primal struggles of the profoundest meaning. All brought poetry.

All brought art, fancies of the mind woven in wood or wool, silk, stone or metal—rugs and baskets, gates of fine design and modeled gardens, houses and walls, pillars, roofs, windows, statues and painting—all brought their art and hand craft.

Then, too, each brought some homely thing, some touch of the familiar home field or forest, kitchen or dress—a favorite tree or fruit, an accustomed flower, a style in cookery or in costume—each brought some homelike, familiar thing.

And all brought hands with which to work.

And all brought minds that could conceive.

And all brought hearts filled with hope—stout hearts to drive live minds; live minds to direct willing hands.

These were the gifts they brought.

Hatred of old time neighbors, national prejudices and ambitions, traditional fears, set standards of living, graceless intolerances, class rights and the demand of class—these were barred at the gates.

At the Altar of America we have sworn ourselves to a single loyalty. We have bound ourselves to sacrifice and struggle, to plan and to work for this one land. We have given that we may gain, we have surrendered that we may have victory. We have taken an oath that the world shall have a chance to know how much of good may be gathered from all countries and how solid in its strength, how wise, how fertile in its yield, how lasting and sure is the life of a people who are one, but have come bearing gifts from many countries.

OUR READERS' OWN COLUMN

DEAR Editor: I am so glad that housewives and mothers are allowed to talk over their household affairs through these columns. I like the loyal honesty shown the farmer and his wife and I trust that M. B. F. will continue to enjoy the success it so richly deserves and has enjoyed in the past.

I want to tell farmers' wives how to make their own corn starch for table use, so that it will be just as nice as that bought in the stores and very much cheaper. And in turn, I would like to have some one of our readers tell me how to make hard soap such as we buy at the stores and for which we are compelled to pay such high prices. Recipes are often given on the cans of concentrated lye but I have never found one that was satisfactory.

Home Made Corn Starch

The corn must be the field corn—not sweet.

Take one bushel of field corn when it is in the milk—that is, has not begun to ripen. Grate it off the cob with any common grater, the larger the size of the grater, the better. Fill a clean tub about one third full of water. Grate the corn into this water. Also wash in all the juice that is on the cobs. Let this stand until all the starch has settled to the bottom. Drain thoroughly. You will find a yellow skum left on top. This is from the hulls and pulp and should be skimmed off. Put on fresh water and stir thoroughly from the bottom. Let settle, drain and skim as before and then put it on plates to dry. Do not allow it to stand in the water too long or it will sour. One ought to begin the making early in the morning in order to finish and allow it to dry over night.—Mrs. E. H.

CLEANING PAINT OFF WINDOWS

CLEANING the windows of a new house or a newly painted house is no enjoyable job. The paint comes off easily, however, if given a little of the right kind of help.

One would hardly go to an automobile accessory store or a garage to find something with which to clean windows, yet it will be found that an ordinary tar remover, used by motorists to clean up their machines after a trip over newly tarred roads, is one of the best things obtainable for taking ordinary house paint off glass. Once housewives learn this, dealers in tar removers are going to have lots of customers who do not own an automobile and never expect to own one.

A Patriotic Creed

To serve my country day by day
At any humble post I may;
To honor and respect her flag,
To live the traits of which I brag;
To be American in deed
As well as in my printed creed.

To stand for truth and honest toil,
To till my little patch of soil,
And keep in mind the debt I owe
To them who died that I might know
My country, prosperous and free,
And passed this heritage to me.

I always must in trouble's hour
Be guided by the men in power;
For God and country I must live,
My best for God and country give;
No act of mine that men may scan
Must shame the name, American.

To do my best and play my part,
American in mind and heart;
To serve the flag and bravely stand
To guard the glory of my land;
To be American in deed:
God give me strengh to keep this creed

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

CHAPTER XIX

"SOMEBODY'S got to marry that crazy woman," Leoncia spoke up, as they lolled upon the mats of the room to which the priest had taken them. "Not only will he be a hero by saving our lives, but he will save his own life as well. Now, Senor Torres, is your chance to save all our lives and your own."

"Br-r-r!" shivered Torres. "I would not marry her for ten million gold. She is too wise. She is terrible. She—how shall I say—she as you Americans say, gets my goat. I am a brave man. But before her I am not brave. The flesh of me melts in a sweat of fear. Not for less than ten million would I dare to overcome my fear. Now Henry and Francis are braver than I. Let one of them marry her."

"But I am engaged to marry Leoncia," Henry spoke up promptly. "Therefore, I cannot marry the Queen."

And their eyes centered on Francis, but, before he could reply, Leoncia broke in.

"It is not fair," she said. "No one of you wants to marry her. As she spoke, she pulled three straws from the mat on which she sat and broke one off very short. "The man who draws the short straw shall be the victim. You, Senor Torres, draw first."

"Wedding bells for the short straw," Henry grinned.

Torres crossed himself, shivered, and drew. So patently long was the straw, that he executed a series of dancing steps as he sang:

"No wedding bells for me,
I'm as happy as can be . . . "

Francis drew next, and an equally long straw was his portion. To Henry there was no choice. The remaining straw in Leoncia's hand was the fatal one. All tragedy was in his face as he looked instantly at Leoncia. And she, observing, melted in pity, while Francis saw her pity and did some rapid thinking. It was the way out. All the perplexity of the situation could be thus easily solved. Great as was his love for Leoncia, greater was this man's loyalty to Henry. Francis did not hesitate. With a merry slap of his hand on Henry's shoulder, he cried:

"Well, here's the one unattached bachelor who isn't afraid of matrimony. I'll marry her."

Henry's relief was if he had been reprieved from impending death. His hand shot out to Francis' hand, and, while they clasped their eyes gazed squarely into each other's as only decent, honest men's may gaze. Nor did either see the dismay registered in Leoncia's face at this unexpected denouement. The Lady Who Dreams had been right. Leoncia as a woman, was unfair, loving two men and denying the Lady her fair share of men.

But any discussion that might have taken place, was prevented by the little maid of the village, who entered with women to serve them the midday meal. It was Torres' sharp eyes that first lighted upon the string of gems about the maid's neck. Rubies they were, and magnificient.

"The Lady Who Dreams just gave them to me," the maid said, pleased with their pleasure in her new possession.

"Has she any more?" Torres asked.

"Of course," was the reply. "Only just now did she show me a great chest of them. And they were all kinds, and much larger; but they were not strung. They were like so much shelled corn."

While the other ate and talked, Torres nervously smoked a cigarette. After that, he arose and claimed a passing indisposition that prevented him from eating.

"Listen," he quoth impressively. "I speak better Spanish than either of you two Morgans. Also, I know, I am confident, the Spanish woman character better. To show you my heart's in the right place, I'll go to her now and see if I can talk her out of this matrimonial proposition."

One of the spearmen barred Torres' way, but, after going within, returned and motioned him to enter. The Queen, reclined on the divan, nodded him to her graciously.

"You do not eat?" she queried solicitously; and added, after he had reaffirmed his loss of appetite. "Then will you drink?"

Torres' eyes sparkled. Between the excitement he had gone through for the past several days, and the new adventure he was resolved upon, he knew not how, to achieve, he felt the important need of a drink. The Queen clapped her hands, and issued commands to the waiting woman who responded.

"It is very ancient, centuries old, as you will recognize, Da Vasco, who brought it here yourself four centuries ago," she said as a man carried in and broached a small wooden keg.

About the age of the keg there could be no doubt, and Torres, knowing that it had crossed the Western Ocean twelve generations before, felt his throat tickle with desire to taste its contents. The drink poured by the waiting woman was a big one, yet was Torres startled by the mildness of it. But quickly the magic of four-centuries-old spirits began to course through his veins and set the maggots crawling in his brain.

The Queen bade him sit on the edge of the divan at her feet, where she could observe him and asked:

"You came unsummoned. What is it you have to tell me or ask of me?"

"I am the one selected," he replied, twisting his moustache and striving to look the enticingness of a male man on love adventure bent.

"Strange," she said. "I saw not your face in the Mirror of the World. There is . . . some mistake, eh?"

"A mistake," he acknowledged readily, reading certain knowledge in her eyes. "It was the drink. There is magic in it that made me speak the message of my heart to you, I want you so."

Again, with laughing eyes, she summoned the waiting woman and had his pottery mug replenished.

"A second mistake, perhaps will now result, eh," she teased, when he had downed the drink.

"No, O Queen," he replied. "Now all is clarity. My true heart I can master. Francis Morgan, the one who kissed your hand, is the man selected to be your husband."

"It is true," she said solemnly. "His was the face I saw, and knew from the first."

Thus encouraged Torres continued.

"I am his friend, his very good best friend. You, who know all things, know the custom of the marriage dowry. He has sent me, his best friend, to inquire into and examine the dowry of his bride. You must know that he is among the richest of men in his own country, where men are very rich."

So suddenly did she arise on the divan that Torres cringed and half shrank down, in his panic expectance of a knife-blade between his shoulders. Instead, the Queen walked swiftly, or, rather glided, to the doorway to an inner apartment.

"Come!" she summoned imperiously.

Once inside, at the first glance around, Torres knew the room for what it was, her sleeping chamber. But his eyes had little space for such details. Lifting the lid of a heavy chest of ironwood, brass-bound, she motioned him to look in. He obeyed, and saw the amazement of the world. The little maid had spoken true. Like so much shelled corn, the chest was filled with an incalculable treasure of gems—diamonds, rubies, emeralds, sapphires, the most precious, the purest and largest of their kinds.

"Thrust in your arms to the shoulders," she said, "and make sure that these baubles be real and of the adamant of flint, rather than illusions and reflections of unreality dreamed real in a dream. Thus may you make certain report to your very rich friend who is to marry me."

And Torres, the madness of the ancient drink like fire in his brain, did as he was told.

"These trifles of glass are such an astonishment?" she plagued. "Your eyes are as if they were witnessing great wonders."

"I never dreamed in all the world there was such a treasure," he muttered in his drunkenness.

"They are beyond price?"

THE SIGN OF ROWENA QUALITY

Women Who Take Pride in Their Baking

insist on getting only the best flour. The women of Michigan are justly famous for their achievements in baking delicious bread, biscuits, rolls, etc., for the home. For generations the fair women of the "Wolverine State" have been using

Lily White

"The Flour the Best Cooks Use"

You can't fool women on flour. Those who are experienced know the flour that wins for them the best results.

Look for the ROWENA trade-mark on the sack

The mills that produce LILY WHITE FLOUR have for nearly sixty years taken the same pride in their flour as have the women who used it so successfully. Flour like LILY WHITE can only be made from the choicest wheat, conscientiously handled from raw material to finished product. It is cleaned, scoured and washed several times before being broken and milled. Far more dirt, chaff and undesirable materials are eliminated than expert flour users realize. That is why the flour is of such good color, so nutritious and wholesome.

Use LILY WHITE for bread, biscuits and pastry and you'll be proud of your baking. Women who use LILY WHITE FLOUR find it absolutely satisfactory. It is guaranteed.

The Children's Hour

DEAR CHILDREN: Before our paper comes to your house again you will have celebrated the Fourth of July, so it is very appropriate that our page this week be given up to our prize letters relative to the days when we display the United States flag. Of course you all know that from sunrise to sundown, the flag is displayed on all government buildings, including schools when school is in session.

The days when all citizens are ask-to display the flag are many more than are usually observed, but I think that if we show it on our houses or grounds on the days enumerated by Pearl Donahue, Florence Howe and Letha Rizer, we will be showing our patriotism very well indeed. However I am going to give you a list of all the days which are recommended for stated flag days:

January 1—American flag first used by Washington.
January 8—Battle of New Orleans.
January 18—Daniel Webster born.
February 12—Abraham Lincoln born.
February 22—George Washington born.
April 2—Thomas Jefferson born.
April 19—Battle of Lexington.
April 27—U. S. Grant born.
May 14—Founding of Jamestown.
May 29—Patrick Henry born.
May 30—Decoration Day.
June 14—American flag adopted.
June 17—Battle of Bunker Hill.
July 4—Declaration of Independence signed.
September 10—Jerry's victory.
September 12—The Emancipation Proclamation.
October 12—Columbus discovered America.
October 19—Surrender of Cornwallis.
November 19—Garfield born.
December 16—Boston Tea Party.
December 22—Forefathers' Day.
December 25—Christmas.

It is wonderful to be able to celebrate the Fourth of July as we do—no other country in the world has a day that signifies half so much. So long as we observe the rights of others we can have just the best kind of a time on this national holiday for this is a FREE COUNTRY. Affectionately yours.—AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare—The days I think you would display our flag would be Flag Day, Washington's Birthday, the Fourth of July and Peace Day, Lincoln's Birthday and Memorial Day. The flag is displayed on Flag Day, because it is a special day set aside by our government on which our flag on Washington's Birthday should be displayed. The flag is displayed because he was a brave man, first President of our country and done lots for it. The flag is displayed the Fourth of July because the Declaration of Independence was signed on that date in the year 1776 Peace Day was the end of the World War. Lincoln's birthday is remembered because he was a good upright President and freed the slaves in the South. Memorial Day is celebrated in honor of our dead heroes of the wars. Our flag should be displayed on the 12 of October because it is the date of the founding of America by Columbus in 1492. Pearl Donohoe, Hersey, Mich.

Dear Aunt Clare—I received the postal cards and I thank you very much. I will try to win the flag you offer. The days are Jan. 1 which is New Years, Feb. 22nd which is Washington's birthday and Feb. 12 which is Lincoln's birthday and who were two of our presidents, May 30, Memorial day when we give our tribute to the old soldier, June 14, which is flag day. A long time ago Betsy Ross made the first flag Fourth of July, when Independence was signed. Sept. 6, Labor Day, November 25, Thanksgiving when the Pilgrims gave thanks to God. —Florence Howe, Ithaca, Mich.

Dear Aunt Clare—I am sending the stories you wanted us to write about each day when the flag ought to float. The flag ought to float on all the great president's birthdays in honor of the great and brave deeds they done for our flag to keep it from defeat. It should float on the Fourth of July in honor of the Declaration of Independence being signed. It should float on Memorial Day in honor of the heroes who fell fighting for their flag and country.—Letha Rizer, Battle Creek, Mich.

Dear Aunt Clare—I have never written a letter to be published before, but as I have been very interested in the letters and puzzles for the boys and girls I thought I would write to you. I live on a farm about one-half mile from Burt Lake which has a trout stream on it. I have two brothers and one sister. I will be in the eighth grade next year and am in the third grade in music. I like to take music lessons and like to play the piano. I am thirteen years old. I like horseback riding very much and have a pony to ride, we live off the road when the mailman passes so my brother or myself go after the mail on the pony every day. I belong to the Burt Lake Junior Canning Club and think it is fine for boys and girls to belong to some kind of a club. The boys of our community are going to have either a poultry or potato club. I would like to have some of the girls my own age write to me.—Ora Mae Dairs, R 1, Alanson, Mich.

Dear Aunt Clare—I have never written to you before, so I guess I will try. My father takes the M. B. F. and thinks it is the best paper published. He reads the market page and what Uncle Rube Spinach says the most and I read the boys and girls letters. They certainly are interesting. I guess I will have to write to some of the girls that are kind enough to write to you, and I would enjoy it if some of them would write to me. I am a girl 12 years of age and I am in the 8th grade. I go to a country school and I like it very well. We have a new Ford car and I enjoy riding in it very much. My father, two of my brothers and one sister are coming home in our new car. Father will be glad when he sees we have his favorite paper for him.—Miss Marjorie Eberly Coleman, Mich., Box 99.

Dear Aunt Clare—This is the first I have written to you. I am a girl 9 years old and in the fifth grade at school. I like to go to school. My school is out. My teacher's name was Hazel Titus. I have 3 brothers and 2 sisters. My father takes the M. B. F. We have three horses, six cows, two calves, 10 pigs, 50 hens, 50 chickens. Waneta Smith, Mayville, Mich.

Dear Aunt Clare—I am ten years old and in the 4th grade at school. My school is out the 2nd of July. My birthday is the 25th of this month. I will be 11 years old. I guess I will close for this time. I am, Helen Hasse, Ossineke, Mich.

The Complete Woodsman

By Francis Rolt-Wheeler

TO KNOW everything in the woods is not possible. To know the essentials of wood-lore, and to possess the essentials of woodcraft, is quite possible.

The first essential is to know how to get food, animal, fish or plant. This means a fair knowledge of shooting and fishing, the ability to read trails, the habits of animals which may be used for food, and the setting of traps and snares. So far as plants are concerned, it means the knowledge of the half-a-dozen food roots that are widely distributed, berries, fungi and nuts. To this must be added a knowledge of those plants which are poisonous.

The second essential is to know how to make fire, how to keep fire when made, and how to handle fire so that it will not spread. Also a woodsman needs to know the simple forms of outdoor cookery, both with and without utensils. The Indians cooked for many centuries before they saw an iron pot.

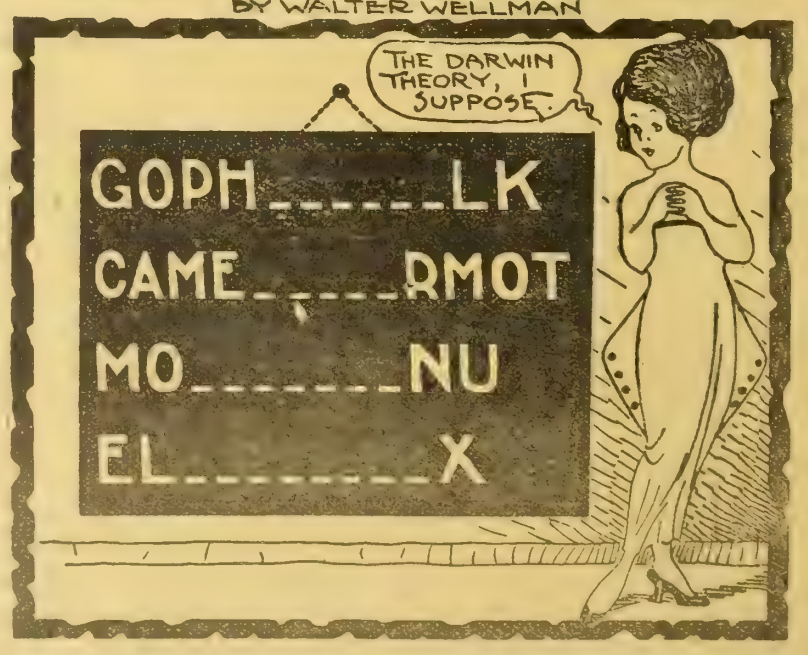
The third essential is shelter. A woodsman with his axe alone, ought to be able to build a comfortable house and all the furniture for absolute need. A draughty cabin is worse than the open air. A properly built chimney is a necessity.

The fourth essential is the ability to find one's way. It is of no use having a camp, if you can never find your way to it again after having left it. Even the best of woodsmen may get lost sometimes, but only on rare occasions.

The Complete Woodsman, of course, is much more than this. He is a rough and ready botanist and knows the principal trees and plants; he is a rough and ready naturalist, and knows the birds and beasts, fishes and insects; he is a rough and ready surveyor and prospector; he understands skinning a fur-bearing animal and preparing the skin; in short, with an axe, a knife, some fishhooks and a gun, he can not only live in the woods, but make a good living out of them. Such men made Canada and the United States the countries they are today, and we are proud of them.

THE MISSING LINK

BY WALTER WELLMAN



The blanks represent the letters in the name of an animal. If you fill the blanks with the name of the right animal, you will also finish the name of two other animals. In other words, you will have the names of three animals in each row. What are they?

Dear Aunt Clare—I am a boy 12 years old last March and I have just passed the eighth grade examination. I have one brother and two sisters. We live on a 125 acre farm and have 5 horses, 5 cows, 8 pigs 55 chickens and for pets I have 2 cats and 2 rabbits. I I have traveled in the states of Michigan Indiana, Illinois, Wisconsin, North Dakota, Minnesota and also from Toronto, Ontario to Moosejaw, Sask., Canada, but I find Michigan the best. My father takes the M. B. F. and I like to read the Children's Hour. As my letter is getting pretty long I will close hoping to see my letter in print.—E. Frank Moats, Marshall, R 1.

Dear Aunt Clare—I have never written to you before. My father takes the M. B. F. I am very interested in the Children's Hour. I am eleven years old and in the seventh grade at school. I am planning to be a teacher. I have five sisters and three brothers. My father has a 120 acre farm. Fish Creek runs through our farm. We live about 80 rods from Crystal Lake. It is a summer resort. I will close, hoping to see my letter in the M. B. F. Bernice Thompson, Crystal, Mich.

Dear Aunt Clare—This is the second time I have written, but did not see my letter in print before. I am a girl 15 years old. I am in the eighth grade at school. I have one sister, Stella age 12 and one brother, Adolphus, age 17. I live on a 80 acre farm. We have 12 head of cattle and three horses, 80 chickens. We have a new Oakland car, and a new Edison Amberola. My father takes the M. B. F. and likes it very much. I wish some of the girls would write to me.—Hilda Adolph, Yale, Mich., R. F. D. 6.

Dear Aunt Care—I am a boy 12 years old and I am in the 5th grade. My teacher's name is Mrs. Clara Woods. I live on a farm. We have 300 acres of land. We have one Moline Tractor, one Union truck, one Buick car, 4 horses, 16 cows, 23 pigs, 150 chickens and four geese. I have three brothers and one sister. I have three pet rabbits and one cat. My father takes the M. B. F. and likes it very well. I will close, hoping to see my letter in print. William Huskins, Essexville Mich.

Dear Aunt Clare—I am a girl of 11 years old. My father takes the M. B. F. This is the first time I have written to you. We have a farm of 60 acres. Our farm runs back to Long Lake. We have five boats that we rent. We live one mile from Rose Corner. I have a dog. We have 25 little chickens and three cows, one horse. I have one brother. His name is John. I will close, hoping to see my letter in print. Stella Mae Brown, Holly, Mich., R 4.

Dear Aunt Clare—This is the first time I have written to you. I am a girl 14 years of age. I have light hair, blue eyes and quite a few freckles. I live on a farm of 185 acres. My father has 10 cows, 9 calves, 6 head of horses and 8 pigs. We have a Ford car. We got it last fall. I have four sisters and four brothers. For pets we have 6 bantam chickens. We have 7 little goslings and three big geese. Elsie Forbes, Clifford, Mich.

Dear Aunt Clare—I am a girl 10 years old and will be in the fifth grade at school next year. My father takes the M. B. F. and likes it very much. I go to the Ferguson school. My teacher's name is Mrs. Dowling. I have 12 little chickens of my own. I have two sisters and two brothers. My oldest sister is married and lives in Racine, Wisconsin. I will close for this time hoping to see my letter in print. Velma Woodard, Bailey, Mich., R 1.

Dear Aunt Clare—I like the Children's page the best. I am a girl 13 years old and weigh 106 pounds and in the seventh grade. I have four sisters and two brothers. I live on an 80 acre farm. We keep 6 cows 3 horses, 4 calves, 27 pigs about 85 chickens and 85 little ones. We got the M. B. F. today and I guessed all the answers to the puzzles of cities. I wish some of the girls of M. B. F. would write to me and I would answer all letters. I will close.—Miss Luella Ewald, Elkton, Mich.

Dear Aunt Clare—I am a girl 12 years old and am in the 7th grade at school. My school is out the 21st of May. My father takes the M. B. F. and likes it fine. I also like to read the boys and girls letters in the Children's Hour and wish some of them would write to me. For pets I have a dog, cat and a pigeon. I have a brother and sister. My father has a Ford car and a silo. We live on a 120 acre farm.—Bernice Miller, R 1, Carsonville, Mich.

Dear Aunt Clare—I am a boy of ten years and will be in the fifth grade next year. My father takes the M. B. F. and likes it very much. We have a 160 acre farm. We have 6 horses, 3 cows, 18 sheep, 9 lambs. I wish some of the boys would write to me. Wesley Bigelow, Holly, Mich.

Dear Aunt Clare—I am in the fourth grade at school and am 10 years of age. Will be in the fifth grade next year. I have a dog and cat for pets. I have to go after the cows every night. I have a colt named Bill.—Harold Bennett, West Branch, R 3.

Crop Reports

ST. JOSEPH—Had a nice rain the 16th and another the 20th that were needed very much. Had been awful hot and dry. The storm the 16th had lots of wind with it and 8 barns were wrecked. Cultivating and planting late potatoes and cucumbers are the principle items before the rain. Cool now since the rains and we hope better crop conditions. Hay and wheat were both shortened by dry weather.

MONROE (N. E.)—Plenty of rain after a long dry spell, crops were suffering for want of rain. Now we have too much. Crops are poor on an average around this territory, especially oats and hay. Can not say as to corn yet. It does not look very promising. Farmers are trying to cut alfalfa during showers and hoping for it to dry up to cultivate corn which is getting weedy. There was a meeting of farmers at Monroe the other day trying to have the Board of Supervisors to repeal their ruling of last fall to enforce the law regarding threshing engines and tractors on improved roads. It was repealed at once as soon as they saw the number and heard their sentiments.—G. L. S.

CALHOUN—Farmers are cultivating corn and haying. Corn is very small and hay is not half a crop. Most of the potatoes are plowed and the acreage is small. Soil is in fine shape, the rain and hail of late, while it did lots of damage to grain and gardens it did lots of good. The following prices were offered at Battle Creek: Wheat, $2.90; oats, $1.10; rye, $2; No. 1 timothy, $38; rye straw, $12; potatoes, $5; hens, 40c; butter, 45c; eggs, 38c; lambs 10@17c; hogs 14c; beef steers, 10c; veal calves, 13c.—C. E. B.

MONTCALM—Some farmers are still planting beans and potatoes. Most of the planting done. The weather is quite warm, but cool nights. The soil is in fine condition for cultivating and crops that are up are looking well. Grain is looking much better. There is not much marketing being done just now outside of poultry and live stock. A few strawberries are being sold. No building being done just now. Farmers are too busy with the crops. The following prices were offered at Lakeview: Wheat, $3.25; corn, $4 cwt.; oats, $1.35; rye, $2.25; No. 1 timothy, $30; No. 1 light mixed $30; beans, C. H. P. Pea, $4.25; onions, 8 cts pound; hens, 25c; butter, 55c; butterfat, 56c; eggs, 34c; hogs, 14c; veal calves, 9@15c; wool 35c.—A. B. W.

GENESEE—Farmers are planting beans and potatoes, cultivating corn and cutting hay. We had quite a heavy rain the first part of the week and the soil is in fine shape for working. Seed potatoes are very scarce and there will not be as many potatoes planted this year as usual. Some farmers are cultivating beans already while others have not got them planted yet. There will not be quite as many beans planted this year as ordinarily. Wheat and rye will both be a little below the average this year. Most of the alfalfa hay has been cut, but just a few farmers have cut any clover or timothy. If the weather is favorable a bit will be cut next week. Corn is looking fair to good but not extra.—C. W. S.

MIDLAND—The following prices were offered at Midland: Wheat $2.80; corn, $1.80; oats, $1.07; rye, $1.80; buckwheat, $3; beans (C. H. P.) $6.50; peas, $3.25; barley, $3.15.—O. B. & G. C.

LIVE STOCK SITUATION

(*Continued from page 9*)

of the big Kansas City banks carrying millions in cattle loans has already reduced credits 25 per cent, promising to call another 25 per cent of its loans before snow flies unless conditions improve. This means that the range calf crop will go to the shambles in the veal stage, preparatory to sacrificing cow herds in the fall, thereby putting a serious crimp in beef production and insuring scarcity one, two and three years hence.

The seriousness of the situation was considered at the annual convention of the National Live Stock Exchange held in Chicago recently, at which M. L. McClure, director of the Kansas City Federal Reserve Bank, made a statement for Governor Harding of the Federal Reserve Board. Mr. McClure saw no prospect of easier money conditions until digestion of the mass of government securities banks are now carrying has been accomplished. He described present financial stringency as the logical result of post-bellum orgy.

The live stock exchange sent a memorial to the Federal Reserve Board, setting forth that unless cattle and sheep raisers can be financed at reasonable rates, meat production will be seriously restricted. A request for prompt government aid in the shape of funds placed with Federal Reserve Banks at preferential rates was made, the Secretary of the Treasury being requested to make such deposits for the purpose of discounting agricultural and live stock paper for the next six months at preferential rates.

As a result of financial stringency restocking northern pastures has been practically suspended. Montana pasturemen with large areas of untenanted grass, were in Chicago this week making unsuccessful efforts to secure loans wherewith to buy southern cattle. Texas, on the other hand, is tied up because its normal market for yearling and 2 year old steers in the Northwest has disappeared. Unless relieved the present situation means crippling both cattle and sheep interests by premature liquidation. The claim is made that loans to other and less essential industries have actually expanded in volume, while live stock credits have been contracted thirty to thirty five per cent.—*Rosenbaum Review.*

LESS MAPLE SUGAR AND SYRUP PRODUCED IN 1920

Production of maple sugar and syrup has declined this year, according to the Bureau of Crop Estimates, United States Department of Agriculture. The sugar production was 7,529,000 pounds, which compares with 10,169,000 pounds in 1919, 13,271,000 pounds in 1918 and 10,389,000 pounds in 1917.

Syrup production has not fallen off in the same degree and yet the estimate of 3,606,000 gallons for 1920 is much below the 3,854,000 gallons of 1919, the 4,905,000 gallons of 1918, and the 4,286,000 gallons of 1917.

With syrup converted to terms of sugar, the maple sugar production of 1920 amounted to 36,373,000 pounds, and this compares with the estimate of 41,005,000 pounds in 1919, 52,513,000 pounds in 1918, and 45,217,000 pounds in 1917.

The productive season of 1920 was a short one and the average number of pounds of sugar per tree, with sryup expressed as sugar, was only 1.91, while in the preceding three years the averages ranged from 2.16 to 2.72 pounds per tree.

FIRST CAR OF 1920 WHEAT BRINGS $2.80 A BUSHEL

The 1920 harvest has begun to move.

First shipments of grain arrived in Fort Worth, Texas, June 25 and the first car of wheat sold at $2.80 a bushel. It came from Haskell county, and tested 60.7.

With the moving of the new grain the embargo on wheat was lifted at Galveston, where non-union longshoremen, working under protection of state troops, have virtually relieved all freight congestion.

DEP'T OF AGRICULTURE WILL NOT FINANCE CATTLE MEN

Secretary Houston has effectively squelched the project to create a revolving fund of $40,000,000 for the purpose of easing the financial condition of western cattle and sheep raisers on the ground that it would create a bad precedent and interfere with the fiscal policy of the United State government. Preferential rates for any special industry is obviously doubtful policy, but at this moment the live stock industry is in a bad way. J. H. Skinner, dean of the Indiana Agricultural College and an admitted expert on live stock matters, predicts a collapse similar to that recently overtaking the transportation interests as production of meats under such unfavorable circumstances as have existed recently will drive cattle and hogs from corn belt farms where the bulk of the national supply is made. Eliminate, even partially, Ohio, Indiana, Iowa, Illinois, Kansas, Nebraska and Missouri, as meat supply sources and the nation's larder would soon be bare.

Orders for approximately 150,000 cows and 350,000 steers to go to northern pastures from the southern breeding ground are held in abeyance at this moment because the business cannot be financed. Twenty-five per cent of the grazing area in the Southwest and 50 per cent in the Northwest is idle for the same reason. Neither cattle nor sheep raisers can afford to pay ten per cent for money, but even on that extravagant basis new business is being emphatically turned down by banks.—*Rosenbaum Review.*

Strength of Organization

Experience of over forty years has developed executive ability. Scientific advancement has brought the telephone from a crude experiment to one of the most perfected of all mechanical devices. Engineering has mastered countless problems involved in the distribution of service. Construction has carried the telephone into the most remote corners of the country. Operative skill has combined the efforts of executives, scientists, engineers and commercial management. These with vision and foresight are the powers which unite in the accomplishment of the Bell Telephone System.

Working in the closest cooperation with its chiefs is the nation-wide organization of telephone employees. Nothing less than finest loyalty, the most untiring devotion, the recognition of the great importance of their work, coupled with a fixed determination to serve faithfully; nothing less than this unified strength which has been so wonderfully displayed by the management and employees of the Bell telephone could have carried the system through the years of strain which began with the war and have not passed.

Hardly ever has public service required so long and severe a test of a businesss organization. Never has an army responded with more hearty united and loyal support.

HIGHWAY COMM'R LIABLE

In grading a large hill in the highway along my farm we found a fine gravel pit running down to the depth of 30 feet or more. The Highway Commissioner says he can take it out 33 feet from center of road each way as deep as the gravel goes down. If he does and goes down 30 or 40 feet right up to the line it won't be but a short time until part of my farm all along the cut will slide in the road and spoil the field and land for farming. What I want to know is if part of my farm slides in the highway because they went right up to the line to get gravel, how am I to get pay for what land they spoil for me?—H. M. W., Berrien County.

The statute provides that any surplus earth or gravel taken from one portion of the road may with the consent of the highway commissioner be used to fill such depressions in any other road in the same district "provided that no earth shall be dug, plowed or scraped nearer than within eight feet of the margin of the highway without the consent of the owner of the premises adjacent." Should this be violated I am of the opinion that all who participate are liable for the damages and I also believe you would be entitled to an injunction to restrain any threatened injury of the kind.—*W. E. Brown, legal editor.*

BUTTER MAKER'S DIPLOMA

I would like to know just how would be the best and cheapest way to get a diploma as butter maker. Can I get it by working under a good butter maker for one year or would I have to go to the M. A. C. for a course of butter making, or could I take an examination at any other place?—Arenac Co. Reader.

I doubt very much if there is any method by which a diploma could be obtained by working with a good butter maker for a year. While in a good many cases a man would learn butter making satisfactorily by working in this way, it would be very hard to regulate and probably in some cases a diploma would not be of very much value.

We offer an eight weeks short course for butter makers at the completion of which, if they do satisfactory work, a certificate showing that they have done satisfactory work, is given. Of course, however, it is important that a man have practical experience in a creamery either before taking this course or afterwards as there is a good bit of practical creamery work which we cannot give them in the eight weeks' time.—*O. T. Goodwin, Associate Professor of Dairy Manufactures, M. A. C.*

CHILDREN WOULD INHERIT THE MOTHER'S SHARE

Can the grandchildren come in for the mother's share, she being deceased for a number of years and the father married again if the grandmother died without a will and there is several of the grandmother's own children living, or if the grandfather is living can he hold any of the grandmother's property there being no incumberances whatever, and will the property have to be probated or can the children divide it among themselves, this property consisting mostly of bank notes and mortgages. How long a time has to expire before there can be any steps made for division?—L. A. H., Tyre, Mich.

The grandchildren would inherit the share their mother would have received had she been alive. Upon the death of the grandmother her husband takes no interest in the real estate. He will receive one third of the personal after the payment of the funeral expenses, expenses of administration and debts. He is entitled to administration of the grandmother's estate and entitled to the fees for administration. If there are no debts the heirs may divide the estate without probate if all are satisfied but it must be unanimous and none can be forced to accept a settlement that they do not agree to.—*W. E. Brown, legal editor.*

ACID PHOSPHATE

I have some acid phosphate and Gleaner General Grower. How much should I use on corn and beans and garden to be of the greatest value?—Troy Fruit Farm, Oceana County.

It is customary to apply acid phosphate at the rate of 200 pounds per acre, the same to be distributed throughout the surface layers of the soil rather than in the hill, due to the fact that only about one-half or two-thirds is utilized by the first crop. Thus when it is distributed throughout the soil mass the crop that follows in the rotation can make better use of it. When the phosphate is applied to gardens, standard applications approach 400 pounds per acre.

The application of mixed fertilizers, to which you refer, depends upon the composition. If it is similar to a 2-12-2 about 200 pounds per acre should be applied to the corn crop and if broadcasted about 125 pounds in the hill.—*M. M. McCool, Professor of Soils, M. A. C.*

LINE FENCE

I have a 17 acre wood lot and my neighbor wants me to build a hog and sheep fence. There is a barb wire fence up now. I pastured three or four acres next to this neighbor where a creek ran through but as there isn't enough pasture only to last two or three weeks, I thought I would take up the fence and let it be out to commons. Two or three years ago this same man told me a barb wire fence would be alright. I told him this fence wouldn't be lawful but he said there would be no use to build a woven wire fence. Now if I tear the fence out on the road and take up my share of the line fence can he force me to build a lawful fence.—O. E. M., Greenville, Mich.

You may throw your property open to the commons and not be required to build line fence. You do not have to build a "hog and sheep fence" but only such a fence as the law requires of four and one half feet high and such material as the fence viewers deem a sufficient fence. Your neighbor does not have the authority to say you shall build a fence in five days. The time and kind of fence is for the fence viewers to determine if you not willing, to build on your own account.—*W. E. Brown, legal editor.*

CHATTEL MORTGAGE

What is the law in regard to a chattel mortgage after it is a year past due?—E. J. P.

A chattel mortgage is good and collectable for six years after maturity and for six years after payment made thereon. However to be valid against subsequent purchasers of the property or against subsequent incumbrancers, it must be renewed by affidavit within the 30 days preceding the year after its filing.—*W. E. Brown, legal editor.*

THE COLLECTION BOX

FARMER RECEIVES MONEY FROM CHICAGO FIRM

The firm of ————of Chicago has owed me about $20 since last January, and being unable to get the money ourselves would like to have you see what you can do about it. You will see by the enclosed list of questions which they have been sending, and which I have filled out, what it is about. We have filled in at least four or five of these papers, and in return get the same thing again. You will also note on their enclosed order blank, that they promise to return money on unsatisfactory goods returned. Then why don't they do it? I think the enclosed questions answered will make things clear to you. They owe us $19.12. I sent them my personal check in January, which they have at present, as you will see they call for it. I think I should not have done this.—*D. N. C., Flat Rock, Mich.*

We wrote the company in behalf of D. N. C. and received a reply from them stating that they had discovered their mistake and were mailing a check to our subscriber covering the amount due. On June 14th, we received the following letter from D. N. C.:

Our account with P—— which they would not settle, and which I turned over to you for collection a few days ago has been paid. We received a check from them for the full amount today. Thanking you very much for your help in the matter, I remain, yours very respectfully.—*D. L. C., Flat Rock.*

FIGHTING GRASSHOPPERS

Has any special preparation been made to fight this year's grasshoppers?—Reader.

Yes, we have done everything possible to encourage the farmers to fight grasshoppers. We have been trying to get the Boards of Supervisors through the County Agents to secure white arsenic early in the winter when the price was down, and some counties have been able to raise the money to do so, others have not found this possible for some reason or other. However, our field man is at present up in the various counties north and west of you advising and encouraging and directing a campaign.

The main difficulty at present is to get white arsenic up into places where it is needed in time. However, the counties that have prepared in advance for this campaign are getting good results I believe and the State Farm Bureau is using its power to aid in securing the poison necasary to make the poison bait, which is the most effective weapon at our command.—*R. H. Pettit, Professor of Entomology, M. A. C.*

RIGHTS OF HIGHWAY COMM'R

Has the Highway Commissioner the right to pile stone and pine stumps along the front of a man's farm and leave them there? Our Commissioner claims that the state reserves eight feet outside of the grade hubs and that he can leave anything on that eight feet that he wishes to.—C. F.

I am of the opinion that the entire highway space may be needed for highway use and that the commissioner has the right to use the side space for stones and stumps that come from the traveled part of the highway in order to make the right of travel safe. I am of the opinion that the commissioner would not have authority to draw material from other parts of the highway and dump them in front of a man's premises.—*W. E. Brown, legal editor.*

NEW HIGHWAY

Certain interests are trying to get a new road laid out, between two points, about 6 miles apart. Now is the decision of a township, county or state highway commission final, or have the taxpayers a right of appeal to some court to review the matter.—X. Y. Z.

The law provides that a commissioner of highways may lay out a highway upon petition of seven free holders of such township. Upon receipt of the application the commissioner shall serve notice on the owners within five days after receipt of the application. Upon the day fixed for a hearing he determines whether it is a necessity or not. Any one dissatisfied may appeal within ten days to the town board and the statute provides for an appeal to the circuit court.—*W. E. Brown, legal editor.*

INCOME TAX

One question please, in regard to the income tax. If A bought a farm (80 A) two years ago for say, $7,000 and he can now sell for $10,000, can the government take any of it. That is if he is heavily in debt on it. Having made quite a few repairs and improvements?—Subscriber, Durand Mich.

The government will not bother you if you haven't sold the land and made a clear profit. Even though it grows to many times what you pay you can not say you have made a profit until sold. The expense of the improvements taken from other incomes are allowable if you sell but if used for permanent improvements would not be allowed as expense. In figuring the profits the government wants the clear gain for the basis of the computation.—*W. E. Brown, legal editor.*

FEEDING GRAIN TREATED WITH FORMALDEHYDE

Can grain that has been treated with formaldehyde be fed to chickens and livestock—Mrs. S., Kingsley, Mich.

Grain which has been treated with formaldehyde can be fed safely to chickens and livestock after thorough airing. If spread out on floor and stirred occasionally all traces of formaldehyde gas will disappear.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

The Agricultural Seed Law of Michigan

I am a reader of your paper. Would you please give me the seed law in the columns of your paper in the next issue. I bought and paid for what I supposed to be red clover seed and one half or better proved to be sweet clover. At that time sweet clover was worth $18 and the red clover $25 and I paid for all red clover. The red clover doesn't mature at the same time of the sweet clover and for that reason I consider it a damage.—J. M., Clinton County.

AN ACT to regulate commerce in certain agricultural seeds and for other purposes. Act 202, P. A., 1913. The People of the State of Michigan enact: Section 1. For the purposes of this act, agricultural seeds are defined as the seeds of alfalfa, Canadian blue grass, Kentucky blue grass, brome (awnless) grass, buckwheat, alsike clover, crimson clover ,red clover, white clover, field corn, Kaffir corn, meadow fescue, flax, millet, oats, orchard grass, rape, red top, rye, sorghum, timothy and wheat which are to be used for sowing or seeding purposes.

Sec. 2. Every lot of agricultural seed as defined in section one of this act, which is offered or exposed for sale within this State for seeding purposes in this state in lots of eight ounces or more, shall be accompanied by a plainly written or printed statement in the English language stating, except where agricultural seed, as defined in section one of this act, is sold at retail from the original package, and said original package being marked in accordance with the provisions of this act.

1. Name of agricultural seed.
2. Name and address of person selling or offering for sale such seed.
3. The approximate percentage by weight of purity or freedom of such seed from foreign matter or from other seeds distinguishable by their appearance.
4. The approximate percentage by weight of contamination, specifying by name each kind present in greater proportion than one per cent by weight of the whole.

Sec. 3. The seeds of quack grass (Agropyron repens), Canadian thistle (Cirsium arvense), clover and alfalfa dodded (Cuscuta epithymum) and field dodded (Cuscuta arvensis) are hereby defined as noxious weed seeds. No person or persons, firm or corporation, shall by himself, his agent or representative of any other person, firm or corporation, offer or expose for sale or distribution, for seeding purposes in this state, or sow or cause to be sown in this state any agricultural seeds defined in section one of this act, containing a greater amount or proportion than one seed of any or all of said noxious weeds to two thousand seeds of the variety of agricultural seed sown, offered or exposed for sale.

Sec. 4. The percentage of purity of agricultural seeds required under section two of this act shall be based upon a test or analysis conducted either by the State Board of Agriculture or its employes, or by the vendor of the agricultural seeds or his agents: Provided, That such test or analysis made by the vendor or his agents, shall conform to the reasonable regulations which said board is hereby authorized and directed to prescribe or shall conform to the reasonable regulations or methods of testing adopted or used by the Association of Official Seed Analysists or the United States Department of Agriculture.

Sec. 5. Whoever buys or sells or sows agricultural seeds, defined in section one of this act for use in this State, for seeding purposes, may submit his samples of such seeds to the State Board of Agriculture for examination and test of purity, and said board of agriculture shall cause such examination to be made as promptly as possible and reported to the sender. For tests of purity, said board shall charge a fee of twenty-five cents for the examination of each sample, which fee shall be payable in advance. All moneys received as such fees shall be paid to the State Board of Agriculture.

Sec. 6. The enforcement of this act shall be entrusted to the State Board of Agriculture, which is hereby authorized to appoint such inspectors, assistants and deputies as may be necessary to enforce this act, and is authorized in person or by its inspectors or assistants to take for analysis, paying the reasonable purchase price, a sample not exceeding four ounces in weight from any lot of agricultural seeds offered or exposed for sale: Provided, That said sample shall be drawn or taken in the presence of the vendor or parties in interest, or his or their agents or representatives, and shall be taken from a parcel, lot or number of parcels, which shall not be less than ten per cent of the whole lot inspected, and shall be thoroughly mixed and then divided into two samples and placed in containers, carefully sealed, and label placed on each container stating the name of the agricultural seed sampled, the same of the vendor and the date and place of taking such samples, and said labels shall be signed by said State Board of Agriculture or its agents; or said samples may be taken in the presence of two disinterested witnesses if the vendor or party in interest fails or refuses to be present when notified. One of said duplicate samples shall be left with or on the premises of the vendor or party in interest, and the other retained by the State Board of Agriculture for analysis and comparison with the label required by section two of this act.

Sec. 7. The provisions of this act shall not apply to:

First, Any person selling agricultural seeds direct to seed merchants or shipping to a general market to be cleaned or graded before being offered or exposed for sale for seeding purposes;

Second, Agricultural seed which is held in storage for the purpose of being cleaned;

Third, Agricultural seed marked "not cleaned" and held or sold for shipment outside the state only.

Sec. 8. Whoever sells, offers or exposes for sale within this state any agricultural seeds defined in section one of this act, without complying with the requirements of sections two and three of this act, or whoever falsely marks or labels any agricultural seeds under section two of this act, or whoever shall prevent the state Board of Agriculture or its duly authorized agents from inspecting said seeds and collecting samples as provided in section six of this act, or whoever shall otherwise violate this act shall be guilty of a misdemeanor and upon conviction shall be fined not more than one hundred dollars: Provided, however, That no prosecution for violation of this act shall be instituted except in the following manner: When the State Board of Agriculture believes or has reason to believe that any person has violated any of the provisions of sections two, three and eight of this act, it shall cause notice of such fact, together with full specifications of the act or omission constituting the violation, to be given to said person who either in person or by agent or attorney shall have the right, under such reasonable rules and regulations as may be prescribed by said State Board of Agriculture, to appear before said board and introduce evidence and said hearing shall be private. If after said hearing or without such hearing, in case said person fails or refuses to appear, said State Board of Agriculture shall decide and decree that any or all of said specifications have been proven to its satisfaction, it may at its descretion so certify to the proper prosecuting attorney and request him to prosecute said person according to law for violation of this act, transmitting with said certificate a copy of the specifications and such other evidence as shall be deemed necessary and proper, whereupon, said prosecuting attorney shall prosecute said person according to law.

Sec. 9. The results of the anlyses and tests of seed made by the State Board of Agriculture may, at its discretion, be published in its reports.

Sec. 10. The necessary expense incurred in carrying out provisions of this act shall be certified by the secretary of the State Board of Agriculture to the Auditor General, who shall thereupon issue his warrant upon the State Treasurer for the payment thereof, but the total amount so paid in any one fiscal year shall not exceed two thousand dollars.

GREATER PRODUCTION, PUBLICITY, DAIRY NEEDS

(*Continued from page* 6)

roads, or on the part of the bankers, or whatever it may be, publicity will cure it. When you point publicity's hand at any man and you say the truth and he is wrong that is the end of him.

Public opinion in a republic is the source of all power and it is the source of all success in the marketing of goods. People will buy the product of the dairyman and pay him just what his mind values it at. When I see you people up here in Minnesota getting all excited over the abuse you have been subjected to, you dairymen about Minneapolis and St. Paul, for years you worked for nothing producing milk for the people of St, Paul and Minneapolis, they did not ask you to but you just simply would not trust each other, each one of you thought he was getting a little more for his milk than his neighbor got, and the distributors were working the whole bunch of you for their own advantage, but you finally got to realize that, it came out in some way, the public got to know and the dairymen got to know that they had been made monkeys of themselves, and while I do not think now they are getting anywhere near what it is worth as a food, they are getting in a good deal better condition and it is all through publicity.

You might take, if you please, the question of potatoes in Minnesota. Suppose you had an organization of potato growers in Minnesota, they agreed they would contribute one cent per bushel for publicity and education about Minnesota potatoes, and the used that money to teach the people to put in their potatoes in the fall before the freezing comes so that the farmers would not be to the extra expense of taking care of them through the winter, and delivering during freezing weather, showing them the advantage of putting in potatoes in the fall—what do you think the result would be? Why, friends, by the time it is froze up in the fall you would not be able to find a potato in Minnesota that was not stored away for winter use in the family that was to use it.

* * * *

If we are going to produce vegetables or grain we have got to feed the plant economically, we have got to be able to handle the produce economically, and we have got to in an efficient way market the product. If there is no demand that makes production profitable, and there is an opportunity to create the demand, we must do that. If we are going to produce the dairy products and hope to succeed and retain our own respect and the respect of the world, we have got to use the most efficient machinery in the world to produce it, and we have got to create a condition of mind that will appreciate it at its true worth through education and publicity. We have got to forget all these little animosities and suspicions of each other.

I think one of the first lessons we must learn is to realize that we must solve our own problems, that our salvation cannot be worked out by political bunco steerers that are trying to arrange for their own perpetuity inoffice, that we have to pull our own weight in the everyday and ordinary walks of life, and that the greatest evaporator of prejudice and corrector of wrong and error, is publicity and education, and if the people of this great northwest who are tilling the soil will agree among themselves to use publicity and education thru their own organization. I believe your troubles would largely cease because the great body of humanity believes in justice and fair play, and publicity and education will get to them your ills and in getting them there correct them.

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

"HEARTS OF THREE"

(*Continued from page 9*)

"They are beyond price."

"They are beyond the value of valor, and love, and honor?"

"They are beyond all things. They are a madness."

"Can a woman's or a man's true love be purchased by them?"

"They can purchase all the world."

"Come," the Queen said. "You are a man. You have held women in your arms. Will they purchase women?"

"Since the beginning of time women have been bought and sold for them, and for them women have sold themselves."

"Will they buy me the heart of your good friend Francis?"

For the first time Torres looked at her, and nodded and muttered, his eyes swimming with drink and wild-eyed with sight of such array of gems.

"Will good Francis so value them?"

Again he nodded emphatically.

She began to laugh in silvery derision. Bending at haphazard she clutched a priceless handful of the pretties.

"Come," she commanded. "I will show you how I value them."

She led him across the room and out on a platform that extended around three sides of a space of water, the fourth side being the perpendicular cliff. At the base of the cliff the water formed a whirlpool that advertised the drainage exit for the lake which Torres had heard the Morgans speculate about.

With another silvery tease of laughter, the Queen tossed the handful of priceless gems into the heart of the whirlpool.

"Thus I value them," she said.

Torres was aghast and, for the nonce, well night sobered by such wantonness.

"And they never come back," she laughed on. "Nothing ever comes back. Look!"

She flung in a handfull of flowers that raced around and around the whirl and quickly sucked down from sight in the center of it.

"If nothing comes back, where does everything go?" Torres asked quickly.

The Queen shrugged her shoulders although he knew that she knew the secret of the waters.

"More than one man has gone that way," she said dreamily. "No one of them has ever returned. My mother went that way, after she was dead. I was a girl then." She roused. "But you, helmeted one, go now. Make report to your master—your friend, I mean. Tell him what I possess for dowry. And, if he be half as mad as you about the bits of glass, swiftly will his arms surround me. I shall remain here and in dreams await his coming. The play of the water fascinates me."

Dismissed, Torres entered the sleeping chamber, crept back to steal a glimpse of the Queen, and saw her sunk down on the platform, head on hand, and gazing into the whirlpool. Swiftly he made his way to the chest, lifted the lid, and stowed a scooping handful into his trousers' pocket. Ere he could scoop a second handful, the mocking laughter of the Queen was at his back.

Fear and rage mastered him to such extent, that he sprang toward her, and pursuing her out upon the platform, was only prevented from seizing her by the dagger she threatened him with.

"Thief," she said quietly. "Without honor are you. And the way of all thieves in this valley is death. I shall summon my spearmen and have you thrown into the whirling water."

And his extremity gave Torres cunning. Glancing apprehensively at the water that threatened him, he ejaculated a cry of horror as if at what strange thing he had seen, sank down on his hands. The Queen looked sidewise to see what he had seen. Which was his moment. He rose in the air upon her like a leaping tiger, clutching her wrists and wresting the dagger from her.

He wiped the sweat from his face and trembled while he slowly recovered himself. Meanwhile she gazed upon him curiously, without fear.

"You are a woman of evil," he snarled at her, still shaking with rage, "a witch that traffics with the powers of darkness and all devilish things. Yet are you woman, born of woman, and therefore mortal. The weakness of mortality and of woman is yours, wherefore I give you now your choice of two things. Either you shall be thrown into the whirl of water and perish, or . . ."

"Or?" she prompted.

"Or . . ." He paused, licked his dry lips, and burst forth. "No! My the Mother of God, I am not afraid. Or marry me this day, which is the other choice."

"You would marry me for me? Or for the treasure?"

"For the treasure," he admitted brazenly.

"But it is written in the Book of Life that I shall marry Francis," she objected.

"Then we will rewrite that page in the Book of Life."

"As if it could be done!" she laughed.

"Then will I prove your mortality there in the whirl, whither I shall fling you as you flung the flowers."

Truly intrepid Torres was for the time—intrepid because of the ancient drink that burned in his blood and brain, and because he was master of the situation. Also, like a true Latin-American, he loved a scene wherein he could strut and elocute.

Yet she startled him by emitting a hiss similar to the Latin way of calling a servitor. He regarded her suspiciously, glanced at the doorway to the sleeping chamber, then returned his gaze to her.

Like a ghost, seeing it only vaguely out of the corner of his eye, the great white hound erupted through the doorway. Startled again, Torres involuntarily stepped to the side. But his foot failed to come to rest on the emptiness of air it encountered, and the weight of his body toppled him down off the platform into the water. Even as he fell and screamed his despair, he saw the hound in mid air leaping after him.

Swimmer that he was, Torres was like a straw in the grip of the current; and the Lady Who Dreams, gazing down upon him fascinated from the edge of the platform, saw him disappear, and the hound after him, into the heart of the whirlpool from which there was no return.

CHAPTER XX

LONG THE Lady Who Dreams gazed down at the playing waters. At last, with a sighed "My poor dog," she arose. The passing of Torres had meant nothing to her. Accustomed from girlhood to exercise the higher powers of life and death over her semi-savage and degenerate people, human life, per se, had no sacredness to her. If life were good and lovely, then, naturally, it was the right thing to let it live. But if life were evil, ugly, and dangerous to other lives, then the thing was to let die or make it die. Thus, to her, Torres had been an episode—unpleasant, but quickly over. But it was too bad about the dog.

Clapping her hands loudly as she entered her chamber, to summon one of her women, she made sure that the lid of the jewel chest was raised. To the woman she gave a command, and herself returned to the platform, from where she could look into the room unobserved.

A few minutes later, guided by the woman, Francis entered the chamber and was left alone. He was not in a happy mood. Fine as had been his giving up of Leoncia, he got no pleasure from the deed. Nor was there any pleasure in looking forward to marrying the strange lady who ruled over the Lost Souls and resided in this wierd lake dwelling. Unlike Torres, however, she did not arouse in him fear or animosity. Quite to the contrary, Francis' feeling toward her was largely that of pity. He could not help but be impressed by the tragic pathos of the ripe and lovely woman desperately seeking love and a mate, despite her imperious and cavalier methods.

At a glance he recognized the room for what it was, and idly wondered if he were already considered the bridegroom, san discussion, sans acquiescence, sans ceremony. In his brown study, the chest scarcely caught his attention. The Queen, watching, saw him evidently waiting for her, and, after a few minutes, walk over to the chest. He gathered up a handful of the gems, dropped them one by one carelessly back as if they had been so many marbles, and turned and strolled over to examine the leopard skins on her couch. Next, he sat down upon it, oblivious equally of couch or treasure. All of which was provocative of such delight to the Queen that she could no longer withstrain herself to mere spying. Entering the room and greeting him, she laughted:

"Was Senor Torres a liar?"

"Was?" Francis queried, for the need of saying something, as he arose before her.

"He no longer is," she assured him. "Which is neither here nor there," she hastened on as Francis began to betray interest in the matter of Torres' end. "He is gone, and it is well that he is gone, for he can never come back. But he did lie, didn't he?"

"Undoubtedly," Francis replied. "He is a confounded liar."

He could not help noticing the way her face fell when he so heartily agreed with her concerning Torres' veracity.

"What did he say?" Francis questioned.

"That he was the one selected to marry me."

"A liar," Francis commented dryly.

"Next he said that you were the selected one—which was also a lie," her voice trailed off.

Francis shook his head.

The involuntary cry of joy the Queen uttered touched his heart to such tenderness of pity that almost did he put his arms around her to soothe her. She waited for him to speak.

"I am the one to marry you," he went on steadily. "You are very beautiful. When shall we be married?"

The wild joy in her face was such that he swore to himself that never would he willingly mar that face with marks of sorrow. She might be ruler over the Lost Souls, with the wealth of Ind and with supernatural powers of mirror-gazing; but most poignantly she appealed to him as a lonely and naive woman, overspilling of love and totally unversed in love.

"And I shall tell you of another lie this Torres animal told me," she burst forth exultantly. "He told me that you were rich, and that, before you married me, you desired to know what wealth was mine. He told me you had sent him to inquire into what riches I possessed. This I know was a lie. You are not marrying me for that"—with a scornful gesture at the jewel chest.

Francis shook his head.

"You are marrying me for myself," she rushed on in triumph.

"For yourself," Francis could not help but lie.

And then he beheld an amazing thing. The Queen, this Queen who was the sheerest autocrat, who said come here and go there, who dismissed the death of Torres with its mere announcement, and who selected her royal spouse without so much as consulting his prenuptial wishes, this Queen began to blush. Up her neck, flooding her face to her ears and forehead, welled the pink tide of maidenly modesty and embarrassment. And such sight of faltering made Francis falter. He knew not what to do, and felt a warmth of blood rising under the sun-tan of his own face. Never, he thought, had there been a man and woman situation like it in all the history of men and women. The mutual embarrassment of the pair of them was appalling, and to save his life he could not have summoned a jot of initiative. Thus, the Queen was compelled to speak first.

"And now," she said, blushing still more furiously, "you must make love to me."

Francis strove to speak, but his lips were so dry that he licked them and succeeded only in stammering incoherently.

"I never have been loved," the Queen continued bravely. "The affairs of my people are not love. My people are animals without reason. But we, you and I, are man and woman. There must be wooing, and tenderness—that much I have learned from my Mirror of the World. But I am unskilled. I know not how. But you, from out of the great world, must surely know. I wait. You must love me."

She sank down upon the couch,

drawing Francis beside her, and true to her word, proceeded to wait. While he, bidden to love at command, was paralyzed by the preposterous impossibility of so obeying.

"Am I not beautiful?" the Queen queried after another pause. "Are not your arms as mad to be about me as I am mad to have them about me? Never have a man's lips touched my lips. What is a kiss like—on the lips, I mean? Your lips on my hand were ectasy. You kissed then, not alone my hand, but my soul. My heart was there, throbbing against the press of your lips. Did you not feel it?"

"And so," she was saying, half an hour later, as they sat on the couch hand in hand. "I have told you the little I know of myself. I do not know the past, except what I have been told of it. The present I see clearly in my Mirror of the World. The future I can likewise see, but vaguely; nor can I always understand what I see. I was born here. So was my mother, and her mother. How it chanced is that always into the life of each queen came a lover. Sometimes, as you, they came here. My mother's mother, so it was told me, left the valley to find her lover and was gone a long time—for years. So did my mother go forth. The secret was is known to me, where the long dead conquistadores guard the Maya mysteries, and where Da Vasco himself stands whose helmet this Torres animal had the impudence to steal and claim for his own. Had you not come, I should have been compelled to go forth and find you, for you were my appointed one and had to be."

A woman entered, followed by a spearman, and Francis could scarce make his way through the quaint antiquated Spanish of the conversation that ensued. It commingled anger and joy, the Queen epitomized it to him.

"We are to depart now to the Long House for our wedding. The Priest of the Sun is stubborn, I know not why, save that he has been balked of the blood of all of you on his altar. He is very bloodthirsty. He is the Sun Priest, but he is possessed of little reason. I have report that he is striving to turn the people against our wedding—the dog!" She clinched her hands, her face set and her eyes blazed with royal fury. "He shall marry us, byt the ancient custom, before the Long House, at the Altar of the Sun."

"It's not too late Francis, to change your mind," Henry urged. "Besides, it is not fair. The short straw was mine. Am I not right Leoncia?"

Leoncia could not reply. They stood in a group, at the forefront of the assembled Lost Souls, before the altar. Inside the Long House the Queen and the Sun Priest were closeted.

"You wouldn't want to see Henry marry her, would you, Leoncia?" Francis argued.

"Nor you either," Leoncia countered. "Torres is the only one I'd like to have seen marry her. I don't like her. I would not care to see any friend of mine her husband."

"You're almost jealous," commented Henry. "Just the same, Francis doesn't seem so very cast down over his fate."

"She's not at all bad," Francis retorted. "And I can accept my fate with dignity, if not with equanimity. And I'll tell you something else, Henry, now that you are harping on this strain; she wouldn't marry you if you asked her."

"Oh, I don't know," Henry began.

"Then ask her," was the challenge. "Here sne comes now. Look at her eyes. There's trouble brewing. And the priests's black as thunder. You just propose to her and see what chance you've got while I'm around.

Henry nodded his head stubbornly.

"I will—but not to show you what kind of a woman conqueror I am, but for the sake of fair play. I was not playing the game when I accepted your sacrifice of yourself, but I am going to play the game now."

Before they could prevent him, he had thrust his way to the Queen, shouldered in between her and the priest, and began to speak earnestly. And the Queen laughed as she listened. But her laughter was not for Henry. With shining triumph she laughed across at Leoncia.

Not many moments were required to say no to Henry's persuasions, whereupon the Queen joined Leoncia and Francis, the priest tagging at her heels, and Henry following more slowly, trying to conceal the gladness that was his at being rejected.

"What do you think," the Queen addressed Leoncia directly. "Good Henry has just asked me to marry him, which makes the fourth this day. Am I not well loved? Have you ever had four lovers, all desiring to marry you on your wedding day?"

"Four!" Francis exclaimed.

The Queen looked at him tenderly.

"Yourself and Henry whom I have just declined. And, before either of you this day, the insolent Torres; and, just now, in the Long House the priest here." Wrath began to fire her eyes and cheeks at the recollection. "This Priest of the Sun, this priest long since renegade to his vows, this man who is only half a man, wanted me to marry him! The dog! The beast! And he had the insolence to say, at the end, that I should not marry Francis. Come. I will show him."

She nodded her own private spearmen up about the group, and with her eyes directed two of them behind the priest to include him. At sight of this, murmurs began to arise in the crowd.

"Proceed priest," the Queen commanded harshly. "Else will my men kill you now."

He turned sharply about, as if to appeal to the people, but the speech that trembled to his lips died unuttered at sight of the spear points at his breast. He bowed to the inevitable, and led the way close to the altar, placing the Queen and Francis facing him, while he stood above on the platform of the altar, looking at them and over them at the Lost Souls.

"I am the Priest of the Sun," he began. "My vows are holy. As the vowed priest I am to marry this woman, the Lady Who Dreams, to this stranger and intruder, whose blood is already forfeit to our altar. My vows are holy. I cannot be false to them. I refuse to marry this woman to this man. In the name of the Sun God I refuse to perform this ceremony—"

"Then shall you die, priest, here and now," the Queen hissed at him, nodding the near spearmen to lift their spears against him, and nodding the other spearmen to face the murmuring and semi-mutinous Lost Souls.

Followed a pregnant pause. For less than a minute, but for nearly a minute, no word was uttered, no thought was betrayed by a restless movement. All stood, like so many statues; and all gazed upon the priest against whose heart the poised spears rested.

He, whose blood of heart and life was nearest at stake in the issue, was the first to act. He gave in. Calmly he turned his back to the threatening spears, knelt, and, in archaic Spanish, prayer an invocation of fruitfulness to the Sun. Returning to the Queen and Francis, with a gesture he made them fully bow and almost half kneel before him. As he touched their hands with his finger tips he could not forbear the involuntary scowl that convulsed his features.

As the couple arose, at his indication, he broke a small corn-cake in two, handing a half to each.

"The Eucharist," Henry whispered to Leoncia, as the pair crumbled and ate their portions of cake.

"The Roman Catholic worship Da Vasco must have brought in with him, twisted about until it is now the marriage ceremony," she whispered back comprehension, although at sight of Francis thus being lost to her, she was holding herself tightly for control, her lips bloodless and stretched to thinness, her nails hurting into her palms.

From the altar the priest took and presented to the Queen a tiny dagger and a tiny golden cup. She spoke to Francis, who rolled up his sleeve and presented to her his bared left forearm. About to scarify his flesh, she paused, considered till all could see her visibly think, and, instead of breaking his skin, she touched the dagger point carefully to her tongue.

(*Continued next week*)

The Supreme Evidence of

DE LAVAL

CREAM SEPARATOR SUPERIORITY

Naturally the cream separator does not make or break the average farm user. The majority of them have no sure means of knowing just what their separator may be saving or wasting.

But the big user in the whole milk creamery or city milk and cream plant does know, and in the long run the separator means success or failure in his case.

That's the reason why 98% of the world's users of factory size cream separators use the De Laval, and why the few such machines of other makes occasionally sold soon find their way to the scrap heap.

And it may well be remembered that De Laval superiority means relatively just as much to the small as to the big user. Ten dollars a month mean as much to the farmer as ten dollars a day to the creameryman.

It's not only a matter of quantity and quality of cream, but of capacity, labor saving, dependability and durability over a long term of years.

A De Laval catalog helps to make these facts plain. The trial of a De Laval machine does so better still. Every local De Laval agent stands ready to prove them.

If you don't know the nearest De Laval agent simply address the nearest main office, as below.

CATTLE

HOLSTEIN-FRIESIAN

Purebred Holstein Cows Return $1.54 for One dollar of Feed

Even though you may regard your farm as a diversion or your hobby, you would doubtless prefer to see it self-supporting, and perhaps take still greater pride in it for that very reason. Here are two or three facts! Holsteins are the largest, most vigorous, most even tempered, the easiest-cared-for breed, and the greatest yielders of milk in the world. Their milk is the most evenly balanced in fat, sugar and proteins, and for that reason easily digested. It is everywhere recognized by the medical profession as absolutely the best for infant and invalid feeding as well as for general use. A herd of Holsteins will give you on the average $1.54 for every dollar's worth of food they eat. Send for our free literature and look it over. Perhaps you will be interested in buying Holsteins.

THE HOLSTEIN-FRIESIAN ASSOCIATION
295 Hudson Street
Brattleboro, Vermont

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT per cow.

A son of Maplecrest Application Pontiac—132852—from our heavy-yearly-milking-good-butter record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons. Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

BUTTER BOY ROSINA PRINCE

257572, herd sire, son of King Ona. His sire is from a 30 lb. cow that made 1,345 lbs. in one year and dam, Butter Boy Rosina 2nd 200, 540, made 29 lbs. and almost 800 lb. in ten months, she has a 33 and 34 lb. sister. Have some fine young bulls and heifers and some heifers bred to him, all from A. R. O. cows with records from 22 to 30 lbs. Write for prices.

Hampshire hogs, fall boars, ready for service and gilts. Booking orders for spring pigs.

Belgian and Percheron Stallions and mares. Imported and American bred.

Michigan Elevators Organize Federation

Forty-Three Co-operative Associations Affiliate as Department of Michigan State Farm Bureau

EFFORTS begun several months ago to bring the co-operative elevator associations of Michigan into a federation were crowned with success last week when forty-three elevators affiliated at Lansing under the name of Michigan State Farm Bureau Elevator Exchange. Seventy-six elevator associations were represented at the meeting but thirty-three of them were not prepared to take final action, being obliged to report back to their membership before affiliating. The Farm Bureau believes, however, that the majority of these will affiliate and that before autumn at least one hundred co-operative elevators will have joined the Exchange.

"The Exchange will be operated as a department of the Farm Bureau, doing its business, of course, on a cost basis and as a brokerage agency," says J. P. Powers, assistant secretary of the Bureau. "A Board of Control elected to manage it is composed of the following: W. E. Phillips of Decatur, Earl Whitney Watkins of Manchester, Carl Martin of Coldwater, Jacob Landis of Scottville, M. S. Shisler of Caledonia and two members to be designated by the executive committee of the State Farm Bureau. This Board will meet in the immediate future to hire a Manager and start the Exchange to work. Incidentally, the Exchange will do a purchasing as well as a marketing business."

The need in Michigan for an Exchange of this kind has long been apparent. The co-operative elevator movement has been very rapid of recent years. In the throes of co-operative enthusiasm some elevator associations have been organized in communities in which volume of business was not sufficient to support a co-operative elevator with profit. These naturally have had their trials. Some of them have failed. Others have been kept going by liberal doses of borrowed capital. Nearly all, however, have felt the need during the past four or five stringent years of a strong parent organization to which they could take their troubles and secure help for their problems.

Undoubtedly the greatest weakness of the co-operative elevator has been that it competed with other co-operative elevators in surrounding territory. Each elevator operated independently of the others and each was anxious to secure the maximum returns to its patrons. Consequently it was forever speculating upon the markets with the result that the elevator having a shrewd manager succeeded in getting the top of the market when the elevator with a manager of less speculative foresight got the lower price. Because each elevator acted independently of the others there was no information available as to the combined stocks held by all, and marketing was therefore carried on in a more or less unintelligent manner.

Similarly, with each elevator purchasing supplies in only such quantities as to supply its immediate territory, it could not secure the most favorable prices. With a large number of elevators, however, buying collectively the purchases, it will be immediately seen, will be so large as to insure the very lowest possible price from the manufacturer or wholesaler. This is perhaps one of the greatest benefits that will be derived from the federating of the elevators.

Additional assistance will be rendered by the Exchange along the lines mentioned in these columns several months ago when the Exchange's plan was first suggested, to-wit: To collect and disseminate information among its members relative to market quotations and crop conditions, yields,etc.; to work for the best conditions in transportation; to establish a claim department; to establish or adopt uniform grades and standards; to develop carlot markets for Michigan products and to find new markets; to increase demand for Michigan products by judicious advertising; to adjust grievances between members; to foster methods for utilizing waste and surplus products; to own and operate feed and flour mills, storage warehouses and terminal elevators.

The completion of the Michigan State Farm Bureau Elevator Exchange gives the farmers of Michigan two strong central organizations for the marketing of their grain and beans. The other is the Gleaner Clearing House Ass'n of Grand Rapids, which has been a pioneer in the co-operative marketing field, with a somewhat different plan, however, than that now being promulgated by the Farm Bureau. The Gleaners, we understand, now have upwards of fifteen or twenty strong elevators in their chain. This farmers' organization will not accept an elevator into their circle which does not have sufficient business to practically insure its success from a standpoint of profit to the stockholders. The leaders of this organization are men of long experience in the marketing field, and we are advised, are making unusually rapid progress with their federated elevators and central clearing house.

Through these two channels, the Michigan State Farm Bureau Elevator Exchange and the Gleaner Clearing House Ass'n, the farmers of Michigan should be able to market their grain to the greatest possible financial advantage, and to solve that end of their marketing problem as nearly as it is possible to solve it under present marketing systems.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

FEDERAL LOANS MONTH OF MAY

During the month of May, 1920, an aggregate of $1,191,100 was loaned to 294 farmers of the United States by the Federal Land Banks on long time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of Omaha leads in the amount of loans closed, the same being $269,200, the Federal Land Bank of St. Louis following with $262,100. The other banks closed loans in May as follows: St. Paul, $243,100; Berkeley, $140,700; Wichita, $76,800; Spokane, $75,200; Sprinfield, $58,300; Louisville, $35,600; Baltimore, $18,600; Columbia, $7,900; Houston, $3,400; New Orleans, $200,

During May 238 applications were received by the twelve banks, asking for $756,509, and during the same month 288 loans were approved by them amounting to $806,000.

On May 31, 1920, there were operating in the United States 3,983 Farm Loan Associations, and the total mortgage loans made by the Federal Land Banks through these associations to 12,298 farmer-borrowers as of that date, amounted to $347,990,941. Deducting from this amount the loans paid off in full by borrowers, to-wit: $10,919,630 the grand total of loans in force as of May 31, 1920, $337,071,311 is distributed within the Federal Land Bank Districts as follows: St. Paul, $45,310,400; Omaha, $45,165,440; Spokane, $42,727,970; Houston, $38,348,141; Wichita, $27,745,900; St. Louis, $27,631,180; Louisville, $25,352,000; New Orleans, $22,992,205; Columbia, $17,956,880; Berkeley, $17,126,100; Baltimore, $13,533,400; Springfield, $13,181,695.

PRIZES STIMULATE PRODUCTION OF GOOD HORSES

The Horse Association of America, in conjunction with leading district fairs from Maine to California, offer one hundred dollars in cash prizes at each for the best grade draft teams. The conditions stipulate a first prize of $50, second prize of $30 and third prize of $20. Awards to be made to the best teams of draft geldings or grade draft mares shown in harness to farm wagon. Horses in such teams must be at least 16 hands high and weigh 3,200 pounds or over per pair. Horses must be measured and weighed (stripped to halter only) on the day of the competition by an officer of the fair and a card giving such height and weight signed by the officer in question, attached to the bridle before the teams enter the ring.

Eighty per cent shall be allowed on the merit of the horses, ten per cent on the harness and ten per cent on the wagon. No discrimination shall be made against the harness or wagon on account of age, providing they are in good repair and clean. Driver must be under 18 years of age.

The list of fairs that have been recognized to date includes the Saginaw County Agricultural Society, Saginaw, Mich.

Similar prizes are being offered for mule teams, but the list of recognized fairs is not yet ready for release.

HOLSTEIN-FRIESIAN ASS'N PLAN SUMMER MEETINGS

The state and local associations are planning a series of summer meetings in the nature of auto tours. The plan is to start from some central point in the forenoon and visit several herds, stopping at noon for a basket lunch and a short program and finishing the rounds of herds in the afternoon. The series for the week will be arranged for in adjoining counties, so that breeders can go on with the caravan for several days and visit as many herds as they like. This will afford an opportunity to get acquainted with the breeders in the neighboring counties and to see their herds and should prove a very attractive outing.

This plan was worked out with great success in Livingston County nearly ten years ago, when the members of the Saginaw Valley Holstein-Friesian Association were taken over the county to visit the herds, and it should prove equally successful on a larger scale. The tours are being scheduled for the latter part of July and early August and will cover a large part of the territory where local associations have been organized.

SPUDS LEGAL TENDER IN POLAND

The erstwhile lowly Murphy has perhaps attained its greatest distinction in Poland, where it is now standard currency.

In the district around Grodno, the American Red Cross reports that all the local help employed in the warehouses or in the activities of the field units is being remunerated with a weekly wage of potatoes. They are glad to get paid in that way because potatoes being a staple article, do not fluctuate like the various species of paper money that are in circulation. Twenty pounds of potatoes are regarded as a fair daily wage for an ordinary laborer. A member of the Polish nobility recently purchased a complete set of drawing room furniture for 12,000 potatoes.

LIVINGSTON COUNTY HOLSTEINS GO OUT OF STATE

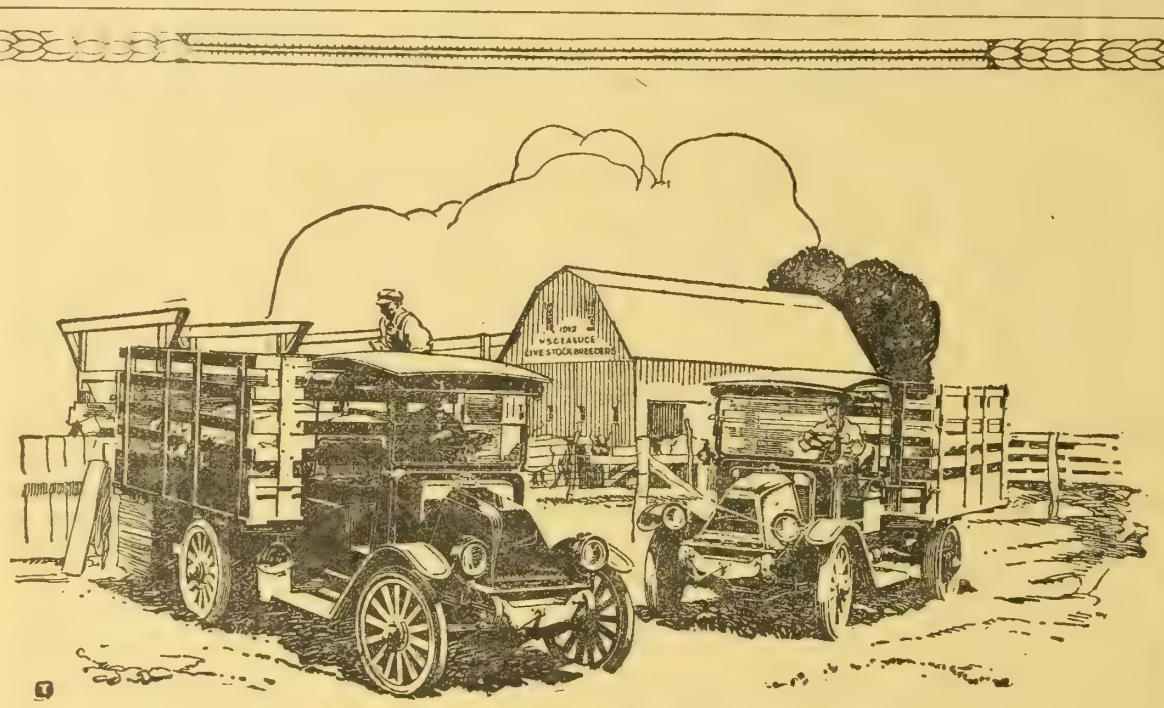
Three cars of registered Holsteins were shipped from Howell, Livingston County, Michigan's most widely known Holstein center, on Saturday, June 12th. One car went to Delaware, one to Pennsylvania, and the third to Camp Pike College, Camp Pike, Arkansas, where the government is establishing a course in Animal Husbandry. These cattle will prove quite a surprise to some of the natives of Arkansas, who have been familiar only with the sort that Pollock calls "coffee cows," and we trust that one carload will not produce such a surplus of milk in Arkansas as to prevent further importations.

GLEANERS PURCHASE ELEVATOR IN CALHOUN

The Gleaner Clearing House Association have purchased the Linihan elevator at Battle Creek and will have it in full operation by July 15. This elevator has a bin capacity of 12,00 bushels, besides two large warehouses. H. E. Newell, of Grand Rapids, will be in charge of activities.

SILO CAPACITY

Many farmers erect silos that are not in proportion to their farms. In determining the size of a silo one should build, the matter of quantity of feeding material is not the only consideration. The size of the herd is very important. A tall narrow silo is better for a small herd than short broad one. For best results, a certain amount of silage should be taken from the top each day. If the herd is too small, not enough silage will be removed and the results will not be so satisfactory.



Your Rail-less Railroad

YOUR live stock and the produce from your fields, carried in freight trains to the cities, thunder past countless danger-signs with the warning, "Look Out for the Cars!" Each one of these marks the crossing-place of a country road—a road without rails, leading to railroad and town. Each one marks a farmer's right-of-way.

Since your farm is a 1920 enterprise, probably it is fitted with most of the following modern equipment—the telephone, good lighting and heating, a silo, a manure spreader, a cream separator, an automobile, an engine, a tractor.

But have your hauling problems found their proper solution? Are the time-losses and difficulties of a decade ago still impeding your endless carrying of farm loads?

Government statistics show that in 1918 alone, 350,000,000 tons of farm produce were transported to local shipping centers in motor trucks. The same national figures prove also that American farmers are the greatest users of motor trucks—among all industries. No progressive farmer can afford to overlook impressive *facts* like these.

Your name and address mailed to our office at Chicago will bring you descriptive folders that will prove interesting and instructive. Put an ***International Motor Truck*** at work on your farm and on the roads which are your right-of-way. Handle all your miscellaneous farm hauling with railway efficiency. The nine ***International Motor Truck*** sizes range from ¾ ton to 3½ ton. Keep in mind that these trucks have been made for years by the makers of good and trusted farm machines.

Loading and Marking Live Stock for Shipment

New York Central Lines Show How Live Stock May be Loaded to Save Freight Expense

DURING THE past few years there has been a great change in the personnel of livestock shippers manifested on the market on which live stock is shipped. This change has come about through an increase in the number of independent shippers and the representation of co-operative associations. As in all business the "new shipper" finds difficulties which he had not anticipated and also finds that there are many details to be considered in making livestock shipments in the most satisfactory manner.

The lack of knowledge in this connection has cost many shippers a "pretty penny" and it is with an earnest hope that this undue expense may be eliminated that the following suggestions are made. In handling livestock shipments the common carrier—the railroad—has problems, too, and while these suggestions are made primarily for the shipper adhering to them will help the railroads in handling your shipments in the most satisfactory way.

It is the earnest desire of the railroads to deliver stock to market in the best possible condition and to do so requires the close co-operation of shippers. You are respectfully requested to study the following suggestions which, if faithfully followed, will mean money saved and loss of stock and damage to the supply of foodstuffs eliminated.

When about to ship livestock to market, the first thing to do is to find out as near as possible what stock you will have to ship on a given date and then order car or cars from railroad agent accordingly—single deck or double deck cars, as the case may require. It is advisable to put your order for cars in writing, showing date, time ordered and kind of car required, also date you intend loading stock. Co-operation with your railroad agent is necessary, give him time to furnish the cars for your use, do not expect cars can always be supplied on short notice.

Load stock to best advantage, straight carloads of any description are more easily loaded than mixed stock. Care should be taken not to overload in weight but you can overload by number of head, which is overcrowding. The loss of bullock, hog, sheep or calf reduces your profit. It is false economy to load too closely and lose animals by so doing.

Before loading stock into cars, examine your car and see that it is free of protruding nails or other projections which might cause injury, and that the floor is in good condition.

Live stock to be shipped is not in actual possession of the carrier for transportation until stock has been placed in the car and the live stock contract signed.

Stock should be consigned direct to party or parties to whom it is to be delivered at destination. If interstate, that is, forwarded from one state into another state, the Federal Law, or 36-hour limitation with respect to feed, water and rest should be duly executed. If stock is to be moved intra-state, that is, from one point to another in the same state, it will be governed by that State's law regarding feeding, watering and resting. Inform yourself regarding these laws and thus avoid complication.

"Don'ts" For Livestock Shippers

DON'T fail to examine cars fo nails and holes before loading.

DON't fail to erect partitions separating each kind of stock in the car.

DON'T fail to bed cars well, using sand or shavings in summer and straw or swail hay in winter.

DON'T fasten partitions to interfere with opening doors.

DON'T use poles spiked to side of cars for partitions. They come loose and are likely to cause serious damage to passing trains and are difficult to remove at destination without injuring the car.

DON'T build temporary upper decks in single deck cars. They are likely to fall down in transit and stock yards are not equipped to unload them.

DON'T overcrowd stock in the cars. Hogs should have sufficient room to lie down. It is cheaper to use two cars than to cause dead and crippled stock by overcrowding.

DON'T load calves in upper decks.

DON'T load hogs in the upper deck if you have a double deck load of hogs and sheep.

DON'T load hogs under cattle.

DON'T load hogs next to the door for movement through Canada, and see that such shipments have a ten inch board along floor at sides of car and that bottom of partition is tight to floor and ten inches in height.

DON'T load bulls loose with other stock. Partition or tie them.

DON'T make instruction for feeding or market privileges indefinite; say "Stop at X for feed;" "Stop at X for market;" "Stop at X to complete loading;" not simply "Stop at X."

Marking of Stock

When two or more people are interested in a shipment forwarded to market, the animals should be so marked as to enable stock to be sold and yet identified by owner or shipper. This may be done by clipping Roman numerals (I-II-III-IV, etc.,) or other character on hip of cattle, all on right side by the use of paint. or by the use of tags.

Sheep are usually marked with paint applied to top of head, shoulders, back or hips. Marking with a dot is better than a stripe, avoid smearing the paint on the wool. By using different colors a large number may be thus marked. Hogs may be marked by paint or tags. If paint is used, stripes are usually made across the back. Plain marking of stock is optional with shippers, but important to commission firms, especially in handling shipments of mixed ownership.

Bedding of Stock

Sand if available, is best for bedding cars, in summer. Straw should not be used for hogs except in cool weather. Shavings are also good.

Loading Mixed Cars

If you have consignments of cattle, hogs, sheep and calves, load the cattle in one end of the car and the hogs in the other end, two partitions will be necessary, using the middle compartment for the lightest stock, sheep and calves.

The partition should be well built, both as to material and construction, to permit no possible chance of breaking down.

It should be secured in the middle at both the floor and ceiling of the car. The partition should be flush with the floor of car so hogs cannot root off boards.

Bulls should be tied or partitioned off from other stock.

Boars or other animals inclined to be vicious should be partitioned off separately.

More than 90 per cent of the losses of stock shipped into stock yards are due to overcrowding and insecure partitions. The strength and kind of partition is an important factor in loading livestock.

The partition may be secured by wiring each end tightly to the sides of the car, in at least three places. using heavy wire, and fastening it at bottom so that partitions cannot be raised by hogs rooting under it, or place cleats on both sides of car on each side of the partitions, and on each side of uprights at top and floor of car. Make cleats as long as the partition or upright against which they rest and at least two inches in depth. Nail cleats securely but do not clinch nails used in holding cleats. Do not nail partitions to cleats or cars.

Freight Charge Comparisons

In loading stock bear in mind that mixed and straight loads have different rates.

If you load cattle in with small stock, sheep or hogs, or both, you pay freight on a load of cattle, therefore it will not pay to load one or two head of cattle with a deck of sheep or hogs, as you will pay for a load of cattle at the rate with reference to kind of stock loaded with cattle.

The rate from a given point to market on cattle and double decks of small stock is for example 30c per hundred; on calves and hogs, single deck 34 1-2c per hundred. (See table of minimum weights of cars.) Stock rates are based on minimum weights per car and haulage.

Minimum Weights According to the Length of Cars

Cattle, 36 ft. 7 in. and under, 22,000; calves, SD, 16.000, DD, 24,000; hogs, SD, 17,000, DD, 23,000; sheep and goats, SD, 12,000, DD, 22,000; over 36 ft. 7 in. and under 40 ft., cattle, 24,000; calves, SS. 17,000, DD, 25,000; hogs, SD, 18,000, DD, 24,000; sheep and goats, SD, 13,000, DD, 23,000; over 40 ft., cattle, 26,000; calves, SD, 18,000, DD, 26.000; hogs, SD, 19,000, DD, 25,000; sheep and goats, SD, 14,000, DD, 24,0000.

Above is shown the different minimums of weight to which all stock with respect to kind is subject, the rate also differs—usually cattle and double decks of sheep or hogs are the same rate, while sheep and hogs single deck cars are transported at a higher rate.

Consult your agent at point of loading regarding railroad rules and regulations.

By loading cattle in with sheep the rate would be 22,000 pounds at 37 1-2c instead of 14,000 pounds at 37 1-2c. You will readily see from this that putting two cattle in with a single deck of sheep, as against a straight deck of sheep, you raise the weight of the consignment 8,000 pounds, or the difference of weight and rate between cattle and sheep. Equalize your loading when you can.

Straight loads of hogs ,not overcrowded, may be fed in transit. and forwarded without unloading for 5 hours rest. If one calf is loaded with a carload of hogs, the entire load must be stopped and rested for 5 hours upon the expiration of the legal time limit. Detention in case of delay or feeding in transit can therefore be minimized by refraining from putting one or two calves in a load of hogs.

The minimum weight on calves is higher than on sheep, however, you may put as many as ten calves in with sheep and still hold the sheep minimum; more than ten calves with sheep you pay the freight of calves.

Compliance with these suggestions would eliminate the principal causes for loss through dead and cripples in shipments and insure more profits to the shippers.

CANT YOU STOP A MINUTE FOR BREAKFAST, HIRAM?
DONT BELIEVE I CAN STOP FOR IT THIS YEAR SALLY, WHAT WITH NO HIRED MEN IN THE WORLD ALL EVERYBODY TO BE FED

—Darling in New York Tribune

Federal Banks to Finance Wool Marketing

Arrangements Made Through Farm Bureau and Wool Organizations to Secure Loans Against 1920 Clip

Report of Special Committee on Wool Financing of American Farm Bureau Federation

THE DELEGATION that waited on Governor Harding and the Federal Reserve Board on Monday, June 21st, consisted of more than sixty men and in addition to Senators King, Smoot and Kellogg and Representative Mondell, included wool growers from thirteen states, bankers, woolen goods manufacturers, representatives of the National Wool Growers Association, the Fleece States Association, the American Farm Bureau Federation, the Bureau of Markets and the Bureau of Animal Husbandry.

The prepared statement for the producer was read by Professor Coffey, vice president of the National Wool Growers Association and various features were discussed by Dr. McClure, former Secretary of the National Wool Growers' Association, by Dr. Wilson, President of the Wyoming Wool Growers' Association, by J. F. Walker, President of the Fleece Growers' Association and by F. R. Marshall, Secretary of the National Wool Growers' Association. Professors Coffey's opening statement was as follows:

The Situation

Since May 20th, there has practically been no wool market in the United States. This condition, so far as we are able to judge, resulted from a number of factors. It is a common custom for representatives of eastern houses to visit the range states in the shearing season, and buy wools either by private treaty, or from pooled lots. The wool growers, the banks and other interests in those sections rely upon the influx of money from sales of wool in that season. This business was proceeding largely as usual, until it came to a standstill on May 20th.

Prior to that time, wool buying houses had been embarrassed by the fact that the railway situation greatly delayed the arrival of their purchases at the eastern markets. Following this there was some disturbance in the manufacturing trade, through cancellation of orders, which followed announcements of price reductions by retailers.

Along with the above factors, there was the effort to deflate credits and release frozen credits. Unfortunately, the American wool market is largely a matter of initial purchase by speculators. With the attempt to reduce credits, the speculators were largely shut off from further loans. This shutting down of credits was also extended to some houses that work strictly on a commission basis, doing no speculating whatever, but representing only bona fide producers.

The situation thereby created was most serious in the range states. The year 1919-20 had been a very expensive and disastrous one in Montana, Idaho, Wyoming, Utah, Nevada, Colorado and some parts of other wool producing states. This was a result of drouth conditions of last summer and fall, protracted and severe winter, necessitating the use of unusual amounts of feeds purchased at unusually high prices. The result of these conditions has also shown itself in a spring lamb crop that amounts to less than 60 per cent of normal for the range states as a whole.

While we recognize that the Federal Reserve Banks have not declined to handle sheep men's paper when presented in proper form, there are some member banks that state that they are not in a position to initiate such loans and therefore can not offer the paper for rediscount.

We feel that the situation is partly psychological and to some extent exaggerated by misinformation concerning the real position of wool in the world's trade, and in some cases by a misunderstanding of the facts.

Extent of Requirements

The need for early return from the wool clip exists in a serious way in the range states where the wool growers are primarily and altogether sheep raisers, and to a degree in all fleece wool states. For wools that are consigned, it is customary for the commission houses to make an advance payment of 75 per cent in order to enable the seller to continue his business until he receives the final returns from his clip.

The data presented below shows the amount and value of the wool of the various states, which we estimate has not been realized on in any way and from which some revenue must be derived to make it possible for the owners to continue their business.

The following table shows for a number of states, the reported production in 1919 and our estimate of the amount of the 1920 clip that has not yet been sold or advanced upon:

States	1919 Prod.	Est. Am't not sold or advanced upon
Arizona	15,000,000	2,500,00
California	13,000,000	12,000,000
Colorado	9,000,000	8,000,000
Idaho	21,000,000	10,000,000
New Mexico	15,000,000	15,000,000
Nevada	10,000,000	5,000,000
Montana	22,000,000	14,000,000
Oregon	13,000,000	16,000,000
Texas	14,000,000	14,000,000
Utah	16,000,000	5,000,000
Washington	6,000,000	2,000,000
Wyoming	34,000,000	20,000,000
So. Dakota	5,000,000	4,000,000
	193,000,000	127,500,000

In addition to these amounts, there is a total of 68,500,000 pounds in the states of Maine, New York, Pennsylvania, West Virginia, Kentucky, Ohio, Michigan, Indiana, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Nebraska and Illinois.

In our opinion the loans necessary to be placed on this unfinanced wool will amount to a total of $50,000,000.

The growers were first called upon to present their case and showed that the year 1919 was one of record breaking conditions for feed as well as labor, and in addition to that, range conditions were such that the lambing crop of 1920 was approximately 60 per cent. Conditions in the East were somewhat similar due to an excessively hard winter and of high feed costs. Regardless of these high production costs, the wool market in the past two years has been gradually declining, while woolen dealers and manufacturers are talking in terms of reduced prices, retailers and jobbers say that no reduction in the price of finished products is being made to them and in certain sections prediction is made that those holding discount sales will be obliged to replenish their stocks at prices higher than were paid for the goods sold.

The relation of the finished product to the price of raw wool was discussed and it was clearly demonstrated that the price the grower received for his wool had no effect on the price the consumer paid for his finished product, the initial cost for material entering into a suit of clothes being so small that in a $100 suit the difference between a price of 20c a pound and a price of 70c a pound, to the grower, would not amount to more than $2 on an entire suit. In 1919 woolen cloth manufactured from wools produced in 1918 and costing 20 per cent more than they did in 1919, were sold on the market at a cost of over $1 less per yard than the same grade, made out of the cheaper wool stocks and sold the subsequent year.

Another interesting sidelight on the market trend shows that while in 1910 the price that the grower received—approximately 30c per pound—was within 6c per pound of the price the dealer received and that this level was practically constant up until May or June of 1919, yet in May, 1920 when the price to the grower averaging 65c the price the dealers received ranged from 70c to 97c, showing conclusively that if there is an abnormal advance in wools at the present time, those who have benefitted by it have not been the producer but rather the dealer.

The quantity of wool stocks available, both in the United States and in the world, was next discussed. The general opinion, with one or two exceptions, was that wool stocks of the world at present were not excessive; in fact, considering the world's enormous need for wool, stocks were thought to be somewhat subnormal and that the quantity of wool held by England and Australia was not in excess of 1,400,000,000 pounds and this represented the largest available supply in any one section of the world. Manufacturer's lofts carry no excess stocks of wool and stocks of manufactured goods are low and mills must purchase wools before starting to fill trade orders. Mr. Strong of Strong, Huett & Company, brought out this last point. Mr. Jones of Holloway, Jones & Donald, wool dealers, on being asked what he considered a fair value for wools made the statement that their concern was advancing 25c and that naturally they considered they were safe in the matter. His opinion was that stocks held by Boston wool dealers approximatey fifty million pounds and that, normally speaking, Boston controlled 75 per cent of the wools in the hands of the dealers.

One thing is evident, that unless imports have been considerably larger than normal, the quantity of wool of good grade has been quite well used up during the first five months of the manufacturing year.

No Arbitrary Price Set

No effort was made by growers to fix or determine on a fair market value for wools, as the growers realize that wool is not a commodity restricted only to the United States but that it is a world product and the vast majority of it is under the control of the British government and that prices ruling at London sales must, to a large degree, determine the values of the American growers can hope to get for wools of similar grade. The opinion of this committee is unanimous that this is not the time for sales as no legitimate market exists and sales can only be made in a speculative way to those men who are safely figuring on making profits on the deal.

In the opinion of the growers the plan followed in financing the cotton crop of 1914 is not practical in the present situation. The prices arbitrarily established as a safe margin for cotton values became, finally, the real market value for this product at a price approximately one-half of its normal value. The cotton trade was two years in recovering from this condition even though but little of the loan fund was ever actually needed or used.

At the close of the discussion setting forth the situation the representatives of the wool growers appointed a sub-committee consisting of bankers thoroughly familiar with the entire situation to further confer with the Board for the purpose of perfecting a plan. The outcome of this conference was the formulation of the following statement which has been authorized by the Federal Reserve Board:

"A wool grower may ship his wool to one of the usual points of distribution, obtaining from the railroad a bill of lading for the shipment; the grower may then draw a draft against his bank for such an amount as may be agreed upon by the grower and the bank, secured by the bill of lading. The Federal Reserve Act authorizes any member bank to accept a draft secured in this manner at the time of acceptance, provided that the draft matures in not more than six months from the time of acceptance. After acceptance such a draft bearing the endorsement of a member bank is eligible for rediscount or purchase by a Federal Reserve Bank, provided that it has a maturity of not more than three months from the date of rediscount, or purchase.

"It was suggested that the Federal Reserve Board communicate with the Federal Reserve Banks, pointing out that shipments of wool to points of distribution may properly be financed by acceptances in the above manner."

Will the Wool Market Come Back?

THE PHENOMENAL decline in wool prices the past sixty days has caused some uneasiness among individual growers and the organizations which are pooling their wool for them. In the case of the Michigan State Farm Bureau pool seventy five per cent of the estimated value of the wool based on current marketing prices has been advanced to the growers. Now should the market not recover its former strength or should it even decline lower the Farm Bureau would not be able to pay the other twenty-five per cent which the growers expect to receive and might, indeed, encounter a loss from what it has already advanced. Now this would be all very unfortunate, indeed, and would certainly tend to destroy farmers' faith in organization, although farmers could not justly take that viewpoint of it, as the Bureau could not be in any ways blamed for the condition of the market. However, it should be said, that there the possibility of continuing low prices for any considerable period of time is very remote, as the accompanying article explains. The Business Farmer looks for an early turn of the market, and while it may not reach its former high level of several months ago, the price will, we believe, be satisfactory. Upon this subject, Alexander, Conover & Martin, a Chicago sheep commission house, has the following to say:

"America needs a great sheep industry badly and it is now only in its infancy and must have proper support and we think it is going to get it. Wool in our opinion never ought to sell for less than 50c a pound and at present it would be one of the cheapest raw materials in the world, at 75c a pound. In fact wool ought to be bringing at least one dollar a pound to be in line with other raw materials.

"We strongly advise those who have wool in storage or who are contemplating selling, not to sell at this time unless at a good fair price, because we feel that the market will soon become stabilized and a good fair price will be the result. There are many friends of the wool industry at work and they should receive all encouragement and support at this time."

Republican and Democratic Conventions Give Ear to Farm Problems

Republican Plank on Agriculture

THE FARMER is the backbone of the nation. National greatness and economic independence demand a population to be distributed between industry and the farm and sharing on equal terms the prosperity which is wholly dependent on the efforts of both. Neither can prosper at the expense of the other without inviting joint disaster.

The crux of the present agricultural condition lies in prices, labor and credit.

The Republican party believes that this condition can be improved by practical and adequate farm representation in the appointment of governmental officials and commissions; the right to form co-operation associations for marketing their products, and protection against discrimination; the scientific study of agricultural prices and farm production costs at home and abroad, with a view to reducing the frequency of abnormal fluctuations; the uncensored publications of such reports; the authorization of associations for the extension of personal credits; a national inquiry on the co-ordination of rail, water and motor transportation with adequate facilities for receiving, handling and marketing food; the encouragement of our export trade; an end to unnecessary price fixing and ill-considered efforts arbitrarily to reduce prices of farm products which invariably result to the disadvantage both of producer and consumer, and the encouragement of the production and importation of fertilizing material and of its extensive use.

The federal farm loan act should be so administered as to facilitate the acquisition of farm land by those desiring to become owners and proprietors and thus minimize the evils of farm tenantry and to furnish such long time credits as farmers may need to finance adequately their larger and long-time operations.

Democratic Plank on Agriculture

To the great agricultural interests of the country the Democratic party does not find it necessary to make promises. It already is rich in its record of things actually achieved. For nearly a century of Republican rule not a sentence was written into the Federal statutes affording one dollar of bank credits to the farming interests of America. In the first term of this Democratic administration the National Bank Act was so altered as to authorize loans of five years maturity on improved farm lands. Later was established the system of farm loan banks from which the borrowings already exceed $300,000,000 and under which the interest rate to farmers has been so materially reduced as to drive out of business the farm loan sharks who formerly subsisted by extortion upon the great agricultural interests of the country.

Thus it was a Democratic Congress in the administration of a Democratic president which enabled the farmers of America for the first time to obtain credit upon reasonable terms and insured their opportunity for the future development of the nation's agricultural resources. Tied up in Supreme Court proceedings, in a suit by hostile interests, the Federal farm loan system, originally opposed by the Republican candidate for the presidency, appealed in vain to a Republican congress for adequate financial assistance to tide over the interim between the beginning and the ending of the current year, awaiting a final decision of the highest court on the validity of the contested act. We pledge prompt and consistent support of sound and effective measures to sustain, amplify and perfect the rural credits statutes and thus to check and reduce the growth and course of farm tenancy.

Not only did the Democratic party put into effect a great farm loan system of land mortgage banks, but it passed the Smith-Lever Agricultural Extension Act, carrying to every farmer in every section of the country, through the medium of trained experts and by demonstration farms, the practical knowledge acquired by the federal agricultral department in all things relating to agriculture, horticulture, and animal life; it established the Bureau of Markets, the Bureau of Farm Management and passed the Cotton Futures Act, the Grain Grades Bill, the Co-operative Farm Administration Act, and the Federal Warehouse Act.

The Democratic party has vastly improved the rural mail system and has built up the parcel post system to such an extent as to render its activities and its practical service indispensable to the farming community. It was this wise encouragement and this effective concern of the Democratic party for the farmers of the United States that enabled this great interest to render such essential service in feeding the armies of America and the allied nations of the war and succoring starving populations since Armistice Day.

Meanwhile the Republican leaders at Washington have failed utterly to propose one single measure to make rural life more tolerable. They have signalized their 15 months of congressional power by urging schemes which would strip the farms of labor; by assailing the principles of the farm loan system and seeking to impair its efficiency; by covertly attempting to destroy the great nitrogen plant at Muscle Shoals upon which the government has expended $70,000,000 to supply American farmers with fertilizers at reasonable cost; by ruthlessly crippling nearly every branch of agricultural endeavor, literally crippling the productive mediums through which the people must be fed.

We favor such legislation as will confirm to the primary producers of the nation the right of collective bargaining and the right of co-operative handling and marketing of the products of the workshops and the farm and such legislation as will facilitate the exportations of our farm products.

We favor comprehensive studies of farm production costs and the uncensored publication of facts found in such studies.

Lapeer Farmers to Try Consolidated School

LAST week Hadley township, Lapeer county, voted by substantial majority to form a Twnship School Dist., consolidating the districts. This is the first township of Lapeer county to take this progressive action. Hadley public schools are adequate in room to accommodate scholars from the whole township. They are free from all indebtedness and buildings and equipment will be turned over to the new district. In addition, E. J. Hemingway has offered to donate to the district ten acres of land opposite the school building.

A Standard Agricultural School will be operate beginning next September. Its organizations has already commenced and five trustees will be elected at the first annual school meeting, July 12. This school will receive from the United States government $1,000 federal aid; and from the state of Michigan, $600 together with $300 for each bus used for the transportation of pupils to and from school.

Mr. Lightfoot, Supt. of Consolidated schools at Gaines, spent several days last week explaining the Township District System to the voters. His efforts were a material aid in carrying the question at the polls.

The German element of the township either fearing that success would injure their parochial or prompted by that old desire to oppose progressive Americanism, were practically a unit against the proposition. They were supported and encouraged in their attitude by Wm. Ivory, State Representative of Lapeer county, who was evidently influenced to forget America and her ideals in order to play cheap politics, confident that the opposition was the winning side. Ivory's record shows that he opposed Local Option when this was a burning question in the county. Farmers of the whole state remember how he opposed their interests when as chairman of the legislative committee he failed, through negligence or opposition to report out the Terminal Warehouse Bill in time for it to become a law. Lapeer county is entirely agricultural and certainly merits a more progressive and representative man to look after the farmers' interest in the lower house at Lansing. The Farm Bureau should see to it that no incompetent cheap politician is elected from Lapeer county in November or even receive a nomination at the August primaries.

The election was the hottest contest in the history of the township, and its progressive people are to be congratulated upon the results of their strenuous efforts to have the voters remember that principle handed down from the ordinance of 1787, "Education, Religion and Morality being necessary to good government, schools and the means of Education shall forever be encouraged."—*Contributed.*

Use of Shoddy Creates Wool Surplus and Demoralizes Wool Market

HALF A billion pounds of shoddy were thrown on the American clothing market in 1919, while a billion pounds of unmanufactured, virgin wool were accumulating in the storehouses. Shoddy is made of woolen rags, re-spun perhaps as often as eight times. It is usually woven with a small percentage of virgin wool to stick the broken fibres together. Of the 620,000,000 yards of "all wool" cloth produced by the nation's mills, the amount of shoddy used would have produced 380,000,000 yards, if straight shoddy cloth had been turned out. Mixed with a little new wool, it entered into a composition of a vastly greater yardage. In the same period, the amount of new wool used would have produced 240,000,000 yards of virgin wool cloth, if it had not been adulterated with shoddy.

"Last year, as never before, the shoddy interests succeeded in foisting their good on the public," says Howard F. Green, Secretary of the National Sheep and Wool Bureau of America. "Only 600,000,000 pounds of wool in its natural state or 300,000,000 pounds of the cleaned wool, were converted into cloth. Most of this amount was mixed with shoddy to make it stick together. If the entire 300,000,000 pounds had been made into pure virgin wool cloth, it would have provided only 240,000,000 yards, as against the 380,000,000 yards of shoddy goods.

"It would have taken 1,550,000,000 pounds of virgin wool to have made the entire 620,000,000 yards of 'all wool' cloth turned out by our mills. But the entire amount need not have been of virgin wool. There should have been virgin wool cloth for those who could afford it and shoddy for thinner purses. That would have provided for fair competition between virgin wool cloth and shoddy and for a fair range of prices. Instead, through the lack of stamping, shoddies were sold as 'all wool' and the public accepting 'all wool' to mean virgin wool, was denied the right of choice and the benefit of a range of prices.

"Today, the stores are filled with shoddy clothing and a billion pounds of virgin wool fill the storehouses. The shoddy interests have become so thoroughly intrenched through the right of their product to masquerade as 'new wool' under the popular term 'all wool,' that they have been able to create in their own interest an artificial over-supply of virgin wool.

"In spite of this billion pounds in the storehouses, the world produces a third less wool annually than it needs and the demand for new wool is as great as ever. The shoddy manufacturers have simply thrown themselves between the public with its demand for virgin wool and the sheep men with their supply.

"As a result the wool growers are being forced into insolvency. To save those of the West from immediate ruin, the Federal Reserve Board has authorized the San Francisco Federal Reserve Bank to advance money to help them carry their unsold clips. However, this aid affords only temporary relief. The farmers and sheep men must have permanent relief from the unfair competition of the rag-pickers.

"That billion pounds of unmanufactured virgin wool in the storehouses, kept from the public which wants and needs it by the legal right of manufacturers to use nuidentified shoddy in their 'all wool' cloth, threatens the annihilation of the sheep and wool industry. It is to the interest of every voter to get behind the French-Capper Truth in Fabric bill and see that it is enacted into law at the next session of Congress. Between enlightened public opinion and the Truth in Fabric Law, the wool growers may be able to recover some of this spring's losses at next spring's clip."

Wheat Price Less Than Average Production

THE COST of producing wheat of the 1919 crop was as low as $1 a bushel on just two farms out of 481 included in a cost of production study just cmpleted by the United States Department of Agriculture. On 20 farms it was $5 or over. The bulk of the farms produced wheat at a cost somewhat less than midway between these two extremes. The average cost per bushel for all farms was $2.15. At such a price, half the farmers in question would have lost money on their wheat.

Fourteen representative districts in the Wheat Belt were visted by the field men of the Office of Farm Management in making this investigation, a preliminary report of which has just been issued. Nine winter wheat areas were surveyed in Kansas, Nebraska and Missouri, and five spring wheat areas in Minnesota, North Dakota and South Dakota. For winter wheat 284 records were taken, for spring wheat 197.

In the winter wheat areas costs ranged from $1 a bushel for two farms to $8.20 on one farm. The average cost was $1.87. If the price received had been $1.87 more than half of these winter wheat growers would have produced wheat at a loss.

In the spring wheat areas the average cost was much higher, $2.65, the range running from $1.10 for one farm to $5 or over for 17 farms. If the price received had equaled the average cost, between 50 and 55 per cent of these spring wheat growers would have failed to break even.

Yields averaged 14.9 bushels per acre for the winter wheat farms, and 8.4 bushels for the spring wheat farms, and the cost per acre $27.80 for winter wheat, as against $22.40 for spring wheat.

Department specialists in cost of production studies, point out in this connection that, for the farms covered in this investigation, the so-called "necessary price"—that is, the price necessary to give the producer a fair degree of certainty of making a profit—would be found at a level considerably above that of the average cost of production. For example, to allow a profit on 80 per cent of the wheat produced on the farms covered by this study, the price would have to be about $2.60 as compared with an average cost of $2.15. At a price covering the average cost plus 10 per cent, 75 per cent of the crop would be covered, but 40 per cent of the growers would still fail to break even.

Railroads Under Private Control

SIX MONTHS of private control of the railroads and what have we got? Everyone clamoring for cars that cannot be supplied; freight tie-ups; late trains; embargoes; applications presented for thirty per cent increase in freight rates.

The Farmers' National Council told the President last fall that the return of the railroads to private hands would cost the farmers an extra three to five billion dollars per year. The statement was scoffed at. The argument was made that private control meant greater efficiency and greater incentive to serve the public and that it would be but a few weeks before all the tangles in the railroad snarl would be straightened out and everything would be lovely once again. But not even during the height of the war emergency were the railroads in such a condition as they are today. Private control has not only signally failed to restore the roads to their pristine efficiency, but has actually permitted them to become more demoralized and unfit for service. The cost to the government of operating the roads when they had to be operated at maximum service regardless of cost and when hundreds of thousands of cars were in government service is insignificant compared to what it has cost and will continue to cost the farmers and other shippers because of lack of cars, embargoes and shipments delayed in transit.

The roads are returning as fast as possible to that beautiful old basis of competition. A writer in the Saturday Evening Post tells us that there is no question but what the people desire the roads to operate on a competitive basis, but he does not explain why they should so desire when the kind of competition practised by the railroads results in all kinds of inconveniences to the public. Take the matter of consolidated ticket offices, for instance. The man who has traveled any distance since the government consolidated the ticket offices appreciates their convenience. At the same window where he buys his ticket he may secure any information he desires about train schedules, fares, etc., on almost any line in the United States. Under the old conditions a man desiring to make a trip through a section served by several lines was obliged to spend a day or two visiting the respective ticket offices of the various lines in widely scattered sections of the city. And it is to those conditions which the majority of the lines propose to return.

Nor is that the only manner in which the public is to be inconvenienced when the roads all go again to their "public-be-dammed" way. Under government control cars were routed over the most direct line. It didn't matter whether the P. D. Q. or the X. Y. Z., got the most profit out of the car. The government, being for the people, placed service to the people first. But under the theory of competition there will be no such tender solicitude for the welfare of the public. If the P. D. Q., accepts a carload of farm produce which can be transported to its destination entirely over the P. D. Q. lines it will never leave the P. D. Q. tracks although the time in transit might be cut in half by re-routing part of the way over the X. Y. Z.

Such are some of the penalties we will have to pay for returning the railroads to private corporate interests to be run for profit instead of service.

Michigan and New York Crops

MOST OF THE early pioneers of Michigan came from New York. We wonder if they have ever pined to return there. We hope not. New York is a wonderful state in many respects. Its natural scenery is beautiful and impressive. Its canals, rivers, railways and splendid highways afford ready avenues of transportation. The soil is good. The climate is suited to the growing of most crops. And yet withal we do not think that New York state can hold a candle to Michigan when it comes to farming.

The editor recently drove four hundred and fifty miles through New York's choicest agricultural counties. The topography of the land is very similar to some of the best lands in Michigan, slightly rolling. Soil types are almost identical with ours. Vegetation in general seemed to be about as far advanced as in Michigan, and yet the majority of grain crops did not appear to be as far along as they were in Michigan two weeks previously. I was particularly struck with the poor condition of the corn. By the middle of June most of the corn in the southern half of Michigan was up eight to fifteen inches, but no where in the state of New York did I see corn anywhere near as high as that as late as the twenty-ninth day of June. The same comparative distinctions are true of other crops. Such wheat and oat fields as I saw gave no promise of a decent crop. Most of them were straggly and uneven and did not indicate a half crop. As an indication of the lateness of the season in New York I saw several farmers planting beans.

It is possible that my vision on the above occasions was slightly colored by a spirit of home pride, nevertheless I am convinced that a careful comparison between the crops of New York and Michigan would show the latter far in the lead.

Farm Bureau's Political Platform

WE CANNOT speak in too high praise of the effort of the American Farm Bureau Federation to secure in the Democratic and Republican platforms the inclusion of planks dealing with specific farm problems. Moreover, in view of the reactionary beginnings of the Farm Bureau, we are surprised and gratified over the thorough progressiveness of many of the planks submitted. We reproduce below the more important suggestions presented to the national conventions of the two leading parties:

1. We recognize agriculture as the fundamental industry and we pledge ourselves to give it practical and adequate representation in the cabinet and in the appointment of governmental officials, and on commissions on a bipartisan basis.
2. We pledge to all farmers the full, free and unquestioned right of co-operative marketing of their farm products and purchase of their supplies and protection against discrimination.
3. We pledge effective national control over the packers and all other great interstate combinations of capital engaged for profit in the manufacturing, transportation, and distribution of food and other farm products and farm supplies and that railroads be required to supply the necessary rolling stock and terminal facilities to properly and promptly distribute all farm products when offered.
5. We pledge the perpetuation and strengthening of the Federal Farm Loan system and the improvement of facilities for loans on farm commodities and the administration of the Federal Reserve system in such way as will at all times supply sufficient ready money for food production needs by rediscounting if necessary all such loans of Member Banks on a basis that will not be above six per cent to the borrower.
7. We pledge ourselves to the conservation of coal oil, waterpower, and other natural resources in the public interests and to their distribution without discrimination against farmers and especially to put an end to the devastation of our commercial timber lands.
9. We pledge the repeal of wartime laws restricting the rights of free speech, free press, and peaceable assemblage, and we pledge the restoration to all loyal people of these fundamental rights.
10. We are opposed to any form of compulsory military training in time of peace.
11. We pledge our support to graduated income and excess profit taxes supplemented by a graduated inheritance tax to furnish the additional revenue needed to meet the cost of the war.
14. We pledge a national system of highways beginning with the farm to market roads as all farm products must go over highways before arriving at lines of distribution of consuming centers.

It is significant that the Republican National convention adopted the above agricultural platform almost verbatim, and the Democratic convention, after pointing out what the administration had already done for the farmers, adopted the essence of the Farm Bureau platform. Both of the agricultural planks of the two platforms appear elsewhere in this issue and are worth studying.

If the two great parties mean what they say, and we can judge their sincerity in part by their past performances—agriculture will get a better deal in the future than it has in the past. But agriculture will get nothing unless its organized forces present their claims for recognition. Some of our statesmen deplore the tendency of capital, labor and agriculture to organize and exert pressure against political parties and legislative bodies, but experience has shown that if bodies of people are indifferent to policies and legislation affecting them, the makers of such polcies will be likewise indifferent. Hence, we rejoice that the American Farm Bureau Federation has gone into politics to the extent of presenting the claims of agriculture to the great political parties.

New York Farmers Want Farmer Governor

THE DECISION of Michigan farmers to elect a governor this fall who understands agricultural problems has had its effects in other states, and even the farm leaders of staid and conservative New York state are casting about for a gubernatorial candidate who will measure up to the agricultural standards. John Dillon, former state food and market director of that commonwealth is conducting a poll among farmers and finds an overwhelming sentiment for a "farmer" governor regardless of his political creed. It is also proposed to conduct a referendum to determine whether the farmers will hold a mass meeting and endorse their choice for governor or whether they will rest their choice upon a questionnaire to be submitted to each candidate.

These are encouraging signs. They show that farmers are beginning to realize they have been derelict in their duties of citizenship and are determined to show a greater interest in the future in the qualifications of candidates and affairs of government.

The awakening will spread, and when the movement has assumed such proportions as to become a factor in political affairs, a good deal of the opposition now directed against farmers going into politics will fade away.

The Democrats in national convention steered shy of the prohibition issue only to nominate a wet candidate for President, thereby placing the issue squarely before the people.

Ananias was counted a pretty fair liar, but that was before the propagandists of the sugar companies told their stories about the 1920 sugar beet acreage.

The bosses of the two leading parties have held their conventions and nominated their candidates. Now let's have a people's convention and nominate men whom the people can support.

We suppose the Michigan State Constabulary will post a soldier at every apple tree in Michigan this year, and insure a bumper crop of fruit.

What the Neighbors Say

SUGAR COMPANIES' ACREAGE ON POOR LAND

Twenty of us farmers here have organized and own a 15 h. p. gas engine and a grain separator and just lately have bought a beaner. Our officers are Dan O'Weefe, president; Malcolm Carlson, secretary; Edw. Wildey, treasurer.

Now we can thresh when we are ready and do not have to wait until the thresher men are willing to come and blow one half of the grain on the stack and charge a good stiff price just the same.

The company's name is the "Garfield, Mt. Forest and Bentley Threshing Company." We could have more than twenty members but we thought twenty is enough as it saves the machine and the more members we have the more trouble as all cannot thresh at once.

About the same men that belong to the threshing company also belong to the Michigan Sugar Beet Growers' Association. Two are growing scab beets, the rest are holding out. If we can grow beets next year for our own factory, we will be willing to give a certain amount of acres to start for nothing just to help ourself. Whatever we give ourself we are not giving Wall Street, where there is no return of any kind excepting foul air, and we cannot live on hot or anykind of foul air as our lungs will give out.

The enclosed clipping is from the Bay City Times Tribune of June 11, also explains itself. I send them a while ago a news item of our association being 100 per cent true and you ought to have seen how they made me out a liar, as they inquired at the Columbia Sugar factory and also at the Michigan Sugar factory about their acreage and the companies officers said they had all the acreage they could handle and did not have any trouble getting it. From what I can learn it is true they have quite a lot of contracts from farmers who never grew beets before. It is very easy to get that kind of farmer, as sugar is high. They think it will bring a high price for their beets. Mebbe so. Another kind of contract they have is in the huckleberry swamps of which there is quite a lot here; they could not raise a beet the size of a lead pencil in all summer, so we just can make up our minds that beets are very scarce this year anyway and drop raising sugar beets like hot potatoes for the sugar kings and try our level best to get our factories running by next year. We farmers are willing to raise beets then.

We all like your M. B. F.—*F. E. S., President Crump Local, Michigan Sugar Beets Growers' Ass'n. Bay County.*

Only two out of twenty-five members growing beets certainly shows loyalty to the cause. If the association stands as firm all over Michigan even though their demand for a better price was ignored by the sugar manufacturers, the farmers have won a victory. They have shown the public that agriculture has began to wake up and that in the near future its demands will have to receive more attention than it has in the past.

We cannot understand why many country newspapers will take up a stand against the farmer. The greater part of their circulation is among the farmers. Some day they will open their eyes and see beyond the end of their nose.—Editor.

LET FARMERS TAKE INTEREST IN GOVERNMENT

The sound advice of Mr. John Fitzpatrick, published in M. B. F. of June 12th of Beaverton, Clare county, should be heeded and acted upon by the farmers of Michigan who have, hitherto, left the arranging of political affairs, very largely to the politicians while they the farmers, were busily engaged with their farming affairs at home.

But times and customs are changing and for the better. The Farm Bureau and other organizations, in the interests of farmers, the primary producing class, are now coming to the front and in the interests of government for the masses rather than for the benefit of the classes.

No man should be entrusted with the duties of a public office who does not possess the three essentials for acceptable service—ability, integrity and activity—and, from the agriculturists of Michigan, can be selected men in abundance who possess the needed three essentials.

The present lack of help on the farms, it is to be hoped will not long continue, whereby the farmers are so fully and continually compelled to give so full attention to the raising of food crops that the nonproducers of food may not go hungry. The press of the state is very properly calling attention to the possibility of a food shortage in the near future and which can be avoided only by the providing of the necessary help to till the soil and raise food crops.—*J. T. D., Clinton County.*

Farmers everywhere are preaching these very things, but a well known party leader was overheard recently to say that the farmers do a lot of talking, but when it comes to voting they follow the same old partisan dictates. We think this gentleman has a surprise in store for him.—Editor.

IN FAVOR OF AMENDMENT

I am more than surprised to see your staunch defense of the parochial schools in issue of June 12. Without going into a lot of details you certainly are lined up on the wrong side of this question.

It is to be fervently hoped that the farmers who have the least to be gained by an alien pope forcing his alien system upon a free American people and innocent children—will carry the amendment by a handsome majority, thus teaching the city cesspools a much needed lesson in pure Americanism. While waiting for this happy event, please be good enough to read and meditate upon the enclosed clipping. Why not publish some one else's views of this vital subject? How many priests did you consult?—*R. F. Lamb, Litchfield, Mich.*

The Business Farmer has never discussed this proposed amendment with anyone of Catholic faith, either priest or layman. Such opinions as we have formed upon the subject are the result of our personal and unbiased convictions. We are not only willing but glad to present others' views on this subject whether they agree with ours or not.—Editor.

PACKERS' SIDE OF REGULATION

Your issue of June 5, 1920 contains a summary of the report of the Federal Trade Commission, submitted by the Farmers' National Council.

It is apparent from the heading given this article, and from your editorial comment, that you consider the above mentioned report furnishes justification for the passage of proposed legislation to control the packers. The mere fact that the supposed justification for such measure lies in the report of the Federal Trade Commission, should be sufficient argument against their passage.

The points made by this commission to uphold their contention that monopoly exists have no basis in fact. These charges have been repeatedly disproved by printed statements issued by Swift &Company, copies of which may be obtained by anyone who is interested.

For the further information of your readers, however, we shall repeat the principal reasons why we believe the proposed legislation will be harmful to both live stock producer and packer.

1. The legislation is unnecessary because there are plenty of laws on the statute books now, such as the Sherman and Clayton anti-trust laws, and the Federal Trade Commission Law to cover abuses if any exist.

2. Anything that hampers the packing industry through government interference will make it more

TEXACO MOTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE

TEXACO

TRACTOR OIL

Under the blazing mid-summer sun, the horse and mule often fall down—but the tractor goes on. In fact, the tractor often does its best work in hot weather. And in the rush season it pulls the tillage apparatus by moonlight as well as by daylight.

Your tractor will go on without faltering, or time out, if you exercise proper foresight as regards water and oil.

You must oil regularly, carefully, and use the best available. And this means TEXACO TRACTOR OIL.

It helps immeasurably in keeping the tractor running at full capacity.

TEXACO TRACTOR OIL has the right body for the work and it clings to the hot surfaces of cylinders, pistons, and bearings. Does not break down under engine heat, provides adequate and constant lubrication.

It is a clean, carefully made oil and will not form hard destructive carbon.

Buy TEXACO (Red Star Green T) TRACTOR OIL and you get an oil that measures up to your severest requirements.

TEXACO TRACTOR OIL is shipped in 55 and 33-gallon steel drums, wooden barrels, half barrels, and 5-gallon cans.

TEXACO T REG. U.S. PAT. OFF.

"There is a Texaco Lubricant for Every Purpose"

The Farm Home
A Department for the Women

Edited by CLARE NORRIS

WHAT DO YOU THINK OF IT

AN INTERESTING report has just been received from Washington, D. C., showing the result of a survey of farming conditions thruout the United States. The government has been working on this survey in conjunction with the Home Demonstration agents who are pretty thoroughly scattered throughout the entire country and therefore in position to make comprehensive reports from the different counties.

The report is composed largely of quotations from different representative farm women throughout the states, with a summary of the needs, and also with suggestions as to the remedy. We give a few extracts from this report with the summary, as it appears very interesting and we would be glad to have our readers give us their opinion of this very vital question—for it is a vital question to both the women of the country and the women of the towns and cities for women in town have come to realize more and more that they are dependent upon their sisters in the country—we cannot live for self alone—it's co-operation in every line of work which brings success and happiness.

It is believed that the survey just completed by farm women themselves in co-operation with home demonstration agents is but the first of a series of intensive studies which will from time to time be made not only to show the needs but to mark the advancement that is sure to come as the government, colleges and farming people work together on a common program for better agricultural and a richer rural farm life.

The Home Demonstration Agent

Women are everywhere welcoming the services of the home demonstration agent much as farmers welcome the agricultural county agent. This trained home economics worker, employed on Federal, State and local funds and devoting all her time to the advancement of home efficiency is studying with home makers the needs of individual homes and communities and is thus able, by linking her technical skill with the practical knowledge and experience of the housewives, to co-operate in the accomplishment of large results by providing a channel through which the State agricultural college and the Department of Agriculture can deal directly with rural home makers.

WEEKLY CHEER

Growl and the way looks dreary;
Laugh, and the path is bright,
For a welcome smile
Brings sunshine, while
A frown shuts out the light.

The five outstanding problems which the survey would indicate call for special consideration are:

1. To shorten the working working day of the average farm woman.
2. To lessen the amount of heavy manual labor she now now performs.
3. To bring about higher standards of comfort and beauty for the farm home.
4. To safeguard the health of the farm family and especially the health of the mother and growing child.
5. To develop and introduce money yielding home industries where necessary in order to make needed home improvements.

These changes may most speedily be brought about by:

1. Introducing (a) improved home equipment, principal among which are running water and power machinery, and (b) more efficient methods of household management, including the rearrangement of the inconvenient kitchen and the installment of a modern heating system for the whole house.
2. Helping farm people to understand and apply the laws of nutrition and hygiene, through home demonstrations in

(a) Child care and feeding.

b Food selection for the family.

c Training in the essentials of home nursing, and

d The installation of sanitary improvements.

3. Cultivating the idea that investment in the comfort, beauty, health, and efficiency of the farm home and community is a wise and legitimate expenditure, and perhaps the only means of stopping the drift of young people to the city.

"The country offers greater opportunity for satisfying life than the city and country women have as great capacity as city women for the enjoyment of life, but are more handicapped with routine work which absorbs their time and strength."

The farm woman does not wish to put up with today in the anticipation of something better tomorrow or in her old age, but wants a chance to enjoy today as the only possession she is sure of. The woman feels that she owes it to herself and her family to "keep informed, attractive, and in harmony with life as the years advance."

Women realize that no amount of wise arrangement or labor saving appliances will make a home. It is the woman's personal presence, influence and care that make the home. Housekeeping is a business as sordid and practical as farming and with no romance in it; homemaking is a sacred trust. "A woman wants time salvaged from housekeeping to create the right home atmosphere for her children, and to so enrich home surroundings that they may gain their ideals of beauty and their tastes for books and music not from the shop windows, the movies, the bill boards, or the jazz band, but from the home environment."

In the minds of many women is the thought that the man at the head of the house lives under a strain of hard work and competition and that "for him to have a comortable fireside and a family that is happy, healthy, well fed, well clothed, well sheltered and contented is his right and his greatest boon."

Because of the shortage of help prevalent throughout the country, women consider it especially important that modern equipment and machinery so far as possible do the work which would otherwise fall to women.

The farm woman knows that there is no one who can take her place as teacher and companion to her children during their early impressionable years and she craves more time for their care. She feels the need of making the farm home an inviting place for the young people of the family and their friends and of promoting the recreational and educational advantages of the neighborhood in order to cope with the various forms of city allurements. She realizes that modern conditions call for an even deeper realization and closer contact between mother and child. The familiar term, "God could not be everywhere so He made mothers," has its modern scientific application as no amount of education and care given to children in a school or elsewhere outside the home can take the place of mothering in the home

Farm women want to broaden their outlook and keep up with the advancement of their children "not by courses of study but by bringing progressive ideas, methods and facilities into the every day work and recreation of home environment.

The Making of a Friend

By Edgar A. Guest

We nodded as we passed each day
And smiled and went along our way
I knew his name and he knew mine,
But neither of us made a sign
That we possessed a common tie;
We barely spoke as we passed by.

How fine he was I never guessed.
The splendid soul within his breast
I never saw. From me was hid
The many kindly deeds he did.
His gentle ways I didn't know
Or I'd have claimed him long ago.

Then trouble came to me one day
And he was first to come and say
The cheering words I longed to hear.
He offered help and standing near
I felt our lives in sorrow blend,
My neighbor had become my friend.

How many smiles from day to day
I've missed along my narrow way;
How many kindly words I've lost;
What joy has my indifference cost!
This glorious friend that now I know,
Would have been friendly years ago.

The bud but very little shows
To tell the beauty of the rose,
And him we greet in passing by
With scarce a nod, the day we sigh
May blossom as the storms descend
With all the beauty of a friend.

DEAR CHILDREN: We have said so much about the Boy Scouts but very little about the Campfire Girls, which organization corresponds to that of the Scouts. The girls learn how to take very good care of themselves, they have delightful hikes the same as the boys, learn to know the birds and flowers and grow into beautiful women.

Their aims and objects as told in their pledge is this:

To seek beauty; give service; pursue knowledge; be trustworthy; hold on to your health; glorify the work nd be happy.

This is a creed which everyone, old and young, boy and girl could well afford to cut out and take as their standard of every day living.

And now I want to tell you that I too am to have a little vacation—oh, your letter will appear just the same as usual in the paper, as even though I go away, I take some of my work with me, but I'm going up to the northern part of our beautiful state where the lake streams are cold, fish abound, and the roar of the dusty city will be left far behind for a short time.

When I return I will tell you of my vacation trip. Affectionately yours, AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare—I just got through reading the Children's Hour and I thought I would try and write to you. I am 13 years old and will be in the 8th grade next year. I am 5 ft. tall and I weigh 98 lbs. I have light hair and blue gray eyes. We live on the Lake County poor farm and have a lot to do as we have no hired girl.. I will close with some conundrums. What belongs to yourself and is used by your friends more than by yourself? Your name. How does water get in a watermelon? The seed is planted in the spring. What is the most difficult ship to conquer? Hardship. Ruth Lee, R 1, Chase, Mich.

Dear Aunt Clare—I like to read the letters in the M. B. F. so maybe mine will be well enough to print too. We all like the M. B. F. as it has reading for the whole family. I am nine years of age and will be in the 4th grade next year. I have never been well so I stayed in town with my grandma my first year in school and this year I made 2nd and 3rd grades. We have a large farm and a tractor. We have 1 1-2 miles to to go to school but mama takes us whenever she can. A. Belle, Dexter, Mich.

Dear Aunt Clare—As I have never written to you before I thought I would now. I have been reading the letters from other boys and girls and am interested in the Children's Hour. I am a boy 11 years old and passed into the eighth grade this year. I have one sister. I live on a forty acre farm. I helped to plant corn, potatoes, cucumbers and beans. For pets I have two kittens and a dog. We have 70 little chicks and also two horses. I will close, hoping to see my letter in print. Glen McClanathan, Mt. Pleasant, Mich. R 6.

Dear Aunt Clare—I am a girl 12 years old and live on an 80 acre farm. I am in the 5th grade at school. I go to the Otter Lake Agricultural School. My teacher's name is Miss Florence Johnson. I live near a river and have lots of fun in the summer. My parents take the M. B. F. I guess I will close now, hoping to see my letter in print. Katherine Kallungi, Tapiola, Mich.

Dear Aunt Clare—I am a girl nine yrs. of age and in the 4th grade. We live on an 80 acre farm near the shores of Lake Huron. There is a brook running through our farm and in summer I often go fishing in it and picking flowers along its banks. I like to read your short stories and the letters from the other boys and girls. I hope to see my letter in print.—Elizabeth Peltz, Rogers, Mich.

Dear Aunt Clare—I drew two pictures one of a candle and another of a tree. This certainly is the very busiest season of the year. We children are going to have about 2 1-2 acres of potatoes this year. I would like to hear from some of the children who write to the M. B. F. Effie Hill Cooks, Mich, R 1.

Dear Aunt Clare—My uncle takes the M. B. F. and I like to read the Boys and Girls names and letters in the Children's Hour. This is the first time I have written to you. I hope this will escape the waste basket. I am a girl 12 years old and I am in the 6th grade at school. Our teacher last year was Miss Clements. I will close as my letter is getting long. Violet Drayton, Lakeview, Mich. There is something that is round as an apple, bussy as a bee the pretty little thing you ever did see. Answer—A watch.

Dear Aunt Clare—I have read the Children's Page and think it is enjoyable. I have never written to you before. I am about 15 years old and have two brothers and two sisters. I would like to have boys and girls write to me. Well my letter is getting quite long and will close, hoping to see my letter in print.—Anita Bricker, Pt Huron, Mich., R 2.

Dear Aunt Clare—I have just read the Children's Hour and like it fine. My father takes the M. B. F. and likes it very well. For pets I have four little kittens, three old cats and a dog. I live on an 80 acre farm. Carleton Brown, Morrice, R1, Mich.

AND then arose rage. At the taste of the blade she threw it from her, half sprang at the priest, half gave command to her spearmen for the death of him, and shook and trembled in the violence of her effort for self-possession. Following with her eyes the flight of the dagger to assure herself that its poisoned point should not strike the flesh of another and wreak its evilness upon it, she drew from the breast-fold of her dress another tiny dagger. This, too, she tested with her tongue, ere she broke Francis' skin with the point of it and caught in the cup of gold the several red blooddrops that exuded from the incision. Francis repeated the same for her and on her, whereupon, under the flashing eyes, the priest took the cup and offered the commingled blood upon the altar.

Came a pause. The Queen frowned.

"If blood is to be shed this day on the altar of the Sun God——" she began threateningly.

And the priest, as if recollecting what he was loath to do, turned to the people and made solemn pronouncement that the twain were man and wife. The Queen turned to Francis with glowing invitation to his arms. As he folded her to him and kissed her eager lips, Leoncia gasped and leaned closely to Henry for support. Nor did Francis fail to observe and understand her passing indisposition, although when the flush-faced Queen next sparkled triumph at her sister woman, Leoncia was to all appearance proudly indifferent.

CHAPTER XXI

TWO THOUGHTS flickered in Torres' mind as he was sucked down. The first was of the great white hound which had leaped after him. The second was that the Mirror of the World lies. That this was his end he was certain, yet the little he had dared permit himself to glimpse in the Mirror had given no hint of an end anything like this.

A good swimmer, as he was engulfed and sucked on in rapid, fluid darkness, he knew fear that he might have his brains knocked out by the stone walls or roof of the subterranean passage through which he was being swept. But the freak of the currents was such that not once did he collide with any part of his anatomy. Sometimes he was aware of being banked against water-cushions that tokened the imminence of a wall or boulder, at which times he shrank as it were into smaller compass, like a sea-turtle drawing in its head before the onslaught of sharks.

Less than a minute, as he measured the passage of time by the holding of his breath, elapsed, ere, in an easier flowing stream, his head emerged above the surface and he refreshed his lungs with great inhalations of cool air. Instead of swimming, he contented himself with keeping afloat, and with wondering what happened to the hound and with what next excitement would vex his underground adventure.

Soon he glimpsed light ahead, the dim but unmistakable light of day; and as the way grew brighter, he turned his face back and saw what made him proceed to swim with a speed stroke. What he saw was the hound, swimming high with the teeth of its huge jaws gleaming in the increasing light. Under the source of the light, he saw a shelving bank and climbed out. His first thought, which he half carried out, was to reach into his pocket for the gems he had stolen from the Queen's chest. But a reverbrant barking that grew to thunder in the cavern reminded him of his fanged pursuer, and he drew forth the Queen's dagger instead.

Again two thoughts divided his judgment for action. Should he try to kill the swimming brute ere it landed? Or should he retreat up the rocks toward the light on the chance that the stream might carry the hound past him? His judgment settled on the second course of action, and he fled upward along a narrow ledge. But the dog landed and followed with such four-footed certainty of speed that it swiftly overtook him. Torres turned at bay on the cromped footing, crouched, and brandished the dagger against the brute's leap.

But the hound did not leap. Instead, playfully, with jaws widespread of laughter, it sat down and extended its right paw in greeting. As he took the paw in his hand and shook it, Torres almost collapsed in the revulsion of relief. He laughed with exuberant shilliness that advertised semi-hysteria, and continued to pump the hound's leg up and down, while the hound with wide jaws and gentle eyes, laughed as exuberantly back.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

Pursuing the shelf, the hound contentedly at heel and occasionally sniffing his calves, Torres found that the narrow track, paralleling the river, after an ascent descended to it again. And then Torres saw two things, one that made him pause and shudder, and one that made his heart beat high with hope. The first was the underground river. Rushing straight at the wall of rock, it plunged into it in a chaos of foam and turbulence, with stiffly serrated and spitefully spitting waves that advertised its swiftness and momentum. The second was an opening to one side, through which streamed white daylight. Possibly fifteen feet in diameter was this opening, but across it was stretched a spider web more monstrous than any product of a madman's fancy. Most ominous of was the debris of bones that lay beneath. The threads of the web were of silver and of the thickness of a lead pencil. He shuddered as he touched a thread with his hand. It clung to his flesh like glue, and only by an effort that agitated the entire web did he succeed in freeing his hand. Upon his clothes and upon the coat of the dog he rubbed off the stickiness from his skin.

Between two of the lower guys of the great web he saw that there was space for him to crawl through the opening to the day; but, ere, he attempted it, caution led hif to test the opening by helping and shoving the hound ahead of him. The white beast crawled and scrambled out of sight, and Torres was about to follow when it returned. Such was the panic haste of its return that it collided with him and both fell. But the man managed to save himself by clinging with his hands to the rocks, while the four-footed brute, not able so to check itself, fell into the churning water. Even as Torres reached a hand out to try to save it, the dog was carried under the rock.

Long Torres debated. That farther subterranean plunge of the river was dreadful to contemplate. Above was the open way to the day, and the life of him yearned towards the day as a bee or a flower toward the sun. Yet what had the hound encountered to drive it back in such precipitate retreat? As he pondered he became aware that his hand was resting on a rounded surface. He picked the object up and gazed into the eyeless, noseless features of a human skull. His frightened glances played over the carpet of bones, and, beyond all doubt, he made out the ribs and spinal columns and thigh bones of what had once been men. This inclined him toward the water as the way out, but at sight of the foaming madness of it plunging through solid rock he recoiled.

Drawing the Queen's dagger, he crawled up between the web-guys with infinite carefulness, saw what the hound had seen, and came back in such vertigo of retreat that he, too fell into the water, and, with but time to fill his lungs with air, was drawn into the opening and into darkness.

In the meanwhile, back at the lake dwelling of the Queen events no less portentous were occurring with no less equal rapidity. Just returned from the ceremony at the Long House, the wedding party was in the action of seating itself for what might be called the wedding breakfast, when an arrow, penetrating an interstice in the bamboo wall, flashed between the Queen and Francis and transfixed the opposite wall, where its feathered shaft vibrated from the violence of its suddenly arrested flight. A rush to the windows looking out upon the narrow bridge, showed Henry and Francis the gravity of the situation. Even as they looked, they saw the Queen's spearmen who guarded the approach to the bridge, midway across it in flight, falling into the water with the shaft of an arrow vibrating out of his back in similar fashion to the one in the wall of the room. Beyond the bridge, on the shore, headed by

THE SIGN OF ROWENA QUALITY

"Tell me, how do you make such delicious bread and biscuits?"

said Mrs. Newly-wed to one of her girl friends.

"It's the easiest thing in the world. I've never found it any trouble to bake good bread, rolls, biscuits and pastry when I had such good flour as

Lily White

"The Flour the Best Cooks Use"

Look for the ROWENA trade-mark on the sack

LILY WHITE is a flour containing the choicest selection of soft and hard wheat grown in America. Soft wheat improves the flavor and color. It insures the baking of a good looking loaf of bread. The flour is correctly balanced to make as good bread as it does biscuits and pastry.

There is just enough hard wheat in LILY WHITE to make it the ideal all-around flour.

After being cleaned four times it is scoured three times, then actually washed, so that every bit of dirt is removed from the kernels of wheat. Everything baked from LILY WHITE is light, tender and of delightful flavor.

Give LILY WHITE a good trial. It is guaranteed to give perfect satisfaction.

No. 2 Mixed	2.33		

"The position of wheat is strong, but some difficulties promise to accompany the marketing of the season's crop," says the *Chicago Daily Drovers Journal.* "Under government control the wheat market was purely artificial, and a return to a natural movement of this cereal is accompanied by credit and transportation difficulties, the results of which cannot be foretold.

"It seems to be a quite general and logical conclusion that, barring widespread crop damage between now and threshing, the tendency this late summer and fall will be downward, to be followed by a substantial advance early next year. Much wheat is and must be marketed each year promptly after harvest, a movement which credit shortage will accelerate to some extent this year. Insufficient transportation facilities can only result in overflowing country elevators, and prices must suffer accordingly, if only temporarily.

"The world's wheat harvest cannot be large this year. The Argentine surplus is about exhausted, Australia and India are said to have little wheat to spare, and while in Europe, France and Roumania have good crops, there will be a place for every bushel of the 250,000,000 it is thought this country may have available for export next year, though the rate of foreign exchange will continue to be a factor in export trade. If these reports are correct, the position of wheat is strong, a condition that should be reflected in prices when the movement of wheat is no longer hampered by overladen markets and overworked railroads.

"Readers are warned that this is not a prediction, but simply a statement of conditions as they promise to affect the price of wheat during the coming months."

The wheat market at Detroit is inactive but at other points shows advancing tendency due to increased export buying and unfavorable reports of the crop throughout the country. Millers are good buyers in the western markets.

CORN LOWER

CORN PRICES PER BU., JULY 6, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.77	1.68½	
No. 3 Yellow		1.64½	
No. 4 Yellow			
PRICES ONE YEAR AGO

No. 2 Yellow	1.88		2.05
No. 3 Yellow	1.92	1.86½	
No. 4 Yellow	1.90		

Corn has lost the strength it showed on the market last week. The prices on the Detroit market declined 13c. The main reason for the weakening of corn was that the price was too high. It was shutting off many uses of the grain, the foremost one being feed for hogs. Corn was so high and hogs were so low that the latter could not be fed on the former at a profit. This is shown by the active selling of hogs. Many corn using industries had to stop using the grain owing to the high price and this reduced the demand to a great extent.

OATS CONTINUES DOWNWARD

OAT PRICES PER BU., JULY 6, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.16	1.08½	
No. 3 White	1.15	1.07

PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard			
No. 3 White	.72½	.72½	
No. 4 White	.72	.71½	

Oat prices are following the trend of corn. There was several drops in the Detroit market during the past week, the total of all amounted to 9c. We are unable to understand the reason for these drops. The 1919 surplus is practically all gone in the United States; in fact, some oats have had to be imported from Canada to help care for the needs here. And reports from the country, until the last few days, show the 1920 crop of oats in an unfavorable condition.

LAST MINUTE WIRES

DETROIT—Oats and corn decline. Wheat gathers strength. Beans inactive and easy. Hay is offered more liberally and market is easy.

CHICAGO—Receipts of grain good. Wheat in demand. Corn and oats lower. Potatoes steady.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

Weekly Trade and Market Review

THE CAR shortage situation continues critical with the possibly slight improvement resulting from the movement of box cars to the Western roads under the order of the Interstate Commerce Commission whereby 19,800 cars were to be delivered to the Western lines. Mr. Aishton, President of the American Railroad Association states that 10,280 cars have been received by the Western roads and 6,223 cars are in transit. Regarding cars fit for shipping bulk grain in, Mr. Aishton states as follows:

"If we waited to secure cars in the Eastern states fit for bulk grain loading in order to relieve the critical Western situation, we moved the cars as they came and issued instructions beforehand to the Western roads as to what they might expect in the way of bad orders and to prepare to put the cars in shape for grain movement.."

Grain harvest is being hampered by the financial situation. Bankers say there will be plenty of money to loan the farmers during this period, but it doesn't show up very fast; in fact, within the last week or two banks, both country and city, have refused to loan money on the new crop of wheat. Credit, during the summer, is a necessity with at least 75 per cent of the farmers and if they cannot get it they have to cut production, which causes a food shortage. So it is up to the bankers to help the producer of foodstuff if they wish to keep this country prosperous and avoid anything that resembles a panic.

Prices in all grains excepting wheat has dropped. It is believed that prices will continue downward up until about the first of January, after that prices are expected to turn and advance again.

BEANS INACTIVE

"Things have been more quiet in the bean market during the month of June than for a long time previously. Many opinions have been expressed concerning the cause for the slackening of demand and probably each reason given has had something to do with it.

"Supply centers stocked up during the switchmen's strike, and when all the embargoes were lifted, the beans flocked in in large numbers. The decline in grain prices had some effect on bean prices, though they have held up remarkably well under the circumstances. Hot weather always causes a cessation of demand for beans, fresh vegetables largely taking their place.

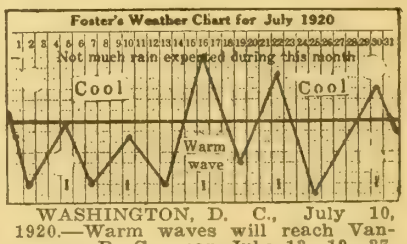
"Acreages have about come up to previous forecasts. Michigan will come nearer 100 per cent than was anticipated. New York, too, will plant more beans than last year, though not up to the mark of two years ago. Good weather conditions, reported from most sections, will insure a good crop."—*The Bean Bag.*

RYE DROPS

Rye has continued downward during the last week but is active and firm on the Detroit market at $2.15 for No. 2. Export demand is good in this grain.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., July 10, 1920.—Warm waves will reach Vancouver, B. C., near July 13, 19, 27, Aug. 2 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of July 14 20, 28, Aug. 3; plains sections 15, 21, 29, Aug. 4; meridian 90, upper great lakes, Ohio-Tennessee and lower Mississippi valleys 16, 22, 30, Aug. 5; lower great lakes and eastern sections 17 23, 31, Aug. 6, reaching vicinity of Newfoundland about 18, 24, Aug. 1, 7. Storm waves will follow about one day behind warm waves, cool waves about one day behind the storm waves.

During first week of this weather period a great high temperature wave will cross continent and will be followed by other disturbances, winding up with unusually cool weather that will cross continent, reaching meridian 90 near July 25, followed by cool weather to end of month and then another rise in temperature. The dreaded hot winds are feared while this great hot wave is crossing continent about middle of July. Hot winds at that time in the great central valleys would be dangerous to corn and northern late oats. There is no remedy against these destructive simoons. We hope it may deal gently with our great corn and oats producing sections.

I also have fears of destructive hails during the weeks centering on Aug. 11 and 25. These hail storms can not be definitely located but they will probably occur between longitudes 80 and 100 and between latitudes 40 and 50. I am only pointing out the danger dates. There is not enough known about these destructive weather events to enable me to make positive forecasts of them.

There are comparatively few in the hay trade who quite realize the significance of the government's June 1 estimate forecasting the tonnage of hay on the present crop. The condition is given at 88.9 per cent with a forecasted yield of 112,000,000 tons; and inasmuch as last year's condition on the same date was 94 per cent and in the past nine years only once has the condition been lower than at present, and inasmuch as since June 1 there have been ample rains, the July 1 estimate should show improvement in both condition and yield and confirm to expectation of the present that an enormous hay crop will be realized this year.

BOSTON WOOL MARKET

The Commercial Bulletin says: "There is less of pessimism in the air, although the market is still erratic and quotations are hardly more than nominal. Some trading in fine Australian has been done, but for the most part the market has been rather dull.

"Reports from the West do not indicate any marked volume of business. Some consignments are reported and here and there sales at unchanged rates.

"Further curtailments in the mill schedules is announced."

Ohio and Pennsylvania fleeces.—Delaine, unwashed, 70@72c; fine unwashed, 62c; 1-2 blood combing, 70@70c; 3-8 blood combing, 53@55c.

Michigan and New York fleeces.—Fine unwashed, 58@60c; delaine unwashed, 68c bid; 1-2 blood, unwashed, 67@68c; 3-8blood, unwashed, 53@54c.

Wisconsin, Missouri and average New England—1-2 blood, 60@63c; 3-8 blood, 50@52c; 1-4 blood, 45@47c.

Virginia and similar—1-2 blood unwashed, 70c bid; 1-4 blood, unwashed, 50@52c.

Scoured basis: Texas—Fine 12 months, $1.60@1.65; fine 8 months $1.45 bid.

California—Northern, $1.65; middle counties, $1.55; southern $1.30@1.35.

Oregon—Eastern No. 1 staple, $1.65@1.70; eastern clothing, $1.50; valley No. 1 $1.55@1.60.

Territory—Fine staple, $1.70; 1-2 blood combing, $1.50; 3-8 blood combing, $1@1.05; fine medium clothing, $1.45@1.50.

Pulled—Delaine, $1.70; AA, $1.50@1.55; A supers, $1.30@1.40.

Mhairs—Best combing, 53@56c; best carding, 48@50c.

LIVESTOCK MARKETS

CHICAGO.—Cattle: Compared with week ago, beef steers, 50c@$1 lower; some warmed up and grassy kind off more; choice corn fed butcher stock, 50@75c lower; others $1@1.50 lower. Hogs—Slow, 25@65c lower than yesterday's average; bulk light and light butchers, $15.25@15.35; bulk 250 lbs. and over, $13.25@15.10. Sheep—Bulk direct to packers; few sales steady.

EAST BUFFALO.—Cattle: Slow. Calves: $1 lower; $6@16. Hogs.—25c lower; heavy, $16@16.25; mixed, $16.50@16.75; Yorkers, $16.65@16.75; light Yorkers, $15.50@16.50; pigs, $15@15.25; roughs, $18; stags, $8@10. Sheep and lambs—Slow; lambs 50c lower; lambs, $8@16.50; other unchanged.

DETROIT PRODUCE MARKET

Buyers are active in the market for all kinds of dairy products. Receipts of butter are large and everything is easily disposed of to either consumers of packers. The market holds its firmness, but eggs are only steady. Receipts are large and require careful handling, as the weather is pretty hot for shipping. Dressed calves are suffering also owing to the weather. Many damaged ones arrive only to be condemned as unfit for food and a great deal of loss results, chiefly because shippers do not use enough ice. Hogs are steady. Buyers are actively taking the best hens and broilers, but the market has been receiving a large percentage of small broilers for which there is little demand and an easy market is quoted. Fruits and vegetables are firm. Strawberries are not in good supply and shipments show the nearing of the finish of the season. There is nothing to take the place of the strawberries, as receipts of other varieties are not large enough to make a market and prices are very high. Receipts of vegetables are small also and buyers have trouble satisfying their needs. Prices are sustained in nearly all lines.

Apples—New, $4@4.50 per hamper; western, boxes, $5.50@5.

Strawberries—Home grown, $8@8.50 per 24-quart case; shipped in, $6@7 per bu.

Cherries—$5@6 per 24-quart case for sour and $3.25@3.50 per 16-quart case for sweet.

Dressed hogs—Light, 19@20c; heavy, 17@18c per lb.

Dressed calves—Best, 21@22c; ordinary, 17@20c per lb.

Live Poultry—Broilers, 60@65; Leghorn broilers, 48@55c; hens, 36@37c; small hens, 34@35c; roosters, 22c; geese, 20@22; ducks, 32@35c; turkeys, 38@40c per lb.

Hides—No. 1 cured calf, 28c; No. 1 green calf, 25c; No. 1 cured kip, 20c; No. 1 green kip, 18c; No. 1 cured hides, 16c; No. 1 green hides, 13c; No. 1 green bulls, 10c; No. 2 cured bulls, 13c; No. 1 horsehides, $7; No. 2 horsehides, $6. Tallow: No. 1, 8c; No. 2, 6c. Sheep pelts, 25c@2.50; No. 2 hides 1c and No. 2 kip and calf, 1 1-2c off.

NATIONAL FARM BUREAU REPRESENTATIVES TO COME TO MICHIGAN

The President and Secretaries of eleven middle west Farm Bureau Federations meeting at Ames, Iowa, June 22nd and 23rd, started an investigation to find out how to correct the evils of heavy gluts, sharp fluctuations of prices and the total inability of the producer to drive a bargain for the products of his years work. Each state will send a representative to a meeting of the Canadian Council of Agriculture in Winnipeg, July 13th, to study the work of the United Grain Growers. The next step will be a meeting of all state organizations of farmers interested in grain marketing. J. R. Howard, President of the American Farm Bureau Federation, has been asked to call this meeting. The State Federations will then meet again on July 28th at Lansing, Michigan.

FARMER PLAYS AT GREAT ODDS

It may be the great and constant gamble with bugs, weather and markets is one of the things that makes farming so fascinating. The general public does not realize that agriculture is just about as certain as speculating in oil stocks. Observe these facts and doubt the statement if you can:

One day of unusual heat at the critical time may reduce the yield of an oat field 25 per cent.

A few hours of rain can half ruin a crop of wheat.

Potato yield may be reduced from 25 to 50 per cent by a short dry spell.

One cold rain can ruin an apple crop.

One hot, muggy day may entirely spoil a crop of beans.

And to these features must be added the fact that countless insects are at constant war with the farmer and that, after he has brought his crop through all these dangers, he has practically nothing to say about the prices he gets.—*The Nation's Business.*

MANY GROWING SORGHUM

A marked increase in the production of sorghum syrup is indicated by reports received by the United States Department of Agriculture, which has been engaged in a special campaign to induce greater production of this crop because of the keen demand for sugar substitutes. At the beginning of the World War the annual yield of sorghum syrup in the United States was approximately 13,000,000 gallons. This his increased steadily until for the past year it was approximately 30,000,000 gallons. The average yield of syrup per acre has been about 100 gallons, but the fact that this figure can be increased is indicated by the departments experiments in which more than 400 gallons per acre have been produced in some localities.

In urging increased plantings to sorghum the department's experts point out that despite the increasing yields the demand is still greater than the supply, as shown by the price for syrup, which has ranged from 90 cents to $1.50 per gallon, and in a few cases even higher.

Crop Reports

MONTCALM, (N. W.)—Most of the farmers are cultivating. Some have begun haying. The planting is done. It is fine growing weather for crops. Just rain enough to keep things growing. The farmers are selling some poultry and live stock. There is no building done but some repair work. The following prices were offered at Lakeview: Cucumbers, $3 cwt.; hens, 20c; butter 55c; butterfat 57c; eggs, 36c; wool, 20c lb.—G. B. W.

OAKLAND (N)—We are having a fine growing time. Corn and potatoes are all planted. Corn is making a good growth. Oats and barley doing fine. Wheat is turning color. Most of us have started haying which we find is better than expected. Stock of all kinds are doing well. Most of the wool is handled by Farm Bureau. Not much building being done on farms. Dr. C. S. Sutherland is building a barn 36 x80. Hay was all cleaned up this spring and so was most everything else in the feed line.—E.F.

SHIAWASSEE—The rain of last week was the saving of all farm crops and also enabled many farmers to plant their bean crop. Farmers as a rule did not care to risk high priced seed in the extremely dry soil. Spring crops in this section is now making a good showing. Corn was slow in coming up, but now is showing a good stand. Early potatoes are doing well and late ones are coming on very good. Prices on farm produce has not changed to any extent for the past two weeks except potatoes, getting higher in price every week. Owing to the early drought, hay is a very light crop and the rain came too late to make much improvement in the growth and many farmers are now cutting grass it is not making any gain in either quality or quantity. Wheat is coming on well and promises to be a very fair crop, although the yield will be far below normal, but seems to be of good quality. Oats are light but are making good gains since the rains of a week ago.—D. H. M.

SANILAC (C)—Are having some nice weather for the growing crops. The crops in Custer are looking fine. Hay and oats are good and there are some pieces of wheat looking good and some not. Have had nice showers of rain, just about enough to keep crops growing. There are some nice pieces of corn and beans, there were quit a lot of beans sowed and most of them are looking good. There were not many acres of sugar beets sown in Custer this year. There was chickory sown, there are some very good stands of chickory and there has been some pieces torn up and planted to beans. The Township of Custer is building another mile of gravel road one and one-half miles west of McGregor. Everybody is busy getting ready for haying such as doing their cultivating and hoeing. Prices offered at Sandusky are: Wheat $2.70; Buckwheat, $2.50 cwt; Oats, $1.07; Rye $2.01; Barley, $3.00; Beans, $7.00; Peas, [illegible]othy, $24.60; Beef steers, 9c lb; Beef $2.25; Cloverseed, $20.00; Alsike $20.00; cows, 7c to 8c lb; Butterfat 56c; Eggs [illegible] B.

Our Ambition : Ideal Telephone Service for Michigan

The Michigan State Telephone Company has set itself earnestly to the task of making the telephone service in Michigan as near ideal as possible for every user, the Business Farmer, the Merchant or the Householder.

To us, ideal telephone service is summed up as follows:

When the service given present subscribers is as intelligent and as nearly perfect as human ingenuity and mechanical accuracy can make it.

Second—When every home and business, that has any use for a telephone, has one.

Third—When there is a mutual understanding between the Telephone Company and its subscribers that fosters confidence and encouragement and courtesy.

The attainment of such an ideal calls for the best brains, the nimblest fingers, the most careful training, the expenditure of vast sums in buildings and material—yet it is a task that we are entering upon with all enthusiasm.

There will be many obstacles and discouragements, but with your help, honest effort will overcome them all.

PROPERTY BELONGS TO WIFE

A man and woman are married holding a joint deed. The man dies thereby leaving the property to the woman. She marries again without having the deed changed. She later dies. Can her husband claim her property? How do the children of her first husband stand in regard to the property? Can the children of the second husband claim it?—M. A. S. Osceola County.

Upon the death of the first husband the property became absolutely the property of the wife the survivor, if it had been deeded to them as husband and wife. There was no need to change the title deed. It was hers the same as it would have been had it been deeded to her direct. Upon marriage the second time the title was not changed from sole ownership in the wife. Upon her death it becomes the property of her children. If she left no children but had parents, or brothers and sisters, then one half would descend to her husband and the other half to her parents, first and if they were dead then to her brothers and sisters. The children of the first husband are strangers to the inheritance unless they are her children also. The children of the second husband stand in the same relation, they are strangers to the inheritance unless they are her own children also.—*W. E. Brown, legal editor.*

KILLING MILKWEEDS

How can I get rid of milkweeds on land of a sandy nature?—Troy Fruit Farm, Oceana County.

Clean cultivation and frequent going over with a well sharpened hoe is the most effective method of controlling milkweeds. After a good soaking rain the plants pull easily and when pulled are not likely to send up shoots again. In killing milkweeds the keeping back of top growth will starve out the large part of the plant under ground. This pest is a serious one and spreads rapidly, hence extra expense of cultivation is warranted in controlling. Seeding down fields infested with milkweed to alfalfa will usually eradicate them in several years.—*J. F. Cox, Professor of Farm Crops, M. A. C.*

PASTE NAME ON VOTER'S TICKET

I would like to have the law referring to a person running on a slip for Highway Commissioner. Can he put the slips in the booth?. As I understand it he has got to distribute his slips 100 feet from the voting polls.—A Reader Elmira, Mich.

The statute provides for the use of slips when a candidate dies, resigns or for any cause there is a vacancy on the ticket, and the committee certifies another name to fill the vacancy. In this case the inspectors themselves should paste the slip on the ticket before the ticket is handed to the voter. If one is running as an independent candidate and was not regularly nominated he must do his electioneering 100 feet from the booth but I can see no legal objections to his furnishing the inspectors with slips to be used by the voter or to be placed in the booth for the use of the voter. If it is ultimately the voters choice that determines whether the slip shall be used.—*W. E. Brown, legal editor.*

ESTATE GOES TO SURVIVOR

How would the law divide property under the following conditions? Husband and wife and two children. Bought a place on joint contract, part of the cows bought on a note signed by both of us, part on note signed just by husband. Some of horses bought with money received as payments on another place owned jointly some are on notes signed just by husband. What bank account we have is in both names. My husband intends I should have all free and clear in case of his death, but says he doesn't think it is necessary to make a will. Is it?—X. Y. Z., Isabella County.

If the real estate was purchased by deed or contract in the name of husband and wife, in case of death of either the whole real estate wuld go to the survivor. If the personal was intended to be owned jointly, then, in case of death of either, the survivor would own half of the personal and the other half would belong to the estate of the other. If the personal was conveyed to the husband and wife by conveyance to them as husband and wife and also to the survivor then it would go to the survivor. Otherwise the half of the deceased would descend as other personal property. Unless some special evidence that it was arranged to have the property owned by the two then property that was purchased by the husband alone and property purchased by the husband's note signed by the wife would also belong to the husband as the wife is not liable on a note she signed for her husband. Some conveyance, by will or otherwise, is necessary to give the wife the whole title in case of his death. —*W. E. Brown, legal editor.*

RIDDING GRASSHOPPERS FROM UNFARMED LAND

Has the state power to go ahead and rid the unfarmed land from grasshoppers and charge the expense to the land owners?—Subscriber, Walkerville, Mich.

We are not aware of any statute covering the matter mentioned.—*Coleman C. Vaughan, Sec'y of State.*

SALE WAS FRAUD

I would like your advice in regard to trouble we have. A bought 80 acres of wild land for $1,600. A paid down on said land $600. A was living on aforesaid land 5 years. Built little house and small shed, but he can not make a living on this land because the farm is very poor and not worth $900. A hired seller and offered him $25 to help him sell the bad place. So the hired man found a buyer in Chicago and A wrote two false letters to the buyer in Chicago, tells him how nice place he is going to have (40 acres of aforesaid 80 acres) good land, 20 acres cleared, good new house, big barn, for only $2,700 so the buyer believed A and sent him $1,000 cash, then A sent contract to B, to be signed. So B did and moved from Chicago to his new place, then B found poor house, small shed in place of big barn and but two acres cleared. B was greatly dissatisfied and wanted money back from A but A refused. He spent B's money by purchasing adjoining 80 acres from bank of Standish for $4,050 and paying $1,000 cash which was the money he got from B. Please answer in our Michigan Business Farmer what can be done with these and how.—Subscriber Standish, Mich.

From your statement of facts I would be of the opinion that the sale was procured by fraud and that it would be set aside and the money ordered returned. However it is such a matter that good personal counsel should be obtained and full and complete statement of facts submitted. —*W. E. Brown, legal editor.*

NOT LIABLE FOR LOSS

I sold 4 tons of hay at my sale last September to a party. He asked if he could leave it in the barns until he had time to draw it. I told him that the barn's roofs leaked and it was at his risk. He drew some in January, some in May, and of course some of it rotted by getting wet. Now do I have to stand for this rotten hay. It was O. K. when I sold it. N. F., Manistee County.

Under the statement of facts the loss is the purchasers and you are not liable for the injury.—*W. E. Brown, legal editor.*

THE COLLECTION BOX

I wonder if you can help me with an order as you have others. In March I sent to the W—— Co., Philadelphia, Pa., for a skirt sent C. O. D. I got the skirt all right the last of March but found it was much larger than I ordered, so on April 5th I returned it and wrote a card telling the reason I was returning it. Since then I have written them four letters but have received no answer ;not even a word to show they had received the skirt. I paid $4.35 for the skirt with the C. O. D. collection.—*Mrs. M. B. M., Washtenaw County.*

We got in touch with the company and received word from them that they had refunded our subscriber's money. June 19th we received the following letter from her.

Gentlemen: I received a check from the W—— Co., Philadelphia yesterday. Thank you for your help in getting a settlement for me.—*Mrs. M. B. M., Washtenaw County.*

LEGAL VOTER IF QUALIFIED

They are going to vote to consolidate the district schools of Hadley township, Lapeer County to one school to be at Hadley Village. Now the school district to which we belong is on the south county line but in Hadley township, Lapeer County, but I live on the other side of road and in Oakland County. Do I have a vote on this question? Will I have to help support this school? Should I not have a vote?—A. F. R., Oakland County.

I am of the opinion that if the election is held under Act 117 of the P. A., 1909, for the organization of township school districts which appears to the purpose as indicated in the letter, that you are a legal voter at the election if you meet all the qualifications of an elector, being a citizen, owner of property, etc. The act contains the following: "Provided, that if in such township, or as a part of such township, there are fractional school districts already organized, the school house of which is within the boundaries of the township, such fractional school district shall be considered a part of the township for school purposes, and qualified school electors residing anywhere in such fractional school district shall be qualified to sign the petition for or vote upon the question of the organization of the township district."—*W. E. Brown, legal editor.*

WIFE GETS SHARE

My brother and I bought a farm and had a joint deed made. After we had bought the farm my brother got married. What could his wife claim if he should die, or if he left her and gave her the deed standing between him and I?—J. W., Livingston County.

If the deed is to yourself and your brother and no other designation or limitation is made therein then each owns an undivided half. If he should die without children his wife would inherit one half and you and your brothers and sisters, or their children if any are deceased, would inherit the other half of his share. You would still own your original half. You could ask for partition at any time. In case of trouble between he and his wife the judge would have a right to dispose of his interest as his judgment determines.—*W. E. Brown, legal editor.*

ACKNOWLEDGMENT OF DEEDS, MORTGAGES FOR SALE BINDING

Is my acknowledgment of deeds, mortgages or contract for sale of real estate binding to either party without the notary seal? I have in mind parties that have sold their farm and received money down on contract to bind the bargain until deed and possession was given and acknowledged before a notary but has not his seal. Is it good?—M. B., Gratiot County.

The acknowledgment to legal documents certified to by a Notary Public in Michigan are good in Michigan without seal unless required for use out of the state.—*W. E. Brown, legal editor.*

OWNER OF STOCK HOLDING

I own two farms some distance apart drive cattle to and from on highway Neighbors have no fence on highway. My cattle destroy their crops on account of no fence. Who shall stand the damage if it be carried to the courts?—Subscriber, Montcalm County.

As one is not bound to build highway fences I am of the opinion that one who uses it to drive cattle must keep them within the highway and is liable for any damage done outside the highway.—*W. E. Brown, legal editor.*

KEEP ANIMALS ON PREMISES

I have a neighbor who raises a large flock of turkeys every year which roam on my farm much of the time, doing damage to grain, corn and fall apples. I have begged and argued with this man to keep his turkeys from my farm but he pays no attention. What is the state law? Can I force this man to keep his turkeys off from my farm or not?—A Reader, Osceola County.

One who keeps turkeys is bound to keep them on his own premises and is liable for all damage done on the premises of another by them. *W. E. Brown, legal editor.*

Hires Household Extract

will make home-made rootbeer easily and economically. Get a 25c bottle from your grocer. A cake of yeast and some sugar — that's all. One bottle makes 80 glasses

Hires Household Extract contains the actual juices of roots, barks, herbs and berries. It makes rootbeer as pure as it is sparkling and delicious.

With our special airtight patent bottle stoppers you can keep the snap and sparkle in your home-made rootbeer until ready to serve. Your grocer has them.

Be sure you get this package. It brings you the genuine Hires Household Extract.

"HEARTS OF THREE"

(*Continued from page 9*)

their priest and backed by their women and children, all the male Lost Souls were arching the air full with feathered bolts from their bows.

A spearmen of the Queen tottered into the apartment, his limbs spreading vainly to support him, his eyes glazing, his lips beating a soundless message which his fading life could not utter, as he fell prone, his back bristling with arrow shafts like a porcupine. Henry sprang to the door that gave entrance from the bridge, and, with his automatic, he swept it clear of the charging Lost Souls who could advance only in single file and who fell as they advanced before his fire.

The siege of the frail house was brief. Though Francis protected by Henry's automatic, destroyed the bridge, by no method could the besieged put out the blazing thatch of roof ignited in a score of places by the fire-arrows discharged under the Sun Priest's directions.

"There is but one way to escape," the Queen panted, on the platform overlooking the whirl of waters, as she clasped one hand of Francis' in hers and threatened to precipitate herself clingingly into his arms. "It wins to the world." She pointed to the sucking heart of the whirlpool. "No one has ever returned from that. In My Mirror I have beheld them pass, dead always, and out to the wider world. Except for Torres. I have never seen the living go. Only the dead. And they have never returned. Nor has Torres returned."

All eyes looked to all eyes at sight of the dreadfulness of the way.

"There is no other way?" Henry demanded, as he drew Leoncia close to him.

The Queen shook her head. About them already burning portions of the thatch were falling, while their ears were deafened by the blood-lust chants of the Lost Souls on the lake shore. The Queen disengaged her hand from Francis' with the evident intention of dashing into her sleeping room, then caught his hand and led him in. As he stood wonderingly beside her, she slammed down the lid on the chest of jewels and fastened it. Next, she kicked aside the floor matting and lifted a trap door that opened down to the water. At her indication, Francis dragged over the chest and dropped it through.

"Even the Sun Priest does not know that hiding place," she whispered, ere she caught his hand again, and, running, led him back to the others on the platform.

"It is now time to depart from this place," she announced. "Hold me in your arms, good Francis, husband of mine, and lift me and leap with me," she commanded. "We will lead the way."

And so they leapt. As the roof was crashing down in a wreath of flame and flying embers, Henry caught Leoncia to him, and spring after into the whirl of waters wherein Francis and the Queen had already disappeared.

Like Torres, the four fugitives escaped injury against the rocks and were borne onward by the underground river to the daylight opening where the great spider-web guarded the way. Henry had an easier time of it, for Leoncia knew how to swim. But Francis' swimming prowess enabled him to keep the Queen up. She obeyed him implicitly, floating low in the water, nor clutched at his arms nor acted as a drag on him in any way. At the ledge, all four drew out of the water and rested. The two women devoted themselves to wringing out their hair, which had been flung adrift all about them by the swirling currents.

"It is not the first mountain I have been in the heart of with you two," Leoncia laughed to the Morgans, although more than for them was her speech intended for the Queen.

"It is the first time I have been in the heart of a mountain with my husband," the Queen laughed back, and the barb of her [illegible] sank deep into Leoncia.

"Seems as though your wife, Francis, and my wife-to-be aren't going to hit it off too well together," Henry said, with the sharpness of censure that man is wont to employ to conceal the embarrassment caused by his womankind.

And, as inevitable result of such male men's ways, all that Henry gained, was a silence more awkward and more embarrassing. The two women almost enjoyed the situation. Francis cudgeled his brains vainly for some remark that would ameliorate matters; while Henry, in desperation, arose suddenly with the observation that he was going to "explore a bit," and invited, by his hand out to help her to her feet, the Queen to accompany him. Francis and Leoncia sat on for a moment in stubborn silence. He was the first to break it.

"For two cents I'd give you a thorough shaking, Leoncia."

"And what have I done now?" she countered.

"As if you didn't know. You've been behaving abominably."

"It is you who have behaved abominably," she half-sobbed, in spite of her determination to betray no such feminine signs of weakness. "Who asked you to marry her You did not draw the short straw. Yet you must volunteer, must rush in where even angels fear to tread? Did I ask you to? Almost did my heart stop beating when I heard you tell Henry you would marry her. I thought I was going to faint. You had not even consulted me; yet it was on my suggestion, in order to save you from her, that the straws were drawn—yes, and I am not too little shameless to admit that it was because I wanted to save you for myself. Henry does not love me as you led me to believe you loved me. I never loved Henry as I loved you, as I do love you even now, God forgive me."

Francis was swept beyond himself. He caught her and pressed her to him in a crushing embrace.

"And on your very wedding day," she gasped reproachfully in the midmost of his embrace.

His arm died away from about her.

"And this from you, Leoncia, at such a moment," he murmured.

(*Continued next week*)

PACKERS' SIDE OF REGULATION

(*Continued from page 7*)

difficult for us to finance our business, and will discourage the putting of new capital into the industry.

3. To deprive the packers of their refrigerator cars would increase the difficulties and expense involved in marketing perishable foodstuffs.

4. Intereference with large complicated business on the part of the government makes for INEFFICIENCY, and hence higher expenses, which would undoubtedly result in a greater spread between livestock prices and dressed meats, causing either lower prices for live stock or higher prices for meats, or both.

5. The evils that the bills aim to cure simply do not exist. There is no monopoly; there are no unfair trade practices; and the charges that these things do exist are based on the unfair report of the Federal Trade Commission, which is unreliable as a basis for legislation.

Last year Swift & Company made net earnings from all sources of $13,870,181.34 and handled over 16,000,000 meat animals, resulting in an earning of less than 87 cents per head or 6 3-5 per cent of investment. We believe livestock producers will agree that such reasonable profits do not indicate necessity for further legislative regulation.

This letter is written with the sole purpose of presenting, in a fair manner, some of the more important facts regarding the proposed legislation.—*Swift & Co., per O. C. Matthies, Commercial Research Dept.*

Facts are what we want. But the "facts" of the packers do not agree with the facts of the Federal Trade Commission, so we must draw our own conclusion which of the two are more likely to be correct and uninfluenced by biased motives.—Editor.

HIS HEARING RESTORED

The invisible antiseptic ear drum invented by Mr. A. O. Leonard, which is in reality a minature megaphone, fitting inside the ear and entirely out of sight is restoring the hearing of literally hundreds of people in New York City. Mr. Leonard invented this remarkable drum to relieve himself of deafness and head noises, and it does this so successfully that no one could tell that he is a deaf man. This ear drum is eective when deafness is caused by catarrh or by perofrated, partially or wholly destroyed natural drums. A request for information addressed to A. O. Leonard, Suite 84, 70 Fifth Avenue New York City, will eb given a prompt reply.—Adv.

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

BLACK FLAG

LP LP

Kills Fleas

Scatter Black Flag powder on floors, under rugs, in bed clothes and in clothing to kill fleas. Blow into fur of dogs and cats with powder gun. Kills by inhalation. **Bugs don't eat it—they breathe it, and die.** Destroys flies, fleas, ants, mosquitoes, bedbugs, roaches, some moths, and lice on animals, birds or plants. Harmless to people and animals. Look for the BLACK FLAG trademark and the red-and-yellow wrapper. At drug, department, grocery and hardware stores, or direct by mail on receipt of price.

U. S. Gov't (Bulletin 771, Agri. Dept.) shows that glass containers keep insect powders fresh longest time. Buy Black Flag in the SEALED GLASS BOTTLE instead of "insect powder" in paper bags or boxes. Three sizes: 15c, 40c, 75c. (except west of Rockies).

BLACK FLAG, Baltimore, Md.

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest long distance sires. His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

BUTTER BOY ROSINA PRINCE

257572, herd sire, son of King Ona. His sire is from a 30 lb. cow that made 1,345 lbs. in one year and dam, Butter Boy Rosina 2nd 200, 840, made 29 lbs. and almost 800 lb. in ten months, she has a 33 and 34 lb. sister. Have some fine young bulls and heifers and some heifers bred to him, all from A. R. O. cows with records from 22 to 30 lbs. Write for prices.

Hampshire hogs, fall boars, ready for service and gilts. Booking orders for spring pigs.

Belgian and Percheron Stallions and mares. Imported and American bred.

The Michigan
BUSINESS FARMER

An Independent
Farmer's Weekly Owned and
Edited in Michigan

Vol. VII, No. 45. MT. CLEMENS, SATURDAY, JULY 17, 1920 $1 PER YEAR

Helping Dad Solve the Farm Labor Problem

Read in this issue:—What of the Future of the Grain Markets?—Uncle Sam's Hired Men Who Serve the Farmers.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

CO-OPERATIVE GRAIN ELEVATOR COMPANIES

In the United States there are some 14,000 co-operative marketing associations. To many of them, the Bureau of Markets, United States Department of Agriculture ,has given valuable assistance by furnishing specimen copies of by-laws and by indicating proper methods of organization and administration.

"The Organization of Co-operative Grain Elevator Companies" is the title of Bulletin No. 860 just issued by the United States Department of Agriculture upon this subject. The bulletin is addressed to those who desire assistance in the formation of co-operative grain elevators, but the subject matter is treated in a manner that makes the bulletin of interest to those engaged in other lines of co-operative endeavor as well. The scope of the pamphlet is limited to matters regarded as fundamental and general, and it is intended that the suggestions and recommendations be considered with references to and in connection with special co-operative laws and the laws governing corporations in each of the several states of the Union.

The bulletin points out that the success of any organization, whether co-operative or for private profit, rests upon social or economic need; a sound organization plan, and efficient management. It then details the various factors that produce these basic conditions. It dwells upon the organization of joint stock companies, private corporations of the capital stock form and co-operative associations incorporated under special co-operative law, the three common forms of organization of farmers' elevator enterprises in the United States.

Under the chapter of preliminary survey, matters of local conditions, prospective membership, capital, valume of business, and methods of survey are covered. Then the processes of actual organization are discussed and a suggested form of by-laws given.

The bulletin also contains some general suggestions regarding the selection of the plant, the choice of directors and a manager, a maintenance agreement, emergency capital and speculative tendencies. The appendix gives detailed forms to cover every phase of the administration of the organization from a capital stock subscription contract to a form of stock certificate, and service and maintenance agreement.

The pamphlet has been written by experts in matters of co-operative associations. It is the composite result of actual experience and should prove of valuable assistance to those interested in co-operative marketing. The bulletin may be had upon request of the United States Department of Agr'l., Washington, D. C. C.

HIDE AND MULE STOCKS ACCUMULATE

Heavy accumulations of raw stocks of hides and skins are reported to the United States Department of Agriculture by 1,094 packers, dealers, importers and tanners, May 31, 1920, as compared with the stocks reported by 1,111 concerns April 30, 1920, and 1,256 concerns May 31, 1919.

The May holdings show percentage increases over those of April as follows:

Calf skins	19.3
Kip skins	10.5
Horse hides	22.5
Horse fronts (whole)	18.6
Horse butts (pairs)	3.3
Horse shanks	160.4
Mule hides	40.2
Colt, ass, donkey, pony	8.3
Deer and elk skins	5.2
Kid skins	404.3
Cabretta	15.7
Sheep and lamb skins	.8
Buffalo skins	91.6
Pig Skins (strips)	4.5
Alligator skins	2.2

There were declines in only four items as follows: Cattle hides, 4 per cent; kangaroo and wallaby skins, 17.9 per cent; goats skins, 3.7 per cent; and pig skins, (pieces) 29.7 per cent.

As compared with the holdings May 31, 1919, the summary shows percentage increases as follows:

Cattle hides	28.1
Calf skins	12.7
Horse hides	205.5
Kip skins	138.9
Horse fronts (whole)	132.6
Horse butts (pairs)	146.6
Horse shanks	74.3
Mule hides	956.3
Colt, ass, donkey, pony	119.8
Kangaroo and wallaby	12.8
Cabretta	10.2
Sheep and lambs	11.7
Buffalo	207.0
Pig skins (strips)	21.6
Alligator skins	3,415.3

The decreases were as follows: Deer and elk skins, 30.3 per cent; goats skins, 6.6 per cent; kid skins, 36.5 per cent; and pig skins, (pieces) 40.7 per cent.

The percentage distribution of the total stocks of hides and skins among the various branches of the trade on May 31, 1920, was as follows:

Tanners, 71 per cent; importers, 13 per cent; packers, 11.5 per cent; and dealers, 4.5 per cent. Cattle hides were distributed as follows: Tanners, 46 per cent; importers, 14 per cent; packers, 32 per cent; and dealers, 8 per cent. Calf skins: Tanners, 64.3 per cent; importers, 6.7 per cent; packers, 14.7; and dealers, 14.3 per cent. Sheep and lamb skins, Tanners, 65.7 per cent; importers, 18.5 per cent; packers, 11.4 per cent; and dealers, 4.4 per cent.

FILMS TO INTRODUCE CATTLE AND SWINE

Introduction of American breeds of live stock and poultry into South America, particularly Argentina, is to be aided by the use of motion picture films prepared for this purpose by the United States Department of Agriculture. The films also will show American methods of breeding live stock and handling it in its many phases from the farm to the home stable.

The Argentine government has shown special interest in the introduction of American methods of handling live stock, as it has, indeed, in the agricultural practices of the northern half of the continent generally. As evidence of this the Argentine Embassy at Washington has already purchased 10 films on these subjects for educational use in its country. It has frequently had the department's bulletins on agricultural questions translated into Spanish for distribution in Argentine.

The Buenos Aires & Pacific Railway has been another purchaser of films and still pictures for use among its system. Its representative in this country, Ricardo Videla, recently called at the department in quest of films showing the swine industry in the United States. He was enthusiastic over the opportunity of almost immediate success if efforts were concentrated on the introduction of American swine into Argentine. He proposed that a film be prepared by the department showing the swine industry in the United States, which could be used along the routes of the Buenos Aires & Pacific Railway.

The Bureau of Animal Industry welcomed the suggestion and preparations are being made for filming the various interesting phases of the subject. It is planned to show important swine breeding farms, the work in the big Chicago packing houses, and the preparation of the product for the table. Pictures will be made of the various types of American hogs, and an effort will be made to give some idea of the vastness of the industry in this country.

MILK PRICE GOES TO 16 CENTS

As partial compensation to the milk producers who have been selling milk the last three months for less than cost of production the Milk Commission last week increased the price to 16 cents per quart restoring the former price to the farmer of $4.05 less deductions for surplus. The price will undoubtedly remain here until the consumer or the press goes on another verbal raid against the high cost of living when it may take a drop. Approximately one-half of the sixteen cents goes to the distributor.

AMERICAN HAMPSHIRE SHEEP ASS'N ADOPT NEW INDUSTRY

The American Hampshire Sheep Association has recently adopted an advanced registry. An animal to be eligible to this advanced registry must be a first prize winner and have two direct progenitors who are first prize winners at some fair or exposition where this Association offers special prizes.

SHORTHORN BREEDERS' PICNIC

Early in the morning of June 25, there were unusual signs of activity at the Geo. Heimforth Resort on Lake Leelanau, Leelanau County, the occasion being the second annual meeting of the Northwestern Michigan Shorthorn Breeders' Association, and incidentally to help Mr. Heimforth celebrate his 49th birthday.

The day was ideal, long tables had been constructed in the grove in anticipation of the big pot luck dinner. In addition to the many well filled baskets brought by the picnicers, the host ushered in an eighty pound lamb roasted a-la-barbecue style. Next came the prêsentation of the mammoth birthday cake with its 49 candles by Professor Edwards. For the next hour the near three hundred guests did their best to clean up on the eats but were unable to reach the goal.

Toastmaster Fred Smith of Elk Rapids, then introduced several local speakers. Mr. Thomas Read, speaker of the House of Representatives was next introduced followed by Professor Edwards of M. A. C. (the Shorthorn Breeders' friend) and speaker of the day. In his talk Mr. Edwards made a strong appeal to breeders to rally to the support of the Michigan State Shorthorn Breeders' Association that they might be of greater service to the Shorthorn Breeding fraternity of Michigan.

Following the speaking a short business session was held the following officers being re-elected for another year: J. W. Zimmerman, Traverse City, Mich., president; Geo. Arnold, Bates, vice-president, and R. F. Zimmerman, Traverse City, Secretary-Treasurer.

In conclusion a rising vote of thanks was tendered Mr. Heimforth, and it was voted unanimously to accept Mr. Heimforth's invitation for the next annual meeting to be on the same date at the same place.

Mr. Heimforth Sr. and Jr. are two of the livest Shorthorn enthusiasts in Michigan and we predict it will not be long until Valley View Farm Shorthorns will be known far and wide.—*Contributed.*

ESTIMATE OF WHEAT YIELD

The Bureau of Crop Estimates reports the estimated yield of wheat in the United States as 780 million bushels which is 60 million bushels less than was produced in 1919 and 40 millions less than in 1918, but nearly 600 million bushels more than the average from 1909 to 1913. Canada's acreage and yield is reported to be slightly less than last year. The Argentine reports an estimated yield of 212 million or almost exactly the same as was produced last year. In France the acreage of wheat this year is 12 million acres or an increase of less than 600,000 acres over 1919 In British India the estimated production for this year exceeds that of last year by about 100 million bushels, but the estimate for Australia shows almost a 50 per cent decrease. The Bureau has no official figures on the estimated production in other important wheat growing countries. Russia and Germany may or may not have a large production in prospect. A safe guess is that they have not, so taking in all the known facts and figures and those we can safely surmise the 1920 crop of wheat will be far less than the 1919 crop.

Canadian production of oats will be slightly in excess of last year's yield. There is a reduction of 16,000 acres planted to potatoes in the provinces, and with a similar or greater decrease in most of the states it is plain to be seen that potatoes will be at a premium next fall and winter.

What Helps the Farmer Most?

WHAT EXTENSION agency is most helpful to the farmer? Among 2,300 farmers of whom that question was asked, 38 per cent said that they received most help from the county agent and the farm bureau. The agricultural press was given first place by 31 per cent. Three per cent of the farmers interviewed said they received most help from farmers' organizations other than the farm bureau and 3 per cent said they received most help from bulletins and agricultural reports. Twenty-two per cent had no definite opinion as to which agency was most helpful to them.

Sought Views of Farmers

These opinions were gathered in a survey made by officials of the States Relations Service, United States Department of Agriculture, in a number of northern and western states. The purpose of the survey was to get the viewpoint of the farmers themselves as to the relative efficiency of various phases of agricultural extension work and to learn the outstanding problems of rural districts as viewed by the farmer of those districts.

An indication of the efficiency of farm bureau work is found by contrasting the replies in states where the farm bureau is organized and in those where it is not. In the former, 66 per cent of the farmers interviewed placed the county agent and farm bureau first among the agencies that are of service to them, and only 13 per cent placed the agricultural press first. In states that have no farm bureaus, 26 per cent placed the county agent first and 39 per cent placed the agricultural press first.

Labor the Biggest Problem

One of the questions asked was, "What is the biggest problem of farmers in your community today?" The farmers who answered this question were divided as follows: labor, 682; improved farm practices, 637; marketing, 309; better organization of farmers, 55; financial assistance, 21; roads, 14; repeal of daylight saving law, 9; schools, 1.

Of the farmers visited, two out of every three were acquainted with the county agent and his work, and 90 per cent of them were favorable to it. One farmer out of every three was receiving the bulletins of the United States Department of Agriculture and two out of every five the bulletins of the State college of agriculture. Four farm families out of every five were taking both a daily and an agricultural paper, and one out of every two a magazine, usually a woman's magazine. One farmer in every three visited was a member of the farm bureau and one of every four was a member of some other organization.

What of the Future of the Grain Markets?

Do Factors of Transportation, Credit, Demand and Supply Foretell Lower Prices for the Next Few Months?

HAVE OUR readers tried to analyze the fluctuations that have been so marked in the grain markets the past fortnight and to explain why the wheat market, for instance, after months of persistent climbing, should all of a sudden become shaky with a tendency to tumble? We have watched this market carefully for thirty days and must confess to a certain bewilderment over its antics. With the entire world short of wheat and the United States producing at the very best a million bushels less than in 1919 there has not until recently seemed any very good reasons for a drop in price, at least so many weeks previous to the crest of the 1920 movement.

By far the most important factor which must be reckoned with as affecting future prices on grain is transportation. In times past the nation has been confronted with a car shortage which has hampered business more or less, but you can take it from us and a good many others who have looked into the situation that any car shortage which has faced this country in previous years would look like a surplus compared to the shortage which now exists and is certainly to become much worse as the crops are harvested and made ready for shipment. Arm in arm with transportation goes another mischief maker, the financial situation. Both are boon companions. Both are as certain to kick the props out from under the grain markets as daylight is to follow dusk.

One hundred million dollars are tied up by Kansas farmers and elevator men in last year's wheat crop. That is to say nothing of a somewhat similar situation prevailing in other states. The crop has not been put upon the market simply because there have been no cars to move it. There is urgent demand for the money represented in those crops. A lot of it was loaned by the federal land banks. More of it was loaned by local banks against their own deposits. All banks are calling in loans to meet the inevitable demand for financing the harvesting of the 1920 crops. This means that just the minute cars are supplied enormous crops of grain are to be moved. In the meantime part of the 1920 crop will have found its way to the markets and will tide the markets over for the next sixty or ninety days in which time it certain that the majority of the old crop will be moved. And when it moves prices are certain to move with it,—downward.

It is in anticipation of such a condition that the demand is slackening for grain as no grain dealer wishes to pay higher prices now than he can secure thirty or sixty days from now.

Now what about the demand in Europe for American grain? It is safe to say that much more grain is needed in Europe than will be imported next winter. All European countries are making a desperate effort to curtail their importations to the smallest possible fraction. Acreage in all those countries are just about normal and we gather from such meagre information as is available that the condition of the grain crops is excellent.

Europe's estimated imports for the 1920-21 season are placed a little above 500 million bushels. North America's estimated exportable surplus is around 400 million bushels. Australia and the Argentine will have grain to export, so that it appears that if anything the exportable surplus is a little short of the import requirements. Now none of the European countries will do any importing to speak of until they are obliged. They will defer their purchases until all their crops are harvested and they have found out how much each of them can supply the other with respective cereals. For a time consequently European purchases in this country are likely to be meagre and inasmuch as it has been the European demand which has been the big price factor the past several years it is fair to assume that the lack of that demand for a period of time will also be a determining price factor.

The warning and the chart published on this page are taken from the *Rosenbaum Review* of Chicago, the editor and publisher of which is J. Ralph Pickell, a man of wonderful ability, foresight and judgment. We would characterize Pickell as the best crop and market analyst of the day. He has special sources of information on the world economic conditions and shows rare intelligence in interpreting this information with respect to its effect upon future prices. Note carefully his warning to both producers and members of the grain trade. Note that he urges the farmers to hold their grain if they can. Note that he warns dealers against too heavy purchases or purchases at too high a price. "Buy cautiously, conservatively and at a profit" is his admonition.

It goes without saying that the majority of dealers will follow this advice. And in so doing they will help to make the market prices the next few months. Except in rare cases the dealers will anticipate a lower market rather than a higher one, and the farmer who must sell upon a declining market will be the suffered. Therefore, Mr. Farmer take the advice of Mr. Pickell and THE BUSINESS FARMER and unless it is absolutely necessary to sell your crops direct from the threshing do not do so.

What a Grain Trade Paper has to Say About Future Grain Prices

In order to emphasize our belief in lower cereal prices all along the line for this Fall, after the temporary European demand has been satisfied, we are using this entire page to say:

For the Long Pull after August
We are Decidedly Bearish
on
CEREALS

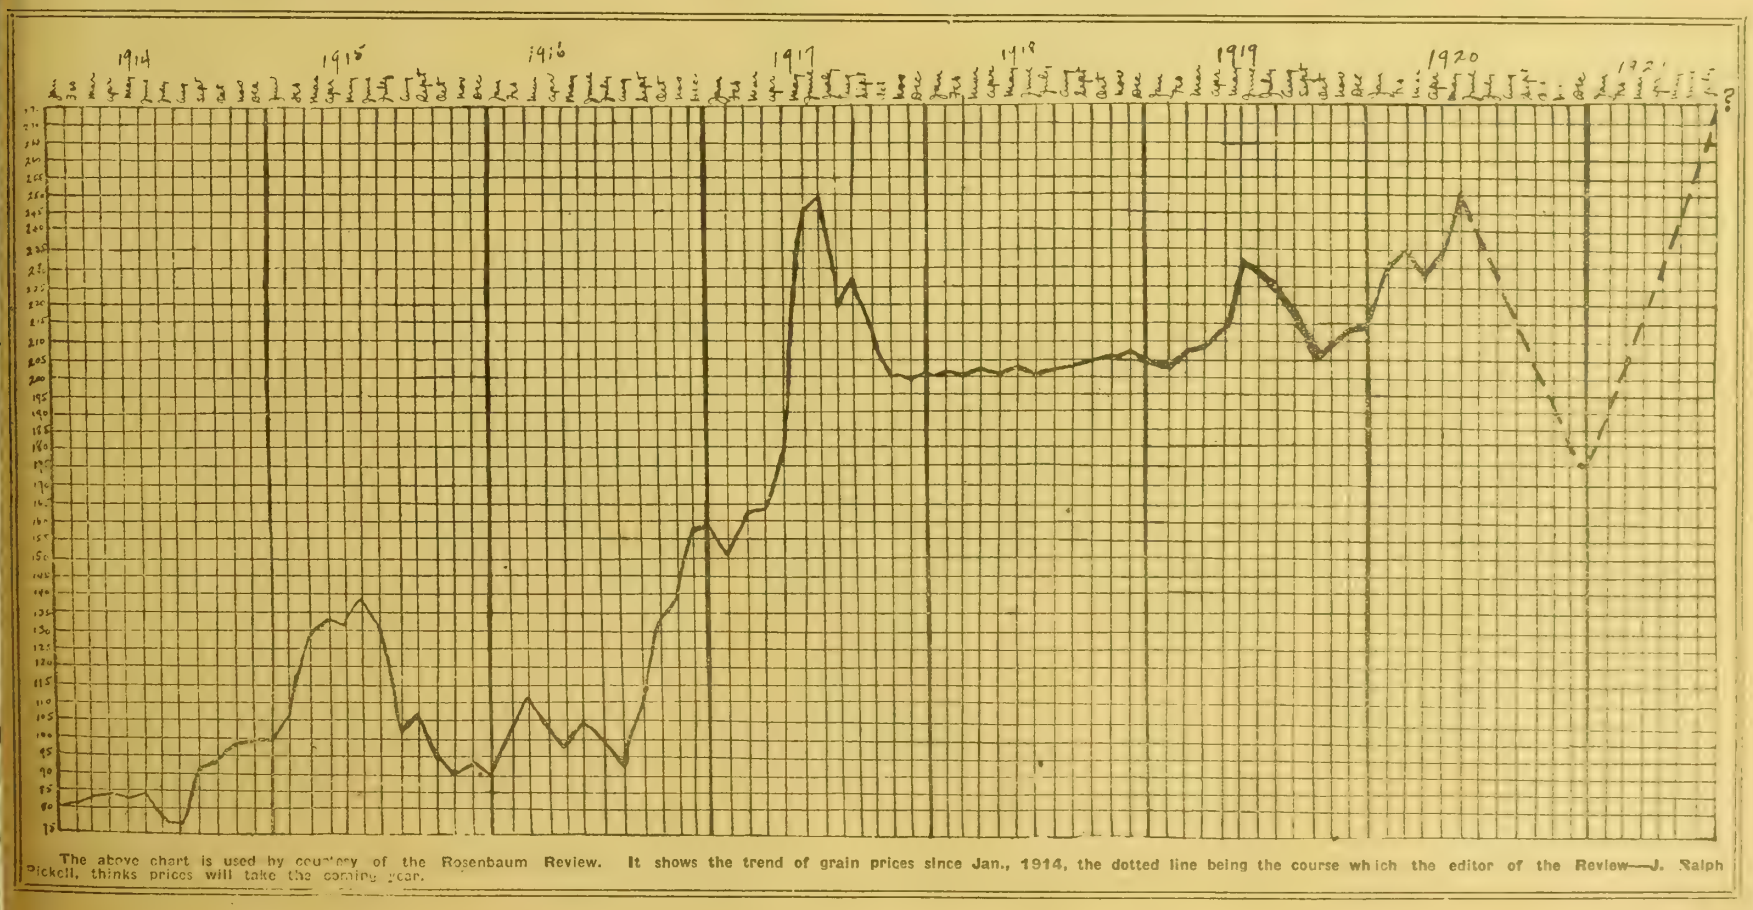
The present range of prices is largely transportation made.

There is nothing in the fundamental situation, as we see it now, which can hold prices anywhere near the present range of values. We repeat,—the financial situation alone justifies a belief in much lower prices. There will be a decided slump in the European demand by September 1st; grain will begin to pile up in the country. There is no hope that present prices will be maintained.

Therefore, farmers, if you can possibly hold your grain, do so, and enjoy high prices which will follow in 1921.

Therefore, grain buyers, bear in mind that the tendency of prices is downward and buy cautiously, conservatively, and at a profit. Let your competitor have the grain if he bulls the market. Better do no business than to buy at a loss. Simply insist upon a good margin and keep all the cash on hand you can possibly raise. Ten per cent money is in sight.

—*J. Ralph Pickell in Rosenbaum Review.*



The above chart is used by courtesy of the Rosenbaum Review. It shows the trend of grain prices since Jan., 1914, the dotted line being the course which the editor of the Review—J. Ralph Pickell, thinks prices will take the coming year.

Farm Organizations Fight Rail Rate Increase

Agitation Started by Farmers' National Council Gets Active Backing of Farm Bureau and Other Farm Organizations

FOR SEVERAL weeks the Interstate Commerce Commission has been conducting public hearings on the application of the railroads for an increase of 27.85 per cent in freight rates in order to net them the 6 per cent income guaranteed to them under the Cummins law. Until very recently most of the arguments of the railroad companies have gone unrefuted, such individual shippers as have appeared before the Commission not having the essential facts to show that the roads could get along with a lower increase than they are asking for. It remained for Mr. Clifford Thorne, representing the American Farm Bureau Association, to make the Commission sit up and take notice when he presented plain facts and figures based on calculations involving months of research, showing that the railroads were not entitled to an increase of nearly 28 per cent in freight rates.

According to the Farm Bureau Federation Mr. Thorne's statements showed:

(1) That the railroad valuation on which the guaranteed 6 per cent returns are figured are tremendously overvalued—to the extent of several thousand million dollars.

(2) That the present basis of income and expenditure is not a fair basis to figure future profits upon, and

(3) That even on the present basis the calculations of the railroads allow for increased expenditures next year but do not allow for increased business and revenue.

Mr. Thorne showed—and supported with volumes of carefully tabulated figures—that on the basis of the figures submitted the railroads would need an increase of only 18 per cent instead of the proposed 27 per cent to pay the six per cent dividends guaranteed under the new railroad law.

Save Public Million Dollars a Day

If successful in the contentions presented, this work of a corps of statisticians under Mr. Thorne's direction and supported by the American Farm Bureau Federation, together with the several shippers' associations handling livestock, grains, and other products, would be a material factor in saving the public in freight overcharges a sum amounting to approximately a million dollars a day. According to the figures presented, the railways would still be getting adequate returns to meet all maintenance and operating expenses and to pay six per cent dividends.

Farmers and the Railroads

WHO COULD POSSIBLY be more interested in cheap and efficient transportation than the farmer? Of all classes of people his freight bill is the largest, and of all classes of people he is inconvenienced most and caused the greatest loss when transportation is demoralized and tariffs are high. We used to believe that production was of prime importance in the business of farming. Then we came to the point where we believed marketing was of superior importance. But since our sorry experience with the railroads the past five years we have reached the conclusion that transportation transcends all other considerations, and that no business can thrive or even long endure that does not have ready and reasonably cheap access to the markets of the world and the sources of the raw material. Transportation, as a matter of fact, goes hand in hand with marketing, and now that the farmer and his organizations are giving such close attention to this end of the business they will be forced to take a larger interest in the transportation of the nation. The accompanying article is a clear, concise and authentic statement of fact relative to the future cost of transportation. Unless the farmers of the nation are on their guard the railroads are going to get an increase in freight rates that will be keenly felt by every farmer in the country. Farm organizations and individual shippers as well should be on their toes every minute to protect their pocket book from undue demands on the part of the selfish interests that control the railroads.—Editor.

Mr. Thorne's briefed statement follows in part:

In Re Proposed Increased Rates

"In this proceeding the railroads of the United States are asking for an increase in freight rates which will produce $1,017,776,995 annually. This is the first billion dollar case ever tried before the Commission, or before any other tribunal. At this moment railroad labor is demanding a billion dollar increase in wages. It is distinctly understood that the rate advance in this case will not care for any portion of the increase that may be necessary because of wage advances ordered by the Labor Board; that will be followed by another freight advance, as a matter of course.

"During the past three years the total annual interest charge on the public debt of the United States government has increased from $23,000,000 to $1,053,000,000.

"If the railroad stockholders and bondholders, as well as railroad labor, are successful in all their demands presented at this time, the increased transportation burden on our people will be twice as large as the total annual tax burden occasioned by the greatest war debt in our history.

"The issue in this case is not whether an advance in rates should be granted; but the issue is how much of an increase is justified. All of those for whom I speak want to see the railroads self-sustaining. The public interest demands an adequate transportation service. Service is of first importance; but the charge for that service is also of importance; and the economic effect on our commercial life of such stupendous increases in the transportation tax as are here contemplated must be seriously considered.

"Those whom I represent are absolutely united on the proposition that whatever advance is granted should not be excessive in amount; and that, for this purpose, a check of the railroad figures is justified.

Value of the Railroads

"The basis for all the computations of the railroads in this case is their so-called property investment account, which they claim represents the value of their properties. This aggregates for the United States $20,616,573,399. That represents the "book value" of American railroads, and in no sense constitutes the actual investment. I believe that the facts which we shall offer will demonstrate that this amount is excessive by several thousand million dollars.

"The carriers have failed to make any allowance for depreciation. They have assumed that all their cars and locomotives, and rails, and ties today are brand new, right out of the shops. Such a method of appraisal is unjust, and has been specificially repudiated by the Supreme Court of the United States. This single item of accrued depreciation for the railroads in this case amounts to $995,384,881. Unquestionably this sum should be deducted from the base figure purporting to represent the value of the railroad properties.

Market or Commercial Value

"A rather interesting figure offered of record is the present market value of all the railroads in the United States. We have used the market quotations of all securities quoted, and the par value of those not quoted.

"The computations cover more than 90 per cent of all the securities outstanding in the hands of the public and the ratio thereby secured has been applied to the balance. In this manner we have estimated that the present market value of the American railroads is approximately $12,200,000,000. Contrast this with the value demanded by the railroads in this case aggregating $20,600,000,000. They desire to add $8,000,000,000.

Par Value of Railroad Securities

"The par value of all railroad capital outstanding in the hands of the public December 31, 1916, was $16,332,578,328. We have written to the companies handling over 95 per cent of the traffic in the United States and find a very small relative amount of securities issued since that date, the total outstanding as of the present time substantially less than $17,000,000,000. Contrast that figure with the $20,600,000,000 demanded as a basis by the railroads in this case.

Bureau of Valuation Figures

"A witness for the railroads has introduced evidence of the reproduction cost new, found by the Valuation Bureau of the Interstate Commerce Commission for some fifty properties. Again the carriers have failed to deduct accrued depreciation.

"We will use the term 'present value' as meaning the cost of reproduction new, less depreciation, of all property other than land, plus the present value of the land, used for carrier purposes. The present value of these properties which we were able to secure equals $2,691,949,667. This is equivalent to 83.21 per cent of their so-called property investment. If this is typical for the country as a whole, the present value

Hark Back to the Landing of the Pilgrim Fathers, 300 Years Ago

By BERTRAND BROWN

ON NOVEMBER, 11, 1620, in the cabin of the Mayflower, a tiny bark lying off the Massachusetts coats, a little band of liberty-loving men, from "Brittania," entered into what history has styled the Mayflower Compact. This agreement bound the 41 adult males in the ship's company into a civil body politic for the better ordering, preserving and furthering of their mutual ends. And it provided for such just and equal laws and offices as should be necessary for the general good of the colony.

Ten days later, so records Dr. Charles W. Eliot's inscription on the Pilgrim Memorial Monument at Provincetown, Mass., "the Mayflower carrying 102 passengers, men and women and children, cast anchor in this harbor 67 days from Plymouth, England.

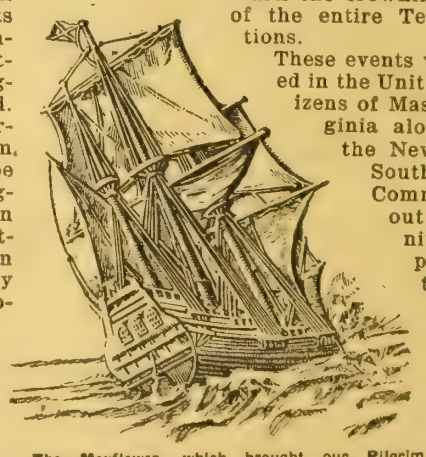
"This body politic, established and maintained on this bleak and barren edge of a vast wilderness, a state without a king or a noble, a church without a bishop or a priest, a democratic commonwealth, the members of which were straightly tied to all care of each other's good, and of the whole by every one.

"With long-suffering devotion and sober resolution they illustrated for the first time in history the principles of civil and religious liberty and the practice of a genuine democracy."

Meantime, uninformed of the Pilgrims, fellow-colonists of Captain John Smith had met at "James City" (Jamestown,) Virginia for the first American Legislative Assembly. On July 30, 1619, they had thus broken ground for the foundation of the present democratic form of government in the United States.

This year (in 1920) these events are being commemorated in the United States, in England and in Holland. In August, the origin of the Pilgrim movement will be celebrated in England. And early in September, meetings will be held in Holland in memory of the Pilgrims' sojourn in that country.

In September a "second Mayflower" will set sail from Southhampton, England, to follow to the American shore the path taken by the original Mayflower. (But this second Mayflower will be modern, and therefore much more seaworthy than her smaller predecessor.)



The Mayflower, which brought our Pilgrim fathers to this country exactly 300 years ago. To commemorate the event a second Mayflower somewhat more seaworthy, however, than the original will set sail from England in September and travel the same route to the shore of America.

This boat, carrying many prominent people in England, Holland and the United States, will anchor in Provincetown Harbor in late September. Its arrival will perhaps mark the crowning dramatic episode of the entire Tercentenary celebrations.

These events will not be celebrated in the United States by the citizens of Massachusetts and Virginia alone. Nor solely by the New England and the South Atlantic States. Communities throughout America are planning to take this opportunity to review the "foundation upon which the United States rests,"— and to re-emphasize those principles which these ancestors established—and which their sons, their followers and their followers' sons have handed down to us through our form of representative government.

America is appropriating, from national and state treasuries, hundreds of thousands of dollars to be used in plans for the commemoration. One plan is to erect, overlooking Plymouth harbor, a colossal statue of Massasoit, the Indian chief who befriended the Puritan pioneer. Another is to set the Plymouth Rock which is 1741 was raised above the tide, in its original position.

Seventy American cities, including New York, Chicago and Boston have started plans for their celebrations of the Tercentenary. The Sulgrave Institution and the American Mayflower Council have been active in co-ordinating these plans.

Community Service (Incorporated) One Madison Avenue, New York, has drawn up suggestions for the use of communities planning to celebrate have been distributed for the use of schools, churches, clubs and general community groups throughout the United States and her territories. By writing to Community Service at the above address, individuals can secure valuable information and counsel regarding suitable plays, pageants, tableaux, recitations, ceremonials and music suitable for use in their communities.

Fertilizer Gives New Life to Old Orchards

Ohio Agricultural Experiment Station Conducts a Successful Orchard Fertilization Test

On page 6 of our April 3rd issue of HE BUSINESS FARMER *we published photograph with the caption, "Fer-ilizer increases Orchard Profits." everal of our readers wrote us ask-ng us for information regarding the aixing and applying the fertilizers o we secured the services of Mr. C. f. Baker, editor of the Division of ublications, Ohio Agricultural Ex-eriment Station, to prepare this rticle.*

By C. M. BAKER
Ohio Agricultural Experiment Station

N 1908, F. H. Ballou, Assistant Horticulturist at the Ohio Exper-iment Station was asked to see hat he could do in rejuvenating the rchards in southern Ohio. Many of he old orchards here had refused to ear even though 15 or 20 years ld and in fact had never borne a rop of fruit or enough fruit to pay ny interest on their investment.

Ballou at once found out that it as necessary to begin a complete praying program, which would des-roy many of the insects and also eep fungous diseases in check, but ven when this was done there seem-d to be something lacking, for the rees refused to bear and feeling that he trees needed plant food, he be-an to study the needs of orchards or fertilizers. As a rule most or-hards on the hilly ground of south-rn Ohio were covered with a heavy rowth of poverty grass, broomsedge nd other weeds, this being the first ndication that the soil on which the pple trees were growing was lack-ng in fertility. Naturally on steep illsides there was a good deal of rosion and even in these old or-hards there were attempts at farm-ng, corn being grown between the ows of trees, which still further de-leted the soil of plant food the rees ought to have had.

With the idea of using commercial ertilizers, Ballou started out by aking an application to each tree f 5 pounds of acid phosphate, 5 ounds nitrate of soda and 2 1-2 ounds muriate of potash. This orked out successfully, the nitrate f soda putting new growth into the oots of the trees and starting new hoots, while the acid phosphate was

Heavy grass mulch produced by fertilizing trees with 5 pounds each of nitrate of soda and phosphate per tree.

particularly valuable for growing grasses in the orchards. This was an important problem in order to prevent the hillsides from washing.

One of the most surprising things that come to Ballou was the fact that when nitrate of soda and acid phosphate were placed in the above mentioned amounts under these old apple trees, a heavy growth of sweet clover, some timothy and other clovers at once began to appear even though no seed was applied. Hence it was shown that these better grasses were here in small amount and only needed some plant food in order to stimulate their growth. Thus it has been possible to grow a lot of grass in the orchards and to provide an excellent amount of mulch, whereas in some cases formerly it was necessary to haul straw into the orchard to provide a mulch. As an example: an acre of 40 trees, 22 or 23 years from planting was reported by Mr. Ballou in connection with demonstration work at this time. These trees after removal or thinning yielded on an average of 2,000 apples per tree, or a total of 1,430 bushels. The apples were Rome Beauty and constituted the second crop after the orchard had been reclaimed from unproductiveness by fertilization and spraying.

In all of these tests, where acid phosphate and nitrate of soda have been used to fertilize the trees, the poverty grass, weeds and broom sedge have been completely eradicated, simply by the competition of the better grasses and yields maintained at a cost of about 35 cents per tree. The following description by Mr. Ballou gives an idea of the value of orchard cultivation:

Fertilizer Experiments in Grass-Mulch Orchards

"In a separate orchard large trees wholly cared for by the grass-mulch method, experiments have been completed in which a number of combinations of chemical plant food were used in comparison with no fertilization. Following is a summary of this series of fertilizer tests:

The unfertilized or check plots produced 36.7 barrels of apples per acre per year.

The plot annually fertilized with the usual formula of 5 pounds each of nitrate of soda and acid phosphate applied on a mulch of straw maintained in circular form under the outer exteremeties of the branches of the trees produced an average of 117.4 barrels of apples per acre per year. This was a gain of 80.7 barrels of apples per acre per year as compared with the yield of the unfertilized plot.

The plot annually fertilized with 2 1-2 pounds of nitrate of soda and 5 pounds of acid phosphate per tree per year, applied on a mulch of straw produced 93.4 barrels of apples per acre per year. This represented a gain of 56.7 barrels of fruit per acre per year as compared with the unfertilized yield and a loss of 24 barrels per acre per year in comparison with the plots fertilized with the 5-5 formula.

The plot fertilized annually with 10 pounds of nitrate of soda and acid phosphate per tree, distributed evenly over the three squares of ground, without a mulch of straw, gave an average of 118.1 barrels of apples per acre per year for the 5-year period, or a gain of 1 barrel per acre per year for the double quantity of "all over" fertilization as compared with the 5-5 mulch formula. The gain of the 10-10 formula was 61.4 barrels per acre per year as compared with no fertilization.

The cost of the 5-5 and mulch, and the 10-10 "all over" schemes of fertilization with nitrate of soda and acid phosphate, which gave so nearly the same results in fruit production, is practically the same. However, in special favor of the double quantity or "all over" plan of application we have an additional result that is very gratifying, namely, that it resulted on the formerly very thin, poor orchard soil between the trees, in the marvelous development of a heavy soil covering of the finer grasses, furnishing mulching material at the rate of 2,515 pounds sun-dry weight per acre per year, or 59.8 pounds per tree square per year. This was a gain of 1,872 pounds of dry grasses per acre per year, as compared

(*Continued on page* 17)

Some Pointers on Planting, Cultivating and Marketing Late Cabbage

I would like to see an article on ising and marketing cabbage in one sue in the near future.—B. A. E.

By C. W. WAID
Extension Specialist, Michigan Agricultural College

ATE cabbage may be grown on quite a variety of soil. How-ever the best results will be se-ured on a clay loam or sandy loam. soil which does not hold moisture eadily will not prove a very satis-ctory one for late cabbage. It is uite important that a rotation be ollowed for the cabbage crop not nly in order to provide against di-ease development but also to per-it the working into the soil of or-anic matter through the plowing un-er of clover or other crops.

Danish Baldhead or Holland in ne of the most common later var-ties. The heads are nearly round, ery hard and usually weigh from ree to eight pounds each. This is good storage variety. Flat Dutch, uccession, and Autumn King are tandard late varieties. Houser is ne of the latest maturing varieties.

Plants for the late crop are usually rown in the open ground. A good arden soil with plenty of moisture satisfactory for the seed bed. The ocation should be changed each sea-on.

One of the chief enemies of the abbage plants is the magot. It is ot an easy matter to guard against he attack of this enemy. Sand which as been treated with a small amount f kerosene or turpentine scattered long the row at frequent intervals ill keep the flies from depositing ggs on the plants. The effectiveness f the method depends entirely upon he thoroughness with which it is one.

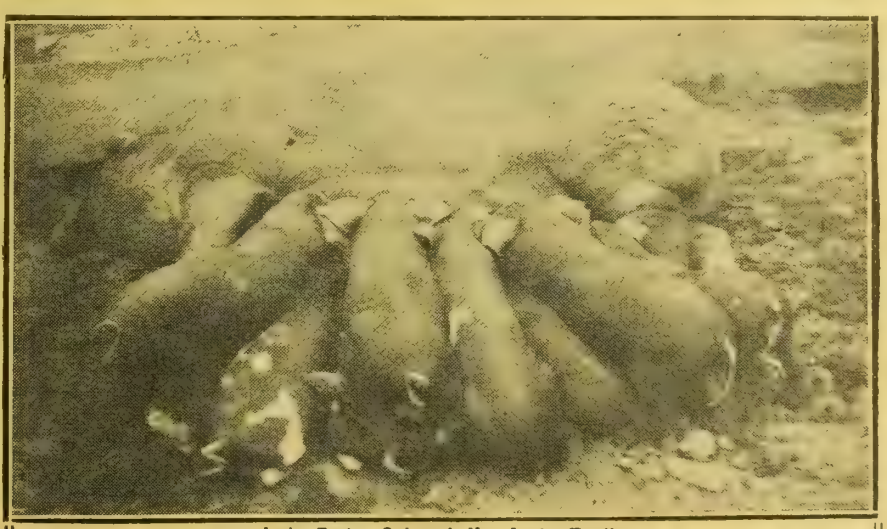
Some of the Canadian growers are sing dilute corrosive sublibmate as means of repelling the flies. This has not been done sufficiently extensive as yet to warrant recommending it for general practice.

Cabbage will prove most satisfactory on a soil that has been well manured. In addition commercial fertilizer may be used profitably in quite liberal amounts. For late cabbage a fertilizer containing 2 per cent nitrogen, 8 to 12 per cent phosphoric acid, and 4 or 5 per cent potash would be about the most satisfactory if it can be secured. It can be applied at the rate of at least 1,000 pounds per acre.

The distance of spacing the plants will vary with the richness of the soil and the varieties grown. Thirty inches by thirty inches is a good spacing when it is desired to cultivate both ways. Cabbage will respond to very thorough cultivation. After the plants are large they should not be cultivated when the leaves are brittle and thus easily broken. All cultivation after the first should be shallow. The yields of late cabbage vary from five to twenty tons per acre.

In sections where kraut factories are located practically all of the cabbage is contracted to these factories. There is no crop which varies more in price than cabbage. Sometimes the contracted price of the kraut factories is very much below that which the growers could get in the open market. Growers who are located near large cities usually secure better returns than those who grow for factory purposes.

If there was some way of regulating the placing of cabbage on the market there would not need to be such a great fluctuation in prices. More definite information as to the acreage being put in in different sections of the country than is now available would also be of great help in preventing over production. Better methods of storing which would enable the growers to move the cabbage at any time of the year would also help stabilize the markets.



Lady Buster 3rd and Her Lusty Family

PURE BRED STOCK PAYS, SAYS Wm. DEAN

"LADY BUSTER 3rd was the first pure blooded Big Type Poland China gilt we ever owned,' writes Wm. Dean & Son, of Ionia county to the Business Farmer. "She farrowed nine pigs and saved eight of them and we call her a good mother as well as a real big type Poland China.

"Although we have had blooded stock but a short time, we have come to one conclusion and that is this: that there is just as much difference between pure blood stock and grades as their is between No. 1 seed oats and screening and certainly no farmer would think of sowing screening for seed, so why not have more farmers raising blooded stock or at least have the sire of what they raise (cattle, hogs or sheep) registered.

"By trying it once you will b satisfied that it pays out very good on less feed than the grades."

Farmers Invited to Lakes-to-Sea Conference

Detroit Board of Commerce Anxious to Have Farmers Attend Convention and Learn the Advantages of the New Route

MR. TOM. L. MUNGER, of the Detroit Board of Commerce, in charge of the arrangements for the Great Lakes-St. Lawrence Tidewater conference, has asked THE BUSINESS FARMER to extend its readers a cordial invitation to attend that meeting which is to be held in Detroit at the Board of Commerce, Jul 22nd, 23 and 24th.

No doubt a good many farmers have thought rather indifferently toward the proposal to open the waterways between the Great Lakes and the Atlantic ocean to ocean-going vessels. Possibly they have not at first hand appreciated the full significance or importance of the project. Commerce is quite commonly though erroneously associated in many people's minds with manufacturing industries, but as a matter of fact the value of agricultural products transported by both rail and water far exceeds the value of all other products combined.

There is an old saying that "Jones always pays the freight," meaning the farmer. It is as true as gospel. Coming and going the freight charges are tacked onto the farmer. So he ought of all men to be interested in any plan which proposes to shorten routes and result in cheaper rates. The Great Lakes-St. Lawrence tidewater project is of this nature. It promises to be the most important transportation development that has been presented in recent years. Think what it would mean now to the harrassed farmers of the west and of Michigan if the crops which are being held back from the markets because there are no cars to ship them to the seaboard could be transported to boats at Chicago, Duluth, Detroit and other lake ports for direct shipment overseas? The condition with which we are confronted today will be with us every year increasingly perplexing until some shorter route than the long haul by rail via New York City is devised to connect up the agricultural regions of the Middle West to the markets of the world.

Advantages that will accrue to the farmer if the Great Lakes-to-the-Sea project is put through are discussed in a recent issue of *The Detroiter* by Chas. P. Craig, executive director of the Great Lakes-St. Lawrence Tidewater Ass'n, as follows:

"The price of grain at the seaboard should be the price at the interior plus freight and charges and the merchant's profit, the latter a small margin. This spring rye was the principal northwestern grain moving for export. In April, from day to day, the price delivered in New York was from 8 to 15 cents above the Duluth price plus freight and charges. In May the spread had widened to 15 to 22 cents. The exporter, buying rye, had no assurance that he would be able to deliver it. The 'merchant's hazard,' represented by the margin necessary to protect himself against failure to deliver, accounted for the extra spread. It is not extra profit. In fact, on perishables it may involve a heavy loss. This margin, ranging from 8 to 20 cents per bushel, which the exporter must take to protect himself, would go to the producer, if transportation and handling conditions would permit its elimination. The merchant is compelled to gamble and the farmer's price is docked.

"Similar evidence was brought out at Omaha. One potato grower reported 45,000 bushels sold at $2.25, which he was unable to deliver. The price at the moment was all the way up to $4. At the very time when potatoes had reached an unexampled height in the city markets, they were stranded in the country markets and great stores were lost entirely.

"A striking example of such loss was furnished in Idaho, where it was reported a flock of 50,000 sheep perished at the loading station gecause no cars were to be had and no feed could be obtained.

"In every line commodity markets were 'wild' because of transportation shortage.

"Wholesalers reported that their entire working capital was tied up in freights and prepaid purchases, which they could not obtain and therefore could not deliver on contracts. Interest charges on duplicate stocks, premiums on forced purchases and lost business on the same account, in many cases doubled the overhead expense and were additional causes of increased prices without corresponding gain to the distributor."

"Not to multiply examples, let two be given, A. H. Groverman, representing the coal industries, declared at Superior that there was no coal shortage, and had been none in years, due to inability to furnish coal at the mouth of the mine. The mines can raise coal as fast as they can load cars; continuous operation is dependent on car supply. If this lakes-to-ocean route were open today, he declared, the railroads could strike off one billion dollars from their estimates of needed equipment."

Third Party Movement Takes Shape at Chicago with Program for Government Ownership

MILLIONS of farmers, laboring men, professional men,—yes, and business men,—who are disappointed over the standpatism of the Republican and Democratic parties as expressed in the platforms adopted at their recent conventions, have been looking to the third party movement in hopes that it will adopt a platform which they can sincerely and enthusiastically embrace. Whether the convention of the Third Partyists now in session in Chicago will do this or whether it will split upon the rocks of dissention remains yet to be seen. As is always the case with new movements of this kind the third party has attracted to its standard every brand of theorist and radical in the country, and while a certain amount of so-called radicalism (which actually is nothing more nor less than a term employed by reactionaries to describe progressiveness) is essential no third party embracing all who are disgruntled with the old parties can be formed let alone win an election if it adopts all the theories held by its various groups.

If the third party is to be a radical labor party espousing the program of the Russian Soviets and calling for the nationalization of all industry, it will lose the support of all farmers and such strength as might come to it from the progressive wings of the Republican and Democratic parties. There are men active in the affairs of the third party movement who are ready to go that far. If the third party, however, sensibly confines its "nationalization" program to public utilities and natural resources which by their very nature appeal to the average person as being legitimate industries for government monopolization and operation, it may become a force to be reckoned with.

Who Make Up the Third Party?

The convention is being participated in by fourteen different political or semi-political bodies, as follows: the National Nonpartisan League, the Farmers' Alliance, the National Consumers' League, the American Labor Party, the National Single Tax Party, the National Public Ownership League, the National People's League, the American Constitutional Party, which was organized by W. R. Hearst a few weeks ago, the World's War Veterans, the Washington State Triple Alliance, the Minnesota Farmer-Labor Party, the New York Labor Party and the Liberal League.

The Program

"Public ownership of transportation, including stock yards, large abattoirs, grain elevators, terminal warehouses, pipe lines and tanks. Public ownership of other public utilities and of the principal natural gas, mineral deposits, large water powers and large commercial timber tracts.

"No land (including natural resources) and no patents to be held out of use for speculation to aid monopoly. We favor taxes to force idle land into use.

"Equal economic, political and legal rights for all, irrespective of sex or color. The immediate and absolute restoration of free speech, free press, peaceable assembly, and all civil rights guaranteed by the Constitution. We demand the abolition of injunctions in labor cases. We indorse the effort of labor to share in the management of industry and labor's right to organize and bargain collectively through representatives of its own choosing."

The above platform represents the tentative draft that was made by the "Committee of 48" at St. Louis last December. Additional planks may be added as follows:

"That Congress should not declare war or the existence of a state of war (except in case of invasion or force) unless authorized by vote of the people.

"Opposition to universal military training in time of peace.

"That our government should make every effort to secure universal disarmament by international agreement.

"That the economic blockade of Russia should be lifted."

The Candidate

The convention threatens to split on the choice of the candidate. Henry Ford would be the quick and unanimous choice were it not for the feeling that he might make it a Ford party and that the party might pass away with Mr. Ford's demise. Senator Robert LaFollette of Wisconsin is a second choice.

Campbell-for-Governor Pre-Primary Committee Needs Expense Money

A WAY HAS presented itself in which the farmers of Michigan may assist in a very practical way the candidacy of Milo D. Campbell, the farmers' candidate for Governor. The Campbell-for-Governor Committee, consisting of men representative of the farming interests, have heretofore paid from their own pockets such incidental expenses as have arisen in connection with their conferences and other work in Mr. Campbell's behalf. As the primaries draw near, however, there will be other expenses which of necessity must be incurred in the legitimate promotion of the Campbell campaign, and after a careful discussion of the matter the committee has decided to call upon the farmers of Michigan for contributions to the Campbell-for-Governor campaign fund.

THE BUSINESS FARMER does not make it a habit to solicit funds from its readers for political purposes and we do not want our readers to think that we are trying to establish any sort of a precedent in this appeal. But in the present case we feel that our interest is altogether justified and will be approved by our readers. The farm organizations have endorsed Mr. Campbell and there is ample evidence to prove that that endorsement meets with the approval of the majority of farmers. Having gone this far none of us who desire to see a man elected Governor of Michigan who is in sympathy with agriculture can afford to lay down on the job and let the other fellow do all the work. We feel that every farmer is personally affected by this matter and that it should be as much to his interest to see that Mr. Campbell is nominated as it is to the interest of Mr. Campbell himself.

A great deal of money is not needed; in fact, is not wanted. The people of Michigan have shown that they are not in sympathy with large political expenditures, and, moreover the law expressly forbids them. When Mr. Campbell accepted the invitation of the farm organizations to become a candidate the subject of campaign expenses came up and Mr. Campbell went firmly on record as favoring strict compliance with the law. But the maximum that a candidate can spend is so low that it scarcely permits the candidate to present his campaign in a proper manner to all the voters, so he must rely on his friends, if he has any, and if he hasn't he has no business being in the race. Mr. Campbell is not a rich man in any sense of the word and were there no law on the statute books necessity would force him to economize on his expenses.

There are certain expenses above mentioned which the Farmers' Campbell-for-Governor committee feels that it should take care of. A little advertising will have to be done in some lacalities. A little printed matter will have to be gotten out and some work will have to be done in some sections on primary day to get farmers and their wives out to the polls who might be tempted to stay at home. And there will be other incidental expenses which will require some money.

It is upon the request of Mr. A. B. Cook, treasurer of the Campbell-for-Governor committee that we make this appeal for funds. We are glad to do it. THE BUSINESS FARMER wants to see Mr. Campbell elected because he is the farmers' candidate. And we believe the majority of the farmers of Michigan want to see him elected and will assist both by their money and votes to help him secure the nomination. THE BUSINESS FARMER will start off the contribution with $25. Who will follow? Amounts of $1 to $25 will be most acceptable. Positively no contribution of over $1,000 wanted! Remittances should be made direct to Mr. A. B. Cook, treasurer of the Campbell-for-Governor committee, Owosso, Mich., and the accompanying coupon may be used as a remittance blank.

Date 1920

Mr. A. B. Cook, Treasurer,
Farmers' Campbell-for-Governor Committee,
Owosso, Michigan.
Dear Mr. Cook:

I want to help nominate Milo D. Campbell Governor of Michigan and to that end I pledge my vote and support and enclose herewith $..... to help defray the campaign expenses of your committee.

Uncle Sam's Hired Men Who Serve the Farmers

Meet Dr. John R. Mohler, Chief of the Bureau of Animal Industry—He is Waving at You

By DIXON MERRITT

THIS IS the first of a series of articles this publication is running in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the department is rendering and stands ready to render our readers, that those not now availing themselves of these services may do so. Accompanying this sketch also is an article describing the duties of the Bureau of Animal Husbandry.—Editor.

A WISE MAN a long time ago said that a man is known by the company he keeps—but John R. ohler is known, half a mile off, by ie way he waves his hand. He aves to everybody he ever saw be- ore, and he has seen a great many eople during the 23 years he has een with the United States Depart- ient of Agriculture as chief, assist- nt chief, head of the pathological ivision and one thing and another the Bureau of Animal Industry. he people who know him best say e never forgot a face or a name. onsidering the number of peple he as met under a multitude of cir- umstances, that seems improbable, ut—well, listen to this:

Mohler recently visited one of the ities where he was on duty a good any years ago as a meat inspector. le took a stroll through the pack- ig houses. Every now and then iat genial wave of the hand would weep out to some man on the killing oor, frequently a negro. His es- ort noticed it and asked him if he ould like to shake hands with the ien. He said he would. He did hake hands with them—and every ian who was there in his day he alled by name.

Dr. Mohler looks like a man who ats three square meals a day of holesome food and sleeps soundly n a good bed, untroubled by a loudy conscience. He is a big man, hysically as well as otherwise. He as a big head which seems to be ell filled with scientific knowledge nd human understanding.

The job he fills and the way he lls it require that kind of man. The ureau of Animal Industry is the iggest enterprise of its kind in the orld. It employs 4,400 people, bout 500 of them in Washington nd the rest scattered all over the Jnited States.

Among them, they re the final au- hority on nearly verything pertain- ng to live stock. hree of them dis- overed the hog holera serum that as reduced loss- s from that di- ease enough to ave the farmers f the United tates about $40,- 00,000 a year—a liscovery by the neans of which ny farmer can rotect his hogs gainst choler a. A member of this ureau was re- ponsible for the liscovery of insect ausation of dis- ases—the discov- ry that made the anama Canal pos- ible, by giving o science the sec- et of eliminating ellow fever from he Canal Zone. Of course, the Bu- eau of Animal In- lustry men were ot thinking about hat when they nade the dis- overy. They were trying to find ut how splenetic fever was trans- nitted from Texas cattle to northern attle, though the two never got near enough together to see each other. They found out that the Texas cattle arried a species of tick, that these icks were frequently scattered over astures, picked up by the northern attle and transmitted the disease to hem.

As a young man in the bureau, Dr. Mohler was on duty as an in- pector along the Mexican border nd learned a great deal about the attle tick. He came back to Wash- ington strong in the belief that the attle tick could be eradicated from he Southern States. The experiment was tried—and it has succeeded. The tick has been eradicated from considerably more than half of the originally infested territory, and the slaughter of the last tick is scheduled for 1923. It will represent 17 years work when it is completed—and already it is saving the country 40 millions of dollars every year. This has all been accomplished by driving the cattle, every so often, through a vat filled with an arsenic solution which kills the tick on the animal's hide.

The men under Dr. Mohler's charge inspect all of the meat that goes into interstate commerce in the United States, as well as all meat that comes into this country and all that goes out. In every packing house whose products cross a State line, a veterinarian or inspector of the Bureau of Animal Industry inspects the animals before they are slaughtered. If there is anything to show that they are unsound, they can not be slaughtered for human consumption. Those that appear to be sound are slaughtered—and every piece of the carcass is gone over carefully by other inspectors. If there is anything wrong, it is condemned. When a piece of meat or a can of meat product is stamped "U. S. Inspected and Passed" the consumer is assured of meat from a healthy animal and killed, cured, and canned under sanitary conditions. Dr. Mohler in his work up through the bureau was connected with this branch of the work for some time.

In all of the kinds of things he was tried at Mohler made good. He knew how to apply scientific knowledge to practical affairs. But he also showed a fondness for research, for digging deeper into a thing than anybody had gone before. That led to his being brought back to Washington in the pathological division of the bureau. He stayed there for 15 years, the greater part of the time as chief of the division. The pathological division investigates diseases of animals—what causes them and how they can be cured. Its work is constantly helping farmers to save valuable animals, and once in a while it saves human life. For instance, this division investigated forage poisoning in horses, discovered that it is due to a bacillus that develops in mouldy hay and such things and prepared a serum that protects against it. Then the discovery was made that botulinus poison in canned foods, from which a good many human beings have died recently, is caused by the same bacillus—and the serum discovered by the Bureau of Animal Industry has been called into use for human beings and has saved some of the victims.

I said a while ago that Mohler looks like a man who sleeps soundly, but very few men have lost more sleep in the line of duty than he has. Each of the three times when foot-and-mouth disease has got into the United States, Mohler was caught in the swirl and rush of the thing and worked night and day until he knew that the disease was driven back across the Atlantic. He confirmed the diagnosis in the outbreak of 1902. When the next one came in 1908 he did a brilliant piece of scientific detective work in tracing the source of the infection to a contaminated strain of smallpox vaccine. He was directly in charge of the radication work during the outbreak of 1914-15.

Another thing that the Bureau of Animal Industry people do is to inspect all live animals that come into the United States from foreign countries. Most of them are all right, of course, but now and then some of them are very much wrong. Several years ago some Brahman cattle—the holy cattle of the East—were brought to our ports by Texas ranchmen, because they are not bothered by the cattle ticks. The ranchmen were very anxious to get them to their ranches, and they had the support of high officials of the government in the effort. The cattle were to be released next day—when this same Mohler we have been talking about discovered that some of them had surra, a very terrible cattle scourge from which this country is free. The holy cattle found infected were not released—and the country was saved from a disease that might have done more damage than the cattle tick. Even Kendron, General Pershing's war horse, was denied participation in the New York parade because he had not passed quarantine. The bureau was asked to waive the restrictions in order that Kendron might carry his master in this great home-coming festivity, but Dr. Mohler felt that the risk was too great, so the famous steed was required to serve his term in quarantine.

Those are a few of the things that Mohler and his men do for the stock growers of the United States. In addition, they are experimenting all the time on breeding problems, feeding methods and a great many other things, and are making their discoveries available to everybody who is interested in live stock.

Mohler is a very successful administrator of that big work his intimates say, because he is a democrat—spell it with a small "d." He is just one of the 4,400 workers—a little busier, perhaps, but just as accessible as any of them. Others say that his success is due to the fact that he combines the qualities of the researcher, the practiotioner, and the administrator. And he has been able to do that, I believe, because he never had a fad. I tried diligently among the men who know him best to get them to tell me something outside of his regular duties that he works at or plays at. They couldn't do it. The nearest any of them came to it was one who said. "Well, Mohler loves a good joke—loves to hear one and loves to tell one."

Certainly this short sketch of the chief of the Bureau of Animal Industry—one of the 17 great bureaus of the Department of Agriculture—gives some idea of the wonderful service the bureau is rendering the farmers and people generally by helpful suggestions regarding protection of live stock and directions for prevention of loss by disease, and considered in connection with the other sixteen bureaus some idea may be had of the service of the Department of Agriculture as a whole.

Dr. John R. Mohler, Chief of Bureau of Animal Industry, U. S. Department of Agriculture.

WORK OF THE BUREAU

ACTIVITIES of the Bureau of Animal Industry are particularly those dealing with live stock and dairy production, disease control, inspection of animals and their products, research and similar lines of effort. The bureau has about 4,400 employees of whom more than 3,700 are assigned to duties in various parts of the United States, outside of Washington. The bureau is principally a field organization.

There are 14 main divisions in the bureau as follows: Animal Husbandry. Biochemic Division—Biochemical and bacteriological research concerning animal diseases, meat production, and disinfectants. Prepares tuberculin and mallein for distribution to authorized officials. Conducts analyses of dips and disinfectants. Dairy Division. Experiment Station—A veterinary experiment station is maintained at Bethesda, Md., for conducting investigations of animal diseases. Its facilities are used by the various divisions. Field Inspection Division—Has charge of eradication of sheep scabies, cattle scabies, horse scabies, dourine, anthrax, influenza, etc. Supervises interstate transportation of live stock. Division of Hog Cholera Control. Meat Inspection Division. Miscellaneous Division. Pathological Division.

MARKET FLASHES

TRADE AND MARKET REVIEW

Concerned as the farmer always is in the disturbances that ruffle the industrial world he is nothing but a spectator compared to the worker and the industrial employer. It would not be true to say that the farmer will not be affected,—is not in fact already feeling the effects of the turmoil that is raging in the world's economics,—for he is. The insufficiency of transportation, the lack of credit, and the disparity in the foreign exchange have already been effected in lower prices on certain of his commodities, and before another thirty days have passed every farmer will clearly see what a slave to transportation and credit he really is.

But among the few things that the farmer can be grateful for is the fact that people must eat. Although there may be no cars, cars there will be when the people are hungry and clamoring for food. Although there may be no ready money to loan to farmers when the harvest is at its height, long, long before the people face the necessity of going without food, plenty of money will be placed to the farmer's credit. So we can conceive of no crisis involving the interests of the city laborer, the employer and the farmer in which the latter will not receive first consideration.

In these respects the laborer and the small employer of the city are not so fortunate. The shortage of cars has already closed some factories. Others are running on a hand to mouth basis, frequently being obliged to shut down a day or a week awaiting arrival of raw material or cars to clear their shortage spaces of the finished goods. Unemployment due to these causes primarily is increasing alarmingly. And for the workman who is thus deprived of his wages there is no relief, either private or governmental.

Crops throughout the entire state are looking fine. The hail storm of last week did some damage but reports of fields totally destroyed have been investigated and found to be not true. The storm in some respects was the worst that has visited the state for some time and it is surprising that the resulting damage was not greater. The downpour, accompanied in places by a brisk wind, caused some lodging of grain where the stand was heavy. It is reported that in some of the western counties the corn was stripped of its ears and fields of wheat, rye and oats laid flat to the ground. If this is true the storm must have been much more severe in that section than it was in the eastern part of the state which shows very little evidence of the storm.

Corn is as far along now in most counties as it was last year which was one of the state's best corn years. The stand of oats in most of the southeastern counties is unusually heavy, and most of the farmers have harvested or are harvesting between the rains, a good hay crop. Wheat is a little thin and not heading up any too well, but rye shows promise of being a good crop.

At this season of the year all the grain markets are subject to "change without notice." The markets are more or less influenced by the great and comparatively unknown factors of the supply and condition of new crops. A sudden downward sweep of prices should not be construed as a permanent falling off of the markets, and a sudden rise in prices should not be looked upon with suspicion for it will not hold. It is the judgment of market students that except for occasional spurts the trend of the grain markets for the balance of the year will be progressively downward, and that thereafter the trend will be upward probably reaching if not passing the high records of the present year.

LAST MINUTE WIRES

CHICAGO—The outstanding features of the wheat situation is the condition of the crop in the Northwest, where black rust has been reported. Another week will determine the effect of this outbreak upon the yield and resulting prices. Live stock of all kinds in slightly better demand. Bearish tendency prevails in all grains.

DETROIT—Grain strength held only temporary. Oats lower. Hay easy with prospects of lower prices.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT PRICES WORK LOWER

WHEAT PRICES PER BU., JULY 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.87		3.02
No. 2 White	2.85		3.02
No. 2 Mixed	2.85		3.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.23	2.27	
No. 2 White	2.21		
No. 2 Mixed	2.21		

Last week wheat prices showed a marked tendency to seek lower levels and for a day or two the market declined. Reports on Saturday and Monday of the appearance of black rust in the northwest had a bullish influence and prices returned to somewhere near their former level. It is stated that the weather conditions of the past few weeks have been ideal for the development of rust. In Michigan we have had much rain and a few muggy nights, and we understand that the same conditions have prevailed in the principal wheat growing sections. The harvest has been under way for some time in the southwest and will begin next week in the northwest, providing the weather continues warm and dry enough to finish the ripening process. While speculators use every excuse to manipulate the market in their favor, it is a remote possibility that the black rust may reach such proportions as to make any appreciable cut in the wheat yield. Western farmers, particularly of Kansas and adjoining states will be free sellers of wheat as soon as it is threshed, so it is reported, in order to liquidate loans that have been made against their crops. This will mean inevitably a temporarily lower market.

CORN INCLINED TO BE BEARISH

CORN PRICES PER BU., JULY 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.70		1.84¾
No. 3 Yellow		1.66	
No. 4 Yellow			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.97		
No. 3 Yellow	1.95	1.95	
No. 4 Yellow	1.90		

The recent estimate on the corn condition and yield has had a bearish influence on the price and the trend has been downward for several days past. No sooner is one bogey of dread and doubt as to what calamity may befall this crop is dissipated than another arises. There was well-founded fear in eary spring that the seed would rot in the ground. Then a spell of dry weather was in the offing and wild predictions were made about the failure of the crop. But the crop has withstood all unusual weather conditions and in spite of the lateness of the season is only about a week behind the condition a year ago. The comparatively cool weather that has prevailed throughout the entire summer is bringing visions of early frost to the gloomsters. Early frost means soft corn and soft corn means the devil to pay in the corn markets. But the weather the last couple weeks has been ideal for corn—plenty of moisture and warm nights. If these conditions continue throughout the balance of the summer, barring possibility of too much rain, corn will be about as far advanced on September 1st as it was on the same date last year. We cannot be pessimistic about the corn yield. If appearances are not deceiving we expect to see Michigan at least produce a better than average crop.

As to the future of corn prices, authorities differ. Some claim that wheat being an international grain will be affected by international conditions, but that domestic corn prices are subject solely to domestic conditions. Be that as it may a certain number of factors that will control the wheat situation the next few months, such as transportation and credits, will also largely control corn prices. For that reason we expect to see a slump in corn. This may not take place simultaneously with the wheat slump, but may when the grain is harvested.

OATS FOLLOW WHEAT

Neither the carryover of old oats nor the estimated yield of new are sufficient amounts to warrant any considerable downward revision in the price of this grain. The government's estimate of 1,295,000,000 bushels is less than four per cent of an increase over last year's crop, an amount far less than the total domestic and foreign requirements. Oats have suffered some serious reverses the last several weeks and it is probable that prices will go still lower, but in the absence of a normal supply much lower prices can only be transitory and of short duration.

OAT PRICES PER BU., JULY 13, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.10	1.11½	1.28
No. 3 White	1.09	1.09½	
No. 4 White	1.08		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.79½	.76	
No. 3 White	.79	.75	
No. 4 White	.78		

RYE STEADY

The European demand for rye is holding this market steady, with prices ranging this week around the $2.30 mark. Poland and Austria are especially interested in American rye and quantities of it will be wanted right along for export to these countries.

NOTHING DOING IN BEANS

BEAN PRICES PER CWT., JULY 13, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.50	8.25
Red Kidneys		15.00	16.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25		
Prime			
Red Kidneys			

The bean market consistently holds to the position which it assumed several weeks back when the speculators bolstered the market for a brief period in order to move their supplies that had accumulated. Trading is inactive, demand slow and supply plentiful, with prices dragging along the $7@7.50 level. The condition of the crop in the western states is good and in Michigan excellent, giving promise of a satisfactory yield. Kotenashis which have been the demon on the trail of the navy bean for three years have lost none of their influence upon the domestic market and to them may be attributed the present condition of the bean market. Kotenashis are received weekly in large quantities at Pacific ports and at always at prices which can undersell the navy bean. The hopes of the farmers for better prices next winter lies almost entirely in the cut in the acreage this year which foretells a greatly reduced yield.

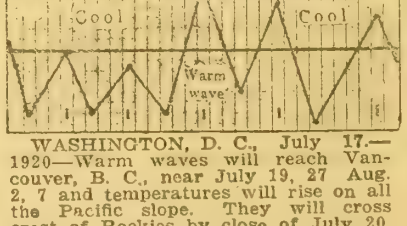
NEW POTATOES WEAKER

SPUDS PER CWT., JULY 13, 1920		
	Sacked	Bulk
Detroit	7.00	7.25
Chicago		
Pittsburg		6.12
New York		6.39
PRICES ONE YEAR AGO		
Detroit		
Chicago		
Pittsburg		
New York		

Fresh supplies of potatoes from the Virginia's, Oklahoma, Arkansas and Mississippi have weakened the potato market considerably, jobbing prices in Chicago running as low as $3.90@4 per bushel. We may reasonably expect further declines on the early potato market as harvesting moves northward and local crops mature. However, at the very best the early potatoes satisfy a temporary need and are well out of the way by the time the late potato movement begins in earnest. So whatever prices prevail on early stock which is quickly consumed they cannot be taken as a criterion of prices on late potatoes which are brought in quantities for winter storage. The price that will obtain this fall on the commercial potato crop will be largely made by transportation. It is a foregone conclusion that except in case of an outright panic which would release cars from industrial commerce for the movement of crops there will be an acute shortage for the potato shippers which will make for a high opening price and lower

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., July 17.—1920—Warm waves will reach Vancouver, B. C., near July 19, 27 Aug. 2, 7 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of July 20, 28, Aug. 3, 8; plains sections 21, 29, Aug. 4, 9; meridian 90 upper great lakes, Ohio-Tennessee and lower Mississippi valleys 22, 30, Aug. 5, 10; lower great lakes and eastern sections 23, 31, Aug. 6, 11, reaching vicinity of Newfoundland about 24, Aug. 1 7, 12. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

First part of July proved to be cool as predicted and a great temperature wave was and is expected to be crossing continent about 17. That will be the deciding event of the 1920 corn crop. If it passes through that crucial test without damage we may reasonably expect at least a fair corn crop for this year. Sometimes frosts damage northern crops last half of August and this is one of the times that such frosts are expected in our middle northern states and the Canadian Provinces north of them. These frosts may be light or heavy; may do much or very little damage. Planetary weatherology is not far enough advanced to determine, but I am expecting some northern frosts during the week centering on Aug. 25.

Northern hail storms and southern hurricanes are expected during the weeks centering on Aug. 5, 13 and 26. These events will probably, at least, cause a scare on the late northern corn and oats crops and the cotton crop. August hurricanes sometimes cause very heavy rains that do much damage in the cotton states. Those hurricanes will probably not be very dangerous to other property and to human life; the forces will probably develope into heavy local rains that will damage cotton.

W. T. Foster

vels as the spring and summer of 921 approach. We wonder what ie potato shipping agencies of the ate, such as the Farm Bureau, the ichigan Potato Exchange and the ichigan Potato Shippers' Ass'n, are oing toward insuring a reasonably dequate supply of cars for the move- ent of the crop. We realize that iere is little to be done along this ne at this time, but it would do no arm to give the matter a little pre- minary consideration and map out plan of procedure.

There has been some further eas- ng off in the hay markets during ie week owing to improved condi- ons and the effort of holders of old ay to move their supplies before ew hay is marketable. Farmers in ie East are anxious to empty their arns of what hay is still back and s most of it is owned by dealers, an ffort is being made to secure cars. he crop has improved in the past wo weeks owing to more favorable eather, but most sections report a rge percentage of weedy hay. Sec- nd cutting alfalfa in the West is eavy and of excellent quality. The ay crop this year promises to be a ecord breaker, but the gain over last ear will be West of the Mississippi iver, the tame hay states reporting larger acreage than the past season ut a smaller yield per acre.

CATTLE STEADY TO HIGHER

Cattle values have been on the pgrade for the better part of the ast two weeks, choice steers bring- ng as high as $17 on the Chicago narket last Friday. Stockers, can- ers, cows and other of the lower rades were in plentiful supply but emand is slow for this type of an- mal and prices are way below nor- nal. Receipts of last week were onsiderably under the previous reek's arrival on the Chicago mar- et and with indications that offer- ngs will not increase for some time o come, the present level of prices is xpected to be maintained.

Hogs are due for an advance in rice if the renewed interest in pork upplies on the part of export buy- rs is any indication. Receipts of ogs last week on the Chicago mar- et were far short of the previous reek and of the corresponding week year ago.

Sheep and lambs have partly re- overed from the drastic declines of fortnight ago, but are hardly back here it would pay a farmer to sell.

LIVESTOCK MARKETS

DETROIT.—Cattle: Market is very ull, some going over unsold; best eavy steers, $14; best handy weight utcher steers, $11@11.50; mixed teers and heifers, $9@10; handy ight butchers, $8.25@8.75; light utchers, $7.25@8; best cows, $8@ .50; butcher cows, $6.50@7.25; utters, $5; canners, $4.50; best eavy bulls, $8; bologna bulls, $7.25 @7.75; stock bulls, $6.50@7; feed- rs, $9@10; stockers, $7.50@8.50; nilkers and springers, $80@100. eal calves: Market opened steady, rospects lower; best, $17@18; fair, 15@16; culls, $7@14. Sheep and ambs: Market slow; best lambs, $15 @15.50; fair lambs, $13@14; light o common lambs, $10@12; yearl- ngs, $8@10; fair to good sheep, $5 @6.50; culls and common, $2@4. Hogs: Market slow; pigs, $14.50@ 4.75; heavy and common, $15.75; nixed, $15.85@16.15; yorkers, 16.25@16.35.

CHICAGO.—Cattle: Handy weight teers firm with some sales best high- r; one load choice 1,383-lb. Angus op at $17.15; several pens handy veight beeves and yearlings, $17; best heavy cattle, $15.90; bulk in all weights, $13.25@16.65; grassy steers, bulk she-stock and bulls and canners strong; calves steady to 25c lower; bulk, $13@13.50; few choice $14; good stockers and feeders are strong; undesirable kinds quiet. Hogs: Better grades steady to 10c lower; others mostly steady to strong; top early, $16.35; bulk light and light butchers, $15.80@16.25; bulk 250 lbs. and over, $13.90@ 15.75; pigs 25c higher; bulk desir- able kind, $13.25@14. Sheep: Slow and strong to 25c higher; choice western lambs, $16.60; bulk, $16@ $16.60; top native lambs, $16; bulk, $15@16; fair native yearlings, $11.50; very good native wethers, $10; choice western ewes, $8.50; bulk ewes, $8@8.50; best feeding lambs, $13.50.

Crop Reports

GENESEE—Farmers are not so busy the last couple of days, but are going to get down to real work again this week if the weather permiths. Up until the recent rains farmers were haying, culti- vating corn, beans and potatoes. Most farmers have just got a good start at haying, and if the weather is good next week will see a lot of hay cut and haul- ed. Hay is quite light this year and will probably bring high prices this fall. Oats and barley will be extra short this year, while rye and wheat will not be quite up to the average. Corn averages good although a few fields are quite poor. The acreage of beans is extra small and although some fields are look- ing fine, over half of the acreage is only fairly good. Not much buckwheat has been put in, on account of dry weather We had some heavy rains and hail dur- ing the last couple of days, which has nearly ruined some fields of corn, beans and oats and has done considerable dam- age to other crops in this vicinity.—C. W. S. The following prices were offer- ed at Flint: Wheat, $2.75; corn, $1.90; oats, $1.15; rye, $1.95; buckwheat $3.75 per cwt.; beans (C. H. P.) $6.75; beans, red kidneys, $11; hay, $22@28; rye straw, wheat straw and oat straw, $8@ 12; old potatoes, $3.50@5; onions, $1.50 @1.75; hens, 35c; springers 35@38c; ducks, 30@32c; geese, 30c; turkeys, 35 @40c; butter, dairy, 50@55c; cream- ery, 56@58; eggs, 40@45c; beef steers, 10@12c; beef cows, $6.50@9; veal calv- es $16@20; sheep, $7@8; lambs, $13@ 15; hogs, 15@16.

MONROE (N E)—A little too much rain right now. We farmers are busy trying to make hay between showers. Wheat that amounts to anything is about fit to cut. It averages poor, due to fly, rust and hail. Corn is getting quite yellow especially on best of bla corn land, oats are picking up and will make a fair crop, although some oats and barley fields are scalded, by rain and hot sun they look rusty. No help to be had at any price, which will make quite a loss of needed crops as weather is bad and lots of help needed. We will have enough for ourselves, but how about the cities and other countries, who are short? We have got to have prices on our products so we can bid for labor against manufacturers or some one will go hungry and that soon.—G. L. S.

FARMERS UNITE TO FIGHT RAIL RATE INCREASE

(*Continued from page 4*)

of all American railroads is approxi- mately $17,155,050,000, compared to their book value of over $20,600,- 000,000,used by railroads in this case.

"The railroads have suggested that an allowance for 'going value,' work- ing capital, and materials and sup- plies should be added to the figure above stated. Going value has been subject to much litigation. The present record is wholly lacking in any competent figures whatsoever as to the amount of such values, if they should be added.

"As a possible offset to such fact- ors, we cite the following facts: The Federal government and the State of Texas have made donations of land to American railroads aggregating more than 146,000,000 acres. This vast domain is larger than the entire land area of Pennsylvania, Ohio, In- diana and Illinois combined. This great empire is larger than that of Belgium, Greece, Portugal, Switzer- land, England, Scotland and Ireland combined. Without stating the amount, a witness for the carriers conceded that this was reasonably worth several hundred million dol- lars. It is now proposed to capital- ize this vast empire, and make the public forever after pay an annual tax to the railroads on its present value, a value which has cost them nothing.

"As a possible offset to working capital and materials and supplies, we have shown that when the rail- roads were taken over by the govern- ment they had an unappropriated surplus in such form as to be readily available (in cash, bank deposits and securities in unaffiliated companies) aggregating more than $800,000,000.

"As another possible offset to the items named, it must be remember- ed that much of these properties has been built out of earnings. The fig- ures for the Pennsylvania verified by its officials in another proceeding showed that this amounted to more than $300,000,000 for that system alone. This Commission has unani- mously held in a previous case, and the presidents of two leading rail- roads in the United States have de- clared under oath on the witness stand that such items should not be capitalized for the purpose of jus- tifying increased rates.

"As further evidence of the present value of these railroad properties we suggest the propriety of capitaliz- ing the standard return guaranteed to the carriers during the war per- iod, and adding thereto the value of additions to property made since December 31, 1917, and also the in- vestment in non-federal controlled lines.

"Adopting the foregoing method, capitalizing the standard return at six per cent, we obtain a total value amounting to $16,611,050,649. If the railroads are entitled to earn six per cent upon this value under the Cummins-Esch Act, their total net railway operating income should equal (above all expenses and taxes) $996,663,036.

"This is equivalent to adopting the standard return, and adding thereto six per cent on all additions to prop- erty subsequently made. In view of the entire situation, for present pur- poses, this method is probably the best.

"The standard return reflects what congress deemed to be reason- able for the properties at the time they were taken over by the govern- ment. In addition to that fact, the standard return is equivalent to the net revenues of the railroads during the most prosperous three-year per- iod they have ever experienced

"The railroad officials have esti- mated what would be the net reven- ues during the coming year on the present basis of freight and passen- ger rates. They have created a con- structive or imaginary year by ap- plying the unit costs anticipated for the next twelve months, to the traffic of the year ending October 31, 1919. In other words they have made full allowance for all increased expenses, but have made no allowance whatso- ever for increased business.

"Precisely the same method was adopted by the railroads in 1917, in the Fifteen Per Cent Case. At that time we objected and showed the large errors that such a method of accounting would produce if applied to proceding years. In the fall of 1917, on re-hearing, we showed that in nine months the railroads had al- ready earned $50,000,000 more than they had prophesied they would earn during the entire year.

"Fortunately we now have the actual returns for the entire cal- endar year 1917. And we find that the railroads' prophecy in the spring of 1917, as compared to the actual returns for the year in the Eastern District alone, involved an error of over $95,000,000.

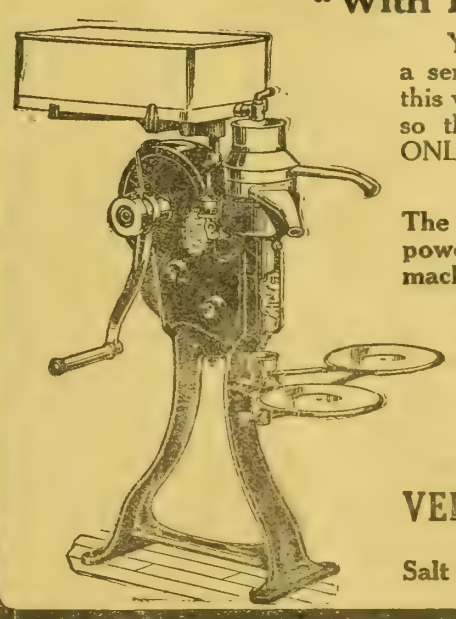
"We have shown that an increase in their total revenues of 12.85 per cent (instead of 19.48 per cent as estimated by the carriers) will en- able the railroads of the United States to earn six per cent upon the value of their properties, arrived at by capitalizing the standard return at six per cent and adding the in- creases to property subsequently made. If the entire increase is con- fined to freight traffic the advance should be 18 per cent (instead of 27.85 per cent as proposed by the carriers.")

Labor Shortage has no Terrors

for the man who owns a

UNITED STATES CREAM SEPARATOR

"With Perfected Disc Bowl"



Years before "labor shortage" on the farms was such a serious consideration as it is today, the men who make this wonderful separator had **anticipated** this very condition so thoroughly that even today the United States is the ONLY cream separator that can be run with

Hand or Power Without a Shift

The U. S. can be fitted for gasoline engine or electric motor power without removing the crank—a hand and power machine combined—ready for any emergency.

This exclusive feature—so important today—is only one in- stance of how the makers of the machine that holds the world's record for close separation have led in the important improve- ments and refinements that make for easy running, easy clean- ing and long life.

Have a United States agent show you what a marvel of easy cleaning the U.S. Perfected Disc Bowl is. You'll say it "shines by comparison." Send for literature.

Business and Philanthropy

AS IF the farmer wasn't harrassed enough by bugs and blight, floods and frosts, failing crops and falling markets, shortage of labor and machinery, lack of credit, the problem of keeping his boys and girls on the farm and other perplexities too numerous to mention, to say nothing of the little problem of making both ends meet—some well-meaning folks would charge him with the responsibility of feeding the world and hold him criminally liable if any suffer for want of food. At the same time none of these well-meaning folks would think of soiling their hands and bending their backs at the arduous labor which some must perform in order that this precious food may be produced.

It is an old and proven saying that business and sentiment will not mix. While it is true that many of the nation's richest men are also her greatest philanthropists it does not follow that any of them combine their philanthropy with their business. They do not. That is the reason they acquire great wealth. The practice of philanthropy in the conduct of business would mean less profits to the business and lower prices to the consumer. If John D. Rockefeller's philanthropic nature had found expression in the policies of the Standard Oil Company, Mr. Rockefeller would not now have so many millions that he cannot count them, and gasoline would be cheaper. The same is true of Andrew Carnegie and other steel barons. Had Henry Ford been as charitable in fixing the price of his motor cars as he has been in building hospitals and other worthy monuments to his name, Ford cars would be cheaper, but we probably wouldn't have the hospitals. Had Dodge Bros. shown a philanthropic spirit in fixing the price of their product, the estate of John Dodge would not now be completing a two-million dollar mansion at Grosse Point and Horace Dodge might not have been able to give his daughter a wedding which for pomp and lavishness set the society world agog.

Perhaps the reader may think we are getting a little far afield from our subject but when we show the connection between gasoline, steel motor cars and the production of food the point we have in mind will be clear. All three of the above commodities, no less than the very money and labor used in their manufacture, are now considered essentials in the successful conduct of a farm. The drillers of oil, the makers of steel and motor cars, as well as the manufacturers of hundreds of other commodities, all draw an enormous amount of labor and credit from the farm. Upon their finished product they set a price that equals cost of production plus a profit,—in some cases a very handsome profit. They sell this product to the farmer at their fixed market price. There is no sentiment involved in the transaction. No discount is allowed because of the peculiarly hazardous nature of the farmer's business or because of the fact that he is mankind's only hope against starvation. He must pay the price, and if possible add the cost of these materials to the selling prices of his crops.

Neither is there any thought of philanthropy upon the part of those who buy the farmer's products. The middleman and even the consumer himself will naturally buy at the very lowest figure at which the farmer can be induced to sell. They do not trouble themselves to the point of finding out whether such prices pay the farmer a fair profit. In the majority of cases they do not. With the purchaser of the farmer's food the transaction is a matter of dollars and cents, pure and simple, undefiled by any philanthropic notions.

In view of the fact that all with whom the farmer deals conduct their business upon a rigid business basis, unmixed with sentiment, and the farmer is of necessity obliged to follow in their footsteps so far as possible, is it fair or reasonable to criticize him for his failure to plant crops which may not grow or which for lack of labor may not be harvested, to raise high-priced live stock which may find no market, or develop any branch of his business beyond what he is reasonably sure will bring him a profit?

The Sugar Beet Acreage

FARMERS who are not growing beets this year because the manufacturers refused to give them a fair share of the profits question the statement of the factories that the acreage this year is the largest in the history of the industry. In letters to the editor they all state without exception that the acreage is far less than normal in their respective localities, and they have asked us to express an opinion as to the correctness of the reports of the total acreage. It is impossible to determine the exact acreage. The Department of State and the Bureau of Markets must of necessity rely upon the reports of the manufacturers themselves for information of this character. Having learned something of the temper of the manufacturers this year we would not put it above them to exaggerate the acreage for which they have contracts if it suited their purpose to do so, and in view of the fact that the beet growers are already getting set for their fall campaign, it would be very much to the interests of the manufacturers to distort their acreage figures and make it appear that the efforts of the growers to reduce the acreage were fruitless, thereby discouraging them possibly from further efforts at organization.

A recent report of the Michigan acreage indicates an increase of about five per cent over last year. Even accepting that this is correct, which we refuse to do, the fact in itself would be of no significance as reflecting upon the success or failure of the beet growers' campaign. The manufacturers might conceivably have five per cent more acres under contract this year than last and yet secure less than fifty per cent of a normal tonnage. This might happen even in the face of normal growing conditions. It must be apparent to all pioneer growers of beets that a very large percentage of the 1920 crop has been planted on land which has never before grown beets and is entirely unsuited for growing them. Also that a large majority of the farmers growing beets this year are entirely unfamiliar with their culture. Under no circumstances except absolute necessity would the manufacturers have contracted for beets in a good many localities which are attempting to produce them this year. Acreage means nothing; it is tonnage that counts. And we shall be very much surprised if the sugar factories of this state have seventy-five per cent of an average tonnage when the beets are weighed.

We hope that nothing may transpire to swerve the practical beet growers of Michigan from their avowed purpose to have a voice in the making of the contract and a fair share of the profits. It is our firm belief that no matter how favorable the balance of the season may be there will be hundreds of growers who will lose money on the crop this year and will be ready to join hands with the organization this coming fall. The dominating principle of the beet growers' "strike" should not be lost sight of for a moment, and every farmer who is an actual or potential beet grower and a lover of justice should refuse to sign a contract for 1921 which is not the result of previous consideration and approval of the growers in conference with the manufacturers.

Why a Great Naval Program?

THE UNITED States is rapidly building what Secretary of the Navy Daniels declares we most need, "incomparably the greatest Navy in the World." The Tennessee has just been launched. It is the largest battleship ever built. The Iowa and the Massachusetts will be even larger. The navy program of twelve super-dreadnoughts will be complemented by a proportionate number of battle cruisers, scout-cruisers, destroyers, submarines and other war craft, giving the United States a navy that should inspire awe in its imaginary enemies and horror in the overburdened taxpayer.

Whether Secretary Daniels is sincere in his advocacy of a matchless navy or whether as an appointee of the Wilson administration he is trying to punish the nation for not accepting the Wilson League of Natons to insure the peace of the world without armament, is not clear; but inasmuch as the Secretary has always been known as a peaceful old gentleman somewhat averse to military preparedness in times of peace, we may reasonably conclude that his naval recommendations are not entirely disassociated from the failure of congress to adopt the League of Nations covenant. Be that as it may the Secretary seems to have met with remarkable success in leading a Republican congress into an unprecedented ship building program.

Do we need a greater navy? Japan, we are told has already been outdistanced in naval armament by this country. England's naval expansion, if she has any plans for such, are entirely at a standstill because of lack of money and material. Germany's navy is at the bottom of the sea, and the combined armaments of all the other leading nations are not formidable enough to cause any alarm even if they were directed en bloc against the United States, a possibility as remote as the Ressurection.

The building of super-dreadnoughts at this time when all the world is suffering from the deep economic wounds inflicted by the great war is a criminal and inexcusable waste of labor and money. The recent congress robbed the constructve agencies of the government like the Department of Agriculture of hundreds of millions that money might be had to build engines of destruction. The people are restless and sullen under the tax burdens. Industry and agriculture alike are crippled because the resources of the Federal Reserve system have been drained and there is no other source of credit to which they can turn for relief. While the government scrapes the bottom of the exchequer to buy steel, brass, lumber and other materials and to pay the wages of ship builders in the construction of dreadnoughts which at the end of five years may be obsolete and ready for the junk pile, all industry languishes for want of men, money material and transportation.

Certainly the farmers of this country will not approve of such senseless and wanton waste of the public funds, at this critical period and we doubt if there are many other classes of people who will approve of it. A poll of the press of the country shows an almost undivided sentiment against any increase in the naval armament. The people should at an early date fix the responsibility for the policy which is being followed by the navy department and show the militarists, whoever they may be, that they have exceeded their authority as the representatives of the people and demand that an immediate halt be called on further naval expansion.

At the recent election in North Dakota the Non-Partisan League re-elected Gov. Frazier and most of its other state officers and captured a United States senatorship, but lost the state treasurership and several places in Congress. There is some disagreement as to whether the election was a defeat or victory for the League depending upon whether the observers are pro or anti-League.

What the Neighbors Say

RE RELIGIOUS EDUCATION NEEDED INSTEAD OF LESS

While reading your last issue of M. B. F. I also happened upon editorial to "Abolish Parochial ools," framed by a certain J. B. n Kent county. If the person uestion had not drawn my atten- to the fact that he had for the eight years been director of a lic school I should probably have ored the absurdity of his editor- as proceeding from a mind too nature to cope with the educa- al difficulties that confront us ay. But occupying such an ex- d and so important a position as ctor of a public school, I cannot ain from setting Mr. J. B. aright. t first, Mr. J. B. has reference to the parochial schools main- ed by the Christian Dutch Re- ned church. However, in the rse of his editorial, I quote him ay that "as for schools maintain- by other denominations their pur- e and aims are too well known to d any discussion here." Mr. J. B. refore, make a sweeping asser- , and declares that all parochial ools should be closed. From a re- ous standpoint I defend the cause y of the Christian Day school of Ev. Lutheran church of the Mis- ri Synod.

wish to say at the outset that Mr. 3. is either totally uninformed re- ding our parochial schools or that maliciously casts such judgment n our schools. The doors of our ochial schools are open to every- Why don't you come to see yourself, Mr. J. B., whether we ulcate Bolshevistic principles into minds of our pupils? The very t that Mr. J. B. knows nothing ut our parochial schools accounts his editorial, and a discussion n this surely would be opportune. That Mr. J. B. displays such a row-mindedness regarding the fare of our country by despis- religion is a puzzle to me. Presi- nt Lincoln once said that "what- r makes a man a good Christian, kes him a good citizen." All the rld over there is a great cry for re spiritual instruction for our ith. I shall quote several para- phs of the committee report as pted by the Methodist General nference, which met in Des Moines, a, from May 1 to 27, they read: e have three and a half millions children and youths in the Sun- schools of the Methodist Epis- al church. This is the largest ly of young life under the direc- n of any Protestant organization America. If rightly trained in Christian life, this great body youth may become the saviors of world.

The Sunday school alone is not ficient for this gigantic task. One ur a week on the Sabbath day is sufficient for such an undertak- More time at a more favorable iod under more favorable condi- ns with a trained leadership must secured if the youth of the church to be thoroughly trained in the nciples and practices of Christian aracter.

The public schools is not the so- ion of the problem. In a republic e ours where church and state are arate and public funds cannot be propriated for sectarian purposes, public school cannot be used as agency for religious instruction. me other agency must be created. ly one course appears to be open. eek day schools of religion must be ablished wherever practicable, and der the auspices of the religious encies of the community where children may be regularly taught d trained in the principles of ristian conduct. Only in this way we hope to adequately train the uth of the church and the commun- in the gospel." (The Daily Christ- Advocate, pps. 388-530.)

Mr. J. B., this assembly of men w the necessity of religious in- uction. Should we then abolish r parochial schools now in exist- ce, because they make Christian w-abiding citizens out of our uth?

The Pro and Con of the School Ameudment

INTEREST is keen in the proposed amendment to abolish parochial schools, as shown by the large number of letters received from M. B. F. readers, both pro and con. Such letters as are free of personal abuse will be published in these columns, without further comment, as the readers of the Business Farmer already know what our position on the matter is. If further discussion of the subject by the editor is deemed advisable it will be presented in the regular editorial columns. In order to avoid hard feelings between subscribers and neighbors of different religious faiths let us be careful to conceal our religious prejudices as much as possible, and to discuss the proposal strictly upon its merits.—Editor.

Here is another notation to the same effect from the March 4 issue of the Presbyterian, wherein Rev. E. L. Jones declares that the matter of religious education is "the paramount problem confronting the Protestant church today." Rev. Jones says that the Sunday school "with its maximum of twenty-six hours a year of religious instruction, it is hopelessly inadequate. This no one presumes to deny." Rev. Jones then gives the advice that "systematic instruction in the Bible and proper religious instruction in all other studies for five days in the week from Sept. until June from the kindergarten to the high school be given."

Enough said, Mr. J. B. Broadmindedness and justice will conquer. "Now I believe it behooves every voter at the coming election to vote upon this question as he sees it, but here is one to vote no on—the school question."—*C. R., Tuscola County.*

FARMER CANDIDATE IN 28TH

Under the heading "Clare Farmers Put Candidate in the Field" the MICHIGAN BUSINESS FARMER prints an endorsement of Senator McRae from the pen of Herbert F. Baker, all of which I endorse, but I don't want you to overlook the fact that Osceola county has presented a real farmer for senator from the 28th district.

Hon. John Schmidt served three terms as a member of the lower house of the Michigan legislature, and has a spotless record as a member of that body, and by experience and temperament is fitted for the office of senator.

Mr. Schmidt was born on his Osceola county farm, and is now and always has been a farmer, and has no other business, and with his son gives his whole time to farming and cattle raising, he has however found time to help in every worthy cause for the upbuilding of the community, for the advancement of agricultural interests. He took the lead in organizing the branch of the Gleaner Clearing House in Reed City, is a member of the Grange and Gleaners, and has taken great interest in the Osceola County Board of Commerce whom you know has done so much for the county, is a good business man, and will be a credit not only to the farmers of the district but to the whole state of Michigan.

Inasmuch as you have given some space to the candidates from the 28th senatorial district I hope you can see your way clear to give Mr. Schmidt the credit he deserves and his record as a legislator and a good citizen warrants.—*M. M. Callaghan, president Osceola County Board of Commerce.*

We are glad to learn of Mr. Schmidt's qualifications. The Business Farmer is not interested in the political candidacy of any man except to reflect the sentiment of the farmers themselves. Whoever the farmers of the 28th district endorse for their senator will be the choice of the Business Farmer. In the absence of any endorsement the Business Farmer will hold aloof from the campaign.—Editor.

FATHER OF PAROCHIAL SCHOOL AMENDMENT EXPLAINS

Referring to your editorial of June 12th, on the proposed School Amendment, we beg leave to present our view of the question.

The reference you make to the Constitution, is quite in keeping with the principles inculcated in this amendment. In the Declaration of Independence it was decreed that all men were created free and equal, and the Constitution prescribed that each individual worship God according to his own conscience. As Society developed, they saw that it was necessary that all children be educated, and with this idea in mind, it was determined that all children should attend school for so many days a year, and so many hours a day. It is impossible and inconceiveable that a State could compel children to attend anything but a non-sectarian public school, without fostering a religion. If churches had not usurped the authority and duties of the state this question would not be raised.

You make the assertion that the proponents of the amendment claim the parochial schools were unpatriotic, but do not submit any proof. From the *Michigan Catholic* of March 25th, we quote as follows:

"Where there is a question, however, of clashing of rights or prerogatives, the inferior institution must needs acknowledge the prior rights and prerogative of the superior establishment. In this case Church rights are superior to state rights."

Is this the kind of doctrine, with which to instruct future American citizens?

You set up three reasons why the amendment should not be passed. First because there is no need of it. There is only one way in which an institution can be properly judged; by its products. That is where it is removed from the influence by contact and association with products or other things of a like nature.

For the last 1,200 years the greater part of the world has been under the educational influence of the Roman Church, and we would like you to point out one example of their efficiency. They have absolute control of education in Quebec, Spain and Mexico, and are fast gaining control in southern Ireland.

If we ever hope to have a united democracy, we must have all our citizens educated with principles in sympathy with democracy.

It might be well to quote you here from a Syllabus of Pope Pius IX, which has never been repudiated or denied.

"The Church has the right to exercise its authority without having any limit set to it by the civil power. The Church has the right to interfere in the discipline of the public schools and in the arrangement of the studies of the public school."

The last quotation indicates that parochial school interests claim the right to interfere with our public schools. This is in exact keeping with a statement made by Rev. Rincke, who is chairman of the Legislative Committee of the Parochial school interests (at a meeting at the Nazareth Lutheran church on June 2nd) to the effect, that he and several others on the committee, drew up our present compulsory school laws. This shows conclusively, that these people are carrying out the dictates of the Papacy.

Your second objection is, that the issue smacks of religious intolerance. We cannot see where your contention has any grounds, inasmuch as the state is absolutely divorced from creed. All this amendment requires is the attendance of children in a purely American school for five hours a day for 160 to 180 days in a year.

Surely you will concede that the state has some interest in the child and is entitled to at least that amount of time, when after deducting sleeping hours, the child still has nine hours a day practically three months

The Week's Editorial

Enclosed find a clipping from *The Successful Farmer*, which if it is convenient I wish you would print in the M. B. F. as it voices just what the most of the people think.—*W. H., Howard City.*

AN AMAZED REPUBLICAN

I am a prohibitionist Republican in a labyrinth of amazement at the course our wise men at Washington have taken upon the great League of Nations document of Versailles.

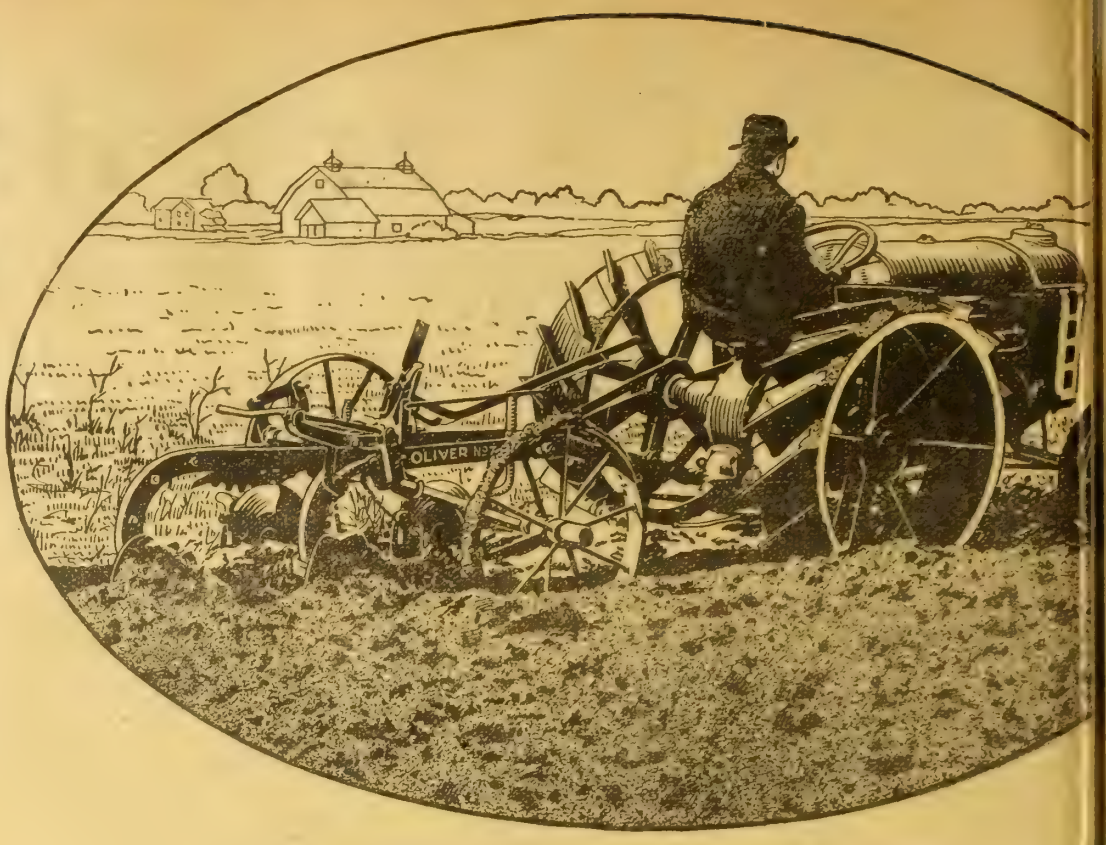
The opportunity for the establishing of a great and wonderful code of laws whereby the world might have a lasting peace, has been most unreasonably, selfishly and enviously defeated and left our great nation outside the circle of the great, honorable and liberal nations. The only reason that our wise men give for thus banishing our nation is "We do not want to assume any of the responsibility of doing our part in establishing and maintaining Justice and Peace in the world." They want to get into the great show but they want to crawl in under the tent and enjoy the performance without having bought their ticket. That is the most charitable way we can put it. The real fact in the case is, the dose of jealousy and envy is mightily working upon their disgruntled and miserable mental faculty. Now, let me tell something that every wise, thinking citizen already knows. If it had been a Republican president who had gone to Europe and was honored and lauded and esteemed as was our great Christian President; if a Republican had taken a leading part in formulating that great code of laws, "The League of Nations;" those trumpet blowers at Washington would have cheered until the dome of the capitol would have fallen. They are mighty blowers of trumpets, trumpets of just one tone and that tone in a minor key.

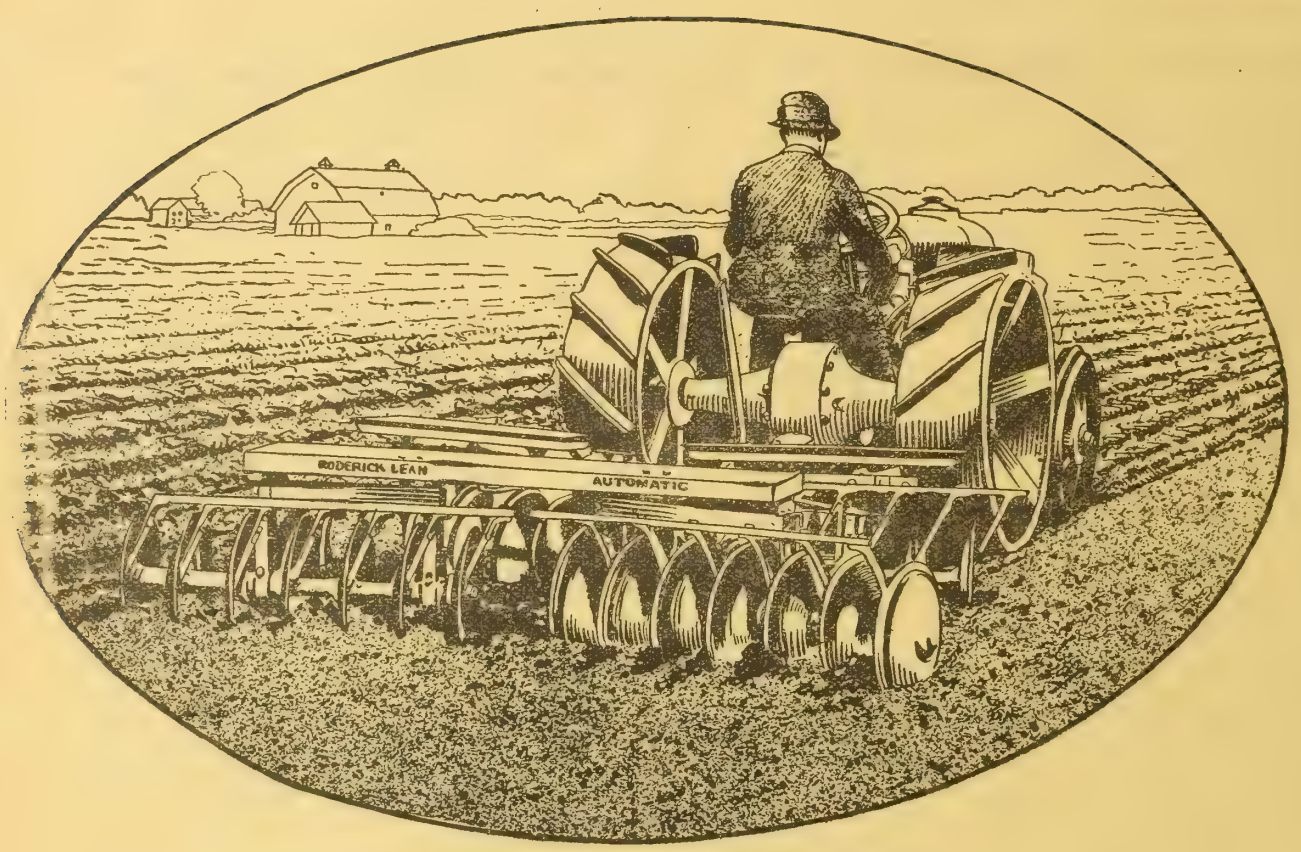
They seem to forget that the great culprit nation, Germany, at the very time when she was hard pressed, boldly hove into the N. Y. harbor and shot her guns into the city. In their envy they seem to forget that Germany contributes her defeat to America.

In their spite against the "Wilson League of Nations," they would rather stay outside that envied League and remain as a nation outside and alone until the time shall surely come when Germany will have recovered from her great defeat, and then she will most assuredly seek and find an opportunity to insult our flag and America will have no friends among the great nations. Do you ask why? I answer: Because the impression over the sea is, we were too selfish to bear our little part to become a member of the brotherhood of nations and we were not worthy of aid or sympathy although, that is not the real cause of our staying out of the League. The real cause is, a Democrat had the most renowned honor of being instrumental in its foundation. If a Republican had been sent to Europe and had brought back that great Christian Code then would our Republican majority at Washington have signed it and embraced it and lauded it, though it called for a standing army in Europe of 500,000 men.—*T. A. W., Wisconsin.*

WITH THE FORDSON TRACTOR THE OLIVER No.7 PLOW

An Oliver Plow for every farming need also has been designed for the Fordson.





WITH THE FORDSON TRACTOR THE *Roderick Lean* DISC HARROW

Built in seven foot size. Other sizes for special conditions. Complete line of specialized tractor spike tooth, spring tooth and orchard harrows.

WITH THE FORDSON TRACTOR THE AMSCO TRACTOR DRILL

MADE BY AMERICAN SEEDING MACHINE CO.

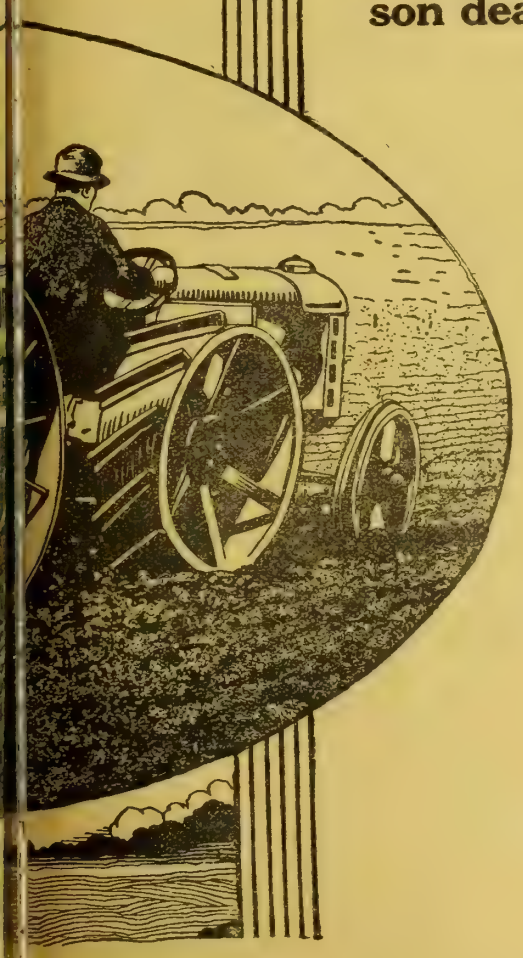
Furnished in plain grain or combined grain and fertilizer styles, and with wood or steel wheels.

Power Farming
Brings the Greatest Profit

The farmers of America are appreciating more fully each day the increased profits that come from power farming. The army of Fordson owners now numbers 100,000 and is continually growing in size.

Fordson farming is profitable because it is practical—because the implements are designed for the work which they must do. Whether it is plowing with an Oliver mouldboard or disc plow, discing the stubble and the plowed field with the Roderick Lean Automatic Disc Harrow, or seeding with the Amsco Drill—these specially built tools serve best the needs of Fordson farmers.

Throughout the country more than 8,000 Fordson dealers can supply you with these specialized farm implements. The service which they offer you is secondary in value only to the implements themselves, for it is your assurance of the continuous successful operation of your power farming equipment. There can be no costly delays in your farming program with such a nation-wide service at your call.



See the Fordson Dealer in your town.

Edited by CLARE NORRIS

VERY OFTEN we think of Women's Clubs as being just sort of social centers where those who have more time to spare than they know what to do with, congregate, and theorize. However, this is not always true, nor are these clubs always card clubs nor literary clubs. Many are organized for the betterment of the community in which they live and as everyone knows that an exchange of ideas is to be desired where vital questions are considered, these clubs are serving a very vital need.

Recently delegates from the leading Business Women's Clubs throughout the country held a convention. There were speakers there from every part of the land who had made a specialty of their particular branch of work, and they were there to tell the other how it had been accomplished.

Women are in business everywhere, and they are in to stay. Where the woman has home duties to perform, she has a God-given task, but not every woman has a home of her own. Many are out in the business world forging their own way, and it remains for the women who have beaten the trail to show those who are unfamiliar, the way.

The report of Miss E. L. Spoor, of the Detroit Business Women's Club is so interesting that I know a great many of our readers would be able to glean helpful hints therefrom, so I am going to give you just a few of the most forceful points made by the several speakers, as reported by her:

Miss Audie V. Gronbery, of Grand Rapids, Investigator for Mother's Pension Fund, told of the development of this fund, of the immense amount of good it was doing for its beneficiaries, keeping the mothers at home caring for their children, but she showed how entirely inadequate it now is in many cases and advocated some plan which should be brought forward by the united efforts of the women of the state so that a law might be enacted in Michigan equal to that of any other state.

Miss Lena Madesin Phillips, of New York, who is executive Secretary of the National Federation of Business and Professional Women, used as her topic the "Open Road." She urged women to play the game as men play it, keeping to the rules of the road. To quit asking for rights and retain their privileges. She said women should have courage to follow their own judgment, that they must stop worrying about details and feeling that they alone are carrying the whole responsibility of the business in which they are engaged. "Do the big things and leave the details to others." "Cultivate true fellowship and eliminate all personality and petty gossip." She said further that some women enjoy martyrdom. We must stop enjoying our misery. Insist that pay for women in business be based on service, not on sex. But be big enough then to fill your job. In closing she pictured women marching down the broad highway, the trail that has been blazed by the pioneers in business life, and running on ahead is a black cat, constantly looking back, but always keeping ahead until it disappears from sight. Hereafter as women acquire a broader view and a clearer vision there will be no more catty ways and methods.

Miss Jessie Ackerman, of Chicago, said: "Woman is the reserve force of the world, and the Lord has called is forces out to prevent the moral sses to humanity. Women in the me have fitted children for the rld, and Low they must go out and the world for the children. Women should preach Christian citizenship."

"The New Fatherland" was the subject treated by Miss Harriet Vittum, of Chicago, head resident Northwestern University Settlement, and surely she is in a position to know her subject. She said in part: "There is no gift like citizenship, but like all gifts it brings its price. Whether we are worthy citizens will not be known until we have lived our life story. We must improve our home education system before we try to transplant it to another land. Another thing left for women to do is to wipe out the imaginary line between capital and labor. After all the so-called unrest is mostly in the minds of those who have never been classed as laboring people. We are frightfully worried because the laboring man has at last his chance. There are two ways to abuse citizenship—one is not to vote, and the other is to use the vote for ulterior motives. One of the great needs of today is for a minister of education in our federal government. We must have an efficient educational system, and should this be accomplished public education would earn its title to the backbone of the nation. Schools are today turning out pupils unfit; 300,000 babies die every year in the United States, and there is no question but that if the mothers were properly educated in the most vital questions of life many of these babies through intelligent care and feeding could be saved. And this should be taught in the public schools. And it is the women who must demand it if it is ever taught. Some day the motherhood of the land, potential or actual, will rally to the rescue of these young lives that are needlessly sacrificed. Set modest standards of dress, dress that will adorn and not caricature."

What Is Home?

Eight hundred replies came to a London magazine which asked the question, "What is home?" These answers were written by persons representing all classes of society. They emanated from homes of refinement and wealth, and from those of crudeness and poverty. Seven which the editor called "gems," were selected and published. They are:

"Home—A world of strife shut out, a world of love shut in."

"Home—The place where the small are great and the great are small."

"Home—The father's kingdom, the mother's world, and the child's paradise."

"Home—The place where we grumble the most and are treated the best."

"Home—The center of our affection, round which our heart's best wishes twine."

"Home—The place where our stomachs get three square meals daily and our hearts a thousand."

"Home—The only place on earth where the faults and failings of humanity are hidden under the sweet mantle of charity."—William J. Hart.

HOME COOKING

MANY OF OUR readers have missed the excellent articles on Home Cooking which for some time were a regular feature of this page. It is with pleasure that we announce a new series. Miss Elizabeth Mathewson, of the staff of the Grand Rapids high schools, has secured for us several articles, each from the pen of an expert in her particular line, on this subject. The first appears in this issue.

The Sunday Dinner

Recognition is made to Dorothy B. Marsh of the Good Housekeeping Institute Staff.

Can I join my family at church on Sunday when there is a hearty dinner to prepare? This is a question many women are asking themselves and the answer is "yes." Make a few preparations, go to church—then cook your dinner afterward, a dinner that is simple, yet hearty and tasty. Simplicity should be the keynote of the Sunday dinner.

Save your more complicated meat, vegetables and desserts for the week day meals when time is not so great an item nor rest so essential. In their place serve broiled or baked chops, steak, small roasts or fish, which require little or no preparation and little time for cooking. Simplify the vegetable courses by avoiding all scalloped or creamed dishes, which take so much time to prepare. Serve carrots, turnips, celery, and such vegetables in their simplest form, that is either whole, sliced or diced, according to the vegetable; when properly cooked and delicately seasoned with salt, pepper, paprika, butter, etc., you will not miss the more elaborate dishes, and it supplies the variety which is always so important. Frequently serve from your store of canned or home preserved vegetables. These are cooked and require only reheating and proper seasoning to be ready for the table. A salad may or may not be included in your dinner. A salad of crisp lettuce is simple but appetizing, for variety other vegetables such as tomatoes, cucumbers, etc., may be added.

At all times fruit is an acceptable dessert, particularly as a quick-time dessert. The fruit may be served as it comes from the market or, if preferred, it may be cut up, slightly sweetened and served plain or with cream. Sliced oranges, bananas, and canned pineapple make a delicious combination when sweetened and sprinkled with cocoanut, and yet what a little time it takes to prepare such a dessert. The orange and pineapple may be prepared early, and are improved by standing an hour or two in the cooler, and the addition of banana and cocoanut is a matter of but a few minutes. In winter halves of grape fruit and in summer pieces of melon suggest time-saving desserts. When fresh fruit is scarce use your own canned fruit or that commercially canned. Very nice canned apricots are for sale at most stores and offer a variety from the Michigan fruits. Serve it as a sauce, either plain or topped with whipped cream. Such a dessert served with home made cookies or cake cannot be surpassed. Another satisfactory dish is to use cake that is becoming dry by pouring over it a soft custard. This not only is a form of economy but makes a very satisfactry dessert.

And so it should be with your Sunday dinner, from the first course to the last, wholesome, tasty, plenty of everything, yet simple and attractive. Nothing simplifies the Sunday dinner problem so much as a fireless cooker, and those who own one are especially appreciative on Sunday. Following are a few menus for suggestions:

Fireless Cooker Dinner

Baked Ham Boiled Potatoes
Buttered Carrots Cold Slaw
Bread Pudding, Whipped Cream

Oven Dinner

Broiled Lamb Chops
Mashed Potatoes Spinach
Fruit Cookies

Range Dinner

Hamburg Steak Sweet Potatoes
Lettuce Salad
Tapioca with Cream

Weekly Cheer

Start the day right and you'll find as it passes—
Something to live for and something to love;
View not the future through indigo glasses—
Note the bright streams and the blue sky above.
Failure may mock you through years of endeavor;
Fame and success may not come at your will;
But nothing can baffle a climber forever
Start the day right and you're half up the hill.

SEEN IN CITY SHOPS

ABOUT the most fashionable summer goods one can buy, and incidentally about the most scarce and expensive at the present time, is navy blue dotted swiss. The dots are embroidered on and therefore will not run. It is cool and very good looking when simply made, white organdie being most favored as to trim. The hems continue to be very deep in the skirts—how fortunate for next year skirts will undoubtedly be longer and that deep hem will come in handy.

We used to think that babies from the mere infant stage to five or six years of age must be dressed entirely in white, but nowadays even kiddies' clothes change as to style. Cery dainty too are the little organdie frocks they are fashioning this year of the very delicate pastel shades. And babies sleeves too are short—mere puffs which display the dimpled elbows. I saw a dear little child of only eighteen months wearing a flesh colored organdie dress with a bonnet-like hat to match, the bonnet being tied with ribbons of two colors—blue of the daintiest shade onone side and the flesh pink on the reverse side—very Frenchy indeed for such a tiny miss. And the mother confided in me that she had wanted such a dear little one in a light shade of yellow but when she priced it, the shops wanted $12 for it—just think of it for a baby dress—and so she had bought a yard of goods—a bit of ribbon and was going to make it herself.

The long, pointed shoes are doomed—their death knell has been sounded by the shoe manufacturers—we know it from the fact that the shops are selling them at greatly reduced prices. Fall will see the round toes and low heels. There is no denying the fact that the long last shoes are most attractive

A HELPFUL HINT

SAVE THE inside wrappers of cracker boxes—they are heavily waxed and excellent to use to wrap stamps in. Many times when making small remittances it is more convenient to send stamps, but they will not be accepted if they are stuck together or to the letter or envelope, and if you will cut these inside wrappers in squares of one or two inches, you will find them very useful for this purpose.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

"AND why not?" she flared. "You loved me. You gave me to understand, beyond all misunderstanding, that you loved me; yet here, today, you went out of your way, went eagerly and gladly, and married yourself to the first woman with a white skin who presented herself."

"You are jealous," he charged, and knew a heart throb of joy as she nodded. "And I grant you are jealous; but at the same time, exercising the woman's prerogative of lying, you are lying now. What I did, was not done eagerly nor gladly. I did it for your sake and my sake—or for Henry's sake, rather. Thank God, I have a man's honor still left to me!"

Man's honor does not always satisfy women," she replied.

"Would you prefer me dishonorable " he was swift on the uptake.

"I am only a woman who loves," she pleaded.

"You are a stinging, female wasp," he raged, "and you are not fair."

"Is any woman fair when she loves?" she made the great confession and acknowledgment. "Men may succeed in living in their heads of honor; but know, and as a humble woman I humbly state my womanhood, that woman lives only in her heart of love."

"Perhaps you are right. Honor, like arithmetic, can be reasoned, calculated. Which leaves a woman no morality, but only . . . "

"Only moods," Leoncia completed abjectly for him.

Calls from Henry and the Queen put an end to the conversation, for Leoncia and Francis quickly joined the others in gazing at the great web.

"Did you ever see so monstrous a web!" Leoncia exclaimed.

"I'd like to see the monster that made it," Henry said.

"And I'd rather see than be it," Francis paraphrased from the "Purple Cow."

"It is our good fortune that we do not have to go that way," the Queen said.

All looked inquiry at her, and she pointed down to the stream.

"That is the way," she said. "I know it. Often and often, in my mirror of the World, have I seen the way. When my mother died and was buried in the whirlpool, I followed her body in the Mirror, and I saw it come to this place and go by this place still in the water."

"But she was dead," Leoncia objected quickly.

The rivalry between them fanned instantly.

"One of my spearmen," the Queen went on quietly, "a handsome youth, alas, dared to look at me as a lover. He was flung in alive. I watched him, too, in the Mirror. When he came to this place he climbed out. I saw him crawl under the web to the day, and I saw him retreat backward from the day and throw himself into the stream."

"Another dead one," Henry demanded grimly.

"No; for I followed him on in the Mirror, and though all was darkness for a time and I could see nothing, in the end, and shortly, under the sun he emerged into the bosom of a large river, and swam to shore, and climbed the bank—it was the left bank as I remember well—and disappeared among large trees such as do not grow in the Valley of the Lost Souls."

But, like Torres, the rest of them recoiled from thought of the dark plunge through the living rock.

"These are the bones of animals and of men," the Queen warned, "who were daunted by the way of the water and who strove to gain the sun. Men there are there—behold! Or at least what remains of them for a space, the bones, ere, in time, the bones too, pass into nothingness."

"Even so," said Francis, "I suddenly discover a pressing need to look into the eye of the sun. Do the rest of you remain here while I investigate."

Drawing his automatic, the watertightness of the cartridges a guarantee, he crawled under the web. The moment he had disappeared from view beyond the web, they heard him begin to shoot. Next, they saw him retreating backward, still shooting. And, next, falling upon him, two yards across from black-haired leg-tip to black-haired leg-tip, the denizen of the web, a monstrous spider, still wriggling with departing life, shot through and through again and again. The solid center of its body, from which the legs radiated, was the size of a normal waste basket, and the substantial density of it crunched audibly as it struck on Francis' shoulders and back, rebounded, the hairy legs still helplessly quivering, and pitched down into the wave crisping water. All four pair of eyes watched the corpse of it plunge against the wall of rock, suck down, and disappear.

"Where there's one, there are two," said Henry, looking dubiously up toward the daylight.

"It is the only way," said the Queen. "Come, my husband, each in the other's arms let us win thru the darkness to the sun-bright world. Remember, I have never seen it, and soon, with you, shall I for the first time see it."

Her arms open in invitation, Francis could not decline.

"It is a hole in the sheer wall of a precipice a thousand feet deep," he explained to the others the glimpse he had caught from beyond the spider web, as he clasped the Queen in his arm and leaped off.

Henry had gathered Leoncia to him and was about to leap, when she stopped him.

"Why did you accept Francis' sacrifice?" she demanded.

"Because . . ." He paused and looked at her wonderingly.

"Because I wanted you," he completed. "Because I was engaged to you as well, while Francis was unattached. Besides, if I'm not greatly mistaken, Francis appears to be a pretty well satisfied bridegroom."

"No," she shook her head emphatically. "He has a chivalrous spirit, and he is acting his part in order not to hurt her feelings."

"Oh, I don't know. Remember, before the altar, at the Long House, when I said I was going to ask the Queen to marry me, that he bragged she wouldn't marry me if I did ask? Well, the conclusion's pretty obvious that he wanted her for himself. And why shouldn't he? He's a bachelor. And she's some nice woman herself."

"But Leoncia scarcely heard. With a quick movement, leaning back in his arms away from him so that she could look him squarely in the eyes, she demanded:

"How do you love me? Do you love me madly? Do you love me badly madly? Do I mean that to you, and more, and more, and more?"

He could only look his bewilderment.

"Do you?—do you?" she urged passionately.

"Of course I do," he made slow answer, "but it would never have entered my head to describe it that way. Why, you're the one woman for me. Rather would I describe it as loving you deeply, and greatly and enduringly. Why, you seem so much a part of me that I feel almost as if I had always known you. It was that way from the first."

"She is an abominable woman!" Leoncia broke forth irrelevantly. "I hated her from the first."

"My! What a spitfire. I hate to think how much you would have hated her had I married her instead of Francis."

"We'd better follow them," she put an end to the discussion.

And Henry, very much bepuzzled, clasped her tightly and leaped off into the white turmoil of water.

On the bank of the Gualaca River sat two Indians girls fishing. Just up stream from them arose the precipitous cliff of one of the buttresses of the lofty mountains. The main stream flowed past in chocolate colored spate; but, directly beneath them, where they fished, was a quiet eddy. No less quiet was the fishing. No bites jerked their rods in token that the bait was enticing. One of them, Nicoya, yawned, ate a banana yawned again, and held the skin she was about to cast aside suspended in her hand.

"We have been very quiet, Concordia," she observed to her companion, "and it has won us no fish. Now shall I make a noise and a splash. Since they say 'what comes up must come down,' why should not something come up after something has gone down? I am going to try. There!"

THE SIGN OF ROWENA QUALITY

Scientifically Milled to Retain Utmost Food Value

There is more to the production of flour than the women who transform it into delicious bread and pastry have any idea. Infinite pains and conscientious methods have made

Lily White

"The Flour the Best Cooks Use"

Look for the ROWENA trade-mark on the sack

Only the choicest wheat is used. It would be a revelation to women to see the amount of dirt, chaff and undesirable materials that are removed from every kernel of wheat. Four cleanings, three scourings and a final washing precede the first break. Nothing but the "goodies"—the nutrition values remain. These are milled to a beautiful, clean whiteness. Close inspection by experts at every stage.

LILY WHITE quality has been maintained for nearly sixty years. Without fear of contradiction we say that it is not only good, but is the finest flour that it is possible to make.

And that is the one reason why it makes bread, biscuits and rolls that are good looking, of excellent volume, wholesome, nutritious and healthy. Satisfaction positively guaranteed.

VALLEY CITY MILLING CO.
GRAND RAPIDS, MICHIGAN
"Millers for Sixty Years"

The Children's Hour

DEAR CHILDREN: I was so disappointed when the flags which I ordered for prizes did not reach me in time to get them to their winners by the Fourth of July. However, there are so many days when the flag is displayed as we learned from the letters sent in, that we will still have plenty of opportunity to use them. Many letters which were excellent were received after the prizes had been awarded and the letters sent in to the printers—we really have to get our page all set up a long time before it is in your hands you know. By the time you receive this paper, the page for next week will all be in type, so you see we have to plan ahead for what we are to have.

Some good stories have been received in the contest for original stories, but they were too long—they would have taken more space than we can allow any one contributor, so we had to omit them in order to give space to just as many of our little correspondents as possible, and the printer has promised if we have space to crowd in a short little dog story this week. Affectionately yours.—AUNT CLARE.

DOG'S LONG TONGUES

AND THE Memory Man said: "When dogs could talk, they were always boasting and talking. Once a king went on a visit to a neighboring court, and took his favorite dog with him. A very important secret treaty was made between the two kings, and the royal visitor turned homeward. Half-way home he missed his dog, and, on his arrival, he found that the terms of the secret treaty were known to everyone.

"Angered, the King called his dog, and bidding it put out its tongue, he gave the tongue a very hard pull, so that it hung far out of the dog's mouth.

"That is why, today, when a dog runs home, he always looks as if he wanted to tell tales of what he has seen, but his tongue hangs out so far that he cannot talk.

"Tale-bearers never bring any good to themselves."—R. W.

PICNIC EATING

EVERY week, now, you and the other girls will want to hike off somewhere into the woods or fields. You need something to take along, and something to bring back.

Your lunch may take on the character of Spring. Make sandwiches of thin slices of bread and butter, with leaves of lettuce or cress and a boiled salad dressing for the filling. Stuffed eggs will taste good and look pretty, too. Cut hard-boiled eggs in half, remove the yolks and mix them with mayonnaise dressing, or just with butter, salt, pepper and a little mustard. Put this filling back in the whites and wrap the stuffed eggs in oiled paper.

Plain bread and butter sandwiches may be cut in leaf shape, with a scalloped cookie cutter. Radishes, the red skin slit and peeled down a little way in the shape of a flower, sandwiches of thinly sliced cucumbers, salted, balls of cream cheese wrapped in lettuce leaves—all these will taste of outdoors and will fill your lunch box in a new way.

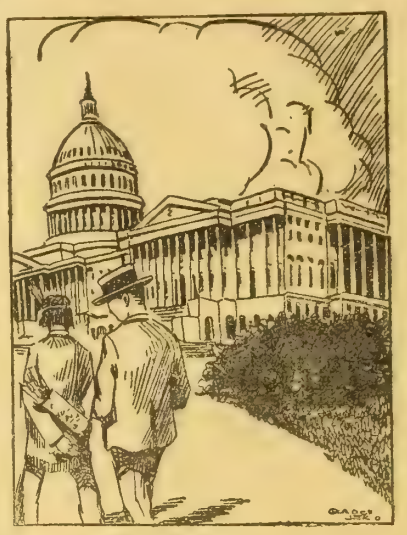
For sweets, take sugar cookies cut with the leaf cutter, or plain cup cakes, each with a flower shaped candy or candied violet or candied orange peel in the center of the icing.

While in the woods you can make some May baskets. On your walk gather as many straight branches with bark on as you can. When you bring them home, whittle them with your jack-knife—of course you are the kind of a girl who can use one—to the same length. Select a square of wood, thin and smooth, to make the bottom of the basket and glue the twigs, one on another, log cabin fashion. Fill this basket with damp moss and rich earth, to hold fern roots and wild flowers. It will be a great addition to your piazza, or set on a table for weeks.

Hunting Eye at the Capitol

By Francis Rolf-Wheeler

THE SECRET Service Man had been so struck by Hunting Eye's intense interest in the Navy and the Army, and by the Indian lad's eagerness to don his country's uniform that he decided to take him with him on his next trip to Washington.



There was a great deal to be shown to Hunting Eye: the Mint, where the money is made; the great government buildings; the General post office, where Hunting Eye told his friend of his adventures on a mail train; the White House, where, as the Secret Service man explained the "temporary big chief" of the United States lived; but last of all, and best of all, came the Capitol.

"Bigger than the Army and the Navy," the Secret Service man said, "bigger than the courts of justice, bigger than the President—what do you suppose that can be, Hunting Eye?"

The Indian lad did not hesitate a moment.

"I know," he said, "the Council."

"Yes," said the Secret Service man "the Council, or as we call it, Congress. And it is bigger than everything else for the same reason that an Indian tribal council is bigger than the chief—because every one has a part in it.

"You spoke of the promise that a soldier makes when he puts on a uniform. But it isn't only the soldier who makes a promise, Hunting Eye. Every American citizen makes a promise—he vows to do everything he can to help his country, not only to obey the laws but to help make the laws; not only to pay his taxes, but to help see that they are rightly imposed and properly spent. Every American citizen should have as his chief desire to make his country better, cleaner, more industrious, more frugal, more deserving of honor with every day he lives. He can do that by being so himself. The pride of Americans, pride in those things of which a man should be proud."

Hunting Eye looked up, his eyes shining.

"The Indian will not fail!" he said.

"Nor anyone else, I trust," came the reply. "America cannot fail."

OUR BOYS AND GIRLS

Dear Aunt Clare—This is the first time that I have written to you. I am 18 years old and work on the farm. We have no cows or sheep but we have got three horses. My father takes the M. B. F. We live on a farm of 53 acres and it is a nice farm. Well, will have to close. Morris Kimberly Belding, R 2.

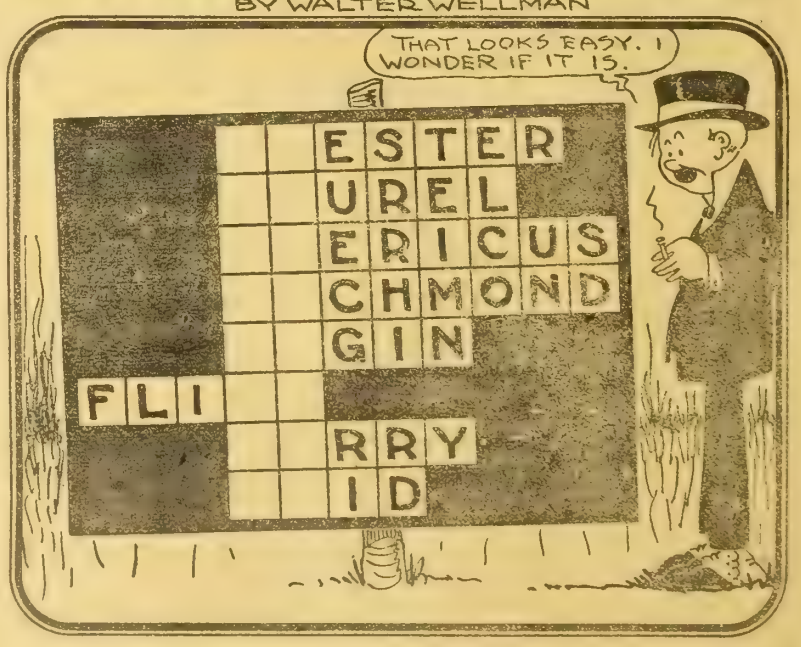
Dear Aunt Clare.—This is the first I have written to you. I am 12 years old and will be in the eighth grade next year when school starts again. I took the seventh grade examination in geography and physiology and passed. We take the M. B. F. and like it fine. I read the Children's Hour every week and enjoy it very much. Here is a riddle: I know someplace you never have been and never will be but in that very same place you will be seen by me. Answer—Looking glass. Della Hollinshead, East Jordan, Mich., R 5.

Dear Aunt Clare—I am 16 years old and in the ninth grade. I have one rabbit. I have six brothers and two sisters. We have been taking the M. B. F. for many years, and we like the paper well. I saw some prizes awarded to winners, so I thought I would try to win. Orval Sharp, Vestaburg, Mich., R 1.

Dear Aunt Clare—We take the M. B. B. and like it very much. I also like to read the Children's Hour. I have written to you before but did not see my letter in print but hope to see this one, also my drawings. For pets I have two cats, two rabbits and one dog. Martha Halfman, Fowler, Mich., R 3.

TWO BOYS-EIGHT CITIES

BY WALTER WELLMAN



Complete the names of cities as follows: In Penna.; in Miss.; in Ga.; in Ind.; in Ill.; in Mich.; in Pa.; in Okla. If you have filled in the correct cities, you should have, reading downward in the vacant space the names of two boys. What are they?

Dear Aunt Clare—I am a girl 12 years old. I live on a farm of 220 acres. We have about 25 chickens and 30 little chickens. For pets I have a cat and a dog. We have five horses and four cows. I am in the 8th grade at school. My teacher's name was Miss Anna Gregory. I like the complete stories best. I hope to see my letter in print.—Iren Carey, Rochester, Mich.

Dear Aunt Clare—I am a farmer boy, 13 years old and in the 8th grade at school. I have been reading the Children's page and thought I would write. I live on a 326 acre farm and like the farm life the best of all. We have four horses six cows, 45 sheep and a tractor. For pets I have a dog and four rabbits. My father takes the M. B. F. and likes it very much. Murland Rowe, Flushing, Mich.

Dear Aunt Clare.—This is the first time I have written to you. I am a girl 12 years old and will be in the 7th grade next year. My father takes the M. B. F. and likes it fine. My home is 3-4 miles west of Ithaca. I live on a 420 acre farm. We have 19 cows, 10 calves, 14 little pigs, 9 horses and one colt. I have two brothers and two sisters. For pets I have a dog and a lamb. Ella Muscott, Ithaca, Mich.

Dear Aunt Clare—My father takes the M. B. F. nd we like it very well. I have written to you once before but did not see my letter in print so will try again. Our school was out the 11th of June. My teacher's name was Miss Lena Cole and I liked her very much. I am 10 years old and in the 6th grade. For pets I have a dog and two cats. I will close for this time. Evelyn Starks, Ravenna, Mich.

Dear Aunt Clare—I was ten years of age the 12th of June. I am in the fifth grade. Our school was out the fourth of June. My teacher's name was Lillian Van Aukens. I have three sisters and one brother going to school. My father takes the M. B. F. and likes it very well. I wish some of the other little girls would write to me. I will close, hoping to see my letter in print. Helen Oakes, Shaftsburg, Mich., R 1.

Dear Aunt Clare—I am a girl ten years old and in the sixth grade in school. My teacher's name was Miss Opal Rankin. I live in Monrovia, Indiana not very far from Indianapolis but I am spending my vacation with my Grandpa and grandma Hadley. I have a brother and sister. For pets I have a big black dog and a white cat and a white horse on which we ride. I will close hoping to see my letter in print. Joyce Hadley, Lakeview, Mich., R 3.

Dear Aunt Clare—I have been reading the letters in the M. B. F. and like it very well. I love to read the letters on the Children's Page. I am nine years old and will be in the fifth grade. My teacher's name is Miss Bertha Marie Trotzka. We live on an 80 acre farm. We have seven horses, 17 pigs and two cows, two calves. For pets I have three kittens. I would like to have some of the girls write to me, also Aunt Clare, too. Vivian Dougan, Grant, Mich., R 2.

Dear Aunt Clare—This is the first time I have written to you. I am ten years old and going in the fifth grade. I have seven sisters and four brothers. My father takes tht M. B. F. and likes it very much. I like to read the letters in the Children's Hour. I have three pet kittens. We are drawing hay and I drive the horses while my brothers are loading with the hay loader, which I enjoy very much. I think I must close as my letter is getting long. Rosella Spitzley, Pewamo, Mich.

Dear Aunt Clare—This is the first time I have written to you. I have three sisters and three brothers living. One sister and two brothers died with the flu last winter. I had the flu and was very sick and the Red Cross nurses took me to the Detention Hospital and I was there seven weeks and then I was taken to the general hospital. I was these six weeks. I am home now. I have been home four weeks and I weight 76 pounds when I come home and now I weigh 88 pounds. My father lives on a 100 acre farm. We have two horses and two cows and five calves and sixty chickens. As my letter is getting long I will close and hope to see my letter in print. My father takes the M. B. F. and likes it very much. Miss Benene Pearl Critts, St. Charles, Mich.

Dear Aunt Clare—I have never written to you before. I am a little orphan girl twelve years old. I have two brothers and one sister out somewhere, but I don't know where. I write to my brother by sending the letter through Coldwater. I took examinations up town and got my standings a few days ago. I will be in the eighth grade next year. Papa takes the M. B. F. and likes it very well. I like the Doo Dads. I get lonely without them. I also like to read the Children's Hour. For pets I have a dog, cat and a canary bird. I raised a lamb on a bottle and will soon sell her wool and have the money for my own. We have a Victrola. I enjoy the music very much. I live by two lakes. You can see them from our house. As my letter is getting long I will close and leave a little room for some other boy or girl. Mae Gowdy R 1, Walkerville, Mich.

OBJECTS TO CATHOLIC DOCTRINES

(*Continued from page* 11)

of holidays and every Saturday and Sunday to pursue their religious beliefs.

The third objection is the question of taxes.

When the state decides to provide education for all its children, the question is, should it perform all its functions, or should it delegate or shirk part of them. Your article seems to infer that the adherents of the parochial schools are so much more thrifty that they can afford to pay the double tax towards the maintenance of their own and public schools, and that this is not a burden to them. If that is your idea then there must be something superior in the spiritual or secular training of the parochial schools and we make the charge that every child in this democracy has the right to the very best that this democracy can afford; so that, any group of people, withholding any meritorious qualities from the child of the public schools, are subject to criticism as to their citizenship and loyalty. If they were Americans first, they would see to it, that the meritorious qualities of their schools are incorporated in the public school, and all the children would receive an equal benefit. Or, is it that they are constrained to attend the parochial schools by threat of withdrawal or refusal of absolution, or the condemnation of a mortal sin.

Your article contends we do not submit any proof and we refer you to the *Michigan Catholic* of June 10th, on the subject of the Canon Law on the Parents' right and Duty, which winds up with this paragraph:

"Therefore, parents and guardians, who without grave reasons, approved by the Bishop send their children to non-Catholic schools when they can be sent to a standard Catholic school, are to be held as violators of natural and religious rights and duties. They are contumacious of the laws of the church and unworthy to receive the sacrament."

We know of scores of instances where parents have been forced to take their children out of public schools and send them to the parochial schools for the reason that the priest would refuse to give them absolution or to baptize babies.

The real issue is to remove this question of controversy by having the state perform all its functions and completely separating church and state.—*Jas. Hamilton, Public School Defense League of Michigan.*

EX-GOV. FERRIS CONDEMNS SCHOOL AMENDMENT

The amendment proposed has on a cursory reading, a very innocent appearance. If the amendment is interpreted with exactness it means several things. In this brief article I am not going to discuss the amendment in detail. One thing I am sure it has for one of its objects, the closing of parochial schools of Catholics, Holland Reformed and Lutherans. Beyond a doubt it would affect a goodly number of private schools that are attended by pupils under 16 years of age. My own belief is that the aim of the amendment is primarily, to close the parochial schools. I am too much of a democrat not to knw that any attempt f this kind would be ruinous to Michigan democracy. I am talking about constitutional democracy. What possible objections can a loyal American raise to parochial schools? They are all teaching the subjects in the English language. They are teaching patriotism. They are loyal to the Stars and Stripes, they are 100 per cent American. I feel that this is a cowardly attack upon thousands of our best American citizens. While I was Governor of Michigan, various attempts were made to close the parochial schools. In Michigan and other states different church denominations have conducted their schools and colleges sometimes with reference to the work of advancing the Congregational church, sometimes the Presbyterian church, sometimes the Methodist. What possible objection can there be to the teaching of religion, so long as it in no wise intereferes with our political or social right? Why should this quarrel among churches be kept up any more than a quarrel among nations? Isn't it high time that the Americans practiced a little wholesome religion?

I refuse to discuss this amendment from the standpoint of what the state would lose financially by closing the parochial schools. I refuse to discuss what other organizations would lose by passing this amendment. I concentrate my forces on the religious bias that is involved in the amendment. The amendment should be overwhelmingly defeated. The recent war has taught us that Catholics, Lutherans, Methodists, Congregationalists, Presbyterians, Christian Scientists, etc., can all work together. Our democracy should guarantee this privilege. If necessary, I am willing to go forth and try to show my friends that this amendment is un-American, therefore dangerous and undesirable.—*Woodbridge N. Ferris, Big Rapids, Michigan.*

HIDE YOUR FLASK WHEN THE EDITOR IS AROUND

I like to read what the neighbors have to say and I did laugh at what Joseph Trojanek had to say. There are a lot more in the same boat with Joseph and August but they are not so fast to let the public know their opinion. I have it estimated that nine men out of every ten will indulge in a drink of some kind but when it comes to the ballot the majority will vote dry, and I believe our worthy editor is one of the nine for he makes a trip to Washington quite frequently. A prominent man told me the other day those fellows have enough booze to last them a hundred years in the capital city. If I should meet the editor and had a flask in my pocket and wanted to save the contents for the future,—well,—I would not show it to him. I may write again some time if I survive the shock that I am going to get when the editor gets through with me.—*Albert Trojanek, Charlevoix County.*

You are a born psychologist, Albert. Any boob can spot the teetotaler, but it takes a man of shrewdness to pick out the nine drinkers. How do you do it? And why are you so cruel as to publish to the world your insight into the editor's secret indulgence in the bottle! Seriously, Albert, you've got a bum steer. Your guessing average would entitle you to a place just one degree below the Tigers. Possibly it is true that nine out of ten men drink when they get the chance. I know that some of my best friends occasionally drank a glass of beer when it was legal to do so. If I were one of the nine I would not be ashamed to say so, for I would have lots of company and some of it pretty desirable company at that. But I am worse than a prohibitionist; I am a total abstainer, a "teetotaler" if you please. I do not abstain from alcoholic beverages through any religious or moral scruples, but simply because I have never acquired a liking for liquor or a habit of drinking. I have never tasted fermented wines or whiskey and the amount of beer I have consumed during my entire life would not fill an ordinary drinking glass. It is not hard for me to speak against the saloon because I never patronized it. And I am entitled to no credit for being a prohibitionist. The fellows who are entitled to the credit for putting the nation dry are the six out of nine drinkers who gave up their beer and whiskey that the curse might be removed from the reach of those who could not leave it alone and whose lives were being wrecked upon the rocks of the liquor traffic. Yes, I have heard that there is plenty of booze in Washington, but I didn't see any of it. During the past six months I have been in Chicago, Washington, New York City, Brooklyn, Atlantic City, Wheeling, Zanesville, Syracuse, Albany, Buffalo and Detroit, some of them notoriously wet cities when there was a saloon on every other corner and I have seen one drunken man. I saw him day before yesterday on the streets of Mount Clemens. Write again, Albert. —Editor.

FERTILIZER GIVES NEW LIFE TO OLD ORCHARDS

(*Continued from page* 5)

with the yields of native weeds and poverty grass of the unfertilized plot. No grass seed was sown.

Plots fertilized with 10 pounds of bone and tankage, per tree per year, applied evenly over the tree-squares, produced an average of 72.3 barrels of apples per acre per year. This was a gain of 35.6 barrels of apples per acre per year in comparison with the unfertilized plot, and a loss of 45.8 barrels per acre per year in comparison with the use of the 10-10 formula of nitrate of soda and acid phosphate.

A number of other variously treated plots were included in this orchard fertilization test; but those that have just been described are the more important.

HOT WEATHER

the season when a

DE LAVAL SEPARATOR

saves most over any other separator or skimming system

IT'S A GREAT MISTAKE for any dairy farmer without a separator or using an inferior machine to put off the purchase of a New De Laval Cream Separator in the summer months especially with butter-fat at the present unusually high price.

Great as are the advantages of the New De Laval over all other separators, as well as over any gravity setting system, at every season of the year, they are even greater during the midsummer season than at any other time.

This is because hot weather conditions occasion greatest butterfat losses with gravity setting and render it most difficult to maintain quality of product with any gravity system or unsanitary separator, while, moreover, the quantity of milk is usually greatest, and any loss in either quantity or quality of product means more.

Then there is the great saving in time and labor with the simply, easy running, easily cleaned, large capacity New De Laval machines over all other methods or separators, which naturally counts for more at this time of the year.

Hence the great mistake of putting off the purchase of a New De Laval Cream Separator in summer, whether you already have a poor machine or none at all, and every dairy farmer should keep in mind not only that a De Laval will pay for itself in a few months but may, if desired, be bought on such liberal terms as to actually save its own cost while being paid for.

Every claim thus made is subject to easy demonstration, and every De Laval local agent is glad of the opportunity to prove these claims to you, in your own dairy, without cost or obligation on your part.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for catalog or any desired information.

WOOL GRADING

"Last year a Farmers' Co-operative Ass'n was organized here and the state was asked to recommend some reliable wool dealing firm thru which the members could sell their wool crop. They referred them to Traugott Schmidt & Sons of Detroit. This firm sent their grader here and graded the Association's wool and finally purchased it outright but through the advice of Mr. A. R. Livingstone, the grader, one of our members was pursuaded to consign his wool. The grader assured him that his grading would be accepted anywhere. When the wool was sold it was under a different grading. Of course this member was the loser on the deal. I am enclosing papers showing the transaction. Kindly write to this man and tell him what can be done."—F. F. S., Fairview Mich.

A letter signed by Mr. Livingstone accompanied the papers and declared that Traugott Schmidt & Sons had suffered a loss of $64.13 even on the basis on which the wool was settled for. The following explanation was given for the failure of this firm to abide by the grading of Mr. Livingstone:

"The fact that unusual market conditions have arisen has made it impossible for us to deliver to the manufacturer your clip on my grading, cannot be remedied. You should consider yourself very fortunate that your cotted, black and seedy wools have been sold at all as probably not five per cent of the wools of that character grown in the United States last year have been marketed yet (March 1, 1920) and cotted wools today are worth about 15 cents per pound, and black and seedy wools about 25 or 30 cents per pound. Moreover, if your quarterblood and three-eighths blood wools were still on hand, they would not be worth over 90 per cent of the price they were sold at."

After an exchange of several letters with Mr. Livingstone and Traugott Schmidt & Sons, the following was received from the former:

"Inasmuch as I have quit Messrs. Traugott Schmidt & Sons of Detroit, I refuse to take issue with Mr. Neff, or others in his behalf, in any controversy they have with Schmidt & Sons. I will say though, that it is my opinion that Mr. Neff cannot gain anything by pressing his complaint. Let him and all wool growers congratulate and avail themselves of the Co-operative Association with headquarters at Lansing. It has already virtually if not completely, put Schmidt & Sons and several other wool dealers out of business. There is no question in my mind about their ability to handle properly, sell at top prices to the ultimate consumer, and establish a clientele that will welcome their methods and services for as long as they live up to their present standards."—*Alex R. Livingstone.*

MUST KEEP STOCK IN ROAD

A bought a piece of land of B for pasture. B's brother owns a piece of land across the road from the piece A bought of B. A's cows have to be driven to and from this pasture each day. The road turns a square corner around B's brother's land which has no road fence, the stock run across the corner of B's land. Can B's brother make any trouble with A about this with nothing to keep them on the road. B's brother does not make any trouble, but his father is trying to.—C. G. M., Antrim County.

I am of the opinion that one who drives cattle on the highway must keep them from trespassing upon private property. The liability would only be the damage done. If it is quack grass sod I would be of the opinion that there could only be a nominal damage. I would be of the opinion that such a boy and dog would be proper to prevent the claim that such cattle were at large in the highway so they might be impounded for being in the highway alone. But if they got away from him and did damage on the premises of the neighbor I would be of the opinion that you would be liable for the damage as I think you are bound to keep them in the highway.—*W. E. Brown, legal editor.*

INDUSTRIAL BOARD NOT INSURANCE COMPANY

Is the State Industrial Board an insurance company? If a man is insured in the Industrial Board and has been married, owes alimony and has children by his first marriage, which he was to pay for their keeping by week, and is married again, his insurance going to wife No. 2, can wife No. 1 come in for her children's keeping and the alimony out of wife No. 2 insurance in the State Industrial Board?—A Subscriber, Montcalm County.

The Industrial Accident Board is not an insurance company. They have supervision over industrial accidents. Your letter does not state whether the benefit is from death or disability by reason of the accident. Act No. 64, Laws of 1919, Sec. 6, makes provision for the payment of benefits in case of death where the deceased leaves depedent children by a former marriage. I am of the opinion that this is a matter that should be determined by the Industrial Accident Board, Lansing, Mich., and a letter to them will receive prompt attention. They will give full instructions, information and how to proceed.—*W. E. Brown, legal editor.*

STOCK ON ROAD

I have a neighbor who for the last three years has turned his cows and horses out on the road to pasture; besides he has thirteen head of hog running loose. It is not safe to go to bed at night for in the morning you will find them in the wheat. He has been told to shut them up a good many times, but he pays no attention. Last year a man's cattle got in his wheat and he made him pay one dollar a head before he let him have them. I don't want to have any trouble but would like to know if he could be notified without any trouble to keep his stock shut up off the road.—G. G. H.

A man has no legal right to allow stock to run in the highway except in the control of an attendant and then only on his own side of the road and in front of his own premises. Such stock if found otherwise can be impounded, the owner then required to pay the statutory fee for the impounding. Should they break into the premises of another the owner is liable for all damage done which may be collected by impounding of the animals and serving the required notice.—*W. E. Brown, legal editor.*

KEEP CATTLE WITHIN HIGHWAY

I would like a little information about going over the public road with my milk cows. I have 7 milk cows which I take to the pasture in the morning and back home in the evening over the public road or highway. Now my neighbor has a field of oats and as the oats sows to the road bed and no fence my cows get on his oats when taking them back and forth sometimes. Now I would like the Michigan state law about driving cows over the highway where there is no fence along and the land is plowed to the roadbed and cropped.—N. D., Ottawa County.

The owner of the adjacent land owns to the center of the highway subject to right of the public to the use of the highway for highway purposes, one of which is the right to drive cattle over it. He is not obliged to fence the highway but the owner of cattle driven over the highway must keep them within the bounds of the highway. The owner of cattle driven through the highway cannot allow them to pasture on the highway either from grass or crops; but if they eat of the crops sown in the highway while being driven therefore, if within the limits of the highway. The owner of the cattle would be liable for any damage done by his cattle while driving along the highway if they go out of the bounds of the highway.—*W. E. Brown, legal editor.*

SHARE OF SECOND WIFE IN WILL

Could you please tell me if a man can cut off second wife with just her support with a will from all personal property and real estate at his death. He leaves children which he had by his first wife, but he had none by his second wife.—A Reader.

The second wife is not obliged to accept the provision made her under the will but may claim under the statute if she makes such claim within the time provided under the law. Under the statute she would be entitled to his wearing apparel, household furniture and other personal not exceeding $200 and an allowance for her support to be determined by the judge of probate. If the husband left more than one child the surviving widow would be entitled to take under the law one third of all the real estate and one third of the personal after payment of debts and expenses. The election to take under the statute must be in writing and within one year from the probate of the will.—*W. E. Brown, legal editor.*

HUSBAND GETS PERSONAL

Can a second husband hold a wife's furniture and personal belongings that was left her by her former husband. Can her children claim them if she should die while living with second husband.—E. B., Van Buren County.

Upon the death of the first husband, if he died without leaving a will, the household furniture would belong to his wife. If she remarried and died leaving a husband and no will all of her personal property, after payment of any debts she had (and expenses of last sickness and funeral expenses are not her debts unless she bound herself in her life time to pay them) would go one third to her husband surviving and two thirds to her children if more than one. Household property in law would be treated as any other personal property.—*W. E. Brown, legal editor.*

DOG TAX

As we are the owner of a dog since the 13th day of January, would like to know if we would be held responsible for the dog taxes which we understand were due the tenth day of January or would the man who sold us the dog be responsible? How long would a man have claim on lumber left by him on farm which he sold to us two and one half years ago. We have not seen or heard from this man during the past 18 months. Would we have a right to use this lumber or sell it?—J. H., Montcalm, Mich.

Sec. 8, of Act 339, P. A. of 1919, page 605 provides that any person who becomes the owner of a dog after the 10th of January, 1920, that has not been licensed shall forthwith apply for and secure a license for the dog. It is made the duty of the supervisor when he makes his assessment to make a list of dogs that should be licensed and report them to the County Treasurer, and his duty to check up the dogs licensed with the list of dogs reported and to notify the sheriff of such dogs whose duty it shall be to locate and kill all such unlicensed dogs. You would have no right to the lumber left on the farm for six years, the statute of limitations and possibly not until you had notified him to remove the same if there was any agreement at all about leaving it.—*W. E. Brown, legal editor.*

GET DEED OF FARM

When a person finishes paying for a farm what should be done. Please explain clearly about the abstracts and mortgages.—P. O. Wayne County.

When a purchaser pays for a farm he is to receive a deed from the seller. The seller does not have to furnish an abstract unless he agreed to do so at the time of the contract for sale. The parties may agree that after the payment of a certain amount of the purchase price the one will give and the other will accept a mortgage for the balance; but unless such an agreement is made the purchaser is not obliged to give one and the seller is not obliged to accept a mortgage in place of payment of balance due.—*W. E. Brown, legal editor.*

BACKER OF NOTE HOLDING

My husband now deceased loaned a young man $50, March 18, 1905. His father backed the note. June 10, 1905, this boy promised to pay this sum with interest at 7 per cent per annum, but did not do it. Left it for his father to pay. His father commenced June 10, 1905 to make payments on this note. He kept making payments on this note up to Nov. 13, 1915, but has paid none since. He has paid all the principal but $8.75. As long as my husband lived he never refused to pay it always said he'd pay every cent of it. Since he died I have asked him about the matter and he positively refuses to pay another cent of it. The note is in my possession.—M. E. M., Charlevoix County.

I am of the opinion that the guarantor is liable for the full amount and interest to date of collection. It does not outlaw until 6 years after the last payment.—*W. E. Brown, legal editor.*

LAWFUL CLAIM

When I was four years old my uncle gave me two sheep and doubled them to my father. When I was twenty-one I mentioned it to him and he says "Oh never mind, I will look after them." Can I put this in as a claim against the estate? I have two good witnesses that heard the transaction.—R. D., Montcalm County.

If the claim has not outlawed I would consider it a lawful claim against your father's estate.—*W. E. Brown, legal editor.*

CANNOT COLLECT BOARD

I would like a little information regard to my father. My brother-in-law took care of him 3 years. No agreement made whatever. Now he wants board. Can my brother-in-law collect board bill from us? None of us told him to keep father.—Subscriber, Clam Lake.

You are not liable for the board of your father without an agreement to pay.—*W. E. Brown, legal editor.*

EXAMINER OF SCALES

Would you please tell me who the government official is who has charge of the scales in the stores and meat markets?—E. J. H., Charlevoix County.

The State Dairy and Food Commissioner shall be supt. of weights and measures.—*W. E. Brown, legal editor.*

Sense and Nonsense

Enjoyed Their Music

"Could you change de tune o' one o' dem cuckoo clocks?" asked Rastus.

"What's the idea?"

"I wants an alarm clock. I don't take to dese hasty an' excited alarm clocks. If you could train one o' dese to cackle like a chicken, I could wake up spry an' hopeful every time!"

Comforting Statistics

She was looking through a mother's magazine when suddenly she said:

"From the statistics given here, dear, I see that every third baby born in the world is a Chinese."

The fond father, who was buried in the pages of the evening paper, peered over the top long enough to reply: "Thank heaven, this is our first."

Scholastic Tests

"What's the matter? You look thoughtful."

"My six year old son brought home a list of questions to answer."

"What of that?"

"My average ranks me as a deficient kid."

Everlasting Fire

Mistress (to cook from the country)—"Well what do you think of our gas fires?"

Cook—"I think them wonderful ma'am. Why those in the kitchen haven't gone out since I came here over a week ago."

Helpful Hints

Borem—"Now, what would you do if you were in my shoes, Miss Cutting?"

Miss Cutting—"I'd point the toes toward the front door and give them a start."

Hopeless

"And why is he here?" we inquired, stopping in front of Padded Cell No. 44.

"He was a politician and when he finally got in office he really tried to carry out his campaign pledges," replied the attendant.

Safety First

The lieutenant: So you'd turn down a poor fellow because he has a bullet hidden in his body?

The lady: Suppose one of these nights it was to go off!

Uncle Sam's Hired Men Who Serve Farmers

(*Continued from page 7*)

—Conducts work relating to animal diseases, their control and suppression, including bacterological and pathological investigations into the causes and nature of disease. Produces and distributes black-leg vaccine. Quarantine Division—Supervises work relating to importation and exportation of live stock, and importation of hides, skins, wool, hair and similar prducts especially with regard to danger of transmitting infection through these commodities. Tick Eradication Division. Tuberculosis Eradication Division. Office of Virus-Serum Control—Has charge of regulator work in the enforcement of the virus-serum-toxin law aimed to insure a high quality of commercial viruses, serums, toxins and similar products for combating animal diseases. Zoological Division—Conducts laboratory and field investigations of animal parasites.

Experimental and Breeding Farms of of the Bureau of Animal Industry

In addition to the experiment station at Bethesda, Md., where investigations are largely of a veterinary character, the bureau maintains experimental and breeding farms at Beltsville, Md., Middlebury, Vt., and Dubois, Idaho. Besides these principal farms it conducts a great quantity of experiments on farms where the work is handled co-operatively with other bureaus, as at Huntley, Mont., and New Iberia, La., or with various states. The Dairy Division of the bureau supervises the work of the Grove City Pa., Creamery, where dairy research results are tested under commercial conditions.

Important Work Already Completed

Work which the Bureau of Animal Industry has carried to actual completion includes:

Discovery of the nature of Texas or tick fever and perfection of a method for eradicating the ticks which carry this fever. Thus far more than half a million square miles of formerly tick-infested territory have been freed from ticks and released from quarantine.

Practical eradication of tuberculosis from live stock in the District of Columbia, and in addition from 2,200 herds now on the accredited list.

Discovery of anti-hog cholera serum and methods for protecting swine from hog cholera.

Improved methods of making tuberculin diagnosis of tuberculosis in cattle and swine.

Complete eradication of pleuropneumonia from the United States, suppression of foot-and-mouth disease on six occasions and the gradual eradication of other serious livestock diseases.

Exclusion from the United States of about 10 serious animal scourges present in other countries. (Details of the disease situation are given in the Department's 1919 Yearbook, just published.)

Improvement through inspection and supervision of methods of handling export live stock.

Important Work Now in Progress

Among the specific activities of practical and popular interest now being conducted are the following:

Development of an American utility breed of horse.

A 20-year experiment to determine how the milking qualities of beef cattle are transmitted.

Detailed experiment on inbreeding of dairy cattle.

Development of a breed of sheep about equally valuable for wool and meat.

Exhaustive experiments in animal gentics to obtain more definite information of operation of heredity.

Methods of making Swiss, Roquefort, Comembert and similar foreign cheeses so that American dairymen and factory operators may compete with the foreign trade in these products. This work is well advanced.

Requirements for milk production on farms in six typical sections of the United States. This work, partly completed, consists of observations reduced to definite factors and relating especially to costs of production in terms of feed, labor, and other items.

Physiology of milk secretion with particular reference to the importance of mineral salts in the feed of high-producing dairy cattle.

Meat inspection investigations of a varied character. For instance, the bureau has experimented with the effect of X-ray on trichinae in pork.

Continuous work is being done on stock-poisoning plants. This problem is especially important on western ranges.

Studies of internal and external parasites of live stock, particularly parasites which interfere with proper growth and development.

Eradication of cattle ticks, tuberculosis and many other diseases.

Results in Progress of Publication

Many of the experiments have progressed far enough and have given sufficiently complete information to justify the publication of results. Among the more important bulletins containing these results, which are in process of publication, are the following:

Diseases of Sheep.
Parasites of Sheep .
A Primer of Animal Breeding.
Milk Plant Construction and Equipment.
Principles of Live Stock Feeding.
Hog Lice and Hog Mange.
Feeding Garbage to Hogs.
Cost Factors in Producing Milk in Northwestern Indiana. (For the Chicago District.)

Besides those mentioned are a considerable number of technical or semi-technical publications. It is expected that all of the bulletins will be received from the printer within the next three months.

Relation Between Research, Experimental Work, and Extension Activities

The most successful and direct method of making results of experiments available to a large number of farmers is briefly this: When research on any problem gives encouraging results the method of applying the principles discovered are tried in an experimental way under conditions as near like those of the average farm as possible. Following experience gained through the experiment, the method for accomplishing the desired result is repeated at other stations and farms of the bureau. Then when the method is considered well developed and suitable for general application, it is made the basis for extension work.

This same principle has been used with success in hog cholera control, in improvement of cheese making, poultry culling and the castration and docking of lambs. This order of procedure, namely: first, research; second, exhaustive experiments; and third, extension, is used with success by many large business houses, and it appears to be a logical method of giving new facts to the public. The extension work of the bureau is supplemented by literature, posters, lantern slides, motion pictures, and other mediums of publicity.

Important Policies of the Bureau

Following are a few policies which indicate the bureau's attitude toward practical live stock problems:

In disease control, both sanitation and a high standard of intelligence by live stock owners need to be encouraged in every possible manner.

Farmers may wisely be encouraged to spend more time, labor and money for clean up and disinfection work, in proportion to the amount they now spend for drugs and remedies of various kinds.

Although live stock owners may successfully treat some of the minor ailments of stock, it is best for a farmer's own interest, and especially for a community, to consult a competent veterinarian immediately when an infectious, or apparently infectious, disease breaks out.

The double or simultaneous treatment for hog cholera is preferred to the serum-alone treatment, when the operator is skilled.

The best policy of eradicating possible outbreaks of foot-and-mouth disease is that of quarantine and slaughter, together with compensation in the form of indemnity.

In tuberculin-testing work the demand for testing cattle under the accredited herd plan shows the need for a greatly augmented force of inspectors. Since the number required probably will exceed the number which the bureau can furnish, arrangements for having the work done to some extent by private veterinarians seen practically essential.

When a person writes to the department for information relating to the Animal Industry, his letter is answered within three days in most cases. When the best qualified person to answer it is temporarily in the field, or the letter requires special investigation for the reply, it is acknowledged and the writer is informed when he may expect a complete reply.

The bureau is endeavoring to raise the standard of the veterinary service in the United States by the supervision and accrediting of veterinary colleges. Since the Bureau of Animal Industry employs approximately 2,000 veterinarians, it is able to exert influence in that field.

The general tendency of bureau work in recent years has been to develop activities relating to the breeding, feeding, and general care of live stock in addition to conducting the disease-control work for which the bureau was primarily intended and for which it was originally organized. This tendency is regarded as constructive and beneficial and is being encouraged.

It is the policy of the bureau to have persons working on the larger and more practical agricultural problems spend a considerable portion of their time in the field.

Feed Every 3rd Hog FREE

Save feed and get your hogs ready for market in less time. Prove at our risk that you can save fully one third your feed, making it possible to feed every third hog free by feeding

Milkoline At 2c a Gallon

Milkoline has a base of pasteurized and sterilized, modified Buttermilk. It is guaranteed not to contain any sulphuric acid or anything of an injurious nature to hogs or poultry.

Aids Digestion: Thousands of the most successful hog raisers from New York to California during the past seven years have proved that Milkoline helps and assists digestion, tending to insure perfect assimilation of feed. It helps tone up the system so that hogs are less subject to disease, and practically insures gains of 2½ pounds per head per day.

University Tested Professor W. B. Combs while Ass't. Prof. of Dairy Husbandry at Missouri University conducted a scientific test on Milkoline and found that Milkoline fed hogs put on more weight and showed 82.67% more profit than hogs not fed Milkoline. W. H. Graham a successful feeder of Middletown, Mo., said $30 worth of Milkoline made him an extra profit of $420. Lee Jackson of Wappingers Falls, N. Y., says Milkoline fixed up a bunch of shoats in fine style and is great for brood sows.

Can't Spoil: Milkoline is guaranteed not to rot, sour or mould. It will keep indefinitely in any climate. Flies do not come near it. It is always uniform, and is guaranteed to make you money or it doesn't cost you anything.

2c a Gallon Milkoline comes in condensed form, and you do the diluting on your own farm. When fed as directed Milkoline mixture (one part Milkoline to 50 parts water or swill) costs only 2c a gallon. Full feeding directions free. It is shipped in convenient kegs and barrels which we supply free. The prices are as follows: 5 gal. $7.50; 10 gal. $12.50; 15 gal. $16.50; 32 gal. $32.00; 55 gal. $49.50. It pays to buy in barrel lots because you save 6c a gal. over the 5 gal. quantities.

30 - Day Guaranteed Trial. You are safe in ordering any quantity of Milkoline today. Feed one half the shipment to your hogs and poultry in a thirty day test, then if you aren't entirely satisfied return the unused part to us at our expense and we'll immediately refund every cent you paid us. We are so confident that you will find Milkoline the best money maker on the farm that the S. W. Boulevard Bank of Kansas City substantiates this offer. You are the sole judge. Send money order, or check, to us or our nearest dealer and we will ship immediately. Our booklet, "How to Hustle Heavy Hogs to Market" will be sent free on request—your name on a card will do.

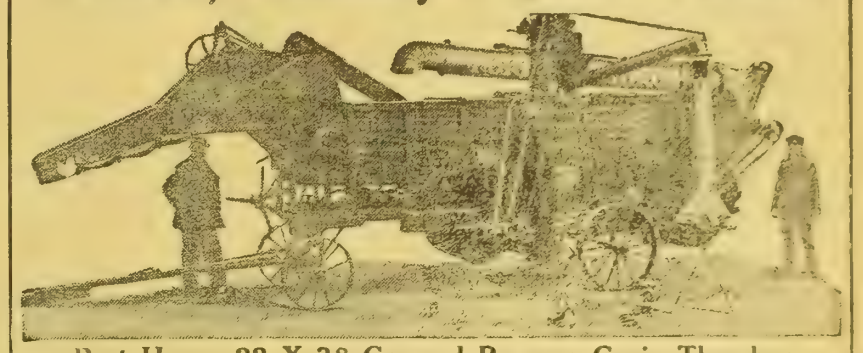
SWARTZ BROS., Saginaw, Mich.

Individual, Community or Custom Thresher



Port Huron 22 X 38 General Purpose Grain Thresher

This machine has large capacity and can be operated with any small steam engine, or medium sized tractor.

Will do excellent work in all kinds of seeds and grain (including clover, timothy, alfalfa, peas, etc.) and is fully guaranteed the same as our standard size threshers.

Save your own grain; thresh when most convenient and accommodate your neighbors. It will take only a small portion of your time in custom work to pay for the machine as well as power to operate it. We can also furnish second hand steam engines or tractor, to operate same.

We can ship from stock same day order is received. Write us for catalog, or, if in a hurry, wire us at our expense.

BUSINESS FARMERS' EXCHANGE

FIVE CENTS A WORD PER ISSUE. MINIMUM size accepted, 20 words. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farmer, Adv. Dep't, Mt. Clemens, Michigan.

FARMS & LANDS

FULLY EQUIPPED FARM WITH GROWING crops, $1,500 cash, gives possession immediately; 2 houses, 10 outbuildings, poultry houses, machine shed, tools and part growing crops; level productive farm, 75 acres pasture; valuable timber, market fruit; variety fruit, 400 sugar maples; 2-story house, good water maple shade; 2 barns, 100 ft. cattle shed; owner's goods forced sale, everything goes for $4,000, only $1,500 cash, big new terms. Details page 72 Strout's Big Illustrated Catalog Farm Bargains 33 States. Copy free. STROUT FARM AGENCY, 814 BE, Ford Bldg., Detroit, Mich.

120 ALL IMPROVED EXTRA BUILDINGS, $150 A. Stock, tools, crops, terms. Immediate possession, write GLEN PINCH, Eaton Rapids, Mich., R 5.

STRIPPED HARDWOOD LAND, RICH clay loam—easy terms, $12.50 to $15.00 an acre. Neighbors, roads, schools. Four to five miles from Millersburg. Never failing clover seed will make your payments. JOHN G. KRAUTH, Millersburg, Mich.

FOR SALE—CHOICE UNIMPROVED FARM lands in Thumb District of Michigan. Near railroads and good markets. Buy direct from owner and get better land for less money. ALBERT HEATH, Harbor Springs, Michigan.

IMPROVED FARMS FOR SALE—OSCEOLA and adjoining counties offer great opportunities for the farmer. Productive soil, fine climate, good roads and best of schools, farmers well organized, three branches of Gleaner Clearing House, everything to make life worth living and livig easy to make. Let us send our descriptive booklet of the wonderful country, and tell you of the great bargains we have to offer. CALLAGHAN & CARROW LAND CO., Reed City, Mich.

FINE FARM FOR SALE CHEAP. EIGHTY acres. Forty two in crops. Buildings and fences good. FRED E. SCHERZER, Rhodes, Mich.

MISCELLANEOUS

BUY FENCE POSTS DIRECT FROM FOR-est. All kinds. Delivered prices. Address "M. M." care Michigan Business Farming, Mt. Clemens, Mich.

CORN HARVESTER—ONE-MAN, ONE-HORSE, one-row, self-gathering. Equal to a corn binder. Sold direct to farmers for twenty-three years. Only $28, with fodder binder. Free catalog showing pictures of harvester. PROCESS CORN HARVESTER CO., Salina, Kan.

FOR SALE—CASE 10-20 TRACTOR IN good condition $500. Reason for selling. Want larger tractor. RAY CHAFFEE, Fenton, Mich.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or commissions. If you want to sell or trade your farm, send in your ad today. Don't just talk about it. Our Business Farmers' Exchange gets results. Address The Michigan Business Farmer, Adv. Dept., Mt. Clemens.

Government Shoes

at less than 1/3 Usual Price

We have purchased direct from the local depots of the Government over 50,000 pairs GENUINE ARMY DRESS SHOES. ASK THE BOYS WHO WORE THEM. Some of these shoes were repaired in the Government Shoe Shops; balance we are repairing with genuine oak leather. Uppers will wear two years. Note the following figures: New Army Uppers are worth $7.00; first class shoe shops get $2.50 for 1-2 soles and heels. Total $9.50. OUR PRICE $2.50, or less than 1-3 their true value. Mailed $1.00, giving size desired. Balance on delivery. Satisfaction guaranteed. Send orders to Gov't Shoe Dept.

Michigan Business Farmer,
Mt. Clemens, Mich.

Gentlemen: — Enclosed please find check for $14.60, the sum due for 13 weeks' chicken ad and one week strawberry ad. If we need any more ads we will let you know later.

Your ads surely bring business. We're all sold out for April and May. Yours is the best paper for Michigan farmers that there is in the state. Continue in the same good way and you will have the support of every bona fide farmer.

Cordially yours,
C. W. HEIMBACH,
Route 5, Big Rapids, Mich.

M. B. F. brings them

"HEARTS OF THREE"

(*Continued from page* 15)

She threw the banana peel into the water and lazily watched the point where it had struck.

"If anything comes up I hope it will be big," Cancordia murmured with equal laziness.

And upon their astonished gaze, even as they looked, arose up out of the brown depths a great white hound. They jerked their poles up and behind them on the bank, threw their arms about each other, and watched the hound gain the shore at the lower end of the eddy, climb the sloping bank, pause to shake himself, and then disappear among the trees.

Nicoya and Concordia giggled.

"Try it again," Concordia urged.

"No; you this time. And see what you can bring up."

Quite unbelieving, Concordia tossed in a clod of earth. And almost immediately a helmeted head arose on the flood. Clutching each other very tightly, they watched the man under the helmet gain the shore where the hound had landed and disappear into the forest.

Again the two Indian girls giggled but this time, urge as they would, neither could raise the courage to throw anything into the water.

Some time later, still giggling over the strange occurrences, they were espied by two young Indian men, who were hugging the bank as they paddled their canoe up against the stream.

"What makes you laugh," one of them greeted.

"We have been seeing things," Nicoya gurgled down to them.

"Then you have been drinking pulque," the young man charged.

Both girls shook their heads, and Concordia said:

"We don't have to drink to see things. First, when Nicoya threw in a banana skin, we saw a dog come up out of the water—a white dog that was as big as a tiger of the mountains—"

"And when Concordia threw in a clod," the other girl took up the tale, "up came a man with a head of iron. It is magic. Concordia and I can work magic."

"Jose," one of the Indians addressed his mate, "this merits a drink."

And each in turn, while the other with his paddle held the canoe in place, took a swig from a square-faced Holland gin bottle part full of pulque.

"No," said Jose, when the girls had begged him for a drink. "One drink of pulque and you might be more white dogs as big as tigers or more iron-headed men."

"All right," Nicoya accepted the rebuff. "Then do you throw in your pulque bottle and see what you will see. We drew a dog and a man. Your prize may be the devil."

"I should like to see the devil," said Jose, taking another drain at the bottle. "The pulque is a true fire of bravery. I should very much like to see the devil."

He passed the bottle to his companion with a gesture to finish it.

"Now throw it into the water," Jose commanded.

The empty bottle struck with a forceful splash, and the evoking was realized with startling immediacy, for up to the surface floated the monstrous, hairy body of the slain spider. Which was too much for ordinary Indian flesh and blood. So suddenly did both youn men recoil from the sight that they captized the canoe. When their heads emerged from the water they struck out for the swift current, and were swiftly borne away down stream, followed more slowly by the swamped canoe.

Nicoya and Concordia had been too frightened to giggle. They held on to each other and waited, watching the magic water and out of the tails of their eyes observing the frightened young men capture the canoe, tow it to shore, and run out and hide on the bank.

The afternoon sun was getting low in the sky ere the girls summoned courage again to evoke the magic water. Only after much discussion, did they agree both to fling in clods of earth at the same time. And up arose a man and a woman—Francis and the Queen. The girls fell over backward into the bushes, and were themselves unobserved as they watched Francis swim with the Queen to shore.

"It may just have happened—all these things may just have happened at the very times we threw things into the water," Nicoya whispered to Concordia five minutes later.

"But when we threw one thing in, only one came up," Concordia argued. "And when we threw two, two came up."

"Very well," said Nicoya, "let us now prove it. Let us try again, both of us. If nothing come up, then have we no power of magic."

Together they threw in clods and uprose another man and woman. But this pair, Henry and Leoncia, could swim, and they swam side by side to the natural landing place, and, like the rest that had preceded them, passed on out of sight among the trees.

Long the two Indian girls lingered. For they had agreed to throw nothing, and, if something arose, they would coincidence be proved. But if nothing arose, because nothing further was by them evoked, they could only conclude that the magic was truly theirs. They lay hidden and watched the water until darkness hid it from their eyes; and, slowly and soberly, they took the trail back to their village, overcome by an awareness of having been blessed by the gods.

CHAPTER XXII

NOT UNTIL the day following his escape from the subterranean river, did Torres reach San Antonio. He arrived on foot, jaded and dirty, a small Indian boy at his heels carrying the helmet of Da Vasco. For Torres wanted to show the helmet to the Jefe and the Judge in evidence of the narrative of strange adventure he chuckled to tell them.

First on the main street he encountered the Jefe, who cried out loudly at his appearance.

"Is it truly you, Senor Torres?" The Jefe crossed himself solemnly ere he shook hands.

The solid flesh, and, even more so, the dirt and grit of the other's hand, convinced the Jefe of reality and substance.

Whereupon the Jefe became wrathful.

"And here I've been looking upon you as dead !" he exclaimed. "That Caroo dog of a Jose Mancheno ! He came back and reported you dead—dead and buried until the Day of Judgment in the heart of the Maya Mountain."

"He is a fool, and I am possibly the richest man in Panama," Torres replied grandiosely. "At least, like the ancient and heroic conquistadores I have braved all dangers and penetrated to the treasure. I have seen it. Nay——"

Torres' hand had been sunk into his trousers' pocket to bring forth the filched gems of the Lady Who Dreams; but he withdrew the hand empty. Too many curious eyes of the street were already centered on him and the draggled figure he cut.

"I have much to say to you," he told the Jefe, "that cannot be said now. I have knocked on the doors of the dead and worn the shrouds of corpses. And I have consorted with men four centuries dead but who were not dust, and I have beheld them drown in the second death. I have gone through mountains, as well as over them, and broken bread with lost souls and gazed into the Mirror of the World. All of which I shall tell you, my best friend, and the honorable Judge, in due time, for I shall make you rich along with me."

"Have you looked upon the pulque when it was sour?" the Jefe queried incredulously.

"I have not had drink stronger than water since I last departed from San Antonio," was the reply. "And I shall go now to my house and drink a long long drink, and after that I shall bathe the filth from me, and put on garments whole and decent."

Not immediately, as he proceeded did Torres gain his house. A ragged urchine exclaimed out at sight of him, ran up to him, and handed him an envelope that he knew familiarly to be from the local government wireless, and that he was certain had been sent by Regan.

"You are doing well. Imperative you keep party away from New York for three weeks more. Fifty thousand if you succeed.

Borrowing a pencil from the boy, Torres wrote a reply on the back of the envelope:

"Send the money. Party will never come back from mountains where he is lost."

Two other occurrences delayed Torres' long drink and bath. Just as he was entering the jewelry store of old Rodriguez Fernandez, he was intercepted by the old Maya priest with whom he had last parted in the Maya mountain. He recoiled as from an apparition, for sure he was that the old man was drowned in the Room of the Gods. Like the Jefe at sight of Torres, so Torres, at sight of the priest, drew back in startled surprise.

"Go away," he said. "Depart, restless old man. You are a spirit. Thy body lies drowned and horrible in the heart of the mountain. You are an appearance, a ghost. Go away, nothing corporeal resides in this illusion of you, else would I strike you. You are a ghost. Depart at once. I should not like to strike a ghost."

But the ghost seized his hands and clung to them with such beseeching corporality as to unconvince him.

"Money," the ancient one babbled. "Let me have money. Lend me money. I will repay—I who know the secrets of the Maya treasure. My son is lost in the mountain with the treasure. The Gringos also are lost in the mountain. Help me to rescue my son. With him alone will I be satisfied, while the treasure shall all be yours. But we must take men, and much of the white man's wonderful powder and tear a hole out of the mountain to drain the water in the room where stand the jewel-eyed Chia and Hzatzl. Their eyes of green and red alone will pay for all the wonderful powder in the world. So let me have the money with which to buy the wonderful powder."

But Alvarez Torres was a strangely constituted man. Some warp or slant or idiosyncrasy of his nature always raised insuperable obstacles to his parting with money when such parting was unavoidable. And the richer he got the more positively this idiosyncrasy asserted itself.

"Money !" he asserted harshly, as he thrust the old priest aside and pulled open the door of Fernandez's store. "Is it I who should have money—. I who are all rags and tatters as a beggar. I have no money for myself, much less for you, old man. Besides, it was you, and not I, who led your son to the Maya mountain. On your head be it, not on mine the death of your son who fell into the pit under the feet of Chia that was digged by your ancestors and not by mine."

Again the ancient one clutched at him and yammered for money with which to buy dynamite. So roughly did Torres thrust him aside that his old legs failed to perform their wonted duty and he fell upon the flagstones.

The shop of Rodriguez Fernandez was small and dirty, and contained scarcely more than a small and dirty showcase that rested upon and equally small and dirty counter. The place was grimy with the undusted and unswept filth of a generation. Lizards and cockroaches crawled along the walls. Spiders webbed in every corner, and Torres saw, crossing the ceiling above, what made his step hastily to the side. It was a seven inch centipede which he did not care to have fall casually upon his head or down his back between shirt and skin. And, when he appeared crawling out like a huge spider himself from some inner den of an unventilated cubicle, Fernandez looked like an Elizabethean stage-representation of Shylock—withal he was a dirtier Shylock than even the Elizabethan stage could have stomached.

The jeweler fawned to Torres and in a cracked falsetto humbled himself even beneath the dirt of his shop. Torres pulled from his pocket a haphazard dozen or more of the gems filched from the Queen's chest, selected the smallest, and, without a word, while at the same time returning the rest to his pocket, passed it over to the jeweler.

"I am a poor man," he cackled, the while Torres could not fail to see how keenly he scrutinized the gem.

Michigan Breeders Buy Holsteins at St. Paul

AMONG the purchases made by Michigan breeders at the St. Paul national sale was the cow Changeling Queen, consigned by the Strickland Estate, of Carthage, New York. Changeling Queen has two records above thirty-six pounds, the better one being 38.9, and she was bought by Buth and Waters of Grand Rapids. In the seven day division she is the highest record cow owned in Michigan.

The G. L. Spillane & Son Company of lio ,Michigan, bought the 32.5 pound cow Vale Cornucopia Fayne, consigned by D. D. Aitken, and her daughter Eva Fayne of Cluny, a 24 pound three year old consigned by R. Bruce McPherson, of Howell, Michigan. The Spillane Company is making a fine showing in long distance work, and there two cows will be put on semi-official test.

Mr. W. L. Hoffman, steward of the Michigan School for the Deaf at Flint, took back two good heifers, Pontiac Monica, a sister of Pontiac Irene, consigned by Pontiac State Hospital, and Traverse Inka Princess Weg, a granddaughter of old Traverse Princess Weg, consigned by Traverse City State Hospital. These were two excellent heifers, both with good records and breeding, and will make a valuable addition to the herd. The Flint school is one of the last of the Michigan institutions to be converted to the Holstein idea, having kept a herd of Ayrshires until recently. However, they are starting in with a very good class of cattle and the steward says that they have already increased their milq supply very materially and with only one-half the number of cows.

The Michigan breeders were greatly pleased at the re-election of Mr. Aitken as President of the National Association for another year. They feel that no one was better fitted to stand at the helm during the troubulous times of the past year and that no one is better qualified to go on during the coming year and help to solve the problems now before the organization.

A list of the names of Michigan people who attended the meeting and sale follows: D. D. Aitken, Flint; G. L. Spillane, Flint; Walter Hill, Flint; W. L. Hoffman, Flint; H. G. Spillane, Clio; E. M. Bayne, Detroit; Mrs. E. M. Bayne, Detroit; Dudley E. Waters, Grand Rapids; Thomas Waters, Grand Rapids; Martin Buth, Grand Rapids; John Buth, Grand Rapids; E. W. McNitt, Grand Rapids; M. W. Willard, Grand Rapids; J. Neal Lamoreaux, Comstock Park; John Buitendyk, Sparta; Peter Terpstra, Berlin; John Tobin, Allegan; F. D. Cutler, Wayland; H. H. Buckhout, Kalamazoo; H. E. Rising, Woodland; B Rising, Woodland; G. A. Weed, Lake Odessa; E. M. Ruehs, Lake Odessa; Charles Lepard, Lake Odessa; Dr. R. W. Chivers, Jackson; H. D. Boardman, Jackson; John Boardman, Jackson; Corey J. Spender, Jackson; E. H. Halsey, Pontiac; J. Wilder, Bay City; G. B. Pike, Traverse City; L. Kelsey, Three Oaks; Oscar Wallin, Unionville; Mrs. O. Wallin, Unionville; S. H. Munsell, Howell; Mrs. S. H. Munsell, Howell; Frank Wiltz, Howell; Frank Wiltz, Jr., Howell; D. H. Hoover, Howell; A. L. Smith, Howell; H. D. Box, Lansing; Fred E. Shubel, Lansing; E. T. Janisee, East Lansing; H. W. Norton, Jr., East Lansing.

Veterinary Department

COW'S EYES SWELL

Would appreciate it if you could tell me what is the matter with my cows. Their eyes swell up, get all white matter and their nostrils run strings of matter. Just one cow had it in one eye about two weeks ago and I supposed she had been hurt in the eye. It all went away and now all three have it. The first time the cow's nose did not run. They are pasturing on a place that has been used as pasture for years and there has never been anything like that noticed before.—R. M., Saginaw County.

Your cows have Epizootic Keratitis; this is a disease affecting the eyes of cattle from time to time in certain localities. It is seen usually during the summer months when the cattle are on grass. Almost without exception it attacks every animal in a herd of cattle which it invades; in rare instances a few animals may escape the infection. The one first attacked in an outbreak usually develops the disease in a most severe form, and towards the latter part of the epizootic the cases become milder and usually recover spontaneously. The disease affects cattle only; horses in the same pasture with the affected cattle do not develop the disease, nor are other animals on the farm affected. In the mild or sub-acute form the symptoms are confined to the eyes; in the severe form the animal will show less of appetite and considerable interference with the milk secretion; the eyes are only partly open and the lids appear slightly swollen; sometimes within twenty-four to forty-eight hours nearly every animal in the herd is affected. The treatment of this disease is entirely local, consisting of one per cent yellow oxide of mercury ointment. A small lump of this ointment of about the size of a pea is placed within the lower eyelid and the lids pressed together a few moments until the ointment becomes warm. It is then distributed over the interior surface of the eye ball by gentle massaging of the lids and the movements of the eye. The animal should be kept indoors and the stable darkened for a few days. In three to five days recovery is complete. In the more severe form in which the discharges from the eyes are thick in character, a solution of zinc sulphate of about a three or four per cent strength is to be used. It is best applied with a small glass syringe having a soft rubber tip; with the owner or an attendant holding the cow's head, the person giving the treatment draws the lower eyelid away from the globe, by pulling on the lashes. About a teaspoonful of the zinc sulphate solution is then squirted into the pocket or cup thus formed, and the lid allowed to return to its position. This is repeated three times daily until the symptoms have disappeared, then follow this treatment up with daily applications of the oxide of mercury ointment.—*W. A. Ewalt, veterinary editor.*

BLOODY MILK

I would like to know how to treat a cow that has not come around for nine months after calving. I also have a heifer that came in three weeks ago and she gives bloody milk.—M. D., Huron County.

No. 1. I cannot very well answer this question without having some history of the case; did the afterbirth come away properly after calving the last time? I suggest you have this cow examined by a qualified veterinarian, one who is able to determine whether or not this cow's ovaries are normal. No . 2. Give this cow two drams Potassium Iodide, dissolved in about a teacupful of warm water morning and night.—*W. A. Ewalt, veterinary editor.*

GET COW WITH CALF

I bought a four year old pedigreed cow last fall. She was bred when I got her. She came in heat the 7th of February May 23rd and June 12th. I don't know if she is in calf now. What can I do for her to get her in calf.—H. B., Mio, Mich.

She may have previously had a modified form of contagious abortion or may have cystic ovaries; a qualified veterinarian, by making a careful examination, should be able to determine the cause, and should, by the use of proper instruments, be able to treat her.—*W. A. Ewalt, veterinary editor.*

WARTS ON COW'S TEATS

What will kill the warts on a cow's teats?—F. J. S., Berrien County.

Apply Fowlers' solution of arsenic once a day; also give animal one tablespoonful in a little water morning and night.—*W. A. Ewalt, veterinary editor.*

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

Your Wife Will Know

Get a new pair of Boston Garters and ask your wife to examine them. She will recognize the superior grade of materials used—she will appreciate the careful, painstaking workmanship and will understand why it is that "Bostons" wear so long.

CATTLE

HOLSTEIN-FRIESIAN

Selling Purebred Holstein Cattle is Profitable

Do you realize that purebred Holstein calves bring a very liberal price? Every day this breed is becoming more and more known. Breeders are telling the public about the value of the milk. The demand today for purebred Holsteins is greater than the supply. Here is opportunity for you to get rich. Hundreds of calves every year are sold from $100 to $200 apiece. With plenty of food and ordinary care these cattle will average from 350 to 500 lbs. of butter per year. Can you see opportunity here? Remember, "Holsteins are the most profitable cattle."

Farm Bureau Plans National Selling Agencies

Would Curb Speculation and Avoid Violent Market Fluctuations Through Control of Markets by National Organizations

THIS WEEK there is being held in Chicago a meeting which may lead to the revolutionizing of the system of marketing farm products and fixing prices thereon. It is a conference of the presidents and secretaries of the various state farm bureaus representatives of co-operative associations, the Department of Agriculture, agricultural colleges, and the agricultural press. The purpose of the gathering is to discuss plans for national selling agencies for grain and livestock, with a view toward curbing speculation and violent market fluctuations.

Next week Tuesday and Wednesday, July 27th and 28th, the above-mentioned aims will be further discussed at the mid-west meeting of farm bureau officers, to be held at the M. A. C., East Lansing, Mich. The grain elevator exchange idea which first found root in Michigan is attracting the attention of other state farm bureaus which hope to organize similar exchanges in their respective states and to ultimately co-ordinate them under a central national agency.

As Mr. J. P. Powers, assistant secretary of the Michigan State Farm Bureau says: "The possibilities of this plan are tremendous." We agree with him. We go further and say that if the American Farm Bureau Federation through the instrumentality of a national brokerage agency for marketing or directing the marketing of grain and livestock, can destroy speculation, regulate grain prices according to actual instead of speculative supply and demand, and prevent violent fluctuation in prices of grain and livestock, it will have succeeded in overcoming the greatest of all obstacles to enduring farm prosperity.

Fixing Prices on Farm Products

IT used to be thought that supply and demand were the rigid factors of price control. It is true that some relationship exists between them but judging from the characteristics occasionally exhibited in the trend of grain prices they cannot be much closer than fourth or fifth cousin to supply and demand. Prices of farm products should, it is readily admitted, reflect in every particular the supply and demand of such products. That they do not do so in actual practice is well known. To make this theory a fact so far as it lies within the power of man is the latest and loftiest aim of the farm bureau.

To expect the average farmer to describe the manner in which grain prices are manipulated on the grain exchanges is as foolish as to expect a child of seven years to explain the theory of logarithms. No one would think of propounding such a question to a child, but it would be perfectly natural to ask a farmer how the prices on his products are set. Looking through the eyes of the man who fixes his own price on the products of his labor and ingenuity, the failure on the part of the farmer to understand the influences that control hs prices and profits, or to fix his own prices, is prima facie evidence of mismanagement, inefficiency and crass ignorance if not imbecility. And yet there are a thousand good and sufficient reasons why the farmer lives in blessed economic darkness.

Mission of Farm Bureau

DISCUSSING the mission of the farm bureau as relating to the subject of marketing and the regulation of market prices, W. G. Eckhardt, director of the grain marketing department of the Illinois Agricultural Ass'n, writing in a recent issue of the Prairie Farmer, says:

"We are coming to see that the biggest job of the farm bureaus is to secure a favorable market for the products of the farms.

"Farmers deserve the same decent, respectful, consideration for their products—the products of their labor—that is given to the products of any manufacturer or business man. Farm products are the only commodities that are gambled in, that have their price set by a group of speculators, who shove the price up and down to suit their fancy. Boards of Trade don't gamble with Ford automobiles or McCormick harvesters. It would be absurd to think of such a thing. Some day it will be just as absurd to think of having the price of farm products fixed in that way.

"We are told that the Board of Trade is an old institution, that this method of marketing grain represents years of evolution. What of it? No one has given much thought to the efficiency or common sense of that system. Farmers have never been in a position to do so. The Board of Trade operators are making plenty of money and are satisfied with present conditions. No one else has ever taken much interest in the matter. The truth is that the men who have built up our present system of marketing and distributing food products have failed deplorably. They have created so wide a gap between producer and consumer that both have been burdened with a load almost greater than they can bear."

Every farmer knows that what Mr. Eckhardt says is all too true. Every farmer has felt for years that there was something wrong with the system, something that could be remedied. Moreover, every farmer has felt a certain sense of injustice when, after selling his products at less than it cost to produce it, he has read of the speculators who have pulled down fortunes from a days turn in the markets.

Recent examples of the shortcoming of the present system of making the day to day prices on grains and livestock may be found in the unexplained and unexplainable antics of the livestock market the last year and the present trend of grain prices. A year ago in the face of the most reliable statistics available showing that the world was short of meat products, farmers went into the livestock market and paid high prices for feeders. Came fall and winter to market these feeders and the price had slumped, not a few cents per hundreweight, but a great plunge that brought many feeders face to face with financial ruin and thousands of farmers a severe loss. The packers and all who have to do with the fixing of livestock prices rushed quickly forward with profuse explanations, but they didn't alter the fact that farmers had lost money and worse still didn't know what had happened. The relative position of supply and demand has not changed. The world still needs more meat products than it can get, but the livestock market still has a case of nerves and jumps around like a monkey on a string. And that's just what it is,—with the speculators holding the string.

For nearly a year the prices of all grains have steadily advanced. That has not been because of the speculators but in spite of them. Stories about the great supplies that were on their way from the Argentine; press-agented stories of the unrest due to high cost of living; and numerous other weakening influences have been played on grain markets for upwards of a year in effort to break the price. Had anywhere near a normal supply existed these efforts would undoubtedly have met with success, but because Europe was begging for supplies and domestic dealers could not get the goods half the time to fill their contracts, prices held up. Today they are going down. There is not a jot of difference in the total world supply and need for grains. There is not a jot of difference in the intrinsic value of the 1919 crop of grain and the 1920 crop. But these are factors that are out of consideration. The speculators have decreed lower prices; the deliciously ignorant public clamors for lower prices, and lower prices there must be if the farmer doesn't earn a penny on his 1920 crops. We will have an era of low prices for the next four or five months. Many farmers will be forced to sell their grain. That will be the opportunity for the speculators. They will take sympathy upon the poor farmer and buy his grain at the artificially low price which they have brought about. Then when they have loaded up with low priced grain and can no longer resist the pressure of the world demand, the lid will come off, and up, up, up will go the prices of grain, and the speculators will reap the profits.

What Can the Farm Bureau Do?

CAN the farm bureau destroy that system and build a better one. We don't know. But we are in favor of their trying it. We appreciate something of the tremendous difficulties that lie in the way. But if the farm bureau through a national marketing agency and subordinate grain exchange in every state in the union has control of the major part of the crop, it would appear that it can virtually dictate the movement of the crop and to a certain extent the market price. It can at least educate the farmer and his marketing associations to be guided by natural instead of artificial conditions, and if natural factors are permitted to be the controlling factors, sudden price fluctuations will be largely done away with.

Firestone

LAST year Firestone lifted the 30x3½-inch tire out from all the sizes made and focused attention on it—as the *only tire size capable of quantity production*. And not only the tire user but the whole tire industry responded.

Firestone built an exclusive factory devoted to this size—and worked out a specialized way of manufacturing this tire in quantity—without a backward move—every tire good.

Today—while others are centering on the tire for owners of small cars, the Firestone 3½-inch is out in front with a highly specialized and bedrock economical method of manufacture.

Firestone is two years ahead because Firestone saw two years ahead—and you owners of light cars get the benefit.

Did Farmers of America Lose Money Last Year

Farmers' National Council Submits Startling Figures to Show That Farmers Ran Behind Six and a Half Billion Dollars in 1919

THE FARMERS' National Council, which is sponsoring a "reconstruction" program calling for "government ownership and democratic operation of the railroads and of the peoples' ships for service and not for profit, full federal control of the meat packing industry, government ownership and development of natural resources, democratic financing of the costs of the war, and making credit as cheap and available to agriculture as to any other equally responsible business," declares that the farmers of America ran behind nearly six and a half billion dollars last year, and presents figures to prove its claims. The Council believes that the adoption of its reconstruction program as above outlined would save the farmers three billion dollars a year.

Are Figures Correct?

We cannot vouch for the correctness of the figures made public by the Council, and we are not sure that the conclusions drawn from them are defensible in every detail, but they are interesting from a statistical standpoint and well worth the study of any farmer. Whether the loss to farmers last year was six and a half billion dollars or only one billion dollars is not important. A comparison of the total actual returns with the property investment does, however, bear out the oft-repeated assertion that farming does not receive the returns to which it is entitled.

Returns From Farms

The Department of Agriculture estimates the total value of farm products in 1919 based on prices at the farm at $16,025,000,000 for crops and $8,957,000,000 for animals and animal products,—a total of $24,982,000,000. The total of the chief costs of production enumerate above was $31,463,787,000, showing that the farmers ran behind in round figures $6,481,787,000 last year.

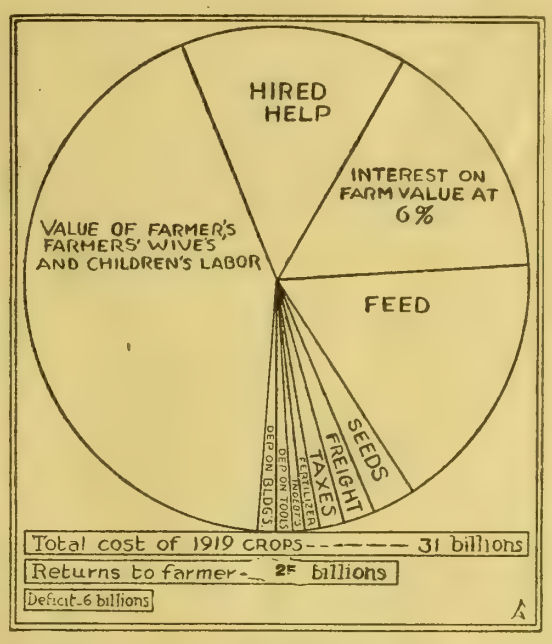
Costs of Production

The Farmers' National Council give the following costs of production as the minimum actual charges which should be considered in reaching the total costs of farm production.

Labor of farmers, farmers' wives and children, $13,000,000,000 (assuming that the minimum value of an adult's labor of eight hours per day is $1,000 per year as explained in a later paragraph) seasonal and hired labor, $5,000,000,000; interest on farm values at six per cent, $4,674,000,000; freight paid for carrying farm products, $600,000,000; taxes, local and state, $400,000,000; fertilizers, $250,000,000; seeds, $723,000,000; feeds, $6,216,000,000; interest on farm indebtedness in excess of six per cent, $120,000,000; depreciation of buildings at 2 1-2 per cent, $269,062,000; depreciation of implements and machinery at ten per cent, $211,725,000.

The Farmers' National Council admits that these figures are estimates, but very careful estimates, and they have purposely leaned toward conservatism in making them. We would go farther and say that the items of cost which the Council has not included would in the aggregate amount to another five billion dollars, to make no allowance for the ultra-conservatism of the figures they do cite.

For instance, no mention is made of the upkeep of fences, always an appreciable item on any farm. Supplies such as gasoline, oil, binder twine, sprays for crops and orchards, and scores of minor items are not mentioned at all, yet on six million farms they must cost a lot of money. The amount allowed for taxes is altogether too low. The farmers of Michigan alone pay in round numbers $20,000,000 a year. In the forty-eight states the total would be close to a billion dollars instead of four hundred million. The same objection can be made to the depreciation estimate of 2 1-2 per cent on buildings and 10 per cent on equipment. No farm building will last forty years without the expenditure of a sum almost equal to if not exceeding its replacement value for paint and repairs. Even with proper care the average wooden structure on the farm will have to be entirely rebuilt at the end of 40 years if not in less time. Farm implements and machinery deperciate at a much greater rate than 10 per cent of their value per year. Manufacturers make a much more liberal depreciation allowance than this on machinery that is housed in heated buildings and never exposed to the weather. How much greater is the deterioration of farm machinery which despite the utmost precautions must some times be exposed to the rain and are housed in damp, unheated barns. Taking into consideration the cost of repairs and improvements a depreciation of at least fifteen if not twenty per cent should be charged off against farm machinery every year.



Value of Farmers Labor

The outstanding fact is that American agriculture is primarily labor and poorly paid labor at that, is the conclusion of the Council. Farmers who manage farms and take the risks of agriculture, need and use large business ability, and are entitled to a return for their labor equal to that of men engaged in other similarly important business, as well as to a fair return upon the value of their farms, and farm equipment. Instead of getting such a return many farmers receive less for their work than unskilled workers in other industries who are themselves paid less than a living wage.

The farmers wives and children who do farm work—and everybody's doing it on the farm,—are entitled, according to the Farmers' National Council, to a labor wage of at least a thousand dollars a year for any adult who spends eight hours a day in farming. They certainly are entitled to time and a half for overtime. There are about six and a half million farms in America, and the Council estimates on an average of two adults of the farmers' family do equivalent of a full days' work each, every day, on the farm, which means they are entitled to labor income of thirteen billion dollars. The 1910 census reports that there were that year 5,926,816 farmers of which 257,706 were women. The great majority of farmers are married and the work of farm women and children is fully entitled to pay. In 1910 there were nearly six million farm laborers, men, women and children, ten years of age or over, of whom about three-quarters were male. Assuming only the same number for 1919 their average wage and keep certainly was equal to $833 a year, a total of five billion dollars.

In 1910 the last year for which census figures are available, the total value of farm properties, including land, equipment, buildings, implements and machinery, domestic animals, poultry and bees, was about $41,000,000,000, an increase of 100 per cent during the decade preceding. The Farmers' National Council estimates that the value increased at least 90 per cent during the nine years from 1910 to 1919 so that it totaled at least $77,900,000,000 last year. A six per cent return upon this value of farm property is $4,674,000,000.

The other items in the above table are carefully estimated though the allowance for state and local taxes is very low and the depreciation allowed,—10 per cent—on the estimated increase in the value of implements and machinery since 1910 is also probably too low.

"We have no doubt," the Farmers' National Council says, "that these figures will be challenged by those who demand that the farmers merely produce and do not worry about whether they are breaking even, that is, working for food, clothes and shelter and not getting ahead. This position taken by the monopoly, predatory and speculative interests of the country, the Farmers' National Council terms untenable."

"We have reached a crisis in agriculture," the Council states, "and unless it is made profitable and put on a business basis farmers will raise enough to feed themselves and will not worry about feeding other people. Unless feeding the world yields fair wages, expenses and interest on investment, farmers won't do it.

Farmers' Interest as Workers Three Times Interest as Property Owners

"The figures show that the labor interest of farmers as such is vastly greater than their interest as capitalists,—fully three times as large. Even on the low figure of two thousand dollars on the average for labor for every farmers' family, directly engaged in farming, the labor value of farmers is nearly three times as large as a six per cent return on the value of farm property."

Farmers Must Oppose Having More Burdens Placed Upon Them

"Our study also shows that farmers must vigorously fight any and every measure which would increase the expenses of production and the cost of living of farmers. It is true that the amount paid for seasonal and hired labor this year will not be as large as last year because farmers are discouraged with the low price they receive for their products and have not sown such large acreage. This is a dangerous situation and if any financial burden be placed upon farmers it will be a blow to our national efficiency and welfare because it is a blow to our basic industry,—agriculture—which is now in a most serious condition as far as the general public is concerned.

"We have reached the stage in agriculture in this country where we must end special provilege and monopoly which are exacting such tremendous tribute from the American farmers."

It is the claim of the Farmers' National Council that the return of the railroads to private management places an additional burden of several billions of dollars upon the farmers. They point to the proposed freight rate increases of 25 to 30 per cent which are necessary to maintain the old wasteful competitive methods of the roads and pay to them the dividends guaranteed under the law. The Council fought vigorously against the return of the roads for these reasons, and it was no less active in its opposition to the sale of government built boats to private interests. It held that a merchant marine established by the government in time of war should be conducted by the government in times of peace. The Council also believed that the wealth that was made possible by the war was not sufficiently taxed to pay the cost of war and is in open favor of "democratic financing of the costs of war."

The Brighter Side of Farming

SPOKESMEN for farmers and sometimes farmers themselves are accused of being unfair to their profession by presenting only the dark side of farming. Perhaps this is true. But it must be remembered that the farmers are convinced that there is something fundamentally wrong with farming from the economic standpoint and their frank discussion of the manifestations of these ills in their business is simply to focus the attention of the government and the consumer upon them in hopes that their co-operation may be enlisted in remedying the trouble.

However, there is a brighter side to farming as we are glad to admit. No man who works for another can have the pride of joy of possession which every land-owning farmer has and without which he could not withstand the discouragements of his business. The farm home is conspicuously the happiest though far from the most comfortable of all American homes. The pure and invigorating air and the open spaces of the country; the green vegetables and tart fruit fresh from the garden and orchard; the warm milk direct from nature's laboratory; the sweet-smelling butter; the delicious foods such as it seems only the good farm wife knows how to prepare; the flowers, the trees,—all bring to the farm dweller an enjoyment and contentment to which the city dweller is a stranger. Were it not for this brighter side of farming, nothing could induce men to accept the hardships and small rewards of the business.—Editor.

Safeguarding Michigan's Wheat Lands

Proper Balance of Fertilizer Will Protect Their Bread-Producing Capacity for Many Years to Come

By A. E. LINDQUIST

FORTY years ago Michigan ranked as the 9th state in the number of acres given up to the production of wheat. In 1919 it had fallen into 20th place; however, this crop is now assuming a renewed importance in the Wolverine state. A greater acreage being planted last year than in any year since 1908. Almost 3,000 more acres were seeded than in 1918 with a resulting yield of over 20 million bushels as compared with 11 million the year before and 15 million in 1917.

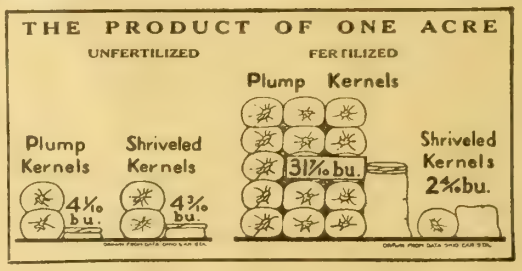
Wheat has been wrongfully denounced as being a grain crop which takes from the soil more plantfood than any others. A 30 bushel crop of wheat will remove 67 pounds of the plantfoods—ammonia, phosphoric acid and potash; a 75 bushel crop of corn removes about 129 pounds and a 60 bushel crop of oats removes 73 pounds, while a 40 bushel crop of barley takes away from the soil 72 pounds of these plantfoods. Thus we see that wheat, instead of being a grain crop which exhausts fertility of the soil more than others, is instead one of the least exhaustive grains.

In Michigan spring wheat is unsuccessful as compared with winter wheat excepting in a few districts in northern Michigan. The Bureau of Crop Estimates reports that in 1919 of the 1,350,000 acres of wheat harvested, 950,000 was winter wheat, and that this year the May 1st outlook indicates that about 857,000 acres of winter wheat will be harvested.

It is almost time to begin preparing for the winter wheat crop of 1921, and in view of the rather heavy losses by reason of infestation of the Hessian Fly last fall and the warnings of the U. S. Department of Agriculture that unless the winter wheat growers will unite in a concerted union to observe the approved methods of combating the Hessian Fly, that a disastrous general outbreak of the pest is likely in 1921, it will be profitable to review the best means of combating this pest which took so many dollars from the pockets of the farmer last year.

One of the best and most effective solutions seems to be to hold off planting the wheat until the fly has come and gone which usually means a delay of from about 10 days to two weeks. No definite date for seeding can be set for Michigan as a whole, but the general rule set forth by the Agricultural Experiment Station advocates the planting in the southern half of the lower peninsula from the 10th to 25th of September—in the northern half from 1st to the 15th is the best time. The wheat should be seeded immediately after danger of fly injury has passed, and fertilizer should then be used to insure its making vigorous growth and going into winter in a strong, healthy condition. Two hundred and fifty pounds of fertilizer which fits the conditions on your farm will force wheat so that when the cold weather comes, it will be in better condition than unfertilized wheat planted two weeks earlier. Manure is recommended where it may be had in quantity, but the average farm never has enough to go around and the best place to apply manure in a rotation, is on the corn crop; furthermore, wheat responds particularly to phosphoric acid, of which manure is relatively deficient. As illustrative of this, the Michigan Agricultural Experiment Station tells of obtaining a return of $9 for each ton of manure applied when re-enforced with 250 pounds of acid phosphate per acre as compared to a return of $3.25 per ton from manure alone.

THE PRODUCT of ONE MAN'S LABOR
On Unfertilized Land
485 BUSHELS GRAIN
864 BALES HAY AND STOVER
On Fertilized Land.
1339 BUSHELS OF GRAIN
2611 BALES HAY AND STOVER
Adapted from W.Va. Agr. Exp. Sta. Bul No. 155



This Picture Tells Its Own Story

It is hardly necessary to present evidence of the value of fertilizers to the farmers of Michigan, but the 18 year experiment, with and without fertilizers at the Ohio Agricultural Experiment Station is worthy of note. There the average yield per acre on the fertilized land was 24 bushels while on the unfertilized the average was only 10.7 bushels. Of equal interest is that historical experiment at Rothamsted, England, where the average yield on a fertilized plot over a period of 51 years is 31.2 bushels, while on the unfertilized land, the average yield is only 13.1 bushels.

Fertilizers further increase the profitableness of wheat by plumping the grains; resorting again to the Ohio Experiment Station figures we find that where fertilizer was used only 6 per cent of the kernels were shriveled, while where the land was unfertilized, 49 per cent were shriveled kernels. This means double profits on the money invested as there are more bushels of wheat and it grades 1 and 2 instead of 4, 5 or lower.

The easiest and most effective method of applying fertilizer at the time of seeding is through the ordinary fertilizer grain drill. This machine applies the fertilizer evenly and leaves it near the roots of young plants.

Where drills not equipped to use fertilizer are still in use, a broadcast distributor offers the next best means of making the application. These machines can be purchased in sizes as wide as 10 to 12 feet, which cover large acreages in the course of a day.

In Steuben County, Indiana, the county agent tells of making tests of the value of fertilizing wheat and gives the following results:

Am't per Acre	Yield of Fer'l'zed Plot	Yield Unfer'l'zed plot	Increase due fertilizer
200 lbs.	42.9 bu	13.3 bu.	29.6 bu.
200 lbs.	20.3 bu.	8.8 bu.	11.5 bu.
200 lbs.	27.6 bu.	19.8 bu.	7.8 bu.
140 lbs.	24.4 bu.	18.2 bu.	6.2 bu.
200 lbs.	21.8 bu.	8.3 bu.	13.5 bu.
175 lbs.	30.2 bu.	6.8 bu.	23.4 bu.
160 lbs.	18.2 bu.	6.2 bu.	12.0 bu.
250 lbs.	33.3 bu.	23.4 bu.	9.9 bu.
190 lbs.	27.3 bu.	13.1 bu.	14.2 bu.

Oregon Farmers Enter Distributing and Manufacturing Business

Organize Not Only to Market Raw Product But to Build Factories for Utilizing Surplus

NEARLY every week unfolds the story of some new co-operative association of milk producers who, weary with the continual combat with milk dealers and condensaries, fluctuating prices, intermittent losses, and the surplus problem, have stepped boldly forth into the larger field of distributing and manufacturing the products of their dairy herds. The latest venture of this kind to come to our attention is that of the Oregon Dairymen's Co-operative League, embracing several thousand farmers of Oregon and southern Washington.

This organization was the outgrowth of a co-operative cheese association that had been in existence since 1916 and had met with very indifferent success. The association had been unable to compete with other buying agencies for the farmers' milk and they began to lose business and money. At the same time farmers of surrounding sections began to feel the need for an organization for the co-operative marketing of their production. The two groups finally got together and the Oregon Dairymen's Co-operative League is the result.

The League has power to provide, install and operate whatever facilities are essential in the successful prosecution of co-operative marketing. The League has as complete power to market co-operatively the products of its members as any individual dairyman would have to market the products of his dairy.

In conjunction with the League there has been organized as a non-profit organization having the same officers and management as the League, the Oregon Dairymen's By-Products Corporation. The corporation will constitute the manufacturing agency of the League and will be expected to take over and manufacture into butter, cheese, powdered milk, condensed milk or other milk products, the surplus of the milk of the League. The League will then take over and market the products manufactured by the by-products corporation. This action is in striking contrast to the oftentimes vacillating policy of the producers' association in this state. On several occasions when crises threatened to destroy the arrangement between the producer and the Detroit distributors and an open break seemed inevitable, the association "threatened" to build cheese factories and refuse to sell to the Detroit dealers, but that is as far as they ever got. The producers themselves, discontented with the manner in which the surplus has been estimated and paid for, have been ready for years to go into the business of manufacturing this surplus into marketable products, but there has been no one to take the lead. What other manufacturer on the face of the earth would turn his surplus products over to another party and accept less than the cost of producing them if there were a way in which he could place them on the market himself at a profit?

We stated before scores of dairymen's associations are going into the actual business of distributing and manufacturing as the only solution of their marketing problem. They have tried, without definite success, nearly every kind of a compromise but none has been discovered which will entirely remove them from the mercy of the dealers. We learn much of the failures that have occurred in the co-operative marketing of milk, but very little is said of the conspicuous successes, of which there are many. THE BUSINESS FARMER expects during the coming months to make a thorough investigation of co-operative milk markcting ventures and to publish the results. Two ventures of this kind in which we are particularly interested is the Turner Center system of Massachusetts and the co-operative marketing plant in Cumberland, Md., a history of each of which will be published in early issues.

What farmers of other dairy sections have done the farmers supplying any one of a dozen Michigan cities can do. If the farmers of Cumberland, Maryland, can organize a successful marketing enterprise, the farmers of the vicinity of Detroit, Grand Rapids, Saginaw, Flint, Jackson, Battle Creek, Kalamazoo, Bay City, and even smaller towns can do likewise. Where is there a farmer who thinks otherwise?

Your Chance is Coming

ALTHOUGH we are not yet permitted to divulge the details we are free to say that a plan is soon to be presented to the farmers of the Detroit area to own a distributing plant in the city of Detroit. The plan is somewhat different than usually followed but it appears sound and ought to give the farmers a much larger share of the consumer's dollar. Whatever prejudice any reader of the Business Farmer may have against farmers marketing their own milk we trust they will be open-minded enough to become familiar with the entire details of the above mentioned plan when it is presented to them, before arriving at any foregone conclusion.—Editor.

Lapeer Farmers Back Legislative Candidates

Farm Bureau Members to Give Organized Strength to Overthrow Reactionary Political Ring

EVERY FARMER in Michigan will be interested in the political activities of their fellow farmers in Lapeer county because those activities were largely brought about by the Lapeer county representative Wm. E. Ivory, who couldn't trust the people to vote upon the warehouse amendment. Moreover, the primary purposes of the farmers' political movement in Lapeer county is to prevent Ivory from going back to the legislature which he aspires to do. With that end in view the Lapeer county farm bureau has induced Mr. Daniel Butler, an upstanding and progressive young farmer of Deerfield township, to become a candidate, and the 2,300 members of the Farm Bureau and those who are not members of the Farm Bureau are expected to actively support him.

But the farmers of Lapeer county will not rest there. They have their eyes on the state senatorship as well, and will back Dr. O. G. Johnson, farmer and physician of Fostoria, against Chas. O. Blinn of Caro, Tuscola county. Blinn was another "farmer" in the 1919 legislature who couldn't trust the people. He is of the old political school, partisan-bound, reactionary, and one of the cogs in the political machine of Tuscola county. Dr. Johnson is exactly of the opposite type, independent and progressive. His experience as a farmer and a physician has given him the common touch and the ability to get next to people and understand their needs and problems. He is extremely popular among both old and young and a prominent newspaper man of Lapeer predicts that he will carry Lapeer county by a large majority.

Such are the substance of the facts imparted to the editor of THE BUSINESS FARMER by Mr. L. L. Chapin of Fostoria, president of the Rich township farm bureau, at whose home the editor was a visitor a couple weeks ago.

"Some of us farmers in Lapeer county have long memories," said Mr. Chapin in discussing the situation. "We remember that Wm. E. Ivory was a reactionary all the way thru the last session of the legislature. We remember that he couldn't trust the people to vote on the warehouse amendment. We weren't all for the amendment, but we thought the farmers who were for it should have a chance to vote for it, and we didn't like the idea of one man, our representative, holding up the whole thing. It doesn't set well in a republican form of government. So we fellows who have long memories got after Mr. Butler and after considerable arguing he consented to become a candidate. And we're going to nominate him, too. We have polled the sentiment of the farmers carefully and we find an overwhelming prejudice against Ivory. I am told that there is a probability that he will not carry his own township. Wm. E. Ivory is not going back to the legislature."

And then we drove over to the Butler farm and found Farmer David pitching hay. He slid down off the mow, shook hands all around and in five minutes had convinced me that here was a man who could be trusted to trust the people and at the same time have great convictions of his own. Lapeer county will have no apologies to make for their next representative in the state legislature if his name is David Butler.

A Review of the Warehouse Case

Lest some may have forgotten the exact circumstances leading up to the drafting of the warehouse amendment and its ultimate fate at the hands of the house of representatives we give below a brief history of the case:

In the first place the warehouse bill was nothing more than an enabling measure. It proposed to refer to a vote of the people an amendment to the State Constitution authorizing the state legislature if it so desired to issue bonds and build terminal warehouses in order to provide storage places in leading cities for farm products and possibly overcome the condition that prevailed at certain seasons of the year when there was food to burn at the farms and people going without in cities. Terminal warehouses are, theoretically at least, supposed to equalize the deficiencies of transportation, enabling shippers to use all the cars they can get in the fall, ship their products to points of consumption and sell them as the public requires them Then should winter storms hold back traffic or cars should not be had for long periods no one would suffer because enough farm products would be at the point of consumption to tide the people of the city over and bring to the farmer a fair price for his products. As we say this is the theory of the thing. That there is need of something of this kind is all too apparent, and that it is the duty of the state to at least investigate the problem if not to actually provide the means of remedying it is also apparent. But as we shall afterward show, the lower branch of the legislature didn't care to be bothered about such fundamental propositions as this. It was too much out of the beaten political path for them to follow, and with Mr. Wm. E. Ivory as their willing tool, as we shall afterward show, they succeeded in killing the proposal to let the people even vote upon the measure.

DAVID BUTLER

The Senate passed the bill. It went over to the House and was referred to the Committee on Amendment and Revision of the Constitution, of which Wm. E. Ivory of Lapeer county was chairman. Then the fight began. The private warehouse and elevator interests of the state sent their lobbyists to Lansing and gave the peoples' representatives instructions not to submit the proposition to the people. Some of them didn't take very kindly to the instructions and insisted that the bill be reported out of the Committee and submitted to the people. But not so with all. Certain "farmer" members of the house who cared more for the political support of the commercial interests of the towns in their district than they did for the welfare of the people or the sovereign right of the people to vote on the measure but at the same time fearful of going on open record as being opposed to the measure, used their combined influence upon Ivory to keep the bill in his committee. And Ivory permitted himself to be thus influenced. The arguments of the proponents of the bill were of no avail. Letters and petitions from the men who had sent him to Lansing were ignored. He refused to let the bill come out, saying that the majority of his committee were opposed to the bill and would vote it down anyway. He even refused to call his committee in session and give them an opportunity to vote. Another member of the committee made the public statement that the committee would report out the bill if the chairman would call it together. And the record shows that out of the nine members of the committee FIVE voted FOR the bill on a record vote in the House when twelve hours before the legislature adjourned and after the proponents of the measure had given up the fight, Ivory called his committee together and reported out the bill.

These are the essential facts, but one more bit of evidence should be recorder. It is this: That all other proposed amendments which came before his committee, such as the proposal to bond the state to build roads and the proposal to increase the salaries of circuit judges, Ivory and his committee reported out unanimously without any questioning or quibbling of any kind. He was willing to trust the people to vote on those amendments, but he wasn't willing to trust the farmers and consumers to vote upon an amendment that meant infinitely more to them.

Such is a part of the record established by Wm. Ivory in the 1919 session of the legislature. He wrote it himself at the command of the political four-flushers of the legislature. The farmers of Lapeer county are accepting the record on its face, and will go forth in the next election to give Mr. Ivory the battle of his political career.

DR. O. G. JOHNSON

David H. Butler

David H. Butler, successful farmer of Deerfield Township, Lapeer county, and candidate for the office of Representative to State Legislature, was born on a farm in Lapeer county, April 15, 1887.

Educated at Fostoria high, worked in general store until he had a good knowledge of the mercantile business.

Has traveled extensively in the East, South and Southwest as a commercial salesman working five years for one company in New York City, giving him a good opportunity to study condition in the various states and his sympathy has always been with the farmer, laborer and their interests and has always longed to see better conditions for them.

For the past ten years has farmed in Lapeer county and is actively engaged in that capacity at the present time.

Has held various offices of public trust serving as treasurer of the township in which he resides during the year 1918 and 1919.

Free from cliques and combines and has always stood for any farm movement which would tend to better conditions for the farmer.

Dr. O. G. Johnson

Dr. O. G. Johnson of Fostoria, Tuscola county, candidate from the 21st District for the office of State Senator, was born on a farm in the township of Rich, Lapeer county, July 31, 1872, and is now 48 years of age.

Being one of a large family, he left home at the age of nine years to make his own way in the world, working on farms summers, going to school winters until at the age of 19 when he completed his high school work. After which he was attracted to railroad work on account of high wages paid railroad men at that time. He successfully passed through the different branches of the transportation service and was promoted to Engineer at the age of 25 years.

At the age of 29 he took his savings and started to college to study medicine and by his own hard efforts he completed the course and opened an office in Metamora, Mich., moving to his present home at Fostoria, two years later.

Dr. Johnson has also been a progressive and successful farmer and a breeder of thoroughbred Holstein cattle, owning and operating one of the largest farms in Watertown township.

At the beginning of the Great War, when the call went out for every available physician, although above the specified age limit, Dr. Johnson offered his services, accepting a captaincy in the medical corps and sailed for France, serving overseas one year, was commander of the Artillery Hospital at Saumur, France.

The Doctor now holds a letter of commendation from his superior officer for his work as an organizer and his executive ability.

Farmers In Politics

THE LEGITIMATE business interests of the state have absolutely nothing to fear from the farmers' awakened interest in politics. The propagandists of the reactionaries have lied when they said the farmers of Michigan are seeking class legislation. They are not. They are seeking decent government, representative government, efficient government, economical government. The farmers court the fullest investigation and can prove that their ideals and ideas of government are fully in accord with the maxim, "the greatest good to the greatest number." Business interests of the state who oppose farmers going into politics are interests who have something to hide under a basket, and in the great majority of cases they are responsible for the farmers new interests in affairs of government. The accompanying story is but one of many instances of farmers endorsing candidates for the legislature. Accounts of other instances will be presented in these columns from time to time.—Editor.

RULES, REGULATIONS, FARM BUREAU ELEVATOR EXCHANGE

THE MICHIGAN State Farm Bureau Elevator Exchange has made public the rules and regulations which have been adopted to govern the organization. The objects of this Exchange were given in detail in these columns several months ago and summarized in a recent issue. They cover the entire gamut of the possibilities facing an organization of this kind and it goes without saying that if the Exchange can carry out all the varied projects now in contemplation it will prove a wonderful machine of service to Michigan agriculture.

The offices of the Exchange will be located at Lansing, in which city the Board of Control will meet on the third Tuesday of each month and the annual meeting will be held on the third Tuesday of July.

Membership in the Exchange shall consist of the members of the local co-operative elevators or associations owned and controlled by farmers in any of the counties of the State of Michigan, which elevators or associations shall have taken action to federate their interests in the Exchange by agreeing to abide by the rules and regulations. Each local thus affiliating shall elect a representative to the Exchange.

Expense of Membership

Each local elevator or association desiring to affiliate with the Exchange must pay in advance to the Exchange a membership fee of $200 for its total membership. In addi-

Credit is Getting Tight

FARMERS ARE beginning to feel the pinch of the credit situation. A good many whose credit has never been questioned and who have been able to borrow money to the limit of their needs are finding it increasingly difficult to secure money for their current expenses. As for those who have been careless of their credit standing and were considered as "poor risks" even when money was plentiful, they are out of luck entirely.

The country banker is not to blame for this situation. The money which he loans does not belong to him. It is merely held in trust of which he is guardian. The amount of money which bankers can loan against their deposits is strictly regulated by law as it should be. Before the establishment of the federal reserve system the amount of loans made by country banks was limited by the amount of deposits. But under the federal reserve system member banks may loan many times their deposits. This system provides that notes and other collateral accepted by member banks in exchange for loans may be presented to federal reserve banks for rediscount, at a nominal charge.

But what's wrong with the system if it fails now to supply credit when it is most needed? is perhaps a most natural question. Let Gov. Jas. B. McDougal of the Federal Reserve Bank of Chicago, give you the crux of the situation as he explained it before the recent convention of the Michigan Bankers' Ass'n. Mr McDougal said:

"In reference to the currency business situation I will just say that the Federal Reserve banks, generally speaking, are overloaned at the present time. The situation is clearly reflected in the published statements of the Federal Reserve banks with respect to the Seventh Federal Reserve district. It can be said that the most important contributing factor to the great demand for credit is traceable to the inadequate transportation facilities. In Iowa alone it is reported that there are 100,000,000 bushels of grain from last year's crop and also large quantities of live stock ready for market, the movement of which is prevented because of the inability to secure cars.

"For many months the Federal Reserve Bank of Chicago has been endeavoring to impress upon borrowing banks the necessity of discouraging all loans for speculative and other non-essential purposes and of conserving their loaning power for legitimate and necessary business. General adherence to this policy, on the part of all the banks, together with improved transportation facilities will result in gradually strengthening the reserve position of the commercial and Federal Reserve banks, thus placing them in a better position to meet the customary seasonal demands for crop moving purposes which naturally come in the fall."

In brief, the banks of the country are overloaned. Too many of them have looked upon the federal reserve banks as inexhaustible reservoirs of money, and have expended their loaning powers in loans for speculative or semi-speculative purposes. As a result the farmers, like old Mother Hubbard, come to a cupboard that is all but bare, and they are likely to suffer long before their crops can be marketed.

While the situation does not as yet give promise of serious consequences, there is no telling how soon it may. It is bad enough now to emphasize the folly of somebody's failure to have looked forward to this day and provided for a source of constant and unlimited credit and capital for the productive purposes of those engaged in agriculture. The nation may yet pay a terrible price for this short-sightedness.

Third Party Blunders

THE ATTEMPT to organize politically the farmers, laboring men and progressive leaders of the two old parties has failed. True, a third party has been launched, but no sooner had it left the docks than the wild-visioned land lubbers who had taken charge threw all its ballast overboard leaving the craft to flounder at the mercy of the waves. They are likely to discover before they have proceeded far that it is no easier to ride the waves of the political sea without a depth of water to steady the hull than it is to walk on air over firm ground, a pastime that has proven quite popular with certain labor leaders and extreme socialists who are in command of the new party.

The third party has missed its opportunity With the support of the Non-Partisan League it might have attracted the attention of farmers in every state. With the support of the conservative elements of organized labor it might have had also the support of all labor. And with the committee of 48,—all men of influence and deeds,—in absolute control of the policies and campaign of the new party, it might have had the co-operation of millions of American citizens who have an indefinable feeling that the Republican and Democratic platforms are lacking in certain vital respects which a third party might have supplied. Thus fortified, the new party might conceivably have become a factor in the fall campaign.

But under the circumstances such a suggestion could only provoke mirth. That any considerable number of people will embrace the Bolsheviki-inspired program of the new party, no man with an ounce of gray matter would seriously contend. The program admirably suits the purposes of the labor agitators, the communists, the anarchists and others of the near-demented, but it is unthinkable that it could appeal to any man who works for a living and is dependent upon industry and agriculture for his bread and butter.

The separation of interests which were active in the early days of the convention and finally resulted in the unconditional withdrawal of the Non-Partisan League, the Forty-eighters and others who gave the new movement a semblance of strength and dignity, was inevitable. We have always held to the opinion that there is no common political grounds upon which organized labor as now constituted and organized farmers can unite. Economically,—in the co-operative purchase of farm products,—such a community of interests exists. But when it comes to legislating upon property rights, taxes, etc., the farmers and the laboring men are as far apart as the two poles. The reason is simple The farmer is a property owner and the laboring man is not. Compromise might be effected between the two on issues in which their interests fail to harmonize were labor under a saner leadership, but not otherwise.

The Chicago gathering was a practical demonstration of this theory.

Bankers Shy at Farm Bureau

MICHIGAN bankers want to know more about the Michigan State Farm Bureau before endorsing it. This fact came out at the recent convention of the bankers' association when it was suggested that the convention go on record as favoring the Bureau. The convention steered shy of such an endorsement and a recommendation was substituted requesting the Bureau to send a representative to the bankers' group meetings in September and explain what the farm bureau was and what it stood for.

The discussion was precipitated by a delegate from Tuscola county who asked for information about the Bureau, stating that in his county the farmers did not seem to know just what the Bureau was doing and that the banks were uncertain as to the credit strength of the organization. R C. Rothfus, Adrian banker, gave the convention his assurance that the Bureau was a responsible organization and its warehouse receipts on wool or any other product to be marketed could safely be honored.

Nevertheless the bankers adopted a "show me" attitude and will find out for themselves whether the Farm Bureau is a conservative, Simon-pure farmers' organization, or a wolf of the Non-Partisan breed parading in sheep's clothing. Bankers, we are told, have no earthly use for the Non-Partisan League and Michigan bankers have been told that Michigan farmers are going the way of the western League. Hence, "caution" is their watchword.

Moving the Crops to Market

WHAT PROFITETH a farmer to produce crops which for lack of cars he cannot move to market? If the railroad situation does not improve within the next sixty days all the farmers' problems of production may pale into insignificance compared with the problem of getting his crops to market. This is no idle guess. It is a prophecy that is the natural fruit of a little investigation and common sense.

Investigation shows that the railroad terminals of the country almost without exception are glutted. It shows that the roads are short over a quarter of a million cars. It reveals great stocks of 1919 grain in the hands of the country elevators, and still greater stocks back on the farms. And for the next sixty days it will disclose a golden stream of new wheat moving from farm to elevator where it will accumulate in every niche and corner to await the indefiinte arrival of cars to carry it to the consumer.

Common sense tells us that there is danger in such a situation. Common sense tells us that we must bestir ourselves to an immediate and careful consideration of this problem. The needs of the farmers for the money they have tied up in their crops and the needs of banks for the money they have loaned to farmers make it imperative that the balance of the 1919 crop shall be sold at once and the 1920 crop transported to points of distribution before the winter comes on.

Managers of co-operative associations should be impressed with the importance of this problem and to plan at once upon the movement of the crop consistent with these untoward conditions. Wherever possible grain should be moved to a consuming market by truck. Farmers and marketing associations located within a radius of twenty to thirty miles of a consuming market should seek an outlet in that market for part of their supplies and they should not depend upon freight cars to transport their products. Every freight car capable of carrying a load will be needed this fall for long-distance hauls and even then trucks will have to be used for considerably longer hauls than are usually thought wise for trucks to traverse. In the face of the emergency that now confronts the nation, the motor truck will come into new and greater usefulness and shippers should wherever possible use it to the exclusion of the freight car.

One of the propagandists of the Michigan Coalition Committee, which is engaged in "combatting industrial and agricultural unrest in Michigan" told an audience the other day that the Michigan State Farm Bureau owed its existence to the Coalition Committee. On the contrary the Coalition Committee came within an ace of killing the farm bureau movement in Michigan and it may do it yet "if you don't watch out."

We wonder how people can fall for that bunk about the meagre forces of the State Constabulary "protecting the orchards of Michigan from the depredations of motorists."

What the Neighbors Say

REP. CHASE COULD NOT TRUST THE PEOPLE

We wish to ask through your paper how Irvin Chase voted on the bill to submit the warehouse amendment to the votes of the people. Was he afraid to trust the people?—*Subscriber and Farmer, Osceola County, Mich.*

Apparently Mr. Chase could not trust the people. The record shows that he voted to table the report of the committee which meant the end of the proposed amendment. What are you farmers in Mr. Chase's district going to do about it, anyway?—Editor.

FEDERAL FARM LOANS

A bulletin issued by the membership committee of the Farm Mortgage Bankers' Ass'n of America, makes an assertion which should make every farmer want to vote the Democratic ticket this fall for both president and congressmen.

The bulletin is signed by W. M. Heckler, chairman of the Membership Committee and apparently was sent for the purpose of increasing the membership of the Association and the surprising, shocking, and in fact staggering, portion of the missive reads as follows:

"Most of us believe that the Supreme Court did not care to render a decision, which I interpret to be unfavorable to the Land Banks, but favorable to us, until after the next election."

The writer is a Republican, but the inference he gathers from the foregoing will compel him to vote the Democratic national ticket, both for president and congressman.

The farm mortgage banks and trust companies compose the largest financial interests in the United States and if money can influence Supreme Court decisions these interests have the money. But why should an unfavorable decision be withheld until after election?

The reason is plain. The Farm Loan Act is Democratic legislation. By November 1st, the Old Guard expects to be so entrenched in national government that it would be impossible to pass a new law.

Grant the faults of the Democratic administration; grant that the best business men, the captains of industry, are in the Republican party, as the writer has been taught from youth to believe; grant that the Democrats who fill government offices are of mediocre calibre and make many mistakes. Isn't it much better at that, than an oligarchy of wealth, such as ruled the country before the enactment of the Federal Reserve Banking Act and Farm Loan Act?

We have carried on successfully a war against the greatest military power the world has ever known, and yet so wonderful is this banking system, that there is less actual suffering from hunger in the months preceding the enactment of this act when money was largely controlled by the bankers who are now bending every energy to get back into power. Will the farmers of the country and the laboring men be hoodwinked into putting their necks back into the slave collar, simply because the Republicans are smarter, better looking, and have more money to spend in election than the Democrats?

The writer is not one of those who are accustomed to rant against the money power and against Wall Street, but he knows too well the grasping methods of some money lenders when left free to do their worst with the borrower who has no other recourse to secure the mortgage loan necessary for him to exist.

As a class he has found the Farm Mortgage Bankers a set of selfish and unconscionable money leeches, desirous of destroying their prey through the extortion of unreasonable and exorbitant interest charges.

Nor has his observations been confined to the type of money lender popularly looked upon as the Shylocks of the community. Men of excellent standing in the communities in which they live, when given the chance will extort the pound of flesh at every opportunity and consider it simply good business.

A case is fresh in mind, during the recent tight money times, when a young lawyer reputed to be one of the cleanest in the community in which he lived, asked a young farmer $1,000 bonus to renew a loan which was readily accepted by the local Farm Loan Ass'n.

Now that the system is temporarily out of business, cases of this kind will multiply without stint during the tight money conditions prevailing at present. No doubt if facts were known extortion of this kind would be appalling to us all.—*P. O., Hillsdale County.*

The average voter does not appreciate the tremendous efforts that have been made to destroy the farm loan system. Most of the opposition has come from the Mortgage Bankers' Ass'n, but not a little of it has come underhandedly from partisan politicians who can see nothing good in the handiwork of a Democratic administration.—Editor.

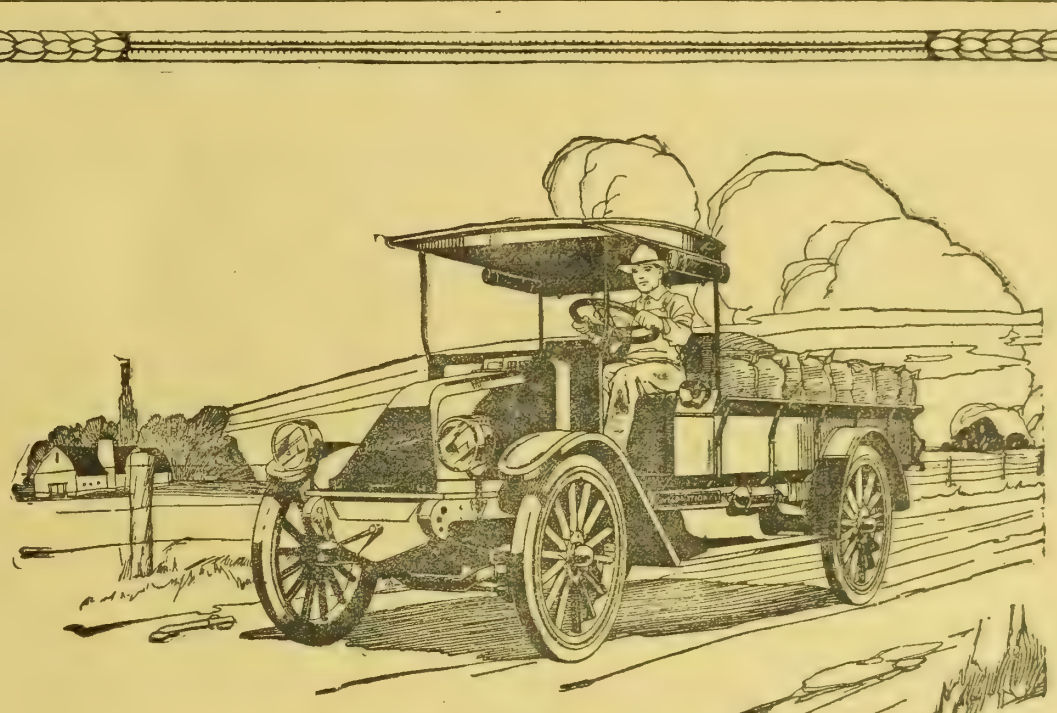
THE WAY WE THINK

Being a subscriber of your valuable farm paper and appreciate your stand for the farmers, permit me to express some of my views as to the different items of the day.

Now then, since the heavy storms of the last few weeks the crop outlook has suddenly taken a backward look as these storms have made it most impossible for the farmer to get on the fields to cultivate and to finish his planting of beans and sugar beets. The high cost of living has been talked so much that we think the city fellow will have a good chance to continue whining in the midst of a crop failure and panic. The farmers today, most of them, are not making expenses at the prices offered. It is about time things should adjust themselves. Right here in our county it is astounding the number of pioneer farmers that are selling out and leaving their farms, moving to the big towns. Farm values have declined but farm products are way below their value. Here at present the farmer who has been planning on his wool clip is very much disappointed at the meagre offer of 28 cents per pound—why should he not. Does the price of wool goods go down? Not very much and still the manufacturers say the prices are lower—that is to get the wool, see the point? Farmers will be advised to keep a nice flock of sheep as they are easy to take care of. That is all bosh, as sheep need just as good care as your other farm animals. The writer is in full sympathy for getting along but, by ginger, I like to have some profit along with my work also.

Farm machinery, lumber, cement or anything the farmer has to buy, he is soaked well. We oftimes wonder where things will go. Henry Ford stated some time ago that things were going too fast and a halt had to come some time and we agree with him. The farmer today cannot afford the wages his hired help on the farms ask, as the farm will not pay it.

In regards to the sugar beet situation wish to state I believe in the farmers having their share but still you know we have to look out for the shortage which is sure to be worse if beets are not planted. Our ground is the heavy kind and produces a normal supply to the acre most any year—*B. B. R., Twining, Mich.*



Make Every Minute Pay Dividends

DURING these days of short working hours, high wages and unsettled labor conditions, every hour saved for essential work is money in your pocket. Every hour you spend on the road between your farm and town represents unproductive time. During your busy season someone is getting high wages for this time, or you personally are spending valuable time. Make every minute pay dividends. Reduce the number of hours spent on the road and increase the hours of productive farm work.

You can haul your farm products to town with an *International Motor Truck* and haul supplies back to the farm in about one-fourth of the time that would be required with a team and wagon—a road saving of 300%. Thereby you save, during the year, many hours for necessary farm work—hours and minutes that total into days. You save money in wages, or at least make the high wages that you are paying someone pay you greater returns.

International Motor Trucks are made in nine sizes, from ¾ ton to 3½ ton—a size and style for every hauling requirement. A letter or post-card to the address below will bring complete information descriptive of these low-cost hauling units that make every minute pay dividends.

EDITED BY CLARE NORRIS

JUST TO BE OUT OF DOORS

Just to be out of doors, so still, so green,
With unbreathed air, illimitable, clean,
With soft, sweet scent of happy growing things,
The leaves' soft rustle, sound of sudden wings,
The far, faint hills, water wide between
And over all the feeling, half serene,
Of what this happy world would come to mean
When no conventions hard shall intervene;
Content with contentment Nature brings,
Just to be out of doors.

—The Public.

TO ONE who thinks of our Northern Michigan territory as simply a stretch of jack pines and barren sand, a trip through the cultivated part of it is a revelation.

True, it remained for the fruit growers of the west to first teach the farmers of other states the value of sprayed fruit, but now that our fruit belt of the north is being developed, there is none finer. For miles along Traverse Bay stretch orchards of cherry trees, with their shining trunks telling the story of painstaking care. And just as carefully cultivated were these orchards as are the corn fields of Illinois.

After driving for miles across the lands owned by the lumber companies who have stripped them of their value, and then left them, it is like the oasis in the desert when the driver strikes the road along the bay, where the way is so narrow that "turn out" places are marked —where the hills have washed the road perilously near the bay, but where the trees on either side of the road bend over and meet, forming an arch through which the traveler emerges to catch glimpses of trees laden with the glistening fruit.

For the tired business man or his family, anxious to escape the heat of the city, there are resorts without number—some of them catering to the idle rich who demand every convenience, while for the school teacher with her long vacation and limited means there are the fruit farms where she can earn her board and room by picking fruit at the same time gaining for herself all the red blood corpuscles which the indoor life have robbed her of, and sending her back at the end of the season, tanned of flesh but with abundant health. Many boy scouts also enjoy their outing in this way and in spite of the work still find plenty of time in which to take their dip in the clear cold waters of the bay.

I wondered why the moving picture men didn't set up their cameras in this district—surely the players would find real recreation with their work in this so-called "heart of nature's playground," and as for setting—no finer scenery could be found.

Whether one is fond of boating, bathing, fishing, drives or "hikes" through beautiful country roads, they are all to be found within the boundaries of our own fair state. And for those who can't afford a long vacation trip, we can think of no more delightful way of spending a short time than putting the whole family into the car and pointing its head due north. You will find many delightful camping sites among the "Christmas trees" or the beautiful silver birches and will return much more refreshed and rested than as if you selected the city for your trip.

The early fall is the time for sightseeing and shopping in the city, when the tourist season is over, rates have returned to more nearly normal and the heat is not so oppressive—but for the summer—if you would find a real restful vacation—just take to the open road.

How I Would Live

I know how short this life at best must be,
So let me live that, after I am dead,
There may be those who will remember me
For some good thing that I have done or said.

If I have made a little child to laugh,
A tired and careworn mother caused to smile,
Or said a good word in someone's behalf:
Oh, then, will not my life have been worth while?

If, by a kindly word, I helped to cheer
Someone in sorrow; helped relieve the pain
Of one who suffered: or dispelled the fear
Of one afraid—then have I lived in vain?

If I deal fairly with my fellow men,
Help those disheartened weary with the strife;
If I am honest with myself, pray, then,
Have I not played the better part of life?

So let me live that, after I am dead,
There may be those, who, looking on my face,
Will think of some good thing I did or said
That made this world for them a brighter place.

—Harrison Russell.

SEEN IN CITY SHOPS

BLACK AND white is finding favor in milady's eyes for the summer wardrobe and some of the creations are truly handsome while some are simply startling, but not at all lovely.

In a shop yesterday I saw a little summer dress all made up which I realizes I wouldn't have chosen had I seen it in the piece and yet in the completed dress it was very effective. It consisted of a black background, with a white figure—rather large. And it's only trim was a very wide hem as of course the skirt was made at least ten inches from the floor and white organdie collars and cuffs. And these white organdie collars and cuffs were made perfectly plain, but stitched in black. And with this costume was worn a sash of black ribbon—the old fashioned kind that we used to call watered silk. It was very wide and made a costume which was cool and at the same time would not soil easily.

A buyer who has just returned from New York confided in me that the fall suits and dresses would be just as short as they had been the past summer.

Thought perhaps some of our readers might be interested in the latest songs, so I dropped into the best music store in town where the clerk gave me the following list of new songs as "best sellers." They are 30c each if you should wish to order through the Personal Service Shopping Bureau:

Kismet, an Arabian Song.
Because You're Here.
Shadows Will Fade Away.
Somewhere.
Little Heart O' Mine.
Railroad Blues.
In Sweet September.

The Children's Hour

DEAR CHILDREN: Two prizes have been awarded this week—the first is a large size pencil box, containing both pens, pencils and eraser. This was sent to Zella Smith, of Boyne City, Mich., who secured three new subscribers for our paper.

And the second prize was the small size pencil box, which was awarded to Ruth Hibberd for her original story "In a Pair of Old Shoes" which appears this week.

During the vacation season is seems as if a whole lot of our little folks could secure subscriptions and earn just the things you have been longing for. Try it. One little girl is working for a camera. It takes ten subscribers and they must be sent in at once in order to gain the camera, but we have no doubt that she will succeed as she seems so determined and that is what always wins—strick-to-it-ive-ness and hard work with a determination to win is a combination which can't be beaten. Affectionately, AUNT CLARE.

OUR BOYS AND GIRLS

Dear Aunt Clare:—Quite a long time ag I sent a poem to your page and was pleased to see it printed. I was very glad to receive letters from my M. B. F. cousins. I am sending you a true story. We thought it a very interesting incident, though sad, and I wanted all of the readers to know of it. I would be very glad to write all of the time for your paper. [illegible] short stories and would like to send them [illegible] I would like to have some of the cousins write to the paper and tell how they earn money, for I want to earn money to go to high school. Hoping you will find a place in your paper for my letter and stories.—Ruth Hibberd, Remus, Mich.

In a Pair of Old Shoes

In our woodshed hangs a pair of old shoes. They were beyond repair and to have them out of the way they were sent out there. They hang on a nail as peacefully as a pair of old shoes should. There are many robins about our yard. What brings them there I do not know, but they are very plentiful around the great trees and the barns. One day last summer I sat idly in the woodshed and several times I saw a robin fly in with a bit of grass or mud. I was curious and watched her, but I could not see where she deposited her burden.

I moved to get a better view and all at once I saw. She was building her nest on that pair of old shoes.

After a few days the nest was finished and four beautiful blue eggs lay close within. How could I wait until those eggs were hatched?

The bird sat on the nest day after day and her red-breasted husband was always singing near or bringing her a bug or a worm.

One day, to my delight, I found that one of the eggs had hatched and soon all the eggs had fussy little objects with wide yellow mouths in their places.

Often I put a bug or worm on the fence nearby for Mrs. Robin to give her children.

I watched the babies grow. I don't think they had ever taken their first lesson in flying yet and I went out to see them one day. But alas! I found the nest empty.

Whether the cat took them or not, I do not know, but the nest is still there, and if it were out of danger of all cats, I should wish that those robins would build their nest there again this year.—Ruth V. Hibberd, age 14 years.

Dear Aunt Clare—This is the first time I have written to you. I like to read the boys and girls letters. I am in the 5th grade. We live on an 80 acre farm. We have two horses two cows and two pigs. We have about 95 chickens. I am going to try and get a camera. Can I send the name of 10 subscribers any time? May father takes the M. B. F. and likes it very much. Well, I will close. Zella Smith, Boyne City.

Dear Aunt Clare—I am a boy 9 years old and weigh 79 pounds and will be in the fourth grade next winter. I have 2 1-2 miles to go to school. Our school is a graded school of about 40 pupils. We were visiting yesterday and on our way home a black bear crossed the road just a few rods ahead of us.

Mama has 75 chickens. This is the first time I have written to you and hope to see my letter in print. Orlan Wise, Selkirk, Mich.

Dear Aunt Clare—I would like to join your circle of boys and girls. I stay with my aunt and uncle. They have two horses, 10 chickens, 1 cock and 1 dog named Shep. He likes to chase cows. I solved the Proverb Jumble, it was "Early to bed and early to rise, makes a man healthy and wealthy and wise." Will close, hoping to see my letter in print. Margaret Kamper, Rudyard, Mich.

Dear Aunt Clare—This is my second letter to you. I am 9 years old. I have 2 sisters. My school was out the 27th of May. We had a picnic in the grove. Miss Little was our teacher. I go to Sunday school every Sunday. Lila Dickinson, Hesperia, Mich., R 5.

Dear Aunt Clare—As I have never written before I would like to see my letter in print. We take the M. B. F. and like it very much. I like to read the Doo Dads very much. As I have never seen any letters from Sidnaw in print I thought I would write once. I am a girl eleven years old and in the sixth grade. There are 13 scholars in our school. The name of our school is Kentuckyville school. I have five sisters and one brother. There are four girls at home the other being married. I live on a homestead farm of 160 acres. Our pets are a dog and a guinea pig. Alma Powell, Sidnaw Mich.

Dear Aunt Care—I am a little girl 8 years old and in the third grade and my school was out the 9th of June. For pets I have two old cats and five kittens. My daddy takes the M. B. F. and I like to read the letters from the other girls and boys. I weed the garden for my daddy and cut the rye out of the wheat. Well I guess I will close. Ruth Scouten, Snover, Michigan.

Dear Aunt Clare—My father takes the M. B. F. and likes it fine. I like the children's page best. I am a girl eleven years old and in the sixth grade. I attend the Town Hall school. I have 3 brothers and one sister. We have a Dort passenger car. I must close to leave room for others. Martha E. Dubiel Kawkawlin, Mich.

Dear Aunt Clare—I am a girl 12 years old. We take the M. B. F. and I enjoy the Children's Hour very much. I have three sisters and two brothers. For pets I have 8 cats and a chicken. Vallah Metz., Deart, Mich.

"Hearts of Three"

By JACK LONDON

Author of the "Valley of the Moon," and other stories.

HE DROPPED it on the top of the show case as of little worth, and looked inquiringly at his customer. But Torres waited in silence which he knew would compel the garrulity of covetous age to utterance.

"Do I understand that the honorable Senor Torres seeks advice about the quality of the stone?" the old jeweler finally quavered.

Torres did no more than nod curtly.

"It is a natural gem. It is small. It, as you can see for yourself, is not perfect. And it is clear that much of it will be lost in the cutting."

"How much is it worth?" Torres demanded with impatient bluntness.

"I am a poor man," Fernandez reiterated.

"I have not asked you to buy it, old fool. But now that you bring the matter up, how much will you give for it?"

"As I was saying, craving your patience, honorable senor, as I was saying, I am a very poor man. There are days when I cannot spend ten centavos for a morsel of spoiled fish. There are days when I cannot afford a sip of the cheap red wine I learned was tonic to my system when I was a lad, far from Barcelona, serving my apprenticeship in Italy. I am so very poor that I do not buy costly pretties——"

"Not to sell again at a profit?" Torres cut in.

"If I am sure of my profit," the old man cackled. "Yes, then will I buy; but, being poor, I cannot pay more than little." He picked up the gem and studied it long and carefully. "I would give," he began hesitatingly, "I would give—but, please honorable senor, know that I am a very poor man. This day only a spoonful of onion soup, with my morning coffee and a mouthful of crust, passed my lips——"

"In God's name, old fool, what will you give?" Torres thundered.

"Five hundred dollars—but I doubt the profit that will remain to me."

"Gold?"

"Mex." came the reply, which cut the offer in half, and which Torres knew was a lie. "Of course; Mex, only Mex. all our transactions are in Mex."

Despite his elation at so large a price for so small a gem, Torres play-acted impatience as he reached to take back the gem. But the old man jerked his hand away, loath to let go of the bargain it contained.

"We are old friends," he cackled shrilly. "I first saw you, when a boy you came to San Antonio from Boca del Toros. And, as between old friends, we will say the sum is gold."

And Torres caught a sure but vague glimpse of the enormousness, as well as the genuineness, of the Queen's treasure which at some remote time the Lost Souls had ravished from its hiding place in the Maya Mountain.

"Very good," said Torres, with a quick cavalier action recovering the stone. "It belongs to a friend of mine. He wanted to borrow money from me on it. I can now lend him up to five hundred gold on it, thanks to your information. And I shall be grateful to buy for you, the next time we meet in the pulqueria, a drink—yes, as many drinks as you can care to carry—of the thin, red, tonic wine."

And as Torres passed out of the shop, not in any way attempting to hide the scorn and contempt he felt for the fool he had made of the jeweler, he knew elation in that Fernandez, the Spanish fox, must have cut his estimate of the gem's value fully in half when he uttered it.

In the meanwhile descending the Gualaca River by canoe, Leoncia, the Queen, and the two Morgans, had made better time than Torres to the coast. But ere their arrival and briefly pending it, a matter of moment that was not appreciated at the time, had occurred at the Solano hacienda. Climbing the winding pathway to the hacienda, accompanied by a descrepid old crone whose black shawl over head and shoulders could not quite hide the lean and withered face of blasted volcanic fire, came as strange a caller as the hacienda had ever received.

He was a Chinaman, middle-aged and fat, whose moon-face beamed the beneficient good nature that seems usual with fat persons. By name, Yi Poon, meaning "the Cream of the Custard Apple," his manners were as softly and richly oily as his name. To the old crone, who tottered beside him and was half-supported by him, he was the quintessence of gentleness and consideration. When she faltered from sheer physical weakness and would have fallen, he paused and gave her chance to gain strength and breath. Thrice, at such times, on the climb to the hacienda, he fed her a spoonful of French brandy from a screw-cap pocket flask.

Seating the old woman in a selected, shady corner of the piazza, Yi Poon boldly knocked for admittance at the front door. To him, and in his business, back-stairs was the accustomed way; but his business and his wit had taught him the times when front entrances were imperative.

The Indian maid who answered his knock, took his message into the living room where sat the disconsolate Enrico Solano among his sons—disconsolate at the report Ricardo had brought in the loss of Leoncia in the Maya Mountain. The Indian maid returned to the door. The Senor Solano was indisposed and would see nobody, was her report, humbly delivered, even though the recipient was a Chinese.

"Huh!" observed Yi Poon with braggart confidence for the purpose of awing the maid to carrying a second message. "I am no coolie. I am smart Chinaman. I go to school plenty much. I speak Spanish. I speak English. I write Spanish. I write English. See—I write now in Spanish for the Senor Solano. You cannot write, so you cannot read what I write. I write that I am Yi Poon. I belong Colon. I come this place to see Senor Solano. Big business. Much important. Very secret. I write all this here on paper which you cannot read."

But he did not say that he had further written:

"The Senorita Solano. I have great secret."

It was Alesandro, the eldest of the tall sons of Solano, who evidently had received the note for he came bounding to the door, far outstripping the returning maid.

"Tell me your business!" he shouted at the fat Chinese. "What is it? Quick!"

"Very good business," was the reply, Yi Poon noting the other's excitement with satisfaction. "I make much money. I buy—what you call—secrets. I sell secrets. Very nice business."

"What do you know about the Senorita Solano?" Alesandro shouted.

"Everything. Very important information——"

But Alesandro could no longer control himself. He almost hurled the Chinaman into the house, and not relaxing his grip, rushed him on into the living room and up to Enrico.

"He has news of Leoncia!" Alesandro shouted.

"Where is she?" Enrico and his sons shouted in chorus.

Mistaking his busy thinking for fright, Enrico stilled his sons back with an upraised hand, and addressed the visitor quietly.

"Where is she?" Enrico asked

"Hah!—thought Yi Poon. The senorita was lost. That was a new secret. It might be worth something some day, or any day. A nice girl, of high family and wealth such as the Solanos, lost in a Latin-American country, was information well worth possessing. Some day she might be married—there was that gosspi he had heard in Colon—and some later day she might have trouble with her husband or her husband have trouble with her—at which time, she or her husband, it mattered not which, might be eager to pay high for the secret.

(*Continued next week*)

(*This announcement is made with the approval of the Bureau of Animal Industry, United States Department of Agriculture*)

Better Sires-Better Stock

$1,000 Money Prize

UNDER rules and conditions provided by the Bureau of Animal Industry, United States Department of Agriculture, a money prize of one thousand dollars will be paid by Chapin & Company, Chicago, to that county in the United States which first becomes free from inferior sires.

By inferior sires are meant low quality purebred sires as well as all crossbred, grade and scrub sires. The word "sires" includes stallions, bulls, jacks, rams, boars and bucks. Poultry is not included.

A county eligible to receive the prize must have a total of 500 or more sires of all classes and 5,000 or more head of female breeding stock.

All owners of males kept for breeding purposes, in the classes mentioned, and a majority of other livestock owners in the county, must have declared their intention of hereafter using nothing but purebred sires by joining the "Better Sires—Better Stock" campaign of the Bureau of Animal Industry.

Upon notification by a County Agent or the officer of a county livestock organization, that the county he represents is free from inferior sires, the Bureau of Animal Industry will investigate the claim. If the Federal expert finds that the county is, in fact, free from inferior sires, the Chief of the Bureau of Animal Industry will declare that county as winner of the prize.

The prize money will be deposited in a local bank to the credit of the County Agent, official of the county livestock organization or other person or persons considered best qualified to administer the fund. It will be maintained as a revolving fund from which loans may be made to persons desiring to purchase purebred sires in any of the classes mentioned. After three years from date of the award, the fund, with accumulated interest, will be distributed in five equal prizes, in open competition, for the most meritorious young stock resulting from the use of purebred sires. One prize for horses, beef cattle, dairy cattle, sheep and swine.

County agents or officials of county livestock organizations desiring to enter their counties as competitors for this prize, will indicate their intention of so doing by letter to Chapin & Company, sending a duplicate of the letter to the Chief of Bureau of Animal Industry, United States Department of Agriculture, Washington, D. C.

No time limit is placed on the offer of this prize. No other rules govern the competition except those herewith provided by the Bureau of Animal Industry.

In addition to the money prize, the county that is declared winner will be presented with a silk banner and a certificate signed by Secretary of Agriculture E. T. Meredith and Dr. John R. Mohler, Chief of Bureau of Animal Industry.

CHAPIN & COMPANY

327 S. La Salle Street **Chicago, Illinois**

MARKET FLASHES

MARKET AND TRADE REVIEW

There has been no material change in the important factors which affect the farmer's business during the past week. A little improvement in the foreign situation is noted and for a day or two an easier money market was in evidence. But immediately upon a renewed demand for loans the market tightened again and interest rates advanced. Transportation is still in a more or less chaotic condi ion with no promise of any immediate improvement. The hearings before the Interstate Commerce Commission for higher rates has been concluded and a decision expected in the near future. It is not believed that the commission will allow the full 27 per cent increase in freight rates that was asked for, but that a substantial increase of perhaps 18 or 20 per cent will be granted is not doubted. The strength of rail stocks on the stock market is an indication of the returning confidence in the ability of the railroads to earn money. The ability of the railroads to render service, which is of prime importance to the freight-paying public, is not necessarily a factor in the stock market. The increase of rates should at least open the way to additional capital which the roads are very badly in need of at the present time and will enable them to the more quickly renew their equipment and better their service. No matter what the cost the nation must have its railroads back on their feet at the earliest possible moment as transportation will be the controlling influence in the nation's prosperity the next few years.

Crop conditions continue favorable throughout the country. The damage that was feared from red and black rust in the Northwest has not materialized and the feeling in the grain exchanges is that it will not materialize. This feeling is reflected in sagging prices. Michigan crops are coming through in fine shape. There has been a little too much rain and not quite enough hot weather. Following the heavy storms of two weeks ago a few days of bright sunny weather would have done the grain crops a world of good. However, the fair weather of the present week is making things hum and the clicking of the binder can be heard on nearly every farm in southern Michigan. Farm help is very scarce but the farmers are managing some way or other as they always do.

LAST MINUTE WIRES

CHICAGO—Grains stronger; prices advance. Hogs higher. Cattle steady. "Time to buy feeder cattle and hogs."

DETROIT—Beans easy. Grains steady and firm.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

WHEAT PRICES MAKES TEMPORARY GAIN

WHEAT PRICES PER BU., JULY 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.82	2.80	2.93
No. 2 White	2.80	2.85	2.93
No. 2 Mixed	2.80		2.96
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.25	2.24	
No. 2 White	2.23	2.21½	
No. 2 Mixed	2.23		

The wheat market after several weeks of declines strengthened up the first of the current week and some predictions are made that it will not go lower. A number of temporary conditions arose, however, to affect the price, and as soon as these conditions are removed lower prices may be again in prospect. Reports of heavy floods in the Canadian wheat provinces and unproved rumors of damage from rust in the Northwest were the controlling factors in the early week deals. Moreover, several large concerns who have been a little shy at buying during the declines of the last several weeks, were buying quite heavily this week. This may have been, however, to fill immediate orders for the wheat or flour. Despite the bullish tendencies of the market this week, there is a fairly strong sentiment that prices will take another drop as the crest of the new wheat movement is reached. The condition of wheat in Michigan on July 1st ranged from very poor to very good. Many fields are badly spotted and some too poor to be worth harvesting. Some damage was done by winter killing, and the Hessian fly has wrought mischief in certain sections. The central counties of the state report excellent stands and a good crop is promised. The forecast of production for the year is 15,451,000 bushels or 30 per cent less than grown last year. According to the Bureau of Crop Estimates there are still 931,000 bushels of the 1919 crop still in farmers' hands.

CORN GAINS STRENGTH

CORN PRICES PER BU., JULY 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.62	1.55	1.72½
No. 3 Yellow			
No. 4 Yellow			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.97	2.14½
No. 3 Yellow	1.98		
No. 4 Yellow			

Lack of supplies, rumors of a railroad strike and none too encouraging crop conditions were influences that strengthened up the corn market this week, after its persistent decline of several weeks past. On the other hand there is a disposition to sell corn in order to release the money that is tied up and a little easing up in the car situation would move plenty of corn to market and undoubtedly cause the price to drop again. The condition of corn in Michigan is fairly satisfactory, better than the ten year average but nine per cent lower than the excellent condition of last year. Some corn that was late planted is small and inclined to turn yellow. It will make a poor silage crop. Other fields, and by far the majority, are fine and thrifty, big, healthy leaves, and in southern Michigan tasseling out in good shape. There promises to be a good yield of ripe corn in Michigan this year. The acreage is estimated at 1,650,000 and the production based on the July 1st condition is 66,628,000 bushels.

OATS ADVANCE ALONG WITH OTHER GRAINS

The general toning up of the grain markets this week has affected oats and prices are generally slightly higher, due to virtually the same influences that affected the corn market. The condition of oats in nearly all states, and particularly so in certain sections of Michigan. Although the crop suffered some from the dry weather, but rains of July have improved it wonderfully. In fact, some of the best fields of oats we have ever set eyes upon may be seen today in Macomb county. The fields are thick, even and heading heavily and promise a bumper yield. In the northern and sandier sections of the state the crop is not so good, the dry weather having more effect and the grasshoppers having tried to finish up where the weather man left off. Nevertheless the crop will be considerably better than the remarkably poor one last year. The estimated production this year is 47,371,000 bushels.

OAT PRICES PER BU., JULY 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 White	1.06	.99½	1.20
No. 3 White	1.05	.98	
No. 4 White	1.04		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.82½		.91
No. 3 White		.89	
No. 4 White		.79¼	

RYE ADVANCES

Rye advanced two cents on the Detroit market this week. It holds about the same relative position as other grains and for several months may be expected to follow the trend of wheat and corn. The estimated production of rye in Michigan for 1920 is 11,768,000 bushels or nearly 2,000,000 bushels less than a year ago.

BEANS TAKE ANOTHER DROP

BEAN PRICES PER CWT., JULY 20, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.00	7.50	8.25
Red Kidneys		16.00	17.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.50		
Prime			
Red Kidneys			

Beans are down again to $7 per cwt. on the Detroit market, and elevators are offering from $6 to $6.50. The bean market has nearly recovered from the unusual conditions which have beset it for several years back and is now but the victim of the general financial and transportation influences which have brought about lower prices in nearly all farm products. Unless general trade conditions improve very greatly we cannot hold out any hope that the bean market will improve for several months. Enormous supplies have been put on the market this summer and with the old crop pretty well cleaned up, and a short crop for 1920, a better tone should prevail in this market toward the close of the year. England is worrying over a wheat famine. Her public men are certain that before many months the entire world will feel the pinch. If this be true, it ought to make for a better market on beans. Anyway, prices cannot go much lower and a couple or three more months ought to reveal something of the future of this market. The estimated acreage of beans in Michigan is 272,000 and which is 12 per cent less than last year, but larger than originally intended as a result of the sugar beet controversy. The condition is good throughout the entire state.

POTATOES IN DEMAND

SPUDS PER CWT., JULY 20, 1920		
	Sacked	Bulk
Detroit		7.25
Chicago		7.23
Pittsburg		7.95
New York		6.12
PRICES ONE YEAR AGO		
Detroit		
Chicago		
Pittsburg		
New York		

The potato market at Detroit is firm and dealers are experiencing a ready market at last week's prices. The Chicago market has advanced during the past few days but at present is in a weak condition. "Excellent growing weather combined with sufficient rainfall has materially improved the potato fields in Wexford, Kalkaska, Antrim, Charlevoix, Emmet, Grand Traverse, Benzie, Otsego and Osceola counties and a good yield is expected," reports the Michigan Potato Growers' Exchange.

New York	27.00 @ 36	24.00 @ 31	
Pittsburg	33.00 @ 34	28.00 @ 29	23.00 @ 25

Shipments of hay to the Detroit market are very liberal and the tone is easy. The hay crop, on a whole, is light this year as rains came too late to give it a normal growth. The estimate for Michigan is 3,058,000 tons, and for the entire United States 85 million tons. Last year's yield was 109 million tons.

CATTLE MARKET WEAK

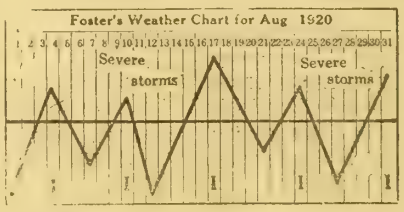
Contrary to belief, receipts of cattle on the Chicago market increased during the past week. They not only increased but last Saturday's receipts were double that of one week before. The market averages about 25c lower than last week. Detroit receipts are fairly good and the price is the same as last week. Eastern markets are feeling considerable of a slump owing to the Jewish fasting period, which began July 15 and ends July 24.

Hogs have shown quite a bit of strength due to small receipts and prices average 5c higher than last week at Chicago. The Detroit market is rather quiet. Market for sheep and lambs inclined toward dullness and prices higher than last week.

DETROIT—Cattle: Best heavy steers, $14@14.50; mixed steers and heifers, $10@11; butchers, $7@8; best cows, $8.50; butcher cows, $7@7.50; best heavy bulls, $8.50; feeders, $9@10; stockers, $7.50@8.50; milkers and springers, $65@100. Hogs: Pigs, $15.25; mixed hogs, $16.25.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for The Michigan Business Farmer



WASHINGTON, D. C., July 24, 1920—Warm waves will reach Vancouver, B. C., about July 27 Aug. 2, 7, 14, and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of July 28, Aug. 3, 8, 15; plains sections 29, Aug. 4, 9, 16; meridian 90 upper Great Lakes, Ohio-Tennessee and lower Mississippi valleys 30, Aug. 5, 10, 17; lower great lakes and eastern sections 31, Aug. 6, 11, 18, reaching vicinity of Newfoundland about Aug. 1 7, 12, 19. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will control cropweather from near July 27 to near August 19. Cool weather has been expected to cross continent during week centering on July 26, followed by a moderately high temperature wave crossing continent during week centering on Aug. 4. Then a low temperature wave crossing continent during week centering on Aug. 12. A dangerous hot wave is expected to cross continent during week centering on Aug. 17.

August, usually a quiet cropweather month, will, for 1920, be a radically rough weather month. Dangerous storms are expected during the weeks centering on Aug. 11 and 25. During first of these severe storms I expect hail in some northern sections east of the Rockies. The second severe storm period will be very dangerous on the continents and the oceans. Near Aug. 25, besides the continental storm, a great hurricane is expected to organize east of Cuba. These hurricanes are very slow travelers and sometimes require two weeks to get thru the southwestern North Atlantic. They make a curve in the Carribean Sea and Gulf of Mexico. Otherwise I cannot locate nor time them. This hurricane will cause frosts in the middle northwest and heavy rains in the cotton states.

W. T. Foster

RULES, REGULATIONS, FARM BUREAU ELEVATOR EXCHANGE

(*Continued from page* 5)

tion each association or elevator shall, when called upon by the Board of Control, deposit with the Exchange a negotiable promissory note payable on demand to the order of the Exchange in the sum of $500. Such note shall not bear interest. These notes shall become the property of the Exchange and shall be available at any time in the settlement of any liquidated damage that may result from the failure of a member elevator to live up to its contract with the Exchange. Such notes may also be used as collateral security as the discretion of the Board of Control.

Each member elevator or association is required to enter into a written contract with the Exchange which appoints the Exchange as its sales agent to sell all or part of the products of such local association. Such products as may be sold or such supplies as may be bought by the local association with the agency of the Exchange will not release the association from its pro-rata share of the maintenance of the Exchange. This contract may be cancelled by the association on July 1st of any year by giving written thirty day notice and paying to the Exchange such indebtedness as it may be under to the Exchange. Any local association may withdraw from the Exchange at any time between the first day of June and the first day of the following July, but "such withdrawal shall not affect any right or lien which the Exchange has against the retiring local or its property until its indebtedness to the Exchange is fully paid." At the time of withdrawal the note given by the local elevator shall be returned.

Each local elevator shall be responsible for its pro-rata share of all contracts, debts and engagements to the Exchange, (with certain exceptions.) The expense of operating the Exchange shall be met by a fixed charge per unit or a percentage charge laid upon returns for products sold and upon supplies purchased, the amount of such charge to be fixed by the Board of Control. Except as provided in certain cases, all products of the same grade shall be settled for upon the average price of each day's sales. The Board of Control shall make such arrangements as to settlements with local elevators as may be deemed necessary. All merchandise purchased by the Exchange for any member association shall be settled for on a cash basis.

After the year's Division of Profits, expenses are paid and a proper sum set aside to cover the depreciation of the Exchange property and provision is made for a contingent fund to be fixed by the board of control, the balance of the year's savings on products shall be divided among local elevators and associations in proportion to the amount (or value) of its products sold, and the balance of the year's savings on supplies purchased shall be divided in like manner.

Grading and Inspecting

All grains, beans, seeds and other farm products grown by members of the local elevators for sale through this Exchange shall be handled and graded in accordance with the rules and regulations of the Exchange, subject to such inspection as may be established by the Board of Control. All brands, labels, trademarks, and the like established by the Exchange, shall be registered and become its property and they shall be attached only to such grades as shall be ordered by the Board of Control.

Other Provisions

The rules and regulations make provisions for a proper system of auditing, for a method of arbitration in cases of dissatisfaction arising over transactions between local associations and the Exchange, amendments, etc.

SAFEGUARDING WHEAT LANDS OF MICHIGAN

(*Continued from page* 4)

It is readily apparent that fertilizer more than pays for itself in increased yields. The average yield in the above experiments on the fertilized plots was 27.3 bushels per acre, while on the unfertilized plots the yield averaged only 13.1 bushels. As a result of the application of from 140 to 250 lbs. of a complete fertilizer per acre, the yield was more than doubled.

It is hard to make definite recommendations covering a wide range of farming conditions but the following will serve as a guide in selecting the most profitable fertilizer for wheat.

	Pct Ammonia	Pct Phos. Acid	Pct Potash
Clay Soils—			
Without manure	2	12	0
With manure	0	16	0
Loam Soils—			
With manure	0	12	2
Without manure	2	12	4
For Sandy Soils			
Without manure	2	10	4
With manure	0	12	4

Select the analysis that best fits the conditions on your farm and apply at least 250 lbs. per acre, for you are not only feeding the wheat crop but also the hay crop which follows, and the increase from the latter should more than pay the cost of fertilizing.

MAY WIN $50 FOR $2.50!

(Gold Contest News Special)

Mt. Clemens, July 19, 1920.—If the friendly little "25c-to-the-end-of-1920" contest closed today, instead of the first of September, we would have to send John Schmenk, of Milan, Mich., a $50 gold piece and for it he has sent us to date just $2.50, which paid in full for ten new subscribers at 25c each! The second prize, a $25 gold piece would go by registered mail to Wilson R. Canouts, Carson City, Mich., for he has sent us eight new 25c subscriptions and just $2 in money! And we would have to send both F. G. Heminger, Otter Lake, Mich., and Chas. H. Wellever, Battle Creek, Mich., each a $10 gold piece because they are tied for third prize, both having sent in six new 25c subscriptions. Then Henry Ruppert, Fair Grove; Chas. Post, West Branch and D. L. Rolfe, Mason, would each get a consolation prize of a $5 gold piece, just to prove we appreciated the boost they gave The Business Farmer.

Of course, all of these folks sent in these new trial subscribers before they received the announcement on the back cover of the July 17th issue, in which we put a little pepper into the summer campaign for new names, by putting up $100 in gold for those who sent in the most 25c subscriptions between now and the first of September, but every name that has been sent in will count.

It is altogether too early to tell who will lead in the contest. As I write this on Monday, the announcement dated last Saturday has only been in your hands a couple of days and of course, I'd hate to think that any of you took advantage of Sunday to let your friends know that they can have The Business Farmer every week until January, 1921, for a quarter!

Where Are the Suffragettes

All of those who have sent in more than a couple of names so far have been men—how do you account for this? Usually it is the woman and girls who can put it all over the men in a contest with gold prizes at the end as a reward for their work! Maybe next week's report in this same column will have an entirely different story to tell!

We hope you or some member of your family will get into this contest not only for one of the gold prizes, but because you know what it will mean to your farm weekly to have many of your friends and neighbors, who are not now subscribers, on our list this fall.

Remember every 25c subscription sent counts in this contest.

Remember to send in your list every Saturday so we can send the very first available copy to your subscribers.

Remember that your list must be postmarked before September first to count.

Next week we will print in this column a list of all contestants and their standing so everyone will know just where they stand all thru the contest. If you can use $50 in gold, September first—just five weeks away— send in as many 25c trial subscriptions as you can get between now and next Saturday. I'll help you all I can to win! Sincerely, Gold Contest Manager, The Michigan Business Farmer, Mt. Clemens.

Shod for Might

The high standard of merit attained in the making of Gillette Cord Tires will be rigidly maintained. That is assured by the fact that every workman in the big Gillette factory has a voice in the management of conditions under which he works. He puts forth his best efforts—takes pride in production because he is a ruling factor *in* that production and works under ideal conditions.

The mighty Gillette Tread is massed into a formation which gives best of traction with least of wear. It is comprised only of the highest grade rubber refined with the exclusive Gillette Chilled Rubber Process which toughens it as iron is toughened when changed to steel. It develops greatest of resiliency and strength of resistance. It reduces sand blisters—abolishes tread separation—stops the evil effects of climatic conditions, heat and cold. Put one Gillette or a full set on your machine right now! If there is no Gillette dealer in your town write our general sales office.

THE BOOK AGENT HAS BOBBED UP AGAIN

I gave a book agent who was canvassing the neighborhood an order for a book with the understanding that I was to pay for it when delivered. Now I have not got the money to pay for the book which cost quite a lot, as I had some debts to pay. I have not received the book. What can they do about it if I do not pay for the book. Subscriber, Cheboygan, Mich.

There's an old college yell that rings in my ears as I read your letter. It ran something like this, "Are they all dead yet; are they all dead yet. No, by golly, there are six left yet." Not all the people who got stung by book agents are all dead yet. As evidenced by the number of letters we receive there are quite a few left yet. If you have signed your name to a contract, or an order which is the same thing, to buy a book, there is no way in which you can evade payment of your debt either legally or morally without the consent of the other party. If the book agent is an amiable fellow and delivers the books in person you might be able to play upon his sympathies and secure a voluntary release from your contract, providing you pay the agent enough to cover his commission. Tell us, somebody please, why people will buy books simply because they have an attractive cover when a moment's reflection away from the hypnotic influence of the book agent will convince them that they are of no earthly value to them? Millions of copies of books describing in word and picture the sinking of the Titanic were foisted upon the public at the time of that great disaster. One look at the pictures and the book had served its purpose. Where are they now? Tucked away in some corner probably, covered with dust and gathering germs and taking up room that might better have been occupied by a worth while volume containing something besides gaudy pictures and melodramatic descriptions. Buy books—when you can afford it, but be sure they are good books. And never, never sign an order for a book or anything else unless you are dead sure that you want it, need it, and will be able to pay for it when the time of settlement comes around.—*Editor.*

BOY SHOT DOG

A boy came in from Brown City to work on a farm in our neighborhood, and he spent some time hunting, and in going past my farm in the evening, when I was away from home, he coaxed my dog to the gate and shot him. Now the sheriff of our county made an investigation and he owned up to shooting the dog and says he don't know why he shot him, as the dog had never molested him. The boys parents are living and refuse to settle for the dog. The prosecuting attorney of our county tells me I have no criminal proceeding against him as he is under sixteen years of age. His parents are not collectable for damage and uphold the boy. Now would you please advise the proper steps to take in regard to this matter and get pay for my dog. I had refused $50 for the dog.—A. B., Sanilac County.

Infants are liable for their crimes but can only be prosecuted in the way pointed out in the law and upon investigation of the county agent. Many children are sent to the reform school for violating the criminal law. It is also well settled that an infant is liable for his torts the same as an adult. Infancy is no defense to such wrongdoing.—*W. E. Brown, legal editor.*

OPERATE MOTOCYCLE AT 16

How old does a boy have to be in order to own and ride a motorcycle?—W. G., Kent County.

Any age one may be the owner but they can not operate the same on the highways without a license. The statute provides that no license shall be issued to one under sixteen years of age; but for some reason unknown licenses have been issued to those fourteen years of age. See Act 368 of laws of 1919.—*W. E. Brown, legal editor.*

RIGHT OF WAY FOR R. R. TRACK

A deeds B the right of way for railroad track across a strip of land. How wide a strip does B require; in other words can B give C a valid lease for thirty feet or fifteen feet on each side of the track? No width being specified in A's deed to B.—F. J. L., Allen, Mich.

If no mention was made in a deed of the width of the right of way for a railroad track I would be of the opinion that it would be limited to what was necessary for the use of the right of way. Its width of necessity would depend upon whether it was for private use or for the general railroad business. If the right of way was for B alone by limitation then he could not lease it to others. But if the deed to B was full deed with no limitation other than it was a right of way then he would be entitled to use it without limitation.—*W. E. Brown, legal editor.*

FALLON COAL MINES

Will you please inform me as to the reliability of the Fallon Coal Mines, 222 Shearer Bldg., Bay City, Mich. Would it to be a good investment? They are selling stock here and a number are buying. Two of my neighbors went to the mine and came back loaded up with stock. I haven't any money to lost but would make a small investment if it was one-half as good as recommended. E. S., North Branch, Mich.

We have looked up the Fallon Coal Mine Co., and except for a few minor stockholders who are men of position and influence in their respective localities we are unable to vouch for the responsibility of the company. An agent of the company has visited us and submitted the prospectus which is used in selling the stock. This is very flattering and we agree with our subscriber that the investment would be attractive if it were one-half as good as pictured. Among the convincing exhibits shown by the company is an analysis by State Geologist Smith which indicates that the company has coal in paying quantities. But when we recall that much of the stock in the worthless Colorado-Michigan Copper Co., was sold upon the strength of an analysis by this same geologist, we must not give it too much credence. The Fallon coal people have leases to a coal field and will undoubtedly be able to mine coal profitably at present prices. We doubt if their profits will be as large as they anticipate, and can readily see the possibility of an actual loss should coal prices take a drop.—*Editor.*

THE COLLECTION BOX

CHICAGO CO. MAKES SETTLEMENT WITH OUR READER

"I see your kind offer in your paper which I read with interest every week, so I am asking a favor of you for my mother. She is a widow and rents her farm and does a little sewing to help out. Early last spring she sent $27 to Philipsborn Co. for a suit. After waiting several weeks she wrote two or three letters asking them to send the money if they couldn't send the suit as she was going away. Since then I have been writing for her. They refuse to answer the letters. I can furnish any proof from the people at the P. O. where she got the postal order or the minister of her church. The suit or money should have been sent to L. M. The suit was in the winter catalogue which I have lost and was $27. The one which I am enclosing was second choice and should have been sent if the first was out of stock."—*J. M., Alcona County.*

We wrote the Philipsborn Co., of Chicago and received a prompt reply from them saying that they were taking care of the matter and our subscriber would receive a check within the next few days. On July 3rd we received the following letter from our subscriber:

"We thank you for getting the money from Philipsborn as we received a check in a few days from the time we wrote you. We always liked the BUSINESS FARMER but now it will seem like a personal friend each week."—*J. M., Alcona County.*

LONDEN LAND COMPANY

Kindly tell me through your paper if the Londen Land Company, owned by Londen Brothers of Detroit with offices in Saginaw, is reliable and what is their land worth that they are selling in Alcona County. It is all unimproved land. J. M. K., Essexville, Mich.

We have had no response from the Londen Land Co., to several letters we have written them, hence conclude that their proposition will not stand scrutiny. There is much good land in Alcona county, most of which, however, has already been purchased and settled. There are perhaps a hundred thousand acres, more or less, of jack pine lands, which are worth from $1 to $5 per acre for grazing purposes. While we do not know for a certainty we suspect that the unimproved land which this firm is offering for sale is of the $5 per acre type. If it is good hardwood land, however, it is worth in the unimproved state from $20 to $30 per acre. In either case, you would be foolish to buy the land or commit yourself to do so until you have actually seen it, in the summer time.—*Editor.*

PERSONAL PROPERTY

When the deed of a farm is held jointly between husband and wife, in case the farm is sold, can the wife collect more than half the proceeds after the debts are paid? If so, what share of the husband's share would she be entitled to? In case a sale is made of the personal property is the wife entitled to a share of that also?—C. E. P., St. Clair County,

In an estate held jointly by husband and wife known as an estate by entirety it can not be said that either has an absolute right to any particular portion of the property. It is usual to agree upon how much each shall receive upon sale before they sign the deed. A wife does not necessarily have the same estate in the personal and may have no interest in the personal in the sense of ownership. It can not be said that she is entitled to any share of the husband's personal. There is no estate in the entirety in personal. That peculiar estate applies to real estate alone.—*W. E. Brown, legal editor.*

CHATTEL MORTGAGE

How long does a chattel mortgage hold good if given for one year and not paid in full and is not purchased. Is it still good? How long if the man holding the mortgage sees fit to purchase can he take the property?—H. G.

As between the parties a chattel mortgage is good for six years after it is due or six years after the last payment; but as to subsequent purchasers or incumbrancers it must be renewed by affidavit every year. The mortgage may be foreclosed at any time within the six years above specified.—*W. E. Brown, legal editor.*

ABSTRACT ON PROPERTY

Is it necessary to have an abstract on a farm you sell if you can give a good warrant deed?—A Subscriber, Gratiot County.

The seller of a farm is not obliged to furnish an abstract unless he contracted to do so in the contract of sale.—*W. E. Brown, legal editor.*

WHO FEEDS STOCK?

A rents a farm to B for the term of 3 years. A has 5 cows and B 2 cows and 2 horses. A also has 40 hens and a brood sow while B has 18 hens and no pigs till A's sow farrows. The contract starts in the fall, A claims B must furnish half of the grain and half of the hay if any hay is needed to feed the cows but B must feed his own horses till the crops are grown on A's farm. Who is to feed this stock until the crops on A's place is ready to be fed from? B furnished 1-2 grain for the cows. Can he make A pay him for the grain if A will not furnish any feed for B's horses? A has not furnished any feed for B's horses.—A. S. L., Tuscola County.

I am unable to advise without a copy of the lease or full statement of the terms of the lease. If oral it would be good for one year. I written the terms of the lease control.—*W. E. Brown, legal editor.*

Genuine Aspirin

Name "Bayer" means genuine
Say "Bayer"—Insist!

BAYER

Say "Bayer" when buying Aspirin. Then you are sure of getting true "Bayer Tablets of Aspirin"—genuine Aspirin proved safe by millions and prescribed by physicians for over twenty years. Accept only an unbroken "Bayer package" which contains proper directions to relieve Headache, Toothache, Earache, Neuralgia, Rheumatism, Colds and Pain. Handy tin boxes of 12 tablets cost few cents. Druggists also sell larger "Bayer packages." Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid.

80 Glasses From One Package

A package of Hires Household Extract—25c at your grocer's, a yeast cake and some sugar. These will make 40 pints or 80 glasses of the best rootbeer you ever tasted. And it's so easy to make.

The actual juices of roots, barks, herbs, berries—and pure cane sugar make Hires Household Extract pure and healthful.

Our special airtight, patent bottle stoppers keep the fizz from escaping until you are ready to drink. Your grocer has them.

Be sure you get this package. It brings you the genuine Hires Household Extract.

THE CHARLES E. HIRES COMPANY
Philadelphia, Pa.

BLACK FLAG

I.P. I.P.

Kills Fleas on Dogs

Keep your dogs comfortable and prevent them from bringing fleas into the house by blowing Black Flag into fur twice weekly with powder gun. Black Flag kills insects by inhalation. Bugs don't eat it—they breathe it, and die. Destroys flies, ants, fleas, mosquitoes, bedbugs, roaches, some moths, and lice on animals, birds and plants. Look for BLACK FLAG trademark and red-and-yellow wrapper. At grocery, drug, department and hardware stores, or direct by mail on receipt of price.

U. S. Gov't (Bulletin 771, Agri. Dept.) shows that insect powder keeps freshest and strongest in glass containers. Buy Black Flag in SEALED GLASS BOTTLES instead of "insect powder" in paper bags or boxes.

Three sizes—15c, 40c, 75c.
Except West of Rockies

CENTRAL MICHIGAN BREEDERS HOLD BIG PICNIC

The annual picnic of the Central Michigan Holstein-Friesian Association was held Saturday, June 26th, at the Ed. Stoll farm, west of Lansing. The day was ideal and about two hundred and fifty people assembled for the boutiful dinner, which was followed by an interesting program in the afternoon.

N. P. Hull, President of the Michgan Milk Producers' Association, was he principal speaker and gave a very forceful address, urging the organization of a local milk producers' association to affiliate with the state organization. The Michigan Milk Producers' Association has accomplished a great deal toward improving conditions in the eastern part of the state, throughout the Detroit area, and the other sections are being organized rapidly.

Field Secretary Norton gave a brief report of the St. Paul trip and annual meeting and sale and discussed the plans of the newly organzed Michigan Holstein-Friesian Asociation.

Action was taken at this meeting voring an automobile tour to visit e Holstein herds in Ingham coun on Friday, August 6th, and a comittee appointed to map out the oute and arrange the details. One undred of the metal signs "Holtein-Friesians on this Farm," were rdered for members of the Central Michigan Association, and it was decided to hold a sale at the College in October. This sale will be under the management of the state organization and will come in the series following the state sale, which will be held at Jackson, October 19th.

The program was varied with several musical numbers and Mark Cutler, "Michigan's Harry Lauder," pleased the crowd immensely with his Scotch songs.

Mr. Stoll has a fine herd, consisting of grand-daughters and great-great-granddaughters of Pontiac Korndyke, and every one inspected them before leaving.

SUMMER HOLSTEIN MEETINGS

Arrangements for the series of summer meetings are being made rapidly and the following dates have been fixed:

Shiawassee county, July 27th; Saginaw county, July 28th; Tuscola county, July 29th; Lapeer county, July 30th; Genesee county, July 31st; Lenawee county, Aug. 3rd; Washtenaw county, Aug. 4th; Livingston county, Aug. 5th; Ingham county, Aug. 6th; Jackson, Aug. 7th.

A day will be spent in each county and the meetings will take the form of automobile tours in which a number of the Holstein herds will be visited. Local committees will set the time and place of starting and select the place for the basket lunch at noon. Arrangements will be made for a brief program following lunch, but a greater part of the day will be spent in viewing the herds.

Local and state papers will announce time and place of starting for each day for the convenience of those interested. Mark these dates on your calendar and attend the entire series.

JACKSON COUNTY BREEDERS MEET JUNE 28TH

A meeting of the executive committee of Jackson County Holstein-Friesian Association was held at the City Club in Jackson on Monday evening, June 28th. The state sale, to be held at the Jackson Fair Grounds, October 19th, was discussed and a committee, consisting of H. D. Boardman, Corey J. Spencer and John Campbell, was appointed to look after the local arrangements.

Plans were made for a large showing of Holsteins at the Jackson County Fair, and a Jackson County Association exhibit of thirty head was pledged for the Michigan State Fair at Detroit.

Dear Editor of M. B. F.: I have read what Mr. August Baerwolf of Sandusky, Michigan has to say about the M. B. F. I think this man is off the right track about you and your paper. I think differently. The M. B. F. is the best farm paper printed in Michigan to my notion. I can't hardly wait until it arrives. I heard a man say the other day "The M. B. F.—that's the paper for us farmers" *H. F. Stuebing, Emmet County.*

What Uncle Sam Says About Fertilizer Quality

FEDERAL 1st PRIZE FERTILIZERS

"The difference between a good brand of fertilizer and a poor one lies not so much in the difference that may exist in the total amount of plant food contained in it as in the quality of the materials of which it is made." (U. S. Dept. of Agriculture.)

Quality in fertilizer, like character in men, is a question of performance and not of promise.

The Federal trade mark is the official stamp of quality. It is for your protection and guarantees to you in every bag of complete fertilizer the largest amount of—

Readily Available Phosphorus
The crop making material

Graduated Nitrogen
To feed the plant from seed-time to harvest

Soluble Organic Potash
From Ground Burley Tobacco Stems

In All—The largest amount of actual available plant food, in the best mechanical condition, for the least amount of money.

If your fertilizer dealer can't furnish you Federal quality in your fertilizer purchase, write us your needs and we will give you the benefit of our 35 years experience making fertilizers that give results in the field.

His three nearest dams average over 33 lbs. and his forty six nearest tested relatives average over 30 lbs. butter in seven days. We offer one of his sons ready for service.

GRAND RIVER STOCK FARMS
Corey J. Spencer, Owner. Eaton Rapids, Mich.

FIVE HOLSTEIN BULLS UP TO 39 LBS. breeding. Good producing dams. Priced to sell. L. PRITCHARD & SON, Elwell, Mich.

SHORTHORN

We Wish to Announce

to the farmers of Michigan that we are now ready to supply them with Canadian bred Shorthorn females either straight Scotch or Scotch topped milkers at reasonable prices.

If your community needs the services of a high-class Shorthorn bull, write us for our Community Club Breeding plan.

PALMER BROTHERS
Established In 1898 Belding, Mich.

SHORTHORNS FROM AN ACCREDITED HERD of grandsons and granddaughters of Avondale Maxwalton Jupiter 754193 heads our herd.
JOHN SCHMIDT & SON, Reed City, Mich.

SHORTHORNS

5 bulls, 4 to 8 mos. old, all roans, mail fed. Dams good milkers, the farmers' kind, at farmers' prices.
F. M. PIGGOTT & SON, Fowler, Mich.

THE BARRY COUNTY SHORTHORN BREEDERS Association announce their fall catalog ready for distribution. Scotch, Scotch Top and Milking Shorthorns listed. Address
W. L. Thorpe, Sec., Milo, Mich.

THE VAN BUREN CO. SHORTHORN BREEDERS' Association have stock for sale, both milk and beef breeding.
Write the secretary,
FRANK BAILEY, Hartford, Mich.

FOR SALE—POLLED DURHAM BULLS AND Oxford Down Rams.
J. A. DeGARMO, Muir, Mich.

Shorthorns at Farmers' Prices
FOUR SCOTCH TOPPED BULL CALVES
under one year old. These are all roans and choice individuals.
FAIRVIEW FARM
F. E. Boyd Alma, Michigan

SHORTHORNS ONLY A FEW LEFT AT OLD PRICE.
Wm. J. BELL, Rose City, Mich.

FOR SALE Clay Bred Shorthorn bull calf from a heavy producing dam.
W. S. HUBER, Gladwin, Mich.

Maple Ridge Herd of Bates Shorthorns Offers for sale a roan bull calf 9 mos. old. Also 2 younger ones. J. E. TANSWELL, Mason, Mich.

For Sale, Milking Shorthorn Bulls from two to 16 mo. old. Dams giving 40 and 50 lbs per day. Yearly records kept. Herd tuberculin tested.
JAS. H. EWER, R 10, Battle Creek, Mich.

KENT COUNTY SHORTHORN BREEDERS' Ass'n are offering bulls and heifers for sale, all ages. Sell the scrub and buy a purebred.
A. E. RAAB, Sec'y, Caledonia, Mich.

WHAT DO YOU WANT? I represent 41 SHORTHORN breeders. Can put you in touch with best milk or beef strains. Bulls all ages. Some females. C. W. Crum, President Central Michigan Shorthorn Association, McBrides, Michigan.

HEREFORDS

MEADOW BROOK HEREFORDS

Bob Fairfax 495027 at head of herd. Registered stock, either sex, polled or horned, mostly any age. Come and look them over.
EARL C. McCARTY, Bad Axe, Michigan.

120 HEREFORD STEERS, ALSO know of 10 or 15 loads fancy quality Shorthorn and Angus steers 5 to 1000 lbs. Owners anxious to sell. Will help buy 50c commission. C. F Ball, Fairfield, Iowa.

HEREFORDS

Cows with calves at side, open or bred heifers of popular breeding for sale.
Also bulls not related.
ALLEN BROTHERS
PAW PAW, MICH.

Hardy Northern Bred Herefords
BERNARD FAIRFAX 624819 HEAD OF HERD
20 this year's calves for sale. 10 bulls and 10 heifers.
JOHN MacGREGOR, Harrisville, Mich.

REGISTERED HEREFORD CATTLE

King Repeater No. 713941 heads our herd. A grandson of the Undefeated Grand Champion Repeater 7th No. 886905. We have some fine bulls for sale and also some heifers bred to Repeater. Tony B. Fox, Proprietor.
THE MARION STOCK FARM, Marion, Mich.

ANGUS

The Most Profitable Kind

of farming, a car load of grade dairy heifers from LENAWEE COUNTY'S heaviest milk producers to include a pure bred ANGUS bull of the most extreme beef type for combination beef and dairy farming.

Car lot shipments assembled at GLENWOOD FARM for prompt shipment.

Methods explained in SMITH'S PROFITABLE STOCK FEEDING. 400 pages illustrated.
GEO. B. SMITH, Addison, Mich.

BARTLETTS' PURE BRED ABERDEEN-ANGUS CATTLE AND O.I.C. Swine are right and are priced right. Correspondence solicited and inspection invited.

Tidewater Project Gets the Nation's Approval

Two Thousand Delegates From Thirty-Five States Spread Campaign of Education to Open Great Lakes to the Atlantic

AS CARTOONIST Thomas views it, the maid of the Great LaLkes is flirting with the old man of the sea, and if the thirty-five states which sent two thousand delegates to the Detroit Tidewater convention can induce Congress to give his consent there's going to be a wedding.

For many years men of genius have dreamed of opening up the waterways between the Great Lakes and the Atlantic ocean to ocean-going vessels. They did not make their dreams public, however, lest they be called fools and visionaries. The break-down of the railway systems, with their disastrous economic effects, broke the silence of these dreamers and they actually talked. And the nation listened. The nation listened to such good effect that congress was induced to provide that the question of improving the St. Lawrence river should be referred to the International Joint Commission, a body composed of equal representatives of Canada and the United States to have a jurisdiction over the waterway rights of the international stream. This Commission was instructed to investigate (1), the need of the improvement; (2), by what method may the river best be improved so as to be freely navigable by ocean-going ships and so as to incidentally develop the power; (3), the probable cost, and (4), how this cost should be divided between the two countries. The Commission employed engineers to make surveys, collect data, etc. Their report will be ready for publication early in November. Suffice to say that they are satisfied that the project is entirely feasible from an economic standpoint.

It was recognized, however, that a public opinion must be created to force Congress to favorable and early action. That is the purpose of the Great Lakes - St. Lawrence Tidewater Ass'n. It remained for the Detroit Board of Commerce, with characteristic Detroit zeal and push to bring together the greatest minds of the Middle West and co-ordinate and weld into a powerful weapon the joint desires and interests of the states most involved in the proposed project. Such was the purpose and the outcome of the Detroit Tidewater Congress.

Where the Farmer Comes In

The Tidewater project will receive the support of the farmers of Michigan because it will mean:

1. Cheaper and more rapid transportation.

2. Reduction in dealers' risks, and therefore the handling margin, resulting in higher prices to farmers.

3. Development of world market for Michigan farm products.

4. Stimulation of co-operative enterprises such as grain elevators, packing plants, canning plants, sugar factories, etc.

Speakers Prove Need of Project

It would be impossible for us to publish in detail the views of the score or more speakers who urged that the Tidewater project be immediately undertaken. The list of speakers included business men, bankers, engineers, legislators and transportation heads,—men who have made a serious study of the nation's transportation needs, and the technical and economic aspects of the waterway project.

Gov. Harding of Iowa scorned the United States for her backwardness in developing her God-given waterways. He said:

"The train of opportunity is passing our door. The Allies, as well as Germany, are out after the bacon, while we hold an animated tea party. Has the American spirit of push and get-there been lost?

* * * *

"The man on the farm without a wagon with which to market his produce, is as much handicapped as a wedding and a bride without a groom. A surplus producting nation without vessels, owned and manned by its own citizens, is on an equality with the violinist who has a violin and no bow. A nation without adequate transportation facilities on land and water to handle its commerce seasonably, is not living up to its opportunity, or doing its duty to its citizens.

"Iowa knows that it is impossible to move its far is to the Ocean, but believes that through the St. Lawrence and the Great Lakes, the Ocean can be brought to them, and so Iowa is heartily in sympathy with the plan of developing this great water course to the extent that it will carry ocean-going vessels."

Nation's Woes Due to "No Cars"

Watson S. Moore, 2nd Vice President of the Grain Corporation, gave one of the most practical talks of the entire convention. His subject was "No Cars," and he cited instance after instance to show the enormous economic loss that was occasioned through lack of cars and congested railway terminals. The following are a few of the more interesting points gleaned from his discourse:

"The burden of our Grain Corporation correspondence for eight months has been 'NO CARS—Can't you help us?'

"Flour Jobbers, out of stock—NO CARS.

"Flour Exporters, delayed shipments, falling down on their foreign contracts—NO CARS.

"Bread Bakers, shutting down, account non-arrival of shipments—NO CARS.

"The first half of May, 1920, bakery after bakery in New York City, advised they would have to shut down unless given flour. The Grain Corporation supplied the temporary needs of bakeries out of its export stocks in storage in New York City awaiting transportation. On pressure from Traffic Division of the Grain Corporation railroads gave special attention to moving flour for relief of these bakers.

"Ocean ship agents, seaboard, repeatedly inquired—'Where is the grain?' Answer—'Chicago, Minneapolis, or Buffalo, etc.' Agents asked, 'Why what's the trouble?' Answer—'NO CARS.'

"At lake port, no trouble about transportation to Eastern end of Lakes. Trouble only at loading and unloading ports, account NO CARS.

"Demurrage paid as high as $6,000 a day on Ocean vessels—one ship collecting $27,000.

"If it had not been for the unusual con-

MARTINDALE

FOR GOVERNOR OF THE STATE OF MICHIGAN

1. He was born on a farm and has lived on one most of his life.
2. He owns and operates under his personal supervision a large well-equipped farm in Oakland County.
3. He advocates the providing of certain facilities by the State for the better handling and marketing of farm products.
4. He would encourage lake to ocean route as outlet to Michigan products and gateway for Michigan necessities.
5. He believes in generous treatment of service-men and their families.
6. He has had broad experienc in State affairs as Representative, Senator and Secretary of State and as such took great interest in advancement of child welfare, pure food laws, health laws, laws relating to good roads and the betterment of farm conditions.
7. He has at heart the highest good of the State, the correlation of all its varied activities and the fullest development of its business, social and religious life.

Will YOU Introduce a Friend or Neighbor?

What The Business Farmer wants is new friends !

You, old friends of ours can help us get them, and you know that every new name we add to our strength, makes us just that much stronger to help you !

We cannot depend on slick-tongued traveling agents, but we have to depend on you, our old friends, to introduce The Business Farmer to new readers——

But we've made it as easy as we know how——

HERE'S AN INTRODUCTORY COUPON

Tear it out and hand it to a friend or neighbor who is not a subscriber. It is worth just 25c to him, because we will send The Business Farmer on trial to any new name from now until January, 1921, nearly 6 months, for this coupon and a quarter (25c) in coin or stamps.

25c **This coupon is worth 25c to any NEW subscriber introduced by an old subscriber.**

The Michigan Business Farmer, Mt. Clemens, Mich.
Friends:

I want to introduce a NEW subscriber and for the quarter (25c) enclosed in coin or stamps you are to send our weekly every week until January, 1921

sideration shown shippers by representatives of foreign governments in allowing substitution of other grains and commodities, I am informed on good authority that a large number of grain exporters would have been ruined by the unusual, extraordinary and long delays of grain shipments from the West during the last eight months—due to NO CARS.

"Now that the grain shipping and export business is going back into the hands of private traders, there will have to be an improvement in the rail service. Otherwise the grain merchants will not be able to meet their ocean freight engagements, and they will pay very dearly if they default on any of these engagements. Consequently caution will have to be exercised and this will be reflected back in lower prices to consumer.

"On January 9th, Grain Corporation ordered something over one million bushels of wheat shipped by rail from Minneapolis to Philadelphia and New York. Up to April 9th, only 299 thousand bushels had been moved. The balance we had to divert to Duluth for lake shipment, and it took FOUR MONTHS to move this wheat by rail from Minneapolis to Duluth, only 150 miles, which should be moved within four days, and when it did get to Duluth, it was carried promptly one thousand miles by water in four days.

"On January 9th, 1920, Grain Corporation ordered 365 thousand bushels shipped by rail from Manitowoc, Wis., to New York. Not a carload of this was moved by rail and we had to move it by lake to Erie.

"On January 9th, 1920, Grain Corporation ordered about 100 thousand bushels from Chicago to Philadelphia by rail. Up to April 9th, only about 65 thousand bushels of this had been moved—NO CARS —and we had to forward the balance by lake. NO DELAY.

"On June 18th, arrangements were made to move about 600 thousand bushels of wheat from Buffalo to Montreal by lake boat down the St. Lawrence River. Up to June 30th, about 484 thousand bushels had been moved this way.

"With the close of navigation last Fall, Grain Corporation had at Buffalo, approximately 14 million bushels of wheat. In spite of all the efforts we could exert with the Railroad Administration while it was in existence and with the individual railroads since March 1st, 1920, and with the canal people, it has taken to present date, July 21st, to get this 15 million bushels moved from Buffalo to the seaboard.

"All of this grain was intended for export and was so situated that it might have been forwarded by vessel direct from the Western lake ports by ocean steamer overseas, had the deep waterway to the sea been in existence at that time. This would have been a very decided relief to the inlands transportation facilities at a time when they were sorely pressed to meet the urgent needs of our domestic commerce, and other foreign commerce.

"Forty-eight million bushels of wheat still in elevators and on farms in Kansas alone on the 15th of May, within a month of the new crop, (which amount was half the estimated new crop for this state) on account of NO CARS.

"Part of car shortage, of course, due to strikes.

"Pressure also was constantly brought to bear on the railroads and the Insterstate Commerce Commission by the producers and representatives of the grain and flour trade.

"Then the priority order for grain was issued by the Interstate Commerce Commission, and grain again moved, but at the expense of other commodities, and manufacturing plants had to shut down and other important industries were campelled to sharply curtail their business.

"Grain priority had to be divided with coal. Coal must be moved to the northwest during the season of navigation, or that section of the country will freeze. There are a large number of people in that country who are unable to get to Palm Beach in the winter.

"The coal operations now claim that the present coal shortage is due in considerable measure to the failure of some roads to obey the priority order.

"With priority given to grain and to coal—

"Then the automobile industry is checked. Answer—NO CARS, and Detroit says 'Ouch !'

"The woolen mills must shut down—NO CARS.

"Now the steel industry is threatened with a shut-down—NO CARS; with twenty blast furnaces idle in the main steel-producing district—NO CARS; with a million and a half tons of steel product piled up and the country crying for it, and which would take 28,300 cars to move—NO CARS.

"Three hundred miles of pipe bought from a Pittsburg concern, intended for Mexico, delivery of which would aid Shipping Board in obtaining much needed oil for their ships BUT NO CARS.

"While everybody is kicking the railroads and they are 'passing the buck' to Uncle Sam, they have sins enough of their own to answer for in the past; nevertheless, it is only fair to note that in 1915, 2,356,000 freight cars in the U. S. moved 277 million tons of freight, while in 1918 2,366,000 freight cars, only slightly more than in 1915, the railroads moved 403 million tons. Of course a large measure of this greatly increased business was due to unified direction of cars and also taking off the car-load limits.

"The car shortage resulting in the delayed movement of the 1919 wheat crop from the farms and also from the country and terminal elevators to the mills the past eight months was largely responsible for a $2 to $3 increase per barrel in the price of flour since January 1st. NO CARS.

"During six months of this period when the car shortage was most acute the consumption of flour in this country was about 61 million barrels, which, at $2.50 per barrel, amounts to One hundred fifty two million five hundred thousand dollars ($152,500,000.) which is over the first estimate of the cost of the improvement of your proposed waterway.

"It is estimated that 160 million bushels of wheat will be carried over from the 1919 crop to the 1920 crop. This is about 100 million bushels above the normal carry-over. There were plenty of hungry people who needed this wheat the past year, but had to go without because it did not get to market. NO CARS.

"In addition to the loss in quantity and quality through normal deterioration, and from improper warehousing and vermin, it takes at least 3c per bushel per month at the present price to carry wheat. Twelve months at 36c on the carry over of 100 million bushels is Thirty-six million dollars ($36,000,000,) which could take care of the interest on the cost of your waterway improvement for four or five years. This on wheat alone.

"The surplus of grain fixes the price. The price of our wheat especially relies upon the European datum point of all World Crops of wheat, less transportation, as the measure of value for our crops, not only for the surplus but also for the domestic portion, which markets on the price level made by the surplus.

"The fifteen states tributary to the Great Lakes raise annually approximately three billion bushels of food grains.

"Mr. Hoover estimates that the proposed St. Lawrence Waterway would mean a saving in transportation cost to producer and consumer of six (6) cents per bushel at least on basis present railroad freight rates. This means One hundred and eighty millions of dollars ($180,000,000.) or exceeding for one year the total cost of proposed waterway—first estimate—by Thirty eight millions of dollars ($38,000,000.)

"This does not count slaughter house products or other commodities. This country of the U. S. produces Two Billion Dollars worth of butter.

"When there are NO CARS, the country buyer must reduce his price to the farmer, to take care of the carrying charges and the risk of a declining market.

"Excessive premiums for wheat, in the terminal markets and at the seaboard (not warranted by the supply and demand situation of the world have been due to the restricted flow from the farm and country buying points."

Way Paved for National Grain and Live Stock

Chicago Conference Brings Farm Representatives from all over Country to Discuss Marketing Problems

PLANS FOR the formation of one or more central organizations or exchanges through which farmers' co-operative associations can market their grain are to be worked out by a committee of seventeen to be appointed by J. R. Howard of the American Farm Bureau Federation. The appointment of such a committee is provided for in Resolutions adopted by a conference of farm organizations and farm marketing associations which concluded a two day session in Chicago last week. The resolutions follow:

Report of Grain Committee

RESOLVED, That we recommend that the Chairman of this Convention appoint a permanent Committee not to exceed seventeen members, representing the various organizations interested, and with the consent and approval of such organizations, to consider, formulate, and submit hereafter for consideration, a definite plan of organization whereby all organizations of grain producers can conduct co-operative grain marketing through one or more central organizations or grain exchanges, or such other solution of the co-operative marketing problem as may be approved by such committee, and that each organization or interest represented shall bear the expense of its own delegate or committee members. That when this Committee is ready to report, copies of this report shall be sent to each organization, and the Chairman of the American Farm Bureau Federation shall call a conference of accredited delegates of such organizations with power to act, to whom such plan shall be submitted for adoption or rejection.

II—RESOLVED: That this Conference request every organization to report to the American Farm Bureau Federation the respective freight problems and car requirements of their respective districts; and that the Federation co-ordinate these requirements fairly and equitably and try to secure the greatest possible relief for all organizations and their requirements.

III—RESOLVED: That this Convention extend its heartfelt congratulations to the Federal Trade Commission for its substantial accomplishments in the past, and pledge the Commission its support in the future.

IV—RESOLVED: Further that we believe that true co-operation will furnish the solution of the grain marketing problems of this country, and further that we earnestly suggest that the Commission investigate the application of co-operative principles to the problems of grain marketing and cover the same in its forthcoming report upon grain conditions in the United States; that in our opinion no report upon this subject will be complete without consideration of co-operative principles as applied to marketing.

V—RESOLVED: That we are heartily in accord with a Deep-Waterway project and that a copy of this resolution be sent to the Deep-Waterway Association now in session in Detroit.

C. H. Gustafson, Chairman, Lincoln, Nebraska; Benjamin Drake, Secretary, Minneapolis, Minn.; A. L. Middleton, Eagle Grove, Ia., J. C. Sailor, Cissna Park, Ill., B. Needham, Lane, Kan.

The Conference was called to consider means of stabilizing grain and live stock market and was participated in by most of the leading farm organizations and farm marketing associations operating in the mid-west.

The committee of seventeen is being composed of representatives of the leading farm organizations and co-operative grain and marketing agencies in the United States. A convention of these organizations is to be later called to consider the recommendations of the committee.

The personnel of the committee will probably not be announced for several weeks and it is likely that some six or eight months will be required for it to formulate its report.

The committee appointed to make suggestions on live stock marketing problems recommended that a separate conference be held in Chicago in the near future to especially consider this subject.

Co-operation in California

"The farmers of the middle west have had co-operative grain elevators for thirty years without even making a dent on the market, and the trouble is you are speculators and not marketers," declared Aaron Sapiro of San Francisco, addressing a conference of Farmers' Organizations and Farmers' Co-operative Marketing Associations in session here to consider means for the stabilizing of markets for grain and live stock. Mr. Sapiro is attorney for fourteen of the largest California producers co-operative marketing associations, which he declares are organized on the American plan of co-operation as applied to marketing. He also made and eloquent presentation of the bean growers' claims for increased tariff before the House Ways and Means Committee last fall.

"You are organized on a Rochdale plan which is an English consumers' co-operative buying plan and not a producers' marketing plan," continued the speaker. Mr. Sapiro then related the experience of the California raisin growers who, after repeated failures to realize cost of production, in 1911 united in a co-operative selling agency having control over 77 per cent of the California raisin crop. The result was undreamed of prosperity. Fresno, California, he says was converted thereby from a city of poverty to the most prosperous city of its size in the United States. The raisin growers' association has no capital and operates without profit. It exercises absolute control over the products of its members. The same idea has been successfully applied to practically all other California products both perishable and non-perishable.

"As a solution of the grain marketing problem in the mid west, Mr. Sapiro advocated organizing in each state a grain growers association and the federation of these associations in a national organization, which would act as a selling agency for all grain grown by members of the state associations. This association would sell direct to millers and distributors, the entire proceeds, less the actual cost of handling, being returned to the producers. He advocated the formation of a separate corporation with capital to take over and co-ordinate and standardize the local elevators, these elevators to do the warehousing of the crop, receiving in return fair interest upon the capital invested.

"The farmer is essentially a producer and not a marketer," declared Mr. Sapiro. "Marketing is expert work and should be done by experts. The trouble with the farmer is that he has not been willing to pay a fair price for expert service. You have no right to expect a fair price for wheat if you are not willing to pay a fair price for brains."

Mr. Sapiro does not advocate undertaking the marketing of live stock in a similar way until after all the packing plants are made public utilities.

Summer Farmers' Day at East Lansing and Round-up at Chatham

THE DATE for the big Summer Farmers' Day at the Michigan Agricultural College this year has been set as Saturday, Aug 7. This day was definitely settled upon at a committee meeting last week.

The meeting which is the first general summer gathering to be held at the college, is expected to draw several hundred farmers to East Lansing. Last year the soils department put on a Soils Day, as you probably remember. Two years ago the Farm Crops men held a Wheat Day which drew a good crowd. This year, however, both these departments, as well as other divisions of the college, are joining forces to stage a big day which will be distinctly worth while. The general plan will be somewhat similar to that in vogue at Ohio State, Cornell and other institutions which have found the summer meeting a practical affair.

Soils and crops subjects will receive major consideration. More than 100 acres of crops plats will be on inspection, while the soils people will bring in summaries of findings taken from their 80 odd test fields scattered out over the state. Timely phases of these subjects will be dealt with. This will include fall planting suggestions, fertilizer requirements, etc.

Prominent speakers from outside the state, as well as local leaders, will address the big afternoon gathering on the campus. Brother Leo, Notre Dame University, will be included on the program. L. Whitney Watkins, Manchester, will preside for the afternoon. Invitations have gone out to several of the biggest men in the country and a fine program seems assured. All speakers will hammer on problems of immediate interest to Michigan farmers.

Special efforts are being made to provide entertainment for the farm visitors. A headquarters and rest room for women will be open in the college women's building, where things of special interest to farm women will be provided.

Children will be taken care of in the gymnasium, where games are to be handled by the college department of physical training. The pool will be open for the day—certain hours for boys and others for girls. Picnic facilities will be provided on the campus, in order to take care of the "basket lunch" crowd. Information and exhibit booths under the campus trees will be another feature planned to add to the comfort and pleasure of the crowd.

All in all, the college latchstring will be out for the day, and it looks like a big gathering for the farmers. An effort will be made to have all the college specialists on the job, for instance, so that any farmers with a problem to solve can get help on that day.

FARMERS' ROUND-UP HELD IN UPPER PENINSULA

Plans have been completed for our second annual farmers' round-up at this Experiment Station August 11 and 12. This round-up gives promise of being the greatest agricultural meeting that has ever been pulled off in the Upper Peninsula.

The State Club Leaders have planned to put on a two days' summer camp for their members. This camp is to be situated on the Station Farm here at Chatham.

The first day with the boys will be a day of special instruction in live stock and crops work to finish up the preliminary work that has been done with the different clubs in their respective counties preparatory to taking their final live stock judging work on the following day.

The Home Demonstration Agents and the Girls' Club Leaders are planning a special program for the two days for the women and girls. The County Agents under the direction of Mr. J. W. Weston, have planned a complete program for their work.

Alger County is making extensive preparations to entertain the large crowd that is anticipated to a big barbecue dinner for the noon hour of the 12th. They have ordered an 800 pound ox for the occasion and Mr. Deacon, the prison chef, will have charge of the feed. Their menu is meat, baked beans, mashed potatoes, buns, sweet corn, ice cream and coffee.

During the forenoon, stump blasting demonstrations will be in operation also dairy demonstrations in charge of Mr. J. A. Waldron, dairy specialist from the college, sheep and hog demonstrations in charge of Professor George Brown, crops demonstrations in charge of G. W. Putnam, Crops Experimenter of the Upper Peninsula Experiment Station, and Home Economics Work in charge of Home Demonstration Leaders.

Directly after the big barbecue dinner a speaking program will be given. On this program are President F. S. Kedzie, Dean R. S. Shaw, Director R. J. Baldwin, Honorable Jasen Woodman, Dr. Eben Mumford, Mr. R. A. Turned of the Michigan Agricultural College and a handicraft demonstration given by the McMillan Handicraft Club. On the night of the 11th the Alumni Association are planning a feed and a big social open air meeting in the Experiment Station Grove.—*D. L. McMillan, Supt., M. A. C. Experiment Station, Upper Peninsula, Chatham, Mich.*

As Herbert Hoover Sees Tidewater Project

"ONE OF the first things which an engineer in surveying this problem (transportation) would advise, would be the creation of a waterway all the way from the Great Lakes to the sea, by way of the St. Lawrence River. By this arrangement, the crops of the Middle West would have direct expeditious and economic access to the ocean. An engineer knows that this could be done at a lesser expense than would be involved in increasing our railroad facilities to care adequately for our marketing. Since the prices of this production are made at the other end in world competition, the cheapening of its transmission to the world's markets would go into the pockets of the farmer, and the farmer, whose prosperity is so closely linked up with the prosperity of the country, must have our care."

Farmer Candidates for Important Public Offices

Lapeer County Farmer-Senator Out for Lieutenant Governor; Farm Organization Leader Seeks Seat in Congress

SEN. CHAS. B. SCULLY
Plain Farmer of Almont who is a Candidate for Lieutenant Governor. It remains with the farmers of Michigan whether he gets the job.

THE INTEREST of Michigan farmers in affairs political will not be confined to the Governorship by any means. The farmers of the entire state will have the opportunity of voting for a practical farmer for lieutenant governor, Sen. Chas. B. Scully of Lapeer county, and the farmers of the Fourth congressional district for John C. Ketcham, master of the State Grange, and for years a familiar and forceful figure in agricultural affairs, who is a candidate for congress.

Sen. Scully claims he is a farmer and proves it by living upon his farm and deriving his major income from the farm. He comes from a family of farmers, and while as it is natural with men of ability and ambition he is financially interested in other lines of business, his real heart interest is wrapped up in the farm, and his best public service has been rendered in matters and positions relating to agriculture.

Biography

Charles B. Scully of Almont, senator from the twenty-first district, comprising the counties of Lapeer and Tuscola, has always lived in Lapeer county, and was born on a farm in Almont township, June 17, 1878, of American parents. He was educated in the district school and the Almont high school, later studying privately with special training from the Michigan Agricultural College. Mr. Scully is married and has two sons and one daughter. He has always been active in social and fraternal affairs; is a member of several Masonic bodies, the Gleaners and the Grange; and has just retired from his second term as president of the Michigan State Association of Farmers' Clubs; two years president Michigan Crop Improvement Association. He was secretary for three years of the Michigan Berkshire Breeders' Register Association. He is also well known as a lecturer on agricultural subjects, and is recognized as a pioneer in the good roads movement in Lapeer county. He is secretary and treasurer of the Lapeer County Farmers' Mutual Fire Insurance Association and is affiliated with several other insurance companies. Mr. Scully is a Republican and after holding various township offices was elected to the senate in 1916, re-elected November 5, 1918.

Sen. Scully's two terms in the state Senate were unusually active and useful. He was a member of the most important committees, viz., insurance (chairman, two terms,) elections, taxation, executive business and industrial schools. During his two terms he introduced and passed more than a score of bills and resolutions of a progressive nature. Other meritorious bills which he drafted or actively sponsored were defeated. Principal among the latter was his constitutional amendment resolution to authorize the enactment of an income tax law. Sen Scully has always been a firm believer in the income tax, as the most equitable form of taxation, but his efforts to bring about the necessary legislation have thus far been defeated.

Among the more important bills which he introduced are the following: "The Insurance Code" bill, the second largest bill ever introduced into the Michigan legislature, a bill giving husband and wife the right to own property jointly without invalidating their credit and financial standing; a bill to amend the agricultural commission act for the purpose of giving greater financial assistance to the weaker fairs of the state; to authorize the investment of trust funds in farm loan bonds (This measure was not reported out of the Committee); a bill to revise and consolidate the laws relative to the production, manufacture and sale of milk and milk products. (This was a timely measure and had the support of the Federated Agricultural Legislative Committee, but could not be pried out of the Committee of Public Health); a bill requiring abstractors of land titles to secure certificate of authority and to file a bond, and to make abstracts of title prima facie evidence of title, ("This," explains Sen. Scully, "was a reform measure requested by the Federal Farm Loan Bank, but as it would have lessened the need of securing the services of lawyers to perfect the land titles and therefor injured that profession the bill is still peaceably slumbering in the judiciary committee.")

JOHN C. KETCHAM
Farm Organization Leader, of Hastings, would like to go to Congress and every Farmer in Michigan would like to see him there.

Sen. Scully opposed such bills as

How Farmers May Finance Their Wool Pool Under Farm Bureau Plan

A FEATURE of the Farm Bureau wool pool plan which has not yet been made clear to a good many farmers who have consigned wool to the Bureau or have contemplated so doing, gives to the farmer the privilege of assigning his wool to his local banker and receiving a loan upon the wool.

How It Works

For instance, John Jones has a hundred fleeces of wool which because of the stagnancy of the wool market he does not care to sell outright. He arranges to pool his wool with the Michigan State Farm Bureau. Under the initial plan the Bureau would advance to him 75 per cent of the present market value of his wool and would hold his wool at his direction until the market was more favorable to sell it. Under a later devised plan, the Farm Bureau issues a receipt to the wool growers, showing the number of pounds received, the grading, and other essential facts. Upon the back of this receipt is an assignment blank that reads as follows:

"The undersigned hereby assigns to the below named bank or banker, the right to receive and collect from the Michigan State Farm Bureau the net proceeds from the wool described in the within receipt upon settlements therefor; consideration herefor being the loan by such bank or banker to the undersigned of the sum of $..... Any sum remaining from the nal settlement after payment of such loan and interest thereon at the rate of ..... per cent per annum to be paid to the undersigned by such bank or banker, who is hereby constituted the agent of the assignor for the above purposes."

Do you get the point? The owner of the wool perhaps finds that after a few months elapses he needs the money which the wool represents. So he takes his receipt to his local banker and negotiates for a loan and the assignment blank being first rate security against the loan, the farmer theoretically has no difficulty in getting the desired loan. Actually few cases have come to light where bankers have refused to loan on this assignment and many banks have promised the Farm Bureau that they will honor the receipts when properly endorsed and presented.

Certainly such a plan is of distinct advantage to the Bureau and simplifies the pooling on a state-wide scale from a financial point of view. To advance money from a central point to all the growers who have wool pooled at Lansing would require a very large surplus of funds, but where the local bankers take on the burden it is widely distributed. Moreover, it is the business of the local bankers to finance their farmer customers, and they are amply protected by the form of receipt rendered by the Bureau.

The Michigan State Farm Bureau has to date pooled more wool than any other single state bureau in the country. The pool at the present time contains approximately 3,000,000 pounds, half of which is in the hands of local assemblers, the warehouses in Lansing being full. That the pool will contain eventually at least 4,000,000 pounds is now a practical certainty.

With the Farm Bureau having control of at least one half of the entire wool clip of Michigan it is in a position to virtually dictate the movement of the Michigan crop. At the same time it is clear that this fact would hold forth no advantage were the other and larger-producing wool states to place their clips on the market without regard for existing conditions, and without some kind of co-operation with the wool holding parties of other states. We are informed however that the Michigan State Farm Bureau has received assurances from several important wool producting states that they have no thought of putting their clip on the market at the present ridiculously low prices. And from states where there is no wool pool, independent holders of wool are just as determined to await a return of decent prices before they sell a pound of wool. The wool market is in such a condition today that it would not require the unloading of but very little wool to insure its continued stagnancy. The return of market prices to somewhere near their former level of four months ago depends upon the closest co-operation between growers and dealers in every state. The situation is not without its uncertainties, however. Quite a large percentage of the total 1920 clip has found its way into the hands of independent dealers who would not hesitate to dump the wool on the market and take a loss if necessary in order to destroy the wool pools of the farm organizations.

The County Agent's Work as Viewed by a County Agent

THE BUSINESS Farmer has indulged in some criticism in times past of the county agent's failure to live up to his full responsibilities and opportunities, particularly in the field of marketing. Because of this criticism the Business Farmer has been accused of being "against" the county agent. As a final word upon the subject we wish to reproduce a portion of an editorial that was published in the August 31st, 1918, issue, together with a recent utterance of the highest paid county agent in the United States.

As Viewed by the M. B. F. Two Years Ago

"The county agent has become a permanent fixture in American agriculture and the time is not far distant when the farmer or farm paper opposing the movement will be listed among the moss-backs and behind-the-timers. As agriculture develops along business lines, the functions of the county agent will gradually change. He will become less of an instructor in scientifical production and more of an advisor and leader in solving the seed, labor and marketing problems. But the county agent who believes that his sole job is to teach farmers how to grow two blades of grass where one grew before has outlived his usefulness."

As Viewed by County Agent Eckhardt of Illinois

(W. G. Eckhardt was the highest paid county agent in the United States. His work in DeKalb county attracted the attention of farm organizations all over the country. But he was too big a man to stay in DeKalb county. The Illinois Agricultural Ass'n has taken him to head their grain department. Here is what he has to say about the farm bureau and county agent and his job:)

"A good many people have a mistaken idea of what a farm bureau is. They think it is some sort of a fatherly organization to send boys around to tell farmers how to treat their oats for smut. They look upon it as an educational institution solely, whose only object is to teach farmers to grow larger crops.

"If that were the only purpose of the farm bureau, and if it were successful in that purpose, it would do vastly more harm than good. There are many things which we can do to increase crop yields. If only a small part of these improved methods were followed by farmers next year, we would produce much more food than the world is willing to buy at a fair price. The markets would be glutted, and prices would fall to a level that would be disastrous.

* * * * *

The county advisor must be a business advisor. He must teach his farmers the folly of raising more food than the world wants. As the farmers take over the job of marketing their own products, getting them to the consumer in the best of condition and at reasonable price, the world will take more of these products."

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. Subscribers desiring a personal answer by mail to a question of a legal nature should enclose $1 for reply.)

FARM BUREAU

Will you explain through your paper just how and why the Farm Bureau is operated by farmers and why no large and unlawful profits can be made by so-called rich men or heads of business. I have a neighbor who declares the Farm Bureau to be just a set of fellows who are in the game for what they can get out of it. Troy Fruit Farm, Walkerville, Mich.

There was undoubtedly a time when the Farm Bureau was in the control of men who had no real interest in the welfare of farmers and sought to direct their organized efforts along lines of no actual benefit to farmers. I am sure, however, that these men are no longer in control. I am firmly convinced that the Michigan State Farm Bureau is an organization of, by and for the farmers, and I cannot conceive of any manner in which its officers could enrich themselves at the expense of the organization, except through the salaries that are authorized by the farmer members themselves. A lot of the men in the farm bureau organization as well as in other farm organizations are giving far more of their effort and time than they will ever be paid for to the advancement of the farmers' interests. If there are or may in the future be any who would employ the organization for selfish pecuniary or political purposes, and they are discovered rest assured that they will be ostracized forever from the good graces of their fellow farmers.—*Editor.*

ASK MEMBER OF LEGISLATURE

We would like information regarding threshers license and the reasons for the same. We operate a threshing machine and obtain the necessary license. In order for threshermen to obtain license they must make a report of all grain threshed at the end of each week. What is the object of this law and the Secretary of State collecting this data? It occurs to us that the grain speculators have access to this data to the detriment of the farmer.—E. T. H. Pigeon, Mich.

Judge Collins, circuit judge of Shiawassee county has held this law to be unconstitutional, but the department of the secretary of state holds the law to be in force until the supreme court decides otherwise. I am not informed as to the reason for the passage of the law. Perhaps the member of the legislature from your county can explain it fully.—*W. E. Brown, legal editor.*

RIGHT TO VOTE

Can a person not an owner of real estate vote on the money question or hold the highest office on the school board?—D. D. L. Antrim County.

On the question of voting school taxes one must own property assessed for school purposes. Any qualified voter whose name appears on the assessment roll and who is the owner in his own right of property so assessed is eligible to election or appointment to office in said school district. They must file a statement under oath to such effect in their acceptance of the office.—*W. E. Brown, legal editor.*

RAISING ALFALFA

I am writing you to find out how to raise alfalfa. What is the best way to inoculate for mammoth clover? Also when is the best time to cut milkweed and is there any way in which to kill them?—W. T. H., Antrim County.

Alfalfa is a very profitable crop and may be grown successfully in this state when properly handled. However, the ordinary cultural methods that insure success with many crops do not always prove successful with alfalfa. We consider the following points of utmost importance:

1. To prevent winter killing only hardy northern grown seed should be used. The Grimm is one of the best of the hardy strains.

2. Alfalfa should be seeded on a well prepared seed bed that is firm and free from weeds and in at least a fair state of fertility. Alfalfa is not a poor land crop.

3. Alfalfa should not be seeded on acid soils, since it is one of the most sensitive crop to this condition. When the soil is so acid that June clover fails; it usually requires two tons of ground limestone to correct the acidity sufficiently to secure a good stand of alfalfa.

4. Good drainage is essential.

5. Spring seedings are usually successful, but when either oats or barley are used for a nurse crop from one-half to two-thirds the usual amount of seed be used.

One of the best ways to inoculate Mammoth clover is by the pure-culture method. Material for inoculation may be secured from the Department of Bacteriology, M. A. C., East Lansing, Mich. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Full directions for application accompany the material.

Milkweeds should be cut early to prevent the seed from forming, then practice clean cultivation. Milkweeds form a root stalk that it somewhat difficult to starve out. Clean cultivation and the full seeding of crops are the best methods of eradication.—*C. R. Megee, assistant professor of Farm Crops, M. A. C.*

OIL IN CARLOAD LOTS

I have been reading the M. B. F. for some time and think if the people would do as you advise about marketing and organizing farming would be more of a success. I am trying to get the names of some of these oil companies that used to have a man come through the country taking orders for kerosene by the barrel, and then they would ship a tank of kerosene to the nearest railroad station and the people that had ordered would go on certain days and get the amount they had ordered. I have been unable to locate any such firm but thought perhaps you might help me. I know I could soon contract a tank of kerosene.—F. R. K., Saginaw County.

The National Refining Company, located at 2082 Rose Building, Cleveland, Ohio, operate five modern refineries and maintain 92 branch offices throughout the central states. Their general office at Cleveland, will sell farm organizations direct in carload lots, where they do not have regular dealers.—*Editor.*

TRACTOR BREAKS HARDPAN

Am a subscriber to your paper and I think your paper a farmer's friend. I was wondering if I could ask you a question or two concerning tractors. I suppose I have what you call a "tractor fever," but I have heard so much about them causing a hardpan in the soil so that the large western farmers are going back to the horses again. Is there any truth in that report? Would a 100 or 140 acre farm support one where the farm is laid out in 50 acre fields or more? Now I have two tractors in mind, one is the ——— and the other is the——— The ——— is a good tractor only they say it tips over so easy and also it is my opinion it might pack the seed bed, being that the heavy part of it seems to come on such a small surface at one time, and as to the catterpillar type I never have seen them at work. Now I would like your opinion on them if you would be willing and could give it, and if not will be all right with me for I'll still be a subscriber as always. W. G. K., Ludington, Mich.

I have not heard that the tractor, as used in western farming, produced a hardpan in the soil as you mention. It is quite probable that, due to the immense weight of the tractors in that part of the country, that such a condition exists. For Michigan conditions, the tractor is found to be beneficial in breaking up the hardpan. I doubt very much whether the western farmers will go back to the use of horses to any great extent. The case mentioned may be a special one.

There is no doubt in my mind but that a tractor should prove profitable on a farm of 100 to 140 acres where fields are laid out in plots of fifty acres or more. However, I believe that the original investment should be under $1,500. The Department cannot recommend makes of tractor to buy. I would suggest, however, that certain things should be considered before purchasing and they are as follows: the tractor company should be well established; the tractor should be out of the experimental stage and should have adequate service to customers. A tractor rated anywhere from 8-16 to 12-25 should fit your needs very well.—*E. C. Sauve, Ass't Professor, Department of Farm Mechanics, M. A. C.*

CHICKENS LOSE FEATHERS

Will you please publish in your paper what to do for spring chicks when they lose their feathers. We have Rocks that have bare necks and bodies except a few feathers on wings. Please tell what to do with chicks with diarrhoea. A Subscriber, Marlette, Mich.

I would judge that the chicks mentioned have not lost their feathers but rather have not grown any due to slow maturity.

We find in many flocks that certain chicks for some reason do not grow as rapidly as others in the flock and it is those slow maturing chicks that exhibit a more or less nude appearance. There is no known remedy to correct this condition.

In regard to your chicks with diarrohea I would say that if this is what is known as White Diarrohea there is no known cure for it. In this case it might be a diarrohea and a preventative in the form of sour milk could be given. For the first two weeks of the chick's life give no water and only sour milk for drinking for this will prevent the spread of White Diarrohea.—*W. E. Newlon, Assistant in Poultry Husbandry, M. A. C.*

COST OF FEEDING HORSES

What would it cost to feed eight horses new hay a week which are getting six quarts of ground oats and corn apiece three times a day. The horses are heavy fifteen hundred pound (1500 lb.) horses and are grading on a state road by my place and are boarding at my barn and I am furnishing the hay.—A Subscriber, Mayville, Mich.

Figuring equal parts by measure of ground oats and corn and each horse eating 20 pounds of hay per day with oats at $1.14, corn at $1.68 and hay at $25 per ton, it would cost $44.99 per week for the eight horses or 80c per head per day to maintain one horse. These figures may be taken as a minimum.—*R. S. Hudson, Dean and Director, Dept. of Farm and Horses, M. A. C.*

KEEPING THE CONSTABULARY BUSY

News Item—Members of the State Constabulary are being Employed to run down Unlicensed Dogs.

"BARGAINS"

Will you kindly inform me if the Big Four Company of Chicago, Ill., is a responsible concern. They advertise flour at $7.98 per barrel, sugar $4.50 per 100 lbs. and other things in like manner. I saw the ad. in "Hearth and Home."—Mrs. F. J. A., Sanilac County.

Any company that advertises at this time sugar at 4 1-2 cents per pound and makes the other misleading statements contained in the page advertisement which you have sent us, is a fake. The kind of papers which carry this advertising should be kicked out of every farmer's mail box. Usually the balance of these so called "mail-order" papers are filled up with medical ads, consumption cures, fat reducers, and such suggestive ads which have no fit place on a business farmer's reading table.

Of course, any sane man or woman ought to know that when a company offers sugar at 4 1-2 cents, at a time when it is quoted in carloads on the New York market at 23c, there is a "nigger in the woodpile."

Most offers of this kind are not quite so apparent and for this reason this may be a good place for us to explain the principle back of these "trial-order-lots" of miscellaneous groceries, which are not only offered by mail order houses but by canvassers and wagon salesmen. We want to show here how simple it is to deceive with a few leaders at low prices which have genuine value and put in a lot of non-essentials which are sold at about ten times their actual cost of manufacture. Here is a trial offer put out by the Big 4 Company in Chicago in the ad referred to:

They offer:

2 pounds granulated sugar ..9c
1 bar Fels Naptha Soap 2c
1 bar Ivory Soap 4c

The balance of their offer is where they make up for the losses above. They offer as follows:

1 package Big 4 brand best tea 35c
1-4 lb. pure cocoa 12c
1 lb. pure baking powder ..42c
1 4oz. bottle vanilla extract 49c
1 box powdered bluing 29c
1 bottle machine oil 17c

It is in these items which are undoubtedly of cheap manufacture, that the loss is made up. A "bottle" of this so-called vanilla extract can probably be produced for three or four cents an a "bottle" of machine oil could be produced for a couple of cents. We do not doubt but what, if you sent this company $1.99 you would get a trial order exactly as stated, but the whole proposition is so misleading that it can be labeled nothing short of a fake, intended to deceive people into believing that this company can supply staple commodities at a fraction of what they are being sold on the wholesale market. We would be glad to have other offers of this kind brought to our attention by our readers.—*Editor.*

PLOWING UNDER RYE

Have a piece of rye which we intend to turn under. The land has been run quite a little. When is it best to turn it under? What would be the best to put on, sweet clover or timothy and clover? —N. R. D., Reed City, Mich.

Rye should be turned under for a green manuring crop just after bloom or while the seeds are in the early milk stage. At this stage the plants are quite full of moisture which aids in the decay of the organic matter. On land that has been run to quite an extent, and has been limed, would recommend sweet clover. Sweet clover, however, it quite sensitive to soil acidity and usually only a small growth is secured on acid soils.—*C. R. Megee, Ass't Prof. of Farm Crops, M. A. C.*

ALFALFA FOR SEED

I would like to know which crop of alfalfa should be cut for seed, the first or second.—L. D., Spruce, Mich.

In this state the second crop of alfalfa is usually the most satisfactory one for seed production. As a rule, however, alfalfa does not produce seed very abundantly. The heaviest yield of seed is usually secured when the rainfall is not quite up to normal.—*C. R. Megee, Ass't Prof. of Farm Crops, M. A. C.*
